4. WHICH COMPANY TO SUE. In case of injuries it is somewhat a nice point to determine which company ought to be sued where the person injured has been booked through and has thus travelled over lines other than those of the company which issued the ticket. As a general rule, the ticket-issuing company is responsible for the safety of the passenger throughout his whole journey, though that journey may be partly on the line of the ticket-issuing company and partly on the line of another. Hence if the passenger sustains injury, the ticket-issuing company will be liable for damages caused by the negligence of the servants, or the defective condition of the carriages or the permanent stock of any other company on whose lines the passenger has been booked through. In this case such ticket-issuing company will be liable because of their contract with the passenger whom they had booked through. On the other hand, the railway company, through the negligence of whose servants or the faulty construction of whose carriages or platforms the injury has been caused, may also be sued, not because there was any contract between such company and the injured passenger (the contract being between the ticket-issuing company and the passenger), but because of the wrong done to him by the servants of the company over whose lines, or in whose carriages the injured passenger had been travelling.

5. COMPROMISING CLAIMS FOR INJURIES. Where accidents occur, a railway company is always willing to settle the claims of injured passengers, rather than incur the worry and the expense of litigation. In that case an injured person should be on his guard, for if he should accept a sum in full satisfaction of his injuries, he cannot afterwards sue the company should his injuries prove to be more severe than was thought at the time. If, however, the agent of the company misrepresented to the passenger the nature of the receipt for the money which he accepted, then the passenger could still claim damages should his injuries prove to be more severe than was anticipated.

Compensation for injuries to clothing will not debar a passenger, who, although apparently sustaining no injury at the time of the accident, from bringing an action for damages should injury to his body or his brain afterwards develop itself as a result of the accident.

6. UNPUNCTUALITY OF TRAINS. The mere issue of a ticket to a passenger is in itself no guarantee that a train shall start on its journey or shall arrive at its destination in a given time; but where a company publishes time tables, and a passenger on the strength of the representations made in the time tables, books by a particular train, there is an express contract between the company and the passenger that such train shall start and shall perform the journey. If, then, the train does not start, or if after having started does not complete the journey, the passenger may sue the ticket-issuing company. It makes no difference whether the uncompleted portion of the journey is on the lines of another company (the passenger having booked through), the company to whom the passenger had paid his fare will still be liable.

In cases where the train fails to keep time, then the passenger will be able to sue the company, provided he can clearly prove that the unpunctuality was due to the actual negligence of the company's servants, and that he himself has been put to actual expense or real inconvenience by such unpunctuality.

> If, for example, owing to the unpunctuality of the train, he had been compelled to stay for a night at an hotel, he could recover his hotel expenses from the company.

But he could not recover the expense of hiring a special train to make up for the time lost, unless, indeed, the circumstances were so grave that it was imperative that he should be at his destination at a specified time. The test of such a case is, would the passenger who has been delayed have gone to the extra expense if the delay had been due to his own fault and not to the fault of the company.

In bringing an action for damages arising from the unpunctuality, a passenger will not get damages unless he has been put to real expense. He can only recover for the expenses which are directly due to the unpunctuality.

> Thus, for example, if he had through the delay of the train missed an important business appointment, by which he expected to benefit, he could not recover damages for the loss of the business engagement.

DUTIES AND LIABILITIES OF PASSENGERS.

1. TICKETS. Every passenger must produce his ticket when asked to do so by the proper officer of the company, or give his name and address. He must at the end of his journey deliver up his ticket, or pay the proper fare, or give his name and address. If a passenger refuse his name and address after having failed to produce his ticket or to pay the proper fare, he will be liable to be detained and to pay a penalty of £2.

Where a passenger is suspected of having given a wrong name and address, he may be detained pending inquiries. But this is a risky proceeding on the part of the company's servants, for should it turn out that the passenger has given his right name and address, the company will be liable to pay damages for false imprisonment, even though the conduct of the passenger has given reasonable grounds for leading the officials to suspect him.

Where a passenger has surrendered his ticket at some station before he has reached his destination, and is called upon to pay over again, he should refuse to do so, but should give his name and address, and should inform the collector that he has already given up his ticket. It should be remembered, however, that a passenger cannot be compelled to give up his ticket until he has reached his journey's end.

Should a passenger lose his ticket (not being a season ticket) or mislay it, he cannot be compelled to pay his fare over again. He should, however, give his name and address, and the name of the station from which he took the ticket, and the place to which his ticket entitled him to be carried. It will then be an easy matter for the company to verify these particulars.

2. **RETURN TICKETS** are not transferable, and any person selling or parting with the return half of a ticket is liable to a penalty not exceeding £2. The person who buys such ticket, or who travels, or attempts to travel with it is liable to the same penalty. Such return half will be confiscated, and the person travelling with it will be compelled to pay the fare from the station from which he started. It is difficult, however, to see how this punishment can be enforced, and in practice return halves of tickets are transferred every day.

3. **EXCURSION TICKETS** can only be used for the particular journey and the particular distance for which they are issued. Such tickets are advertised as available only to and from the stations named on them, and any passenger using them for a place short of the said stations, or beyond them, will be liable to forfeit them and to pay the ordinary fare. Hence, any passenger breaking his journey will be clearly liable. But it is not so clear where a passenger travels beyond the station to which the ticket is available. For in that case, what is to prevent a passenger getting out at the station named on the ticket and procuring a fresh ticket to carry him on to the end of his journey. Surely he should be in no worse position when he stays in the train, and on reaching his destination pays the fare for the distance between the station to which the excursion ticket is available and the station at which he gets out. Where an excursion ticket says that the return journey must be made on a certain date, and by a specified train, it is not available on a date prior to or after the specified date, or by any other train.

4. **SEASON TICKETS** are issued under special conditions to their holders, and if the holder of a season ticket fails to observe these conditions, he must abide by the consequences mentioned on the ticket. He must at all times produce his ticket when asked to do so by the proper officers of the company. Should a particular officer vexatiously and capriciously require a season ticket holder to produce his ticket, the proper course for such ticket holder is to write to the company, complaining of such unreasonable conduct on the part of its servant.

5. **TRAVELLING WITHOUT A TICKET.** Where a person travels or attempts to travel without having first paid his fare, and with intent to defraud, he is guilty of an offence. But it must be clearly shown that the passenger did so with the intent to defraud, otherwise he cannot be convicted. The intent to defraud can be shown from all the circumstances of the case, and, indeed, this is really the only way in which the fraudulent intent can be proved. On the first conviction such fraudulent passenger may be fined £2; for a second offence the penalty is £20 or a month's imprisonment.

Frequently, however, persons have not time to take a ticket. In such a case the passenger should pay the proper fare, which is the actual fare from the station at which he started to the station where he intends to get out. The company cannot compel him to pay the fare from the station at which the train originally started, although such extortion is often attempted. Should his payment be refused, he ought to give his name and address. If the company then sues him, his proper course is to pay the money into Court, and at the trial explain that he did tender payment at the proper time. In that case the company will have to pay all the costs of the action. A passenger who has not taken a ticket can be prevented from entering the train, but apparently he cannot be ejected after the train has started on its journey.

6. **BREAKING A JOURNEY.** Where a passenger gets out at a station short of his destination, he cannot afterwards on the same ticket resume his journey and travel on to the station to which that ticket is available. He cannot, however, be compelled to give up the ticket on breaking the journey, because the ticket cannot lawfully be taken from him until he has reached the station to which it is available. He must, however, show it if required.

7. **TRAVELLING BEYOND THE STATION NAMED ON THE TICKET.** Where a passenger, having paid his fare for a certain distance, wilfully and knowingly travels beyond that distance, *with intent to defraud*, he is liable to the same penalties as if he had travelled without a ticket with intent to defraud. The essence of the offence is the intent to defraud, and if there is no such intent, no offence has been committed.

Frequently passengers change their minds and travel further than they originally intended. In that case, all that can be demanded from them is the "additional fare for the additional distance." This is not the same thing as the difference between the sum originally paid and the fare from the original starting place to the station at which the passenger has actually got out.

> Thus, the fare from A to B is 5s., and from A to C a station farther on than B, on the same line is 7s., the fare from B to C being 1s. A passenger takes his ticket from A to B, but travels on to C. Here he cannot be charged 2s., the difference in the fares from A to B and from A to C. All that the company can legally exact is the fare from B to C, viz., 1s. In this way the passenger saves a shilling, and where this saving can be effected, many passengers do so. On the other hand, suppose the fares from A to B and from A to C are the same, and a passenger books to B, but continues his journey on to C, here he can be compelled to pay an additional fare, viz., the fare from B to C, though had he originally booked to C, he would have had nothing extra to pay.

8. **TRAVELLING IN A SUPERIOR CLASS.** Where a passenger travels in a class superior to that for which he has taken a ticket, he commits an offence, and is liable to a penalty of £2, provided he has so travelled with intent to defraud the company. But this fraudulent intent must be clearly proved. For instance, there is no fraudulent intent where the third class compartments are full, a passenger having taken a third-class ticket finds the only carriages available are first-class and enters a first-class carriage; then, if the station at which the traveller takes his ticket is the station from which the train starts, the passenger may travel in the first-class carriage without having to pay an increased fare, because his ticket entitled him to be carried in that particular train, and if the company were unable to convey him by that train, he might sue for damages. He should, however, as soon as the third-class carriages cease to be full change into his proper class. If the station at which the passenger takes his ticket be an intermediate one, he may enter a carriage of a superior class, but will be liable to pay the excess of fare, because at intermediate stations tickets are issued only on condition that there is room in the train, and the company is, therefore, under no obligation to carry a passenger by that particular train if there is no room in the carriages for which he has taken his ticket. It may, however, be said that railway companies do not as a rule insist on the excess of fare when a passenger has been compelled to travel in a superior class, through the other carriages being full.

9. **TRAVELLING IN AN INFERIOR CLASS.** Where a passenger has, through overcrowding, been compelled to travel in an inferior class, he is entitled to recover the difference in the fares of the two classes. He should, however, before his journey is ended, draw the attention of the company's servants to the fact that he was compelled to travel in an inferior class. He should not surrender his ticket until he is paid, giving, of course, his name and address; or, if he gives up his ticket without having been paid, he should take a note of its number and afterwards demand payment from the company. If payment is then refused, he may sue the company.

10. **ENTERING COMPARTMENT ALREADY FULL.** Every compartment is built to seat a certain number of

persons, and any one persisting in entering a carriage containing this number, after an occupant has objected to his so doing, is liable to a penalty of £2. The person objecting is entitled to keep him out, but he cannot eject the intruder if he has once entered. The only remedy that the objector has is to appeal to the guard or other responsible official to remove the intruder.

11. SMOKING. A passenger must not smoke in a compartment which is not set aside for that purpose. If he does so, he will be liable to a penalty of £2, and it makes no difference if he is the only occupant of the carriage, or if the other occupants do not object. Where a person in a non-smoking carriage objects to a person smoking in it, the objector has no remedy against the smoker; all he can do is to call the attention of the officials to the fact, and it is then for the company to prosecute or not as it thinks fit.

12. FINDING LOST PROPERTY. Where a passenger or other person is lawfully on the company's premises, and finds an article in a place to which the public have access, such person need not give the article to the officials of the company. He is entitled to keep it until the owner turns up, and should the owner never claim it, it becomes the property of the finder. Of course, if the property has on it the address of the owner, or has some clue by which he may be found, the finder should at once restore the lost property to its owner. The same is true of a servant of the company who, when off duty, finds lost property on a part of the company's premises to which the public have access, e.g. the platform, refreshment room, waiting room, the carriage of a train which is about to start on a journey, and such like places. But if the property be found in a place where the public have no business to be, e.g. an empty train alongside a platform and which is not there for the purpose of conveying passengers, the property must be given up to the company, and if the owner does not come forward, the company is entitled to keep it. The same is the case when a servant on duty finds lost articles.

13. MISCELLANEOUS POINTS. The person who is seated next the window and facing in the direction the train is going is recognised by custom as having the right to control the opening and the shutting of the window. A passenger has the right of reserving a seat for himself in a carriage by depositing some article of luggage thereon. He may eject a usurper from it, but he must take care not to use more force than is absolutely necessary, otherwise he may be involved in an action for damages. A passenger with a first-class ticket takes his seat in a first-class carriage. The guard afterwards fills the carriage with third-class passengers. Can the passenger sue the company for damages? One opinion is that the company, having practically converted the carriage into a third-class, have broken their contract with the first-class passenger, who would, therefore, be entitled to the difference between the first and the third-class fare. But this contention cannot be upheld. Had the guard filled the compartment with people travelling with free passes, surely the first-class passenger could not have claimed the difference between his fare and the cost of the free passes, which would be really the amount of his fare. Such a contention is absurd.

POST OFFICE.

The Post Office as a State institution, with the sole right of despatching letters, dates from an Act passed in 1657, declaring that "there shall be but one post office, and one post-master general and controller to settle posts." This Act of the Commonwealth Government was confirmed at the Restoration, 1660. During the next century highway robberies of the post frequently occurred, but by the adoption, in 1784, of Palmer's scheme of mail-coaches, much greater security was obtained. The main roads also were greatly improved, and the speed in consequence increased from four or five to ten miles an hour. But by far the most important step in the progress of the Post Office was taken in 1840, when Mr. (afterwards Sir) Rowland Hill's penny postage scheme came into operation. Previously, the postal rate was regulated not only by the weight of a letter, but by the distance it was carried, the minimum charge for a letter of one sheet being 4d. for a distance of 15 miles. This was doubled for 80 miles, and trebled for 300 miles, with many intermediate rates. But by Rowland Hill's scheme a uniform charge of 1d. per ½-oz. was made on all inland letters irrespective of distance.

The transmission of letters has always been the main business of the Post Office, but from 1838, when the Money Order system was taken in hand, its operations have from time to time been extended to other forms of business relating for the most part to conveyance and correspondence

DEVELOPMENT OF THE POST OFFICE BUSINESS.

1657. The Post Office as a State Institution, reserving to itself the sole right of transmitting letters, established.
1720. Ralph Allen's cross-road postal scheme adopted.
1784. John Palmer's scheme of mail-coaches tried and found successful.
1830. Mails first sent by railway between Liverpool and Manchester.
1838. Money-order system became a recognised branch of the post office service.
1840. Rowland Hill's uniform penny postage for inland letters not exceeding ½-oz. in weight came into force.
1841. Adhesive stamps on envelopes came into use.
1855. Book-post started at the rate of 4 oz. for 1d.
1860. Management of the mail-packet service, previously in the hands of the Admiralty, taken over by the Post Office.
1861. Post-office Savings Banks established.
1861. Postmaster-General authorised to grant Life-insurance policies and Annuities within certain limits.
1870. Electric telegraphs taken over by the Post Office and the exclusive privilege of sending telegrams conferred on it by Act of Parliament. A uniform charge of 1s. for 20 words, with free addresses, was the charge at first.
,, Half-penny post Cards first issued.
,, Pamphlets, sketches, circulars, &c., transmissible at the uniform charge of ½d.
,, The penny postage on newspapers reduced to ½d.
1871. Penny postage extended to letters not exceeding 1 oz. in weight.
1881. Postage stamps authorised to be used for receipts instead of the special receipt stamps previously required.
,, Postal Orders began to take the place of money orders for small sums.
1882. Reply post-cards first issued.
1883. Parcel Post came into operation, with 7 lbs. as the maximum weight.
1885. Minimum charge for a telegram reduced to 6d. for 12 words, but addresses no longer free.
1886. Maximum weight of a parcel raised to 11 lbs.
1889. Money orders made transmissible by wire.
1891. Uniform Colonial, India and Foreign postage of 2½d. for ½-oz.
,, Post-office Express Delivery by boy messengers begun.
1894. Private cards of proper size with ½d. adhesive stamp permitted.
1895. Free transmission of re-directed letters, books, and newspapers, but not parcels.
1897. All the Trunk Telephone lines in the United Kingdom transferred to the Post Office.
,, Penny postage extended to letters weighing not more than 4 ozs.
1898. Imperial penny postage, per ½-oz., established, except with Australia.
1902. Postage to, but not from, Australia reduced to 1d. per ½-oz.
1907. Imperial postage will probably be reduced this year to 1d. for 1 oz.; Foreign postage to 2½d. for 1 oz., and 1½d. for each additional ounce.

[Refer to "Progress of the Post Office" in *Index*.]

EXCLUSIVE RIGHTS OF THE POSTMASTER-GENERAL.

The Postmaster-General possesses the exclusive privilege of carrying, collecting, and delivering letters. Carriers

are specially prohibited from carrying letters, except such as concern goods sent by carrier and are carried by him gratuitously and delivered with the goods to which they relate.

Similarly, the Postmaster-General possesses the exclusive privilege of transmitting telegrams or messages by telephone within the United Kingdom, except such as are transmitted gratuitously by a telegraph maintained for the private use of a corporation, company, or person. Thus a merchant may establish telegraphic communication between his house and his office, or between his head office and a branch office, but not with the office of another merchant.

INLAND RATES OF POSTAGE.

(United Kingdom, Channel Islands, Orkney, Shetland, and Scilly Isles).

LETTERS.

Not exceeding 4 oz. in weight, 1d.; for every additional 2 oz., ½d.

Double postage will be charged on delivery for letters posted unpaid, and double the deficiency for letters not sufficiently paid.

Letters may not exceed two feet in length or one foot in width or depth, excepting those to or from a Government Office.

Where there are two or more places of the same name in the United Kingdom, or where there is an important town bearing the same name abroad, it is advisable to add the name of the county. The abbreviated addresses registered for telegrams must not be used for letters.

LATE FEE LETTERS.

To catch the night mails, inland letters for the country and abroad must be posted in London before 6 o'clock, and in suburban places from half an hour to an hour and a half earlier. If, however, an extra ½d. be affixed to the letter, it will be forwarded by the night mails when posted after that hour. The late fee posting time is 7 p.m. at most town branch offices; 7.30 at St. Martin's Le Grand, and 7.45 at Mount Pleasant. Letters bearing an extra ½d. stamp may also be posted in the letter-boxes affixed to all mail trains to which sorting carriages are attached. A late fee is not necessary for letters addressed to certain towns within reach of later mails. As, however, some of the trains by which the later mails are conveyed are not mail trains, there is a certain risk of irregular arrival, particularly at the more distant towns.

RE-DIRECTION OF LETTERS, ETC.

No charge is made for the re-direction of letters, half-penny packets, post cards and newspapers, provided they are re-posted not later than the day after delivery (Sundays and public holidays not counted), and that they do not appear to have been opened or tampered with. If re-posted later than the day after delivery, they are liable to charge at the prepaid rate. If they appear to have been opened they will be charged as freshly posted unpaid letters or packets.

Re-directed registered letters must not be dropped into a letter-box, but must be taken to a post-office to be dealt with as registered. No additional postage or registering fee will be charged, provided they are presented for re-registration not later than the day after delivery.

Re-directed parcels are liable to additional postage at the prepaid rate for each re-direction, except in those cases where the original and corrected addresses are both within a delivery from the same post-office.

NOTICE OF REMOVAL.

Notices of removal and applications for letters, etc., to be re-directed by the Post Office authorities must be duly signed by the persons to whom the letters are addressed. Printed forms can be obtained from the post offices, and when filled up and signed should be given to the post-master or to the postman. Separate notices must be filled up for parcels and telegrams. The Post Office will continue to re-direct letters, etc., for a period of one year, but the time may be extended, if desired, on payment of 1s.

Letters, etc., will not be officially re-directed for a person leaving home temporarily, unless the house be left uninhabited, nor will they be re-directed when addressed to Clubs, Hotels, Boarding-houses, or Lodgings. Where caretakers are left in charge, they are expected to receive and re-direct letters.

UNDELIVERED CORRESPONDENCE.

Undelivered inland letters bearing the full name and address of the sender printed or written upon the outside are returned unopened. Others are opened, and where possible returned to the senders. If they contain neither the sender's address nor any enclosure of importance, they are destroyed. Undelivered letters containing anything of value are recorded and returned registered, for which a fee of 2d. is charged. Undelivered letters from abroad are returned unopened to the countries from which they came. Undelivered half-penny packets, newspapers, and post cards are returned, provided they bear on the outside the name and address of the sender, with a request for their return in case of non-delivery, and are delivered to the sender on payment of a second postage.

MISSING LETTERS.

Inquiries for missing letters should be made at the secretary's office, G.P.O. (north), between the hours of 10 a.m. and 5 p.m.; Saturdays between 10 a.m. and 1.30 p.m. The Returned Letter Office is at Mount Pleasant, E.C.

ARTICLES NOT ALLOWED TO BE SENT BY POST.

No indecent or obscene print, painting, book, etc., nor any explosive or noxious substance, nor any living creatures (bees excepted, and they must be packed in suitable cases), may be sent by post, nor anything likely to injure the contents of the mails or any officer of the Post Office.

POSTE RESTANTE.

Letters, etc., addressed to a Poste Restante, to be called for, are retained for one month. If not called for by the end of that time they are sent to the Returned Letter Office to be disposed of. If, however, a letter be addressed to a post office at a sea-port town for a person on board a ship bound for that port, it is kept two months. Letters should have the words "to be called for," or "Poste Restante," included in the address. The Poste Restante is only intended for the accommodation of strangers or travellers who have no permanent abode in the town.

Letters or parcels addressed to initials or fictitious names, or Christian names without a surname, are not taken in, but at once sent to the Returned Letter Office.

Persons applying for Poste Restante letters or parcels should be able to say from what place they are expected, and produce some proof of identity. Foreigners should produce their passports.

REGISTRATION OF LETTERS AND PARCELS.

The ordinary registration fee for each inland letter, parcel, or other postal packet is 2d., in addition to the postage. The payment of this fee secures compensation in the event of loss or damage up to £5. Compensation up to a limit of £400 may be obtained on the following scale: Fee of 2d., compensation £5; 3d., £20; and after this every additional penny on the fee adds £20 to the amount of compensation, up to the limit of £400.

Registered Letters must be handed to an agent of the Post Office, and a receipt obtained. They must not be posted in a letter box.

Letters containing money must be posted in an envelope supplied for registered letters by the Post Office.

CONVEYANCE OF SINGLE POST LETTERS BY RAIL.

By an agreement with the Postmaster-General, inland letters not exceeding 4 oz. in weight may be conveyed by certain railway companies by the next available train or steamship, either to be called for at the station of address, or to be transferred thence to the nearest letter box for

delivery by postman. The letter must be taken to a station of the railway company, and a charge of 2d. will be made for its conveyance, in addition to the ordinary postage rate of 1d. Letters to be conveyed in this way can be handed in at an Express Delivery Office, for immediate conveyance by special messenger to a railway station, on payment of the ordinary express fee of 3d. per mile.

EXPRESS DELIVERY OF LETTERS AND PARCELS.

There are three systems for the special delivery of letters and parcels :—

1. *By special messenger the entire distance*, for which the charge is 3d. per mile, or part of a mile (ordinary postage is not charged). Special charges are made where the packet is heavy or bulky, and for long distances where no ordinary public conveyance is available. This is the quickest service, and letters, etc., for Express Delivery are accepted at all the more important post offices. They must bear the word "Express" in the top left-hand corner of the cover.

2. *By special messenger after transmission by post.* By this system letters and parcels are forwarded in the regular course of post, and on arrival at the office of delivery are sent out by Express Messenger. The charge is 3d. per mile, or part of a mile, from the office of delivery, in addition to the ordinary postage. There are special charges, as in system No. 1. The letters may be posted like ordinary letters, but must be clearly marked "Express Delivery" in the top left-hand corner, and have a thick perpendicular line on each side of the envelope. Parcels and registered letters for this service must be handed in at a post office or to a rural postman.

3. *By special delivery in advance of the ordinary delivery.* Any persons wishing to receive their letters, etc., in advance of the ordinary delivery may have them delivered by special messenger on payment of 3d. per mile for one packet, and 1d. for every ten, or less, additional packets.

STAMPS.

Postage stamps of the following values are issued by the Post Office : ½d., 1d., 1½d., 2d., 2½d., 3d., 4d., 5d., 6d., 9d., 10d., 1s., 2s. 6d., 5s., 10s., £1.

Rural postmen are authorised to sell 1d. postage stamps and registered envelopes.

Stamps may be perforated with the initials of firms, etc.

ENVELOPES.

Embossed envelopes bearing a half-penny stamp may be had in two sizes, Commercial and Foolscap, the former at ½d. each, or 9d. the packet of 16 ; the latter at ¾d. each, or 6d. the packet of 10. Embossed penny envelopes are in three sizes : A (4¾ by 3⅛ in.), Commercial (5⅝ by 3⅛ in.), Foolscap (9 by 4 in.). A size are sold at 1½d. each, or in packets of 20 for 1s. 10d. ; Commercial at 1¼d. each, or 240 for 21s. 3d. ; and Foolscap 1¼d. each, or 20 for 1s. 10½d.

REGISTERED LETTER ENVELOPES.

Registered letter envelopes for foreign as well as inland letters, bearing a 3d. stamp embossed on the flap for payment of registration fee of 2d. and postage 1d., are of five sizes, and are sold at F (5¼ by 3¼ in.) 3½d. each, or 3s. 3d. for 12 ; G (6 by 3¾ in.) 3½d. each, or 3s. 4d. for 12 ; H (8 by 5 in.) and H2 (9 by 4 in.) 3¾d. each, or 3s. 9d. for 12. K (11½ by 6 in.) 4d. each, or 4s. for 12.

POST CARDS.

Post cards bearing a halfpenny stamp are sold at the rate of 1 for ¾d., 7 for 4d. and 11 for 6d. They are of two kinds—stout cards 4½ in. by 3½ in. ; thin cards 5½ in. by 3½ in. Reply post cards are sold at about double the price of the single cards. Private cards may be used, but must correspond as closely as possible in size and weight with the official post cards, and must bear a halfpenny stamp on the same side as the address. They must not be more than 5½ inches long and 3½ inches wide, nor less than 3¼ inches long and 2¼ inches wide. The right-hand half of the address side of a post-card is reserved exclusively for the address and postage-stamp.

LETTER CARDS.

Letter cards are sold at the following prices : 1 for 1¼d., 8 for 9d., and a packet of 96 for 9s.

HALFPENNY PACKETS.

Printed or written matter not in the nature of a letter may be transmitted by the halfpenny packet post. The packet must not exceed 2 oz. in weight, and the regulation size is the same as that of letters.

Halfpenny packets may contain printed matter, manuscripts, books and periodicals, invoices, deeds and agreements, sketches, photographs, prints, maps, etc. (when not on glass or other brittle substance), also the binding or mounting ordinarily used for the same, provided it be not made of glass or any like substance, printed cards of invitation, visiting cards, Christmas, New Year, and birthday cards (these may bear written formulas of courtesy, provided they do not exceed five words or initials, such as "at home," "P.P.C.," "Change of Address," etc.). Samples of goods, patterns of cloth, etc., cannot be sent at the halfpenny rate.

RULES CONCERNING HALFPENNY PACKETS. A halfpenny packet must be posted without a cover, or in an unfastened envelope, or cover which can be easily removed to allow of examination. It may be tied with string for security. It must not contain any communication in the nature of a letter. Should any of these regulations not be complied with, the packet will be treated as a letter. If posted unpaid, double postage will be charged.

NEWSPAPERS.

The postage is ½d. for every registered daily or weekly newspaper, whether posted singly or with others in a packet. The newspaper must be posted without a cover, or in a cover open at both ends, and must be folded in such a way as to show the title. Nothing in the nature of a letter must be enclosed, but the name and address of the sender may be written on the wrapper, a request for return in case of non-delivery, and a reference to any page in the newspaper to which the sender wishes to call attention. A newspaper or packet of newspapers may not exceed 5 lb. in weight, two feet in length, and one foot in width or depth. If any of these rules be disregarded, the newspaper packet (unless it is admissible as a halfpenny packet) will either be charged as an insufficiently paid letter, or transferred to the Parcel Post, whichever charge is the lower, with a fine of 1d. in addition to any deficient parcel postage.

Newspaper wrappers, bearing a halfpenny stamp, are sold at the rate of 1 for ¾d., or 7 for 4d. A packet of 120 costs 5s. 8½d. The price of wrappers bearing a penny stamp is 1¼d. for 1, 8½d. for 8, or a packet of 40 for 3s. 6½d.

The annual fee for registering a publication at G.P.O. for circulation within the United Kingdom as a newspaper is 5s.

,, ,, 7 lb... ..	7d.		

REGULATIONS. No parcel may exceed 11 lbs. in weight, 3 feet 6 inches in length, or 6 feet in length and girth combined. Parcels must not be posted in a letter-box, but must be handed over the counter of a post office, or given to a rural postman, and the postage must be prepaid by postage stamps affixed by the sender. The words "Parcel Post" should be written in the left hand corner above the address. The sender's name should be on the cover or inside the parcel. A certificate of the posting of a parcel may be obtained at the time, if so desired. This certificate must be filled up by the sender and handed to an officer of the Post Office for his signature. Parcels marked "to be called for" are kept for three weeks (unless they contain anything of a perishable nature). After they have remained in the office one clear day, a charge of 1d. per day is made. Parcels sent to or from the Channel Islands are liable to customs duty, and a declaration of contents must be made by the sender at

the time of posting. Rates of postage are the same as to other parts of the United Kingdom.

COMPENSATION FOR UNREGISTERED PARCELS.

Compensation to the amount of £2 will be given for loss or damage of unregistered parcels, provided the above regulations have been observed. To secure compensation on such parcels, a certificate of posting should be obtained at the time of posting. No compensation will be given for loss or damage of unregistered parcels containing money, watches, or jewellery, nor for damage done to parcels containing articles of a perishable or exceptionally fragile nature.

UNDELIVERED PARCELS.

When a parcel, bearing on its cover the name and address of the sender, cannot be delivered owing to insufficient address or any other cause, it is retained at the Head Office of the district, and a notice forwarded to the sender informing him that the parcel will be given up free of charge on application at that office, or that it will be forwarded to a fresh address or returned to him on payment of a fresh postage. If no reply is received within six days of the date of the notice, the parcel is sent to the Returned Letter Office of the District. If the parcel does not bear the name and address of the sender on the outside, it is sent to the Returned Letter Office, where it is opened and examined. If the sender's name and address is found inside, the parcel is treated in accordance with the rule given above; if not, the name of the addressee and other particulars are entered on a list and exhibited at the Returned Letter Office in question. If unclaimed by the end of three months, the parcel is disposed of. Parcels, the contents of which are likely to be offensive or worthless through decay, are liable to be disposed of forthwith.

(For re-direction and registration of parcels, see re-direction and registration of letters.)

SUNDAY AND BANK HOLIDAY HOURS.

At all offices open in London on Sunday postage stamps may be purchased and telegrams despatched. The hours are, as a rule, from 8 a.m. to 10 a.m. Letters cannot be registered in London on Sunday except at certain railway stations. At those offices open during certain hours on Good Friday and Christmas Day for the transaction of telegraph business, postage stamps are sold and letters registered.

At all provincial offices open on Sunday postage stamps are sold and letters registered during the hours the offices are open, generally from 8 a.m. to 10 a.m. The same regulation applies to Christmas Day and Good Friday. The hours at which telegraph business is transacted are as a rule the same as for postal business, but certain offices are also open for telegraph business in the afternoon or evening, and postage stamps may be purchased there at such times. In no provincial town in England and Ireland is there more than one delivery of letters on Sunday, Christmas Day, or Good Friday. Few Scotch towns have any delivery on Sacramental Feast Days. No Parcel Post, Money Order, Savings Bank, Insurance or Annuity business is transacted on Sunday, Christmas Day, or Good Friday.

At all towns where Bank Holidays are observed as public holidays, the public counters of the Head Office and branch offices are closed at 12 noon for all business except telegraph business, the acceptance of parcels, the sale of postage stamps, and the registration of letters and parcels. All village offices which are not telegraph offices close at noon. Town sub-offices, which are not telegraph delivery offices, are, as a rule, closed entirely on Bank Holidays. There is only one delivery of letters and generally one despatch on Bank Holidays.

FOREIGN AND COLONIAL POSTAGE RATES.

LETTERS.

The rate of postage to all foreign countries at the beginning of 1907 was 2½d. per ½ oz. To all parts of the British Empire, with the exception of a few unimportant possessions, the rate was 1d. per ½ oz.

N.B.—Before the close of 1907, as the Postmaster-General has announced in Parliament, will probably take effect the new arrangements of the late Postal Union Convention at Rome. THE NEW TARIFF when it comes into force will be as follows: To foreign countries 2½d. for letter not exceeding 1 oz., and 1½d. for each additional ounce or part of an ounce. To India, Egypt, and the Colonies, 1d. per oz.

LETTERS TO SOLDIERS AND SEAMEN IN THE ARMY AND NAVY ON ACTUAL SERVICE.

Letters to and from non-commissioned officers, soldiers and seamen in his Majesty's service serving abroad, the Cape Mounted Rifles and enrolled pensioners in Canada, and not exceeding ½ oz. in weight are charged 1d. If posted unpaid, or insufficiently paid, or the description of the soldier or seaman be not included in the address, the letter will be detained and returned to the writer for payment of the full postage.

POST CARDS.

Official post cards are transmissible to all parts of the world, 1d. single, 2d. reply. Inland post cards may also be used, provided the additional postage is supplied by means of postage stamps. Private post cards may be sent abroad if they are of the same size and substance as the official cards and have the words "Post Card" printed or written on the address side. Plain cards without any inscription cannot be sent abroad as post cards.

PRINTED PAPERS, ETC.

Printed papers, newspapers, books, sheets of music, visiting cards, Christmas cards, maps, catalogues, circulars, engravings, photographs, etc., may be sent at the rate of ½d. per 2 oz. [To Canada ½d. per lb., including trade journals.]

The rate for commercial papers and MSS. is the same as for the above, except that the lowest charge is 2½d. The rate for samples is the same as for printed papers, except that the lowest charge is 1d.

Packets to British Colonies or Possessions, or to non-union countries or colonies must not exceed 2 feet in length by 1 foot in width or depth, and 5 lbs. in weight; the length is limited to 18 inches and weight to 4 lbs. to foreign countries in the Postal Union. If in the form of a roll, the limits of size in either case are 30 inches in length and 4 inches in diameter.

Packets must be posted without a cover, or in an ordinary envelope left entirely unfastened, or in a cover wholly open at both ends. To ensure the safety of the contents, however, the ends of the packet may be tied with string, but it must be easy to unfasten.

Packets must be prepaid; if wholly unpaid the packets will be stopped; if not fully prepaid, double the deficiency will be charged on delivery.

UNDELIVERED CORRESPONDENCE.

Undelivered correspondence returned from places abroad is, as a general rule, treated in the same way as inland correspondence.

FOREIGN AND COLONIAL PARCEL POST.

The rules and regulations for foreign and colonial parcels are similar to the rules for inland parcels, but the sender of each parcel must make a declaration as to its contents for Customs purposes. This declaration must be made on a form provided by the Post Office for the purpose. The sender can prepay all charges to certain countries and places by paying a fee of 6d., signing an undertaking to pay on demand the amount due, and making a deposit of 1s. for each 10s. and fraction of 10s. of the value of the parcel, otherwise the Customs and other charges must be paid by the addressee. The size limit to some places abroad differs from that for inland parcels.

Certain articles are inadmissible; these include letters to nearly every place; coin, jewellery, etc., to many places; opium to China, India, etc.; fresh meat and living plants to some countries; fire-arms and ammunition to many parts.

INSURANCE OF PARCELS.

Parcels can be insured to almost all foreign countries and colonies at the following rates:

For Compensation up to	Fee	For Compensation up to	Fee.
£12	5d.	£72	1s. 5½d.
£24	7½d.	£84	1s. 8d.
£36	10d.	£96	1s. 10½d.
£48	1s. 0½d.	£108	2s. 1d.
£60	1s. 3d.	£120	2s. 3½d.

The rates are different to the United States see list following).

For Compensation up to	Fee	For Compensation up to	Fee.
£12	6d.	£72	3s. 0d.
£24	1s. 0d.	£84	3s. 6d.
£36	1s. 6d.	£96	4s. 0d.
£48	2s. 0d.	£108	4s. 6d.
£60	2s. 6d.	£120	5s. 0d.

No parcel can be insured for more than £120, and to some countries the limit is as low as £20.

MONEY ORDERS.

INLAND.

At every Money Order Office Money Orders can be obtained between the hours of 8 a.m. and 8 p.m. The poundage for these orders is:—

For sums not exceeding

£1	£3	£10	£20	£30	£40
2d.	3d.	4d.	6d.	8d.	10d.

No order may contain a fractional part of a penny.

No single Money Order can be issued for more than £40.

A Money Order may be crossed like a cheque for payment through a bank.

TELEGRAPH MONEY ORDERS.

INLAND.

Money may be transmitted by Telegraph Money Order from any Money Order Office in the United Kingdom, which is also a *despatching* office for telegrams, and may be made payable at any Money Order Office which is also an office for the *delivery* of telegrams.

The charges for Telegraph Money Orders are a poundage at the ordinary rate for Inland Money Orders, with an additional fee of 2d. for each Order and the cost of the official telegram of advice.

POSTAL ORDERS.

Postal Orders are issued and paid at all Money Order Offices in the United Kingdom during the ordinary hours of business on week-days, and in certain British Colonies and places at which British Postal Agencies are maintained.

Orders may be had for every 6d. up to 19s. 6d.; and for 20s. and 21s. Those for 6d., up to 2s. 6d. cost ½d. each; after that, up to 15s. the charge is 1d.; after that, to 21s. the charge is 1½d.

By affixing stamps (perforated ones not allowed) not exceeding 5d. in value nor three in number to the face of any one Postal Order, odd amounts may be made up, but not fractions of a penny.

An Order not cashed within three months from the last day of the month of issue will be charged a fresh commission.

FOREIGN AND COLONIAL MONEY ORDERS.

For sums not exceeding

£1	£2	£4	£6	£8	£10
3d.	6d.	9d.	1s.	1s. 3d.	1s. 6d.

and for countries on which Orders may be issued for a larger sum than £10 the charge is 3d. for every additional £2 or portion of £2.

TELEGRAPH MONEY ORDERS—Foreign and Colonial.

Telegraph Money Orders may be sent to or from certain places. The charges for those issued in the United Kingdom are the ordinary foreign and colonial Money Order poundage, with the addition of a fee of 6d. and cost of official telegram of advice.

POST OFFICE SAVINGS BANK.

Savings Bank business is transacted at every Money Order Office from the hours of 8 a.m. to 8 p.m. on week-days.

Any sum from one shilling upwards (excluding pence) may be deposited at one time, and any number of deposits made in the course of a year (ending December 31st) up to a limit of £50. The total must never exceed £200, including interest, which is at the rate of 2½ per cent.

For those unable to save more than a few pence at a time, forms are provided free of charge, to which stamps can be affixed till they amount to a shilling in value, when they are accepted for deposit. Perforated stamps not accepted.

Acknowledgment for every deposit exceeding £1 is sent to the depositor by post from the Savings Bank Department in London. For any deposit under £1, the entry of such a deposit in the depositor's book is proof of the sum deposited.

Once every year, on the anniversary of the day on which the account was opened, the depositor must forward his book to the Comptroller of the Savings Bank that the interest up to the 31st December last may be entered in it. An envelope for this purpose may be obtained at any Post Office Savings Bank.

A depositor can at any time withdraw the whole or part of his deposits, and for sums not exceeding £1 without giving notice. For sums above £1 he must forward to the Savings Bank Department a notice of withdrawal, which he can obtain at any Post Office Savings Bank. He will then receive a warrant, which he must present for payment at the post office, together with his book.

LIFE INSURANCE.

Any persons between the ages of 14 and 65 years can effect a Life Insurance for any sum from £5 to £100. Children between 8 and 14 years of age can be insured for £5.

An insurance cannot be for less than £5, but further insurances may be effected on the same life from time to time for any amount of not less than £5, until the sum reaches £100. (See "Government Insurance Tables" in *Index*).

ANNUITIES.

Immediate or deferred Annuities from £1 to £100 can be bought at any Post Office Savings Bank on the life of any one who is not less than five years of age. (See "Government Annuity Tables" in *Index*).

TELEGRAMS.

INLAND.

For the first 12 words, 6d.; for every additional word, ½d. Figures are counted at the rate of five to a word.

Stamps in payment must be affixed by the sender. The address of the receiver is charged for, but not that of the sender, if written on the back of the telegraph form.

The charge includes delivery, provided the address be within the Town Postal limits, or within three miles of a head office. When the address is beyond the free delivery limit, a charge of 3d. for each mile is made, reckoned from the office door. This charge to be prepaid by the sender. Replies not exceeding 48 words in length may be prepaid by the sender.

Telegraph forms are of two kinds, the A form (given gratis) with no stamp; and the A1 form embossed with a stamp, which may be purchased singly, or in a book of 20, price 10s. 2d.

Any one may register an abbreviated address on payment of a fee of 21s. per year.

Telegrams re-directed by wire to a second address are liable to an additional charge.

The usual hours of attendance at Telegraph Offices on week days are from 8 a.m. to 8 p.m. The usual Sunday attendance in England is from 8 a.m. to 10 a.m.; in Scotland from 9 a.m. to 10 a.m., and in Ireland from 8.25 a.m. to 10.25 a.m. The following offices are always open:—

LONDON. Central Telegraph Station (corner of Newgate Street), King's Cross Station, (closed from 1.30 p.m. to 2.30 p.m., Sundays), Liverpool Street Station, London Bridge Station, (S.E. and C. Railway), St. Pancras Station, Stratford Railway Station, Waterloo Station, West Strand Office, Willesden Junction.

THE PROVINCES. Aberdeen, Alnmouth (Ry. Sta.), Belfast (G.P.O.), Birmingham, Bristol, Cardiff, Cork, Derby, Devonport, Dover, Dublin, Dundee, Edinburgh, Exeter, Falmouth, Glasgow, Holyhead, Hull, Inverness, Leeds, Liverpool, Londonderry, Lucker Station, Manchester, Newcastle-on Tyne, Norwich, Nottingham, Penzance, Plymouth, Portsmouth, Queenstown, Sheffield, Shipley Station (Mid. Ry.), Shipley Gate Station, Southampton Docks, Swansea.

TELEPHONES.

THE TELEPHONE TRUNK LINES which connect the various Telephone Exchange areas throughout the country are the property of the Postmaster-General, and are worked by his officers. The Trunk lines can be used by callers at Post Offices which are connected with the Trunk Telephone system as well as by subscribers and callers using Telephone Exchanges.

The fees for the use of the Trunk lines are as follows:—

For 25 miles or under	Threepence.
,, 50 ,, ,, ...	Sixpence
,, 75 ,, ,, ...	Ninepence.
,, 100 ,, ,, ...	One Shilling.
,, Every additional 40 miles or fraction thereof	Sixpence.

The period of conversation is three minutes from the time when the caller has been informed that the connection is completed; but any person, by prepaying a double fee, may secure either the uninterrupted use of a Trunk line for six minutes, or the option of continuing it at the end of three minutes. In the latter case the fee for the second period is refunded when the call is completed in three minutes. No person is entitled to use a Trunk line continuously for more than six minutes.

The charge for a six minutes' conversation between 7 p.m. and 7 a.m. is the same as for a conversation of three minutes' duration in the day time. All sums payable for the use of a Trunk line must be prepaid. Callers are required to pay the Call Office fee in addition to the Trunk fee.

TELEPHONE EXCHANGES. The Postmaster-General has Telephone Exchanges in London and at a large number of Provincial towns. The rates of subscription in LONDON for the *Ordinary Message-rate Service* (including one telephone at the subscriber's premises) are as follows:—

(a) For connection with any Exchange *in* the County of London within two miles of the subscriber's premises, annual subscription £5.

Message Fees: (1) One penny for each call to a subscriber on any Exchange in the County of London. (2) Two pence for each call to a subscriber on any Exchange outside the County of London.

(b) For connection with any Exchange *outside* the County of London within two miles of the subscriber's premises, annual subscription £1.

Message Fees: (1) One penny for each call to a subscriber on the same Exchange. (2) Two pence for each call to a subscriber on any other Exchange.

N.B.—The minimum yearly amount payable by each subscriber for Message Fees is 30s.

Any person can use a call office on the Post Office system in London for a fee of two pence. The fee is payable by subscribers as well as other persons. Post Office subscribers can communicate with subscribers of the National Telephone Company in the London Exchange Area at the same rates of charge as for communication with other Post Office subscribers.

TELEPHONE COMMUNICATION WITH FRANCE AND BELGIUM. London and certain provincial towns in England can communicate by telephone with Paris, Brussels, and certain provincial towns in France and Belgium. The fee is from 8s. to 10s. for a conversation of three minutes, the same conditions and regulations in this case as in that of ordinary Trunk line conversations.

N.B.—In making appointments for conversations with correspondents in France, remember that Paris time is 9 minutes in advance of Greenwich time. But in Belgium Greenwich time is used officially for telegraphic and telephonic purposes.

MISCELLANEOUS REGULATIONS.

CUT-OUT STAMPS. Embossed or impressed postage stamps cut out of envelopes, postcards, letter-cards, newspaper wrappers, or telegram forms may be used as adhesive stamps in payment of postage, provided they are not imperfect or defaced in any way. But embossed or impressed Inland Revenue Stamps cannot be used in payment of postage, and stamps indicating the payment of a registration fee may only be used for registered correspondence.

SPOILED STAMPS. Payment of postage cannot be made by means of imperfect or defaced postage stamps. Stamps are considered defaced when marked on the face with any written, printed, or stamped characters. Stamps may, however, be perforated with initials provided that the perforated holes are no larger than those dividing one stamp from another in a sheet of stamps.

Application for the recovery of the value of spoiled or unused stamps, whether postage or revenue, can be made to the Postmaster at most large Post Offices in the provinces.

STAMPS BOUGHT FROM THE PUBLIC. Persons wishing to sell postage stamps must fill up a form obtainable at any Post Office, stating the value of the stamps, and the name, address, and occupation of the vendor. The form and stamps should then be handed in at any Money Order Office and an acknowledgment obtained. An order for payment for the face value of the stamps, less 5 per cent. commission, will be sent from the Chief Office of Account, London, Dublin, or Edinburgh. No maller amount than one pound's worth will be purchased.

INLAND REVENUE STAMPS. Stamps issued for Inland Revenue purposes, whether impressed, or adhesive, can be obtained through any Money Order Office in England and Wales, and through certain selected offices in Scotland and Ireland. Fee stamps of every kind may also be obtained.

STAMP DUTIES. Ordinary adhesive Postage and Revenue stamps may, as a rule, be used for the purpose of denoting stamp Duties up to a limit of 2s. 6d., where adhesive stamps are admissible for that purpose (Refer to "Adhesive Stamps" in *Index*). One or more Postage and Revenue Stamps may be used to make up the duty.

STAMPING OF DOCUMENTS, &c. On the prepayment of the proper duty, any executed or unexecuted documents or printed forms can be left at any Money Order Office in England and Wales, and at certain offices in Scotland and Ireland, to be forwarded for stamping, without charge for transmission. Executed documents can, as a rule, be reclaimed the second day after being left.

EXCISE LICENCES of the following descriptions and values are supplied by the Post Office:—

(1) **Dog Licence,** 7s. 6d. **Gun Licence,** 10s. 0d.

(2) **Establishment, Motor, & Private Brewers' Licences:** Licences for Male Servants and Carriage Licences, and all other Establishment Licences as well as Motor and Private Brewers' Licences are kept at Post Offices, where there is a demand for them.

(3) **Game and Gamekeepers' Licences** are issued at the London Head District Offices, and at some Money Order Offices in England and Scotland. Game Licences (but not Gamekeepers' Licences) are also issued at certain offices in Ireland. (See "Excise Tables," p. 681).

PREPAYMENT OF CORRESPONDENCE IN MONEY. At the Head Offices of the principal Metropolitan Districts, and at the Head Offices in Edinburgh and Dublin, and certain large towns in the provinces, every kind of inland correspondence, other than newspapers, may be prepaid in money, provided that the articles are chargeable with a uniform rate of postage, that the amount paid is in no case less than £1, and that the correspondence is tied in bundles representing a postage of 5s. each (or, in the case of exceptionally bulky packets, 2s. 6d. each), with the addresses arranged in the same direction.

EVASION OF POSTAGE. Nothing sent through the post may contain an enclosure directed to a name and an address different from the name and address borne on the cover.

POSTMASTERS AND THE PUBLIC. Postmasters are not allowed to return any correspondence to the writer or sender, or to delay forwarding it to its destination according to the address, even though a request to such effect be written thereon. Postmasters are not bound to weigh for the public, letters, half-penny packets or newspapers, brought for the post, but they may do so if their duty be not impeded thereby. This rule does not apply to parcels, which are tested both as to weight and size before being accepted.

EXCISE TABLES.

The Excise is derived from taxes on commodities (chiefly spirits, beer, and tobacco) produced and consumed within the country, and from licences to carry on certain trades and professions. (The subject is treated on pp. 555-63.)

The following is a schedule of excise licences, with the amount payable *annually*: :—

I. EXCISE LICENCES.

	£	s.	d.
Appraisers.	2	0	0
Licensed Auctioneers and House Agents may act as Appraisers without further licence. Licensed Appraisers may act as House Agents without further licence.

Warrant for goods	0	0	3

UNSTAMPED DOCUMENTS. The following instruments cannot legally be stamped after execution:—**Bills of exchange, bills of lading, marine policies executed in the United Kingdom, proxies, and voting-papers. And as an unstamped document has no legal force, such instruments cannot be adduced as evidence in a law-court. In most cases,** however, documents requiring stamps may be stamped after execution on payment of certain penalties and then used as evidence.

Penalties incurred by failing to stamp documents at the proper time:—	£	s.	d
Agreements under hand only after 14 days from execution	10	0	0
Attested copies after 14 days from execution	10	0	0
Charter-parties within 7 days from execution	0	4	6
Charter-parties after 7 days but within a month	10	0	0
Receipts within 14 days after they have been given	5	0	0
Receipts after 14 days, but within a month	10	0	0

† N.B.—The subject of "Stamp Duties" is treated on pp. 562-3.

* After a month receipts cannot be stamped under any circumstances. A stamp is not required on a receipt for money not paid as a debt.

(N.B.—The subject of Customs Duties is treated on p. 560.)

COMMERCIAL PRODUCTS

WITH SPECIAL REFERENCE TO

THE TRADE AND MANUFACTURES OF THE UNITED KINGDOM.

Ale or **Beer,** a fermented liquor made from various grains malted (chiefly barley). Made in all parts of the British Islands and in Germany. Burton-on-Trent and Edinburgh are famous for their *ales*, Dublin for *stout*, and London for *porter*. Bavaria and Vienna are famous for *beer*, especially *lager beer*, which is beer *laid up* or stored before use. We import a certain amount from Germany and Holland.

Alabaster, a compact variety of gypsum or sulphate of lime. The best kinds are found in Spain and Italy; inferior in Germany and France. Made into statuary, vases, tables, candlesticks, etc., etc. Florence is the centre of the trade.

Allspice, Pimento or Jamaica Pepper, is the dried berry of a West Indian plant. It is used for flavouring, and is called allspice because it combines the flavours of other spices.

Almonds are stones (with kernels) of the fruit of a tree of the plum kind. Those sold in shops are "sweet almonds." From "bitter almonds" an oil is obtained which is used medicinally, and in confectionery. Bitter almonds are imported from Morocco; sweet almonds from Valencia, Malaga, Italy and France.

Aloes, a bitter, resinous drug obtained from the juice of the leaves of aloes. It is used as a stimulating and purgative medicine. The best aloes are imported from Socotra, inferior kinds from Arabia and Cape Colony.

Alpaca is a cloth made from the long wool of the Alpaca, a species of llama found in the Andes of Peru, Chile, and Bolivia, whence it is imported. The cloth is manufactured in Yorkshire, especially at Saltaire, near Bradford.

Alum is a double sulphate of alumina and potass: white, transparent, and very astringent. It is found in China, Italy, South Scotland, and Yorkshire. It is used in calico printing, dyeing, leather dressing; by candle makers to harden and whiten the tallow, and sometimes by bakers to adulterate bread; in medicine, as an astringent.

Amber is a resinous substance found as a fossil, chiefly on the Prussian Baltic coast, also in the United States, East Indies, and East Africa. It is used for pipe mouth-pieces, beads, necklaces, handles of instruments, etc.

Ambergris, a fragrant, fatty substance, a secretion in the intestines of the Spermaceti Whale. Found floating on the ocean or picked up on the coasts of the Bahamas, Brazil, Africa, the East Indies, China, and Japan. It is used as a perfume.

Amethyst, a bluish or purple sub-species of quartz. The common amethyst is found chiefly in Brazil; also in India, Siberia, Germany, and Spain. The so-called *oriental* amethyst is really a bluish ruby or sapphire. Amethysts are used for jewellery.

Anchovy, a small fish found in the North Mediterranean and on the coasts of Portugal and France. Imported into England from the Mediterranean in casks; much used in making Anchovy sauce and paste.

Anthracite Coal is found chiefly in the United States and South Wales. It is hard and compact, burns with great heat, but without flame, and is, therefore, used in smelting iron.

Antimony is a whitish, brittle metal found in West Europe, the East Indies, North America, Siberia, and Mexico. It is imported into England chiefly from Singapore and Borneo, and is used in medicine, with lead in making printing type, and with tin for plates on which music is engraved; also in making Britannia Metal and Pewter.

Apples are grown in the temperate parts of Europe, America and Australia. Imported into England from the United States, Canada, Portugal, and Tasmania; dried apples from the United States and Canada.

Areca or **Betel Nut** is the nut of an Indian palm, largely used in the East to chew with lime and the leaves of the betel pepper. It is an important article of commerce in the East.

Arrowroot, a highly nutritious farinaceous substance, extracted from the roots of plants in Brazil, West Indies, India, and Australia. A variety called Canna Arrowroot, or "tous les mois," is produced from a species of Canna.

Arsenic, a metal of steel grey colour and brilliant lustre, used as an alloy. Oxide of arsenic or arsenious acid, or white arsenic, is a deadly poison, used in medicine and in the arts.

Asbestos is a whitish, fibrous mineral found in most countries of Europe and in Canada. It may be woven into fine cloth, which is inconsumable by fire. Blocks of it are now used in gas stoves. It is imported chiefly from Canada and Russia.

Asphalt is the solid form of Bitumen, dark in colour and very hard. It is found in Germany, France, on the shores of the Black Sea, in Switzerland, and in the West Indies. The Swiss Asphalt (from the Val de Travers) is largely used in London for street paving. The varnish called Brunswick Black is made from asphalt. We import it from Germany, British West Indies, France, and Italy.

Attar or **Otto of Roses** is a fragrant essential oil distilled in Eastern countries from rose leaves. It is very costly, 100,000 roses yielding only 180 grains. It is imported into England chiefly from the southern slopes of the Balkans. The valley of the Maritza is famous for its rose gardens, as is also the district round Grasse, in South France.

Bacon, the salted and dried flesh of pigs, except the thighs, which are similarly prepared, but sold separately as "Hams." Produced in all parts of Great Britain, the best is Wiltshire, Hants, and Yorkshire. Irish bacon is less carefully prepared. Large quantities are imported from the United States, Denmark, and Canada.

Badger Skins. Badgers are found throughout the Northern Hemisphere. Their skins are made into a coarse fur. Those of the American badger are the finest. Badgers' hairs are made into painters' and other brushes.

Balsam, a resinous, oily substance of various kinds, obtained from the juices of certain plants. *Copaiva Balsam* is obtained from a tree in the West Indies and Brazil; *Canada Balsam* comes from Canadian pines; *Balsam* or *Syrup of Tolu* from South America; *Storax* from the East Indies; *Balsam of Gilead* or *Opobalsam* from the Levant. Used for medicinal and other purposes.

Bamboos are tree grasses, natives of tropical Asia and America. The hollow stems are of immense use for building houses and bridges, for water pipes, masts, walking-sticks, fishing rods, wickerwork, etc., etc.

Bananas are the nutritious fruit of a tropical plant, and grow in large bunches, each of 60 to 150 fruits. Enormous quantities are now imported into England from the Canary Islands and the West Indies. The **Plantain,** though closely allied, requires cooking before it is eaten.

Barilla, an impure carbonate of soda, obtained by burning marine plants. It is found native in Hungary and Egypt. Used in glass and soap making, and in bleaching.

Bark is the rind of plant stems and branches, especially of trees. The bark of the *oak* is used in tanning; that of the *cork-tree* for making corks; that of the *cinchona* for quinine. Cork bark is imported from Spain, cinchona from Peru and India, bark for tanning from Natal, Belgium, Algeria, Victoria, South Australia, and Tasmania.

Barley. See *Corn.*

Barytes, the sulphate of *Baryta*, the heaviest of all earths. Used by painters as a white paint, and in the manufacture of wall papers, paper collars, etc.

Bast is the inner bark of lime trees Made into matting, it is used by gardeners for protecting plants. It is imported from Russia.

Bay-salt, a coarse salt obtained by evaporation of sea water in France, Spain, and Portugal, used in curing bacon, etc.

Bdellium, a gummy, aromatic resin obtained from trees in South-West Asia. Formerly used in compounds and plasters, such as *diachylon*. The bdellium mentioned in the book of Genesis probably was a mineral.

Bear Skins are obtained from the colder parts of the Northern Hemisphere; those of the brown bear from Russia and Siberia, of the black bear from North America, and those of the white bear from the Polar regions. They are used for clothing, and for mats, muffs, etc. Imported largely from Russia and North America.

Bear's Grease is the fat of bears, used in making pomatum.

Beaver is the fur of the beaver, once much used in the manufacture of men's hats. Still used for coats, rugs, mats, etc. The beaver was once common in Europe; now found only in North America, whence the fur is imported.

Beef, the flesh of the ox, is produced in large quantities in the British Islands, but much fresh beef is imported in a frozen state from the United States, the Argentine Republic, New Zealand, and Queensland. Salt beef is imported from the United States.

Beer. See *Ale.*

Benzoin, or **Gum Benjamin,** is a fragrant resin obtained from a tree in the East Indies. Used as a cosmetic and in making incense, pastilles for fumigation, and varnishes.

Bergamot is a perfume made from the fruit rind of a species of citron; imported from Italy.

Betel. See *Areca.*

Black-Lead, Plumbago, or **Graphite,** a mineral composed chiefly of carbon, is used in making pencils and crucibles, and as a polish for iron stoves, etc. Formerly the best was obtained from Borrowdale, Cumberland; but Ceylon is now the chief source of supply.

Boots and Shoes are made in Great Britain, but large numbers are imported from the United States, Belgium, France, and Holland.

Bottles. See *Glass.*

Borax, a salt composed of boracic acid and soda, is used in soldering, and as a flux for metals; also in assaying minerals, and in preserving meat, fish, etc. It is imported from Chile, Asiatic Turkey, and Peru.

Brandy, an ardent spirit, distilled from wine and from grape husks. France produces the best brandy, chiefly at Bordeaux, Cognac, Orleans, Rochelle, and Nantes, whence we import it.

Brazil-nuts are the nuts of a tree grown in South America. They are enclosed, 18 or 20 together, in a hard, round shell. Imported largely from Brazil.

Bristles, the short, coarse hairs of swine, chiefly used in brush making, are obtained from China, Germany, Russia, Bengal, and Hong Kong.

Butter, a fat obtained by churning the cream of milk in nearly all parts of the British Islands, except the mountains. England imports large and increasing quantities from Denmark, Russia, Normandy, Holland, New Zealand, Sweden, and Canada.

Cacao or **Cocoa** is the seeds of the Cacao tree, which is grown in the West Indies, New Granada, Brazil, Ecuador, Caracas, and Guayaquil. They are used in the preparation of the beverages, cocoa and chocolate, and of the latter in solid cakes for eating.

Camphor is a white substance with a strong, pungent smell, obtained from the oil of two trees in China, Japan, Formosa, and the East Indies, whence it is exported. It is used in medicine and as a disinfectant.

Canes are the slender stems of various grass-like palms found in the hotter parts of the East. The commonest canes used in England are *rattans*, which are readily split, and are used in making chair bottoms, baskets, etc. *Bamboos* are used in the East for building houses, bridges, etc., and in England for making furniture. *Malacca* canes are made into walking-sticks. Our chief imports are from the Straits Settlements, China, Japan, and Hong Kong.

Caoutchouc, or **India Rubber,** is an elastic substance obtained from the juices of various tropical trees. It was first used for rubbing out pencil marks, whence its name of *India Rubber*. It is now chiefly used in making waterproof clothing, and the tyres of motor cars and other carriages. It is imported in large quantities from Brazil, and in small quantities from West Africa and the United States.

Capers, the pickled buds of a plant grown in Mediterranean countries. Used chiefly as a condiment.

Carpets are largely manufactured in England and Scotland, Wilton, Axminster, and Kidderminster giving their names to different kinds. Carpets and rugs are still imported from Turkey, Persia, and the East Indies, but Great Britain is the centre of carpet manufacturing.

Cassia Bark is obtained from a species of laurel in the East Indies, India, and China. It is used as a spice, much like cinnamon, for which it is often substituted. Cassia buds are also used as a spice. Other varieties of cassia are sold as senna. It is imported from China, India, and Java.

Catechu is a brown inspissated juice, extracted from an acacia grown in India and Burma. Used in tanning, dyeing, and as a drug.

Cattle. Oxen are imported in large numbers from the United States and Canada, smaller numbers from the Argentine Republic.

Caviare is prepared from the roe of sturgeons, spiced and salted. It is a favourite delicacy in Russia, the best being produced, near Astrakan, whence small quantities are exported to Italy and England.

Cayenne Pepper is a very pungent species of pepper produced from capsicums. It is imported from the West and East Indies and Cayenne, and is used in cooking.

Cedar is the wood of various trees, the Cedar of Lebanon being the largest. Havana cedar is used in making the insides of furniture, boxes, etc. Another variety is used in pencil making. A harder kind is used in the West Indies in shipbuilding. Cedar is imported from North America, West Indies, New South Wales, etc.

Cements are mixtures used for uniting stone and brick-work. Ordinary cement is a mixture of slaked lime and sand; Portland cement is composed of chalk and clay or mud in the ratio of 3 to 1. After mixing it is dried, then burned in a kiln, then ground to powder. Cement is manufactured largely on the Lower Thames and Medway. Much is imported from Belgium.

Cheese is the curd of milk, separated from the whey and pressed into moulds. Large quantities are made in England, Cheshire, Gloucestershire, Somerset, Shropshire, and Leicestershire being the chief counties. Very large quantities are imported from Canada, the United States, Holland, Italy, France, and Belgium.

Chicory, the roasted roots of a plant that grows wild all over Europe.

Chillies. See *Cayenne Pepper.*

China or **Porcelain** is fine earthenware, called China because first brought from that country. It is now manufactured in all European countries, the Dresden, Sèvres, and Staffordshire wares being most esteemed. Our chief imports are from Germany, Holland, and France. See *Pottery*.

Cider is the fermented juice of apples, and is largely manufactured in Worcestershire, Herefordshire, Somerset, and Devon; also in Normandy, Belgium, Germany, and the United States. From the last large quantities are imported into England.

Clocks are time pieces whose motions are regulated by a pendulum. Large numbers are manufactured in England, London being the chief seat of the trade. Large numbers are imported from Belgium and the United States.

Cloves, the dried flower-buds of a plant, a native of the Moluccas and Philippines, used as a spice.

Coal is a rock of vegetable origin composed chiefly of carbon and bitumen, and found in layers under the surface of the earth. *Anthracite* coal is chiefly carbon and burns without flame. *Bituminous* coal flames when kindled. Coal is largely used for heating and cooking, for the manufacture of gas and the production of steam. It is plentiful in Great Britain, the chief coal-fields being in Northumberland, Durham, Yorkshire, Staffordshire, South Wales, Cumberland, Somerset, and the Midlands; near Edinburgh and Glasgow, and in Fife and Clackmannan; small quantities in Ireland. On the continent of Europe coal is plentiful in Belgium, France, Prussia, Silesia, Russia, and Spain. Enormous quantities are found in the United States, and smaller quantities in many other parts of the world. Great Britain exports many millions of tons annually.

Cocoa. See *Cacao*.

Cocoa Nuts are the fruit of the Cocoa-Nut Palm, which grows in most tropical countries. They are used as food, and an oil extracted from the fruit is used in the East as butter, and imported into England for candle-making. The nuts are imported chiefly from the West Indies.

Cod, a valuable food fish caught in vast numbers off the Newfoundland Bank and in the North Sea. Cod-liver oil is obtained from its liver.

Coffee is the berries of a tree grown in Brazil, Colombia, the southern United States, the British East and West Indies, and Costa Rica, whence it is imported into England. The best comes from Arabia, but by far the largest quantity comes from Brazil.

Coir is rope or yarn made from the coarse fibre which surrounds the shells of cocoa nuts; used for boat ropes, matting, and brushes. It is imported chiefly from Ceylon.

Condensed Milk. See *Milk*.

Copal is a resin obtained from two trees, one in the West, the other in the East Indies, and in Central and South America. It is largely used in the preparation of Copal Varnish.

Copper is the well-known reddish metal, next to iron the most useful in manufactures. It is very abundant, being mined in Chile, Peru, Spain, Cape of Good Hope, New South Wales, Queensland, and the United States. Our chief imports of copper ore are from Chile, Cape of Good Hope, and Peru; of copper bars, blocks, ingots, etc., from United States and Chile; of copper regulus and precipitate from Spain and Chile.

Coral is the secretion, in the form of cells, of minute marine polypes. Chief sources of supply, the Mediterranean, the Arabian Gulf, and the East Indies. The pink or red coral is used largely in England in making ornaments, buttons, beads, etc. Black Coral is much prized in India.

Cork is the thick fungous bark of a species of oak, called the cork-tree, abundant in Spain and Portugal, Italy, France, and North Africa. Cork is made into stoppers for casks and bottles, and, on account of its lightness, into lifebelts and jackets, and parts of lifeboats. It is imported chiefly from Spain and Portugal. Manufactured cork is imported also from France.

Corn or **Grain** is the seed of various plants, the chief being wheat, oats, barley, rye, and maize. Much wheat, oats, and barley is grown in the British Isles; rye in the northern countries of Europe; maize chiefly in the United States, in the hotter parts of America and South Europe. *Wheat* is used (as are oats also in Scotland) for grinding into meal for food; *oats* are used in England chiefly as food for horses; *barley* is made into malt for use by brewers and distillers; *maize*, when ground, is used in cornflour, for food; and, unground, as food for fowls, etc. England imports *wheat* chiefly from the United States, South Russia, Argentina, British India, and Canada. The amount from the United States is decreasing, that from India and Canada increasing. *Barley* is imported from South Russia, Turkey, Roumania, and the Western United States; *oats* from Russia, Roumania, and Germany; *maize* from the United States, Argentina, Roumania, and South Russia; *rye* from Canada, Russia, and the United States.

Cotton is the down which covers the seeds of the cotton plant. It is cultivated in the Southern United States, Egypt, British India, and Brazil, whence it is imported into England. Much of the oil-cake used in cattle feeding is made from cotton seeds after an oil has been extracted.

Creosote, obtained by distillation from wood-tar, is largely used for preserving timber.

Crystal is a transparent mineral of geometrical form, found in Brazil, Madagascar, Switzerland, and France; used as articles of ornament. The Cairngorm of the Scottish Highlands is a species of crystal.

Currants. See *Grapes*.

Cypress Wood is the wood of a coniferous tree, and is of unique durability. It is grown in East and North-East Europe, and in China and India; has been used in the making of mummy chests and coffins.

Dates are the nutritious fruit of the date palm, cultivated largely in Turkey, Western Asia, North Africa, and Arabia, where they form the chief article of food. They are imported into England from Smyrna, Alexandria, and Tunis, and are used as a dried fruit.

Deals are long planks of fir or pine over 7 inches in width, used largely by carpenters. They are imported from the Baltic ports of Russia, and from Sweden, Norway and Canada.

Diamonds, the most valuable of precious stones, are remarkable for hardness and brilliancy. They are found in India, Sumatra, Java, Brazil, South Africa, the Ural Mountains, and Australia. Besides being worn as ornaments, diamonds, from their extreme hardness, are used in cutting other gems and glass. Our chief imports are from South Africa, Brazil and India.

Down, the fine, soft feathers from the breast of certain birds, especially the eider duck, is imported chiefly from Scandinavia, Greenland, and Iceland. It is much used in stuffing quilts, beds, and coverlets. Swan's down is largely imported from Dantzic.

Ebony is a hard, black wood, the heart of a tree found in most hot countries in the East. It is used for inlaying, mosaic work, and turnery; also in making piano keys, musical and mathematical instruments, handles of knives, etc. It is imported chiefly from the Mauritius, Madagascar, Ceylon, and the East Indies.

Eggs. Fowls' eggs are very largely imported into England from Russia, Denmark, Germany, Belgium, and France.

Eider-down, the down taken from the nests of the Eider Duck, in Iceland and northern countries.

Emerald, The, is a precious stone of a rich green colour, obtained from Colombia, Egypt, Germany, Venezuela, and Russia.

Emery is a dark-coloured, very hard mineral, which is used in a powdered state in polishing precious stones, metals, glass, marble, etc. *Emery paper* is paper covered with emery powder and used in polishing.

Ermine is the fur of an animal of the weasel kind, which in the winter of cold latitudes becomes white, except the tip of the tail, which remains black. This white fur, made up with the tail tips at regular intervals, is used for the state robes of kings and nobles. The robes of judges and magistrates are lined with ermine, as emblematic of purity. Ermine is imported from Norway, Lapland, Siberia, and the Hudson Bay territories.

Esparto Grass is a coarse grass found in South Europe and North Africa, whence it is imported into England to be used in paper making.

Feathers are produced in the rural districts of Great Britain, chiefly those of fowls, but large quantities are imported from Germany and France. Feathers are much used in stuffing beds, cushions, etc., and enormous quantities are used in millinery for ornament. Ornamental feathers are imported chiefly from France, Holland and South Africa.

Figs are the fruit of a tree grown in all the countries of Southern Europe and North Africa. Dried and packed in boxes and baskets, they are exported to England, the best coming from Turkey and Greece.

Fir. See *Pine*.

Flax is an annual plant (*linum*) from the rotted fibrous stalks of which linen is produced. It is grown in the British Islands, but chiefly for its seed, Linseed, whence also linseed oil and oil cake are made. For the manufacture of linen, flax is imported in large quantities from Russia and Belgium. *New Zealand Flax* is the very strong fibre of a wild plant in New Zealand, and is imported for making ropes, mats, sail-cloth, etc.

Flour and **Wheatmeal** are very largely imported from the United States and Canada; smaller quantities from Austria and France.

Flowers. Fresh flowers are imported largely from France. Bulbous and tuberous roots of many flowers, chiefly daffodils, tulips, hyacinths, narcissi, anemones, and crocuses are imported in large quantities from Holland and Belgium, Haarlem being the centre of the trade. Rose trees and other plants are also imported thence. Flower seeds are chiefly imported from France. Artificial flowers are brought chiefly from France and Holland.

Furs are the skins of certain animals covered with short, fine, soft hair, prepared for use as clothing, especially in colder climates. They are chiefly imported from the northern parts of Europe and Asia (especially Russia), and North America. The most important are those of the seal, from the Pribylov Islands (Behring Sea), the ermine and sable (which see); bear (see *Bearskins*); chinchilla, a rat abundant in Chile; badger, otter, hare, rabbit,

and lynx. Rabbit skins in enormous quantities are imported from Australia, New Zealand and Tasmania, Belgium and France. Tiger and leopard skins, used chiefly as mats, reach us from India.

Gall Nuts are vegetable excrescences produced by insects depositing their eggs in the bark or leaves of plants or trees. Those produced on oaks are most valuable and are largely used in ink making, dyeing, and in medicine. They are imported from the Levant, China, and Persia.

Gin is a spirit distilled from rye and barley. It is largely used as a beverage in England, especially in London, where large quantities are manufactured.

Ginger is the hot and spicy root of a plant grown in the East and West Indies and Sierra Leone, whence it is imported. It is largely used in cookery and medicine.

Glass is a more or less transparent substance made by fusing salts and metallic oxides with silica. It is used in various ways, for windows, drinking vessels, bottles, optical instruments, vases, clock and watch faces, etc. Much glass is made in, and a certain amount exported from, Britain, but enormous quantities are imported from Belgium, Holland, and Germany. *Glass bottles* are largely imported from Germany, France, Holland, and Belgium.

Gloves are made of leather, fur, silk, cotton, and wool. They are largely made in London, Yeovil, Worcester, Woodstock. Leominster, and Ludlow. Large numbers of leather gloves are imported from France, where Paris and Grenoble are the chief seats of the manufacture; also from Germany and Belgium.

Gold is a heavy, yellow metal, very malleable and ductile. It is much used in coinage, making ornaments, and in gilding. The chief sources of supply in modern times are California, Australia, New Zealand, Transvaal, and (since 1896) the district of Klondyke, North-West Canada.

Grapes, the fruit of the vine, are imported from Spain, especially Malaga, and in a dried state, as *raisins* from Spain, Turkey, and the Levant; and as *currants*, small dried grapes, from the Ionian Islands and Patras, in Greece.

Graphite. See *Black-Lead*.

Ground Nuts, the seeds of a plant which are largely exported from West Africa and yield an oil for burning and for table use.

Guano is the dung of sea fowl, found on the coast and islands of Bolivia and Peru, whence it is sent to England to be used in a powdered state as manure. *Fish Guano* is now coming much into favour. It is made from fish and fish offal dried and ground. It reaches England in large quantities from Norway and Newfoundland.

Gum is a juice which exudes from the barks of several trees. *Gum Arabic*, the most important, is imported from North Africa, Turkey, and the East Indies. It is much used for adhesive purposes. *Copal* is used in making varnish. The best comes from the East Indies; other kinds from the West Indies, Guinea, and America. *Gum animi* is similarly used, and is imported from South America. *Tragacanth*, from Asia Minor, is used by confectioners. *Assafœtida*, imported from Persia and India, is used as a drug, and is noted for its disagreeable smell.

Gutta Percha is the hardened juice of trees found in the East Indian Archipelago. It is easily moulded and is used for a variety of purposes—such as the making of belting, hose-pipes, boot-soles, and for insulating telegraph cables. Our chief imports are from the Straits Settlements.

Hair, both of men and of animals, is extensively imported into England from various European countries, especially the northern. *Human hair* is used in the manufacture of wigs, and also as false hair. *Camel's hair* is chiefly imported from China, and is used in making artists' brushes. *Horsehair* is made into hair cloth, and is used by upholsterers for stuffing, and by fishing-line makers. Coarser kinds of hair are made into brushes. *Goat's hair* is largely imported from British India, China, Belgium, and France.

Hams. See *Bacon*.

Hats. Silk hats, with backs of wool, are manufactured in England, in London and Coventry; straw hats in Bedfordshire, Luton and Dunstable being the chief centres, but the straw plait used there is now largely imported from Tuscany and Leghorn. Panama hats are made of the narrow strips of the leaves of a plant grown in Central America, and of such extreme fineness that a hat sometimes costs many pounds. Felt hats are made in England chiefly of the fur of rabbits, hares, beavers, etc. Straw hats are imported chiefly from Belgium and France.

Hemp is a plant whose fibrous bark is used for coarse cloth and cordage. It is largely exported from Russia, Germany and Italy. A special kind, known as *Manila Hemp*, comes from the Philippine and Ladrone Islands.

Hempseed is used as a food for birds and for the extraction of oil.

Herring. In spite of the vast numbers caught by British fishermen, a large quantity is imported from Sweden and Norway.

Hides are the skins of beasts, especially the larger ones, such as the ox, cow, horse, buffalo, etc. They are imported in great quantities for the manufacture of leather, from Holland, South America, China, Russia, and the East Indies.

Hollands, or Geneva, is a kind of gin made in Holland and Germany, and flavoured with Juniper-berry juice. It is chiefly imported from Holland.

Honey is a thick, sweet fluid collected by bees from flowers. Large quantities are produced in Great Britain, but some is imported from the British West Indies.

Horns of various animals, especially the ox, deer, buffalo, and sheep are heated or soaked, and pressed into various shapes to make knife and other handles, combs, knobs, spoons, boxes, buttons, etc. Our chief imports are from British India and Argentina.

Horses, Mares, and **Geldings** are imported in large numbers from Belgium and France.

Ice. Although much is obtained at home in severe winters, enormous quantities are imported from Norway, chiefly from Wenham Lake.

Indigo is a blue colouring matter obtained from the indigo plant, a native of India, chiefly in the province of Bengal, whence most is imported.

Iron is a metal, hard, durable, and very malleable when heated. Large quantities are produced in many parts of England, South Scotland, and Wales. Its uses in manufactures, railways, ship-building, etc., etc., are too numerous to mention.

Isinglass, a gelatine prepared from the air-bladder of the sturgeon and other fishes and used in confectionery and for clarifying wines.

Ivory is a hard, white, opaque substance obtained from elephants' tusks, and also from those of the walrus and fossil mammoths. It is easily turned and polished, and is much used for making handles, parts of various instruments, billiard balls, chessmen, boxes, etc.

Jute is a fibre obtained from the inner bark of two species of plants of the lime tree order. It is manufactured into cordage, coarse cloth, and carpets, the chief seat of the manufacture in Britain being Dundee. Almost the whole of our imports of raw jute come from Bengal, but large quantities of *Jute Yarn* reach us from France and Belgium, and enormous quantities of manufactured jute from Bengal.

Lac is a resinous substance produced by an insect, principally on the banyan tree. Various forms are stick-lac, seed-lac, and shell-lac. Shell-lac is used in making varnish, sealing-wax, and hats. It is imported chiefly from Bengal.

Lace, a fabric of fine threads of linen, silk, or cotton, forming a net, used as an ornament in dress. Machine-made lace is manufactured at Nottingham, Leicester, and Derby. Brussels and Valenciennes have long been famous for lace, but these are imitated in England. Our chief imports are from France, Holland, and Belgium.

Lambskins, are largely used for clothing, those from Astrakhan especially being valued for their rich, black, glossy fur.

Lead is a heavy metal of a dull, bluish white colour. Being soft, ductile, and malleable it is much used in making water and gas pipes, and (as sheet lead) for roofing, lining cisterns, etc. It is still produced in the British Islands, but chiefly in Spain and the United States. *Pig and Sheet Lead* are largely imported from Spain, New South Wales, and the United States.

Leather is made by preparing animals' skins, so as to render them waterproof, tough, and durable, the hair being first removed. It is used in the manufacture of boots, shoes, and gloves, harness, carriages, straps for machinery, book-covers, etc. Much is produced in England, but large quantities, dressed and undressed, reach us from the United States, and of undressed from British India, chiefly Madras.

Lemons are fruits resembling oranges, but with a more acid flavour, and are grown in and imported from South Europe, especially Italy and Spain. Lemons are used an an anti-scorbutic, in making lemonade and other drinks, and preserves.

Linseed, the seed of common flax. The oil from the seed is used in the making of linoleum, in oil-painting, and in the composition of varnishes and of printers' ink. The refuse makes oil-cakes for cattle.

Lobsters are large, long-tailed, crustaceans, used for food, found largely in the Scilly Islands and Cornwall; also in Scotland. Large quantities are imported from Norway and Newfoundland. *Canned Lobsters* are largely imported from Canada.

Logwood is the wood of a tree growing about the Gulf of Mexico, especially the Bay of Campeachy. It is used chiefly in dyeing, producing purple and black colours. It is imported chiefly from Honduras, Hayti, and St. Domingo.

Macaroni is an article of food made from wheat flour into tubes, largely made in and exported from Naples. *Vermicelli* is another form in smaller tubes (little worms).

Mace. See *Nutmegs*.

Machinery of all kinds, including steam engines, mill-work, electrical, agricultural, and textile machinery, sewing machines, motor cars and cycles, bicycles, etc., etc., is imported in enormous quantities from the United States, and (less) from Germany and Belgium.

Madder, a plant grown in Holland, Belgium, and other European countries, and India. From the roots is produced a valuable dye used for silk, cotton, and woollen goods, and by artists; it is imported from the Netherlands.

Mahogany is the hard wood of a large tree in South America, of a rich brown or red colour, and capable of a high polish. It is, therefore, much used in furniture making and in internal house decoration. The logs are imported from British and French West Africa, the West Indies, Central America, and the United States.

Maize. See *Corn*.

Marble. The term is applied to any compact, calcareous stone, beautiful and capable of high polish. There are many varieties:—*Parian* and *Carrara* are white; *Verde Antico*, *Giallo Antico*, *Rosso Antico*, and *Nero Antico* being green, yellow, red, and black respectively. Our chief imports are from Italy.

Margarine or **Butterine** is a manufacture of ox and other fats sold as an imitation of butter. Large quantities are imported from Holland.

Matches are small splints of wood tipped with some chemical compound which will gnite by friction. *Safety Matches* are so tipped that they will ignite only by rubbing on a side of the box which is covered with phosphorus mixed with ground glass. Matches are manufactured in large quantities in England, especially in London, but enormous numbers of boxes are imported from Sweden, Belgium, and Norway.

Mats are textures of sedges, rushes, or straw used to lay down in halls, rooms, floors, etc.; for packing figs, dates, etc. Imported from India; bast mats from Russia.

Mercury or **Quicksilver,** a silvery-white metal, used medicinally, in separating gold and silver in ores, in the backs of looking-glasses, and in making barometers and thermometers. It is imported almost entirely from Spain.

Milk is the opaque white or yellowish liquid secretion with which mammals suckle their young. It contains all the ingredients of a perfect food, and is, therefore, used as an article of diet for adults as well as infants all over the world, that of the cow being most used. From it are made *Butter* and *Cheese* (which see). Milk is produced all over the British Islands, except in mountain districts, but *Condensed Milk* is imported in large quantities from France, Holland and Switzerland.

Millet is the grain of an East Indian grass, now largely cultivated in South Europe, as well as in the East and in Syria, Arabia, and North Africa, growing well in light, sandy soil. It is used as food for man in the East; as food for fowls in Europe. Two varieties are known as *Dhourra* and *Sorghum*.

Mohair, fine wool of the Angora goat, a native of Asia Minor, but now successfully bred in South Africa. Exported in large quantities to England.

Molasses, the viscid, uncrystallizable syrup which runs from sugar in process of refining, is imported from the United States of America, Cuba, and Egypt, and used for sweetening under the names of *Treacle* and *Golden Syrup*.

Morocco, a fine kind of leather, prepared from goat skins, coloured red or yellow. It is used in bookbinding, chair-covering, etc.

Mother of Pearl, a shining substance forming the internal part of the shell of the pearl-oyster. Exported from Queensland and Ceylon. Used for knife-handles, buttons, etc.

Motors and **Motor Cycles** are locomotive machines, propelled by electricity, steam, or petrol, and used on ordinary roads. They are largely made in Great Britain, but numbers are imported from the United States, France, Holland, and Belgium.

Nickel is a grayish metal, very ductile and malleable, much used in alloys, e.g. German or Nickel Silver, Belgian coinage; also in the manufacture of porcelain. It is found in Westphalia, in other countries of Europe, and in the United States, whence it is exported to England.

Nitrate of Soda is largely imported from Iquique in Chile and used as a manure.

Nutmegs are kernels of the fruit of a tree cultivated in the East Indies. They are ground or grated and used for flavouring. The second coat or skin of the nuts is *Mace*, which is similarly used. *Oil of Nutmegs* is obtained by crushing small nutmegs.

Nuts. Brazil nuts are the fruit of the Juvia found on the banks of the Orinoco and Amazon. Hazel nuts are imported from Spain. Portugal, and France, the best, "Barcelonas," coming from Tarragona. See also *Cocoa Nut* and *Walnut*.

Oak. The Oak is a genus of trees found in all parts of the Northern Hemisphere, except the extreme north, and also in some parts of the Southern Hemisphere. The Oak is the chief forest tree of England, and its timber was, in earlier days, most valuable in shipbuilding. It is now used in the manufacture of furniture and many other things where strength and durability are required. Much is imported from the United States and Germany. *Oak bark* is used for tanning, dyeing, and medicinal purposes. The *cork oak*, from which cork is obtained, grows in France, Portugal, and Spain, whence large quantities of cork are imported.

Oats. See *Corn*.

Oils are of various kinds. *Fixed oils* or fats are either animal or vegetable. Animal oils are obtained from whales, herrings, cod, and other fish; vegetable oils from olives, palms, linseed, nuts, castor, hemp, poppy, etc. Whale and fish oils are imported from Newfoundland, Norway, Denmark, and the United States; *Castor Oil* from Belgium, France, and Bengal; *Cocoa Nut Oil* from Ceylon, New South Wales, and Madras; *Olive Oil* from Spain and Italy; *Palm Oil* from British West Africa and Germany.

Oils, Volatile. See *Petroleum*.

Olives are the fruit of a tree grown in the southern countries of Europe and North Africa. Their chief value is in the oil which is obtained from the fleshy covering of the seeds. The oil is imported in large quantities from Spain and Italy, and is used as an article of diet, and in the manufacture of soap and woollen.

Onions are bulbs of acrid, pungent flavour, which form a valuable article of food, especially in Spain and Portugal. They are grown in all the countries of Europe, and in Asia and Africa. Spanish and Portuguese onions are milder in flavour than English garden onions, and are very largely imported into England. Large supplies also come from Egypt and Holland.

Opals are beautiful, iridescent gems, showing many different colours, which have been highly prized since very ancient times. The finest opals are obtained from the Dubnik mine, Hungary. Opals are also found in Saxony, South America, etc.

Opium is the dried juice of unripe white poppy heads, which are extensively cultivated in India, chiefly in the plain of the Ganges, Asiatic Turkey, Egypt, Persia, and China. It is used largely as a medicine, but its chief use in the East is for chewing and smoking. The chief imports into England are from Turkey and Persia.

Oranges are the fruit of a tree of the Citron genus, other well-known species being the lemon, citron, lime, and shaddock. The most common are sweet oranges, which are imported from the Spanish peninsula, Turkey, and Italy, and eaten as a fruit; and the bitter or Seville oranges from Seville, used in making marmalade and orange wine. The peel of the Seville orange is dried for use by apothecaries and candied for use in cooking.

Oyster, The, is a bivalve shell-fish very abundant round the British Islands. Artificial oyster beds are made at many points on the coast, those at Whitstable being the most noted. Young oysters to stock these beds are imported from France. Our chief imports of full grown oysters are from the United States, Baltimore being the centre of the trade.

Paper is a substance in thin sheets of different colours, used for printing and writing on, covering walls of rooms, as covers for parcels, and in many other ways. It is made of vegetable matter reduced to pulp, the chief materials now used being wood and sawdust, Esparto grass, linen and cotton rags, old paper, and other vegetable substances. England manufactures much paper of all kinds, but requires to import immense quantities from Sweden, Norway, Holland, and the United States.

Paper Making Materials are imported: *Pulp of Wood* (wet and dry), from Norway, Sweden, and Canada; *Rags* from Belgium and France; *Esparto* and other grasses from North Africa and Spain.

Paraffine is a white, transparent crystalline substance obtained by distillation from coal, coal tar, etc., and used in the manufacture of candles. Large quantities are imported from the United States.

Paraffine Oil. See *Petroleum*.

Pearls are round, white, shining bodies formed between the shell and body of a species of oyster found in Eastern seas, chiefly round Ceylon and in the Persian Gulf; also in the East Indies and on the coasts of Australia and Central America. They are used as gems for personal ornament. Ceylon pearls are considered the best.

Pepper is the fruit of a genus of shrubs cultivated in the East Indies and other tropical countries. *Black Pepper* consists of the berries dried whole and then ground; *White Pepper* is made from the dried berries with the black coat rubbed off. *Cayenne or Red Pepper* is produced by a plant in Cayenne (Guiana), and in the East and West Indies. It is extremely pungent. Pepper is used for culinary purposes. Our largest imports are from the Straits Settlements, Indo-China, and British India.

Perfumery is of two kinds, animal and vegetable. *Animal* scents or perfumes are obtained from the Musk Deer, the Spermaceti Whale, the Civet Cat, and the Beaver. *Vegetable* scents from numerous kinds of flowers and plants by distillation, the chief being the Rose, Iris, Orange, Violet, Jasmine, Tuberose, and Lavender. Perfumes are imported chiefly from France; smaller quantities from Germany and the United States. See *Attar of Roses*.

Peruvian Bark, Cinchona, or **Jesuits' Bark,** is the bitter bark of certain trees growing in Peru, Ecuador, and Bolivia. It is most valuable for medicinal purposes, quinine being obtained from it. The trees have been introduced into British India, and our chief supplies now come from Madras; smaller quantities are imported from Holland, Java, and Peru.

Petroleum, Rock Oil, Paraffine Oil, or **Naphtha,** is an inflammable liquid bitumen which exudes from the earth in Pennsylvania, at Baku, in South Russia, Roumania, Burma, Canada, etc. When refined by distillation it is used for illumination. It is also used as a lubricant. Its use for fuel, as in Motor cars, has increased the demand for it. Our chief supply comes from the United

States; out of 285,000,000 gallons imported in 1902, nearly 184,000,000 gallons came thence; while South Russia supplied 86,000,000.

Phosphate of Lime, prepared from the calcined bones of animals, is a valuable fertiliser. It is imported chiefly from United States of America, Algeria and Tunis.

Pimento. See *Allspice.*

Pine, a coniferous tree closely allied to the fir, and abundant in the northern countries of E. and W. hemispheres. Most of the timber of commerce is obtained from pines and firs. It is exported mostly in the form of deals or planks from Sweden, Norway, Russia, and Canada.

Pineapples are the luscious fruit of a plant which is a native of tropical America. It is largely cultivated in the West Indies, and many, either in their natural state or canned, are exported to England. Pineapples of superior quality are cultivated in English hothouses.

Plantain. See *Banana.*

Pitch is a black, solid residuum after the distillation of tar from wood or coal. It is also obtained from petroleum. In a liquid state it is used as a paint or varnish for preserving ships, iron and wood fences; in making asphalt for paving and patent fuel. It is imported chiefly from Russia and North Germany.

Plaiting (Straw, etc.), for the manufacture of hats, is imported chiefly from Japan, China, Belgium, and France.

Platinum is a whitish, hard, tough, malleable metal. It is obtained in small quantities from the Ural Mountains, Brazil, Central and South America. Our imports of it reach us through Belgium and France.

Plumbago. See *Black-Lead.*

Plums are the fruit of a tree, of which the *Blackthorn* or *Sloe* is the original wild form. They are extensively grown in Europe and Asia; some varieties also in North America. The *Damson* (Damascene) is a variety of plum. Plums are used for eating as fresh fruit, and also largely for preserving. *Prunes* are dried plums, and are imported from the United States. Fresh plums are largely imported from Germany, Holland, and France.

Pomegranates are the fruit of a tree commonly grown in tropical countries, and imported into England from South Europe and the West Indies.

Porcelain. See *China.*

Potatoes are the tubers of a plant which was introduced into England from Virginia in the 17th century by Raleigh. They are now grown in enormous quantities in temperate and sub-tropical countries. Although not very nutritious, they are of very great value as food. Although extensively grown in Great Britain, large quantities are imported, chiefly from France, Germany, Belgium, and the Channel Islands. Potatoes are largely used in the manufacture of starch.

Pottery. For the production of earthenware of all kinds England is unsurpassed. Its exports are in value three or four times that of its imports. Germany stands second and France third in this industry.

Poultry, including fowls, turkeys, ducks and geese, are reared in large numbers in Great Britain for the sake of their eggs, flesh, and feathers. Large quantities are, however, imported, chiefly from Russia, Belgium, France, and the United States.

Pyrites, compounds of metals with sulphur, much used in the production of sulphuric acid. Imported chiefly from Spain and Portugal.

Quicksilver. See *Mercury.*

Quinine is a very bitter alkaloid obtained from Peruvian Bark (which see), or cinchona, the salts of which are used as medicines in cases of fevers and agues, and also as a tonic. It is imported chiefly from Germany, Holland, and the United States.

Rabbits are very prolific rodents found in most warm and temperate climates. Introduced into Australia about the middle of the 19th century, they increased so fast as soon to become a plague, and large sums were spent in endeavouring to get rid of them. They are plentiful in Britain, and form a valuable article of food, but enormous numbers are imported in tins from the United States and Victoria, and, fresh, from Holland and Belgium.

Rags. See *Paper Making Materials.*

Raisins. See *Grapes.*

Rape Seed is the seed of a plant of the cabbage kind, imported from British India, South Russia, and Roumania. It is used for the manufacture of lubricating oil for machinery, the refuse being made into cake for feeding cattle.

Rice is the seed of a grass, a native of the East Indies, but now grown in all countries with a hot, moist climate. It has for ages formed almost the sole article of food in China, Japan, and Burma. Enormous quantities are imported into England from Burma and Bengal. *Carolina Rice* is imported and is superior in quality to rice from the East. *Paddy* is Indian rice with the brown husk left on. Rice, ground and unground, is largely used for food in England, and *Rice Starch* is also made from the grains.

Rosewood is the wood of various trees, the most important being grown in Brazil. The wood is generally red coloured and beautifully marked, hard, and one very suitable for making furniture. Our chief imports are from Bahia and Rio de Janeiro. Less beautifully marked rosewood is imported from India.

Ruby, The, is a transparent, red-coloured gem, the hardest and heaviest of all gems except the diamond. In value, the finest oriental rubies are superior to diamonds of the same size and quality. The finest rubies come from Upper Burmah, large numbers of inferior ones from Java, Siam, Ceylon, and China.

Rum is a spirit distilled from cane juice, treacle or molasses, produced chiefly in Guiana, the West Indies, France, and Holland. Our chief imports are from Guiana and the West Indies, rum of the best quality coming from Jamaica. *Pine Apple Rum* is West Indian rum flavoured with slices of pine apple.

Russia Leather is a leather specially prepared in Russia from cow-hides. Its flexibility makes it suitable for bookbinding. It is produced in South Russia, chiefly near Astrakhan, whence it is exported.

Rye is the grain of a hardy esculent plant allied to wheat, and forms the chief food in North Europe. It is scarcely grown in Great Britain, but considerable quantities are imported from the United States, Canada, and South Russia.

Sable is the fur of an animal of the same name of the weasel kind. The fur is dark coloured, the blackest being the most valuable. The fur is imported chiefly from Russia and North America.

Sago is a granulated starch, prepared from the pith of the sago palm, and valuable as an article of food, especially for invalids. Nearly all our imports are from the Straits Settlements.

Salmon, The, is the most important and valuable fish of British rivers. It is found in most northern seas, ascends the rivers to spawn, and the salmon fishery is an important branch of business in the Scottish and Irish rivers and lakes. The salmon is also a great object of sport to anglers. Fresh salmon, packed in ice, are imported from Norway, and tinned salmon, in enormous quantities, from the Pacific coasts of the United States and Canada.

Salt, the chloride of sodium, is largely used for seasoning certain foods, and for preserving fish, meat, etc. It is found in mines in Poland, Spain, Hungary, and in many other countries. Cheshire salt-mines are very extensive, and salt springs abound in Cheshire and Worcestershire.

Saltpetre, or Rock Salt, is nitrate of potassa and is largely used in the manufacture of gunpowder and in glass making. It is imported into England chiefly from Bengal; smaller quantities from Germany, Belgium, and Holland.

Sandal-wood is the wood of a tree growing in India, Ceylon, and the South Sea Islands. The wood takes a high polish, and is used for ornamental purposes. It has been long in use as a medicine. *Red Saunders,* another variety, is used as a dye.

Sapphire, The, is a blue precious stone, next in hardness to the diamond, found chiefly in Ceylon. The *White Sapphire,* and the *Oriental Sapphire,* which is blue, are varieties, and all are allied to the *Oriental Amethyst* (purple), the *Oriental Topaz* (yellow), and the *Oriental Emerald* (green).

Sardine, The, is a fish of the herring family, caught in large quantities in the Mediterranean and on the coasts of Portugal and France. England imports sardines tinned in olive oil, chiefly from Portugal.

Satin is a glossy, thick, silk cloth, the woof being overshot by the warp. It is manufactured chiefly at Lyons, Genoa, and Florence. Large quantities are imported by England from France.

Satin-wood is a fragrant lemon-coloured hard wood, which takes a lustrous surface, and is much used in cabinet work. It grows chiefly in India and Ceylon, but the best in the West Indies. England imports it chiefly from Singapore, Bombay, and St. Domingo.

Seals are carnivorous, amphibious mammals, found on the coasts of most cold countries, and on the ice, in both hemispheres. They have short legs of little use on land, but which serve as fins in the water. Their bodies are covered with hair or fur. There are many varieties. The common seal is found on all the west coasts of Europe (not on the ice), and even in the Mediterranean. It is hunted for its oil and its skin, which is covered with hair. Larger seals of the same class are the Sea Elephant and the Sea Leopard. The Sea Lions are also covered with hair, but the Sea Bears, or Eared Seals, are covered with the valuable fur generally known as *Sealskin.* These are killed on the Pribylov and other Islands in the Behring Sea, and elsewhere in the Arctic regions; much smaller numbers in the Antarctic regions. The skins of the hair seals, tanned, are made into shoes; and, with the fur on, into coats, etc. Our imports of common sealskin are chiefly from Newfoundland, much smaller quantities from Canada and Norway; seal-oil mostly comes from Norway.

Semolina is the larger, harder parts of wheat grains, retained in the sifting machine. It is used as a food, chiefly for puddings, and imported into England chiefly from France.

Shammy, or Chamois Leather, is a soft, pliant leather, prepared from the skins of the chamois goat, but much is manufactured from skins of common goats and sheep. It is used for cleaning purposes, and is, therefore, called *wash-leather.*

Shawls are loose coverings for the shoulders, made of wool, silk, cotton, or

hair. The most valuable shawls are Cashmere Shawls, made of the wool of goats found in Tibet. Some fine specimens are worth £200 or £300. They are manufactured in Cashmere, Tibet, and (inferior ones) in the Punjab. Shawls are manufactured in France at Lyons, Paris, and Nismes. The use of shawls is declining.

Sheep, The, is a small ruminant quadruped, most valuable to mankind for its flesh and wool. Sheep are bred in enormous numbers in Great Britain, especially in hilly districts, but very large numbers of sheep and lambs reach England from the United States, Canada, and Argentina. See also *Mutton and Wool.*

Shoes. See *Boots and Shoes.*

Silk is the fine, soft thread forming the cocoon in which the silkworm caterpillar lies in its chrysalis state. The threads are unwound from the cocoon, producing *raw silk*, and then become by various processes the silk and satin woven cloth so well known as rich materials for clothing. From China, where silk was first manufactured, the industry has extended to Japan, India, Italy, Turkey, France, Holland and Belgium. *Raw silk* is imported into England from China, France, India, and Italy; *Thrown Silk* from France and Holland; *Manufactured Silk or Satin* from France, and smaller quantities from Holland and Japan; *Velvet* from Holland; *Ribbons* from France, Belgium, and Holland.

Silver is a soft, white, ductile and malleable metal, capable of a high polish. With some alloy it is largely used for coin, plate, and various ornamental purposes; also for covering or "plating" other substances. The chief sources of supply are Germany, New South Wales, Chile, Peru, Spain, and the United States.

Skins of various animals are imported into England. See *Furs, Leather.*

Soap, used in washing, etc., is a compound of acids formed from fatty bodies and the alkalis, potash and soda. It is largely manufactured in England, but is also imported, chiefly from the United States.

Spermaceti. See *Whales.*

Spices. See *Allspice, Ginger, Nutmeg, Cassia.*

Spirits. See *Brandy, Rum, Hollands, Whisky, Gin.*

Sponges are light, fibrous substances found adhering to rocks and classed as belonging to the animal kingdom. They are dived for on the coasts of Asiatic Turkey, Greece, France, and the British West Indies, whence they are exported to England. Sponges are used in washing, and are very valuable in surgery and the arts.

Steel is iron combined with carbon and refined. It is used for instruments of war (swords, etc.). surgical instruments, tools, knives, razors, springs, and many other mechanical appliances, girders of bridges, rails, tyres, axles, etc. Steel is largely manufactured in England and Scotland, but large imports come from Belgium, Holland, the United States, and Germany; steel and iron machinery (including motors and cycles) is imported very largely from the United States, and in smaller quantities from the countries mentioned above.

Straw Plait. See *Hats.*

Sugar is a sweet, crystalline substance obtained from the sugar cane, beet, and maple trees, and other vegetables. The sugar cane is cultivated in the East and West Indies, China, India, and South America. *Brown Sugar* is the raw sugar, from which British refiners produce white, refined, *lump* or *loaf sugar. Molasses* is the viscid, uncrystallizable syrup which drains from sugar in process of refining. *Refined Sugar* (mostly beetroot) is imported in very large quantities from Germany, and smaller amounts from Holland, France, and Austria. *Unrefined* is also chiefly imported from Germany, with smaller quantities from Austria, Belgium, and France. *Unrefined cane sugar* is imported chiefly from the British West Indies, British Guiana, Java, Cuba, Argentina, and Peru.

Sulphur, or **Brimstone,** is a yellow, brittle mineral which burns with a blue flame and a suffocating odour. It is found in connection with volcanoes in Italy, the West Indies, and the Andes, also in veins in Hungary and Switzerland. It is used in the manufacture of gunpowder and sulphuric acid, and as a drug. It is chiefly imported from Sicily.

Tallow is the melted fat of animals of the sheep and ox kind, and is used in making candles and soap. England imports it chiefly from New Zealand, Australia, the United States, and Argentina.

Tapioca is a farinaceous substance prepared in the British East Indies, Java, and South America from the roots of the cassava or manioc plants, a poisonous juice with which the American Indians poisoned their arrows having been extracted.

Tar is the thick, dark, resinous substance obtained from pine and fir trees by burning them in a close, smothering heat. It is used for the same purposes as *Pitch* (which see), and is imported almost entirely from Russia. *Coal Tar* is a bituminous substance found native in coal mines.

Tea is the leaves of a shrub, a native of China and Japan, where it has been cultivated from remote ages. The leaves are dried and then roasted. *Green Teas* are produced by drying the leaves less before roasting than is done with the other teas. The Tea plant is chiefly cultivated in Ceylon, China, Japan, and Assam. Our supplies come principally from India, Ceylon, and China.

Teak is the wood of the teak tree which grows in Burma, India, Ceylon, Java, and Siam. The wood is hard and durable, and is much used for shipbuilding and general carpentry, an important quality being that it resists the attacks of white ants. England imports considerable quantities from Burma, and small amounts from Siam, Bengal, and Java.

Tin is a white, soft metal, very malleable. It was at one time very plentiful in Cornwall. Our chief supplies are now from the Straits Settlements and Chile. Tin is largely used for coating or plating other metals, such as iron. Iron, so plated, is commonly called *tin*, and is made into cooking and other vessels, boxes, etc.

Tobacco is the leaf of a plant native in America, now cultivated in most hot and temperate countries. It is largely used for *smoking*, in the form of cigars and cigarettes, and in fibrous form in pipes; for *chewing*, and, when ground, as snuff. *Unmanufactured Tobacco* is imported into England chiefly from the United States, smaller quantities from Holland and Turkey; *Cigars* from the United States; *Cigarettes* from Egypt; *Cavendish* as *Negrohead* from the Cape of Good Hope and the United States.

Tulip-wood is the wood of a large, ornamental North American tree of the magnolia kind. Imported from North America, and used in cabinet-making and coach-building.

Turpentine is an oleo-resinous substance which exudes from coniferous trees, and is chiefly produced in North America. When distilled, *spirit* or *oil of turpentine* is produced, and the residuum is *resin.* Turpentine and oil of turpentine are imported from the United States.

Turquoise, The, is a gem of bluish green colour, not of great value; used as an ornament and imported chiefly from Persia and Mexico.

Turtle, The, is a marine species of tortoise, found on the west coast of the Atlantic from Brazil to Cape Hatteras. It is highly valued for its flesh, used in making the rich turtle soup.

Velvet is a soft cloth of silk with a loose pile or shag on the surface. It was first woven in Italy, Genoa, Florence, Milan, Lucca and Venice being the chief seats of its manufacture. It was later introduced into France, and from France, after the Revocation of the Edict of Nantes, into England. Much is now imported from France and Holland. *Velveteen* is made of cotton and silk mixed.

Vicuna is the wool of the Vicuña goat found in the Andes of South America. It is made into a fine variety of cloth.

Walnut-wood is that of the common walnut tree, and is used for the making of furniture and gunstocks. The unripe fruit is made into pickle and ketchup, and the ripe is eaten as a nut. The wood is imported chiefly from Italy, Spain, and France.

Watches. London excels in watch making, but Paris, Geneva, and Neufchatel are important centres of the industry. Our chief imports are from France, Belgium, Germany, the United States, and Switzerland.

Whales are aquatic mammals of various species. The *Spermaceti Whale* is killed for the oily, flaky substance obtained from its fat and brains. It is used in making candles, ointment, etc. The *Greenland* or *Right Whale* furnishes oil to be used in making soap, etc., and as lamp oil; also *Whalebone* (which see).

Whalebone is a flexible, bone-like substance taken from the upper jaw of the right whale. It is not properly bone, but is more properly called *baleen.* It is brought by whalers from the Arctic Seas, and is used as a stiffening for stays, fans, screens, etc., and for making brushes in road-sweeping machines and other hard brushes.

Wheat. See *Corn.*

Whisky is a spirit distilled from barley or other grains, potatoes, etc. It is produced largely in Scotland and Ireland, where it is the national drink, also in England, where it is largely used.

Wine is the fermented juice of fruit, but the name is generally confined to that produced from the grape. It is manufactured in most of the warmer temperate countries in both hemispheres. The chief wine-producing countries are France, Italy, Spain, Austria-Hungary, Algeria, Portugal, Russia, and Germany. The chief wines imported from France are *Burgundy, Champagne,* and *Claret;* from Spain, *Sherry, Amontillado,* and *Malaga;* from Portugal, *Port* and *Madeira;* from Italy, *Marsala;* from Austria, *Tokay;* from Germany, *Hock* and *Moselle.*

Wool is the warm covering of the sheep and other animals in cold countries. The wool of the sheep is cut annually, and the fleeces are cleaned, spun into thread, and woven into cloth of various kinds to be used chiefly as clothing. Much sheep and lamb's wool is produced in Great Britain, but enormous quantities are imported from New Zealand, New South Wales, Cape Colony, Victoria, British India, Argentina, France, and Chile. *Merino* is a fine wool imported from Spain, and is woven into fine cloths.

Woollen Yarn is imported from Belgium, France, and Germany.

THE METRIC SYSTEM.

The Metric System of Weights and Measures is arranged decimally, each Weight or Measure being ten times the next below it.

The unit of **length** is called a **metre.**
The unit of **capacity** is called a **litre.**
The unit of **weight** is called a **gram.**

Each unit has multiples and sub-multiples: the multiples being 10, 100, and 1,000 times the unit; the sub-multiples being $\frac{1}{10}$, $\frac{1}{100}$, and $\frac{1}{1000}$ of the unit.

The multiples are named from prefixes derived from the Greek:—

deca = 10; **hecto** = 100; **kilo** = 1,000; **myria** = 10,000.

The sub-multiples are named from prefixes derived from the Latin:—

deci = $\frac{1}{10}$; **centi** = $\frac{1}{100}$; **milli** = $\frac{1}{1000}$.

The **metric standards** in the custody of the Board of Trade are:—

Measures of Length.

Double metre or 2 metres.
METRE
Decimetre or 0·1 metre.
Centimetre or 0·01 „
Millimetre or 0·001 „

Weights.

20, 10, 5, 2 kilograms.
KILOGRAM.

Notwithstanding anything in the Weights and Measures Act, 1878, the use in trade of a weight or measure of the metric system shall be lawful, and nothing in section nineteen of that Act shall make void any contract, bargain, sale or dealing, by reason only of its being made or had according to weights or measures of the metric system, and a person using or having in his possession a weight or measure of the metric system shall not by reason thereof be liable to any fine.

The Board of Trade standards which may be made under section eight of the Weights and Measures Act, 1878, shall include metric standards derived from the iridio-platinum linear standard metre and iridio-platinum standard kilogram deposited with the Board of Trade and numbered 16 and 18 respectively.—*Weights and Measures (Metric System) Act*, 1897.

BRITISH WEIGHTS AND MEASURES.

Although, each trade having its own system, there are numbers of different weights and measures, every one must, by law, be derived from the two Imperial Standards —the Imperial Standard yard and the Imperial Standard pound—and each weight or measure must also be the same throughout the United Kingdom.

Formerly, the two Imperial Standards were kept at the Houses of Parliament, but were lost when the Parliament buildings were destroyed by fire in 1834. New Standards were constructed which are now in the custody of the Board of Trade, and, in case of further mishaps, copies are also deposited at the Royal Mint, the Royal Observatory at Greenwich, the New Palace at Westminster, and with the Royal Society of London. (For the benefit of the public, sections of the Standards are exhibited on the outer walls of Greenwich Observatory; and, as probably few people know, a length of 100 feet, and another of 66 feet (1 chain) marked on brass are let into the granite step at the back of Trafalgar Square.)

Should either of the originals or copies be destroyed or injured in the future, the Board of Trade have powers to replace it by reference to either of the remaining originals or copies; so that the likelihood of fresh standards having to be constructed is very remote, unless the Standards are altered by law.

Besides the Imperial Standards, there are Secondary, or what are called Board of Trade Standards, all, of course, fractional parts or multiples of the Imperial Standards. Copies of these Board of Trade Standards are supplied to the Local Authorities for use by their Inspectors in testing weights and measures and weighing and measuring instruments. For this small fees varying from ½d. for small weights up to 10s. for a ten ton weighing instrument are charged. Inspectors are stationed at or attend at convenient intervals, all parts of the United Kingdom, thus giving ample facilities to the public for the stamping and verifying of all weights, measures, and instruments. The Inspectors have the power to test weights, measures, and instruments, used in trade, at any time; and any persons convicted of fraud are liable to fines up to the sum of £50, or for a second offence, to be imprisoned for two months with or without hard labour.

The following tables of the different Weights and Measures in use in the United Kingdom are arranged under the three convenient sections, **Measure, Weight** and **Capacity**; and full particulars of the Imperial Standards and lists of the Board of Trade Standards are given under their respective headings.

MEASURE.

Imperial Standard . . . . the yard.

The Imperial Standard yard is the straight line or distance between the centres of the two gold plugs or pins in the bronze bar used for determining the Imperial Standard yard, measured when the bar is at the temperature of sixty-two degrees Fahrenheit, and when it is supported on bronze rollers placed under it in such manner as best to avoid flexure of the bar, and to facilitate its free expansion and contraction from variations of temperature.

"The Imperial Standard, for determining the length of the Imperial standard yard, is a solid square bar, thirty-eight inches long and one inch square in transverse section, the bar being of bronze or gun-metal; near to each end a cylindrical hole is sunk (the distance between the centres of the two holes being thirty-six inches) to the depth of half an inch: at the bottom of this hole is inserted in a smaller hole a gold plug or pin, about one-tenth of an inch in diameter, and upon the surface of this pin there are cut three fine lines at intervals of about the one hundredth part of an inch transverse to the axis of the bar, and two lines at nearly the same interval parallel to the axis of the bar; the measure of length of the Imperial Standard yard is given by the interval between the middle transversal line at one end and the middle transversal line at the other end, the part of each line which is employed being the point midway between the longitudinal lines; and the said points are in this act referred to as the centres of the said gold plugs or pins; and such bar is marked 'copper 16 oz., tin 2½, zinc 1. Mr. Baily's metal. No. 1 Standard yard at 62°·00 Fahrenheit. Cast in 1845. Troughton and Sims, London.'" —*Weights and Measures Act*, 1878.

Board of Trade Standards.

(Prepared for the use of Inspectors in testing Measures—See Introduction.)

100 feet.
66 feet or a chain of 100 links.
Rod, pole, or perch.
10 feet.
6 feet or 2 yards.
5 feet.
4 feet.
3 feet or 1 yard.
2 feet.
1 foot.
1 inch divided into 12 duodecimal, 10 decimal, and 16 vinary equal parts.

Long Measure.

12 lines	=	1 inch.	*in.*
12 inches	=	1 foot.	*ft.*
3 feet	=	1 yard.	*yd.*
5½ yards	=	1 pole, or rod.	*pl.*
40 poles (220 yards)	=	1 furlong.	*fur.*
8 furlongs (1,760 yards)	=	1 mile.	*ml.*
3 miles (5,280 yards)	=	1 league.	

---

3 barleycorns	=	1 inch.
2¼ inches	=	1 nail.
3 inches	=	1 palm.
4 inches	=	1 hand (used in measuring the height of a horse.)
9 inches	=	1 span.
18 inches	=	1 cubit.
2½ feet	=	1 pace (military).
5 feet	=	1 pace (geometrical).

Square Measure.

144 square inches (*sq. in.*)	=	1 square foot.	*sq. ft.*
9 square feet	=	1 square yard.	*sq. yd.*
30¼ square yards	=	1 square pole, rod, or perch.	*sq. pl.*
40 square poles	=	1 rood.	*rd.*
4 roods	=	1 acre.	*ac.*
640 acres	=	1 square mile.	*sq. ml.*

Cubic Measure.

1728 cubic inches (*cub. in.*)	=	1 cubic foot.	*cub. ft.*
27 cubic feet	=	1 cubic yard.	*cub. yd.*

Land Measure.

Land is measured with a chain invented by Gunter in 1606. It is 22 yards long and has 100 links. Every tenth link has a piece of brass attached for the convenience of the surveyor.

7·92 inches	=	1 link.
25 links	=	1 pole.
4 poles (100 links, or 22 yards)	=	1 chain.
80 chains	=	1 mile.
62·7264 square inches	=	1 square link.
625 square links	=	1 square pole.
16 square poles	=	1 square chain.
10 square chains	=	1 acre.
30 acres	=	1 yard of land.
100 acres	=	1 hide of land.
40 hides	=	1 barony.

Nautical Measure.

Cables' lengths are nearly always used in Marine chart reckonings.

6 feet	=	1 fathom.
120 fathoms	=	1 cable's length.
2027·3 yards	=	1 knot or nautical mile.
3 knots	=	1 nautical league.
69.121 statute miles	=	1 degree.
60 knots	=	1 degree.
360 degrees	=	the circumference of the earth.

Cotton Yarn Measure.

120 yards	=	1 skein.
7 skeins	=	1 hank.
18 hanks	=	1 spindle.

Worsted Yarn Measure.

80 yards	=	1 skein.
7 skeins	=	1 hank.
144 hanks	=	1 gross.

Linen Yarn Measure.

300 yards	=	1 cut.
12 cuts	=	1 hank
10 hanks	=	1 bundle.

Cloth Measure.

This measure is used in measuring cloths, linens, silks, ribbons, muslins, tapes, tapestries, etc. Scotch and Irish linens, etc., are measured by the yard; Dutch linens bought by the Flemish ell and sold by the English ell; and tapestry is sold by the Flemish ell.

2¼ inches	=	1 nail.
4 nails	=	1 quarter (of a yard).
3 quarters	=	1 Flemish ell.
4 quarters	=	1 yard.
5 quarters	=	1 English ell.
6 quarters	=	1 French ell.

Paper and Book Measure.

24 Sheets	=	1 quire.
20 Quires (480 sheets)	=	1 ream.
516 Sheets	=	1 printer's ream.
2 Reams	=	1 bundle.
10 Reams	=	1 bale.

Paper is made in sheets of different recognized sizes, which are as follows:—

Brown Papers.

	Inches.		Inches.
Casing	46 × 36	Imperial Cap	29 × 22
Double Imperial	45 × 29	Haven Cap	26 × 21
Elephant	31 × 24	Bag Cap	24 × 19½
Double Four Pound	31 × 21	Kent Cap	21 × 18

Writing and Drawing Papers.

	Inches.		Inches.
Emperor	72 × 48	Medium	22 × 17½
Antiquarian	53 × 31	Large Post	20¾ × 16¾
Double Elephant	40 × 26¾	Copy	20 × 16
Atlas	34 × 26	Demy	20 × 15½
Colombier	34½ × 23½	Post	19 × 15¼
Imperial	30 × 22	Pinched Post	18½ × 14¾
Elephant	28 × 23	Foolscap	17 × 13½
Super Royal	27 × 19	Brief	16½ × 13¼
Royal	24 × 19	Pott	15 × 12½

Printing Papers.

	Inches.		Inches.
Double Super Royal	40 × 27½	Super Royal	27½ × 20
Double Royal	40 × 25	Royal	25 × 20
Double Demy	35½ × 22½	Medium	24 × 19
Double Large Post	33 × 21	Demy	22½ × 17½
Double Crown	30 × 20	Large Post	21 × 16½
Double Post	31 × 19	Crown	20 × 15
Double Foolscap	27 × 17	Post	19 × 15½
Imperial	30 × 22	Foolscap	17 × 13½

The sheets are folded and make various sizes, those most frequently used being given in the following table. It must be remembered that a sheet unfolded is one leaf or two pages, it being printed on both sides (thus a sheet folded once makes two leaves or four pages). The size of a book is described by the size of the folded paper (e.g. crown quarto) and the double sized papers give twice the number of leaves and pages of the same size as the single sizes. Thus a Crown quarto gives 4 leaves or 8 pages and a Double Crown quarto 8 leaves or 16 pages. The different foldings are named:—

Folio	making	2	leaves or	4 pages.
Quarto (4to)	,,	4	,,	8 ,,
Octavo (8vo)	,,	8	,,	16 ,,
Duodecimo (12mo)	,,	12	,,	24 ,,

And so on—16mo = 16 leaves, 32 pages; 32mo = 32 leaves, 64 pages; etc.

Sizes of Folded Papers.

The size of a book when bound and finished is the size of the paper before it is trimmed.

	Folio.	Quarto.	Octavo.
Imperial	15 × 22	11 × 15	7½ × 11
Super Royal	13¾ × 20	10 × 13¾	6¾ × 10
Royal	12½ × 20	10 × 12½	6¼ × 10
Medium	12 × 19	9½ × 12	6 × 9½
Demy	11¼ × 17½	8¾ × 11¼	5⅝ × 8¾
Large Post	10½ × 16½	8¼ × 10½	5¼ × 8¼
Crown	10 × 15	7½ × 10	5 × 7½
Post	9½ × 15½	7¾ × 9½	4¾ × 7¾
Foolscap	8½ × 13½	6¾ × 8½	4¼ × 6¾

Timber Measure.

1 load of unhewn timber	=	40 cubic feet.
1 load of squared timber	=	50 cubic feet.
1 ton of shipping	=	42 cubic feet.
1 stack	=	108 cubic feet.
1 cord	=	128 cubic feet.
1 Christiania standard	=	103⅛ cubic feet (120 boards, 11 feet long, 1¼″×9″)
1 Petersburg standard	=	165 cubic feet (120 deals, 6 feet long, 3″×11″)
1 London standard 1 Dublin standard	=	270 cubic feet (120 deals, 12 feet long, 3″×9″)
1 Quebec standard	=	229⅛ cubic feet (100 deals, 10 feet long, 3″×11″)
1 square	=	100 square feet (superficial).

Boards sold by the square can be any thickness, thus:—200 boards 6 ft. long by 12 ins. wide measure 12 squares whatever their thickness. If ½ inch thick, for instance, it would be 12 squares of ½ inch stuff; if ¾ inch thick, 12 squares of ¾ inch stuff and so on.

Time Measure.

60 seconds	=	1 minute.
60 minutes	=	1 hour.
24 hours	=	1 day.
7 days	=	1 week.
4 weeks (28 days)	=	1 lunar month.
28, 30 or 31 days	=	1 calendar month.
13 lunar months	=	1 year.
12 calendar months	=	1 year.
52 weeks	=	1 year.
365 days	=	1 year.
366 days	=	1 leap year.
100 years	=	1 century.

A year really consists of 365 days, 5 hours, 48 minutes, 51 seconds, that being the time occupied by the earth in revolving round the sun. This is called a Solar year. On account of this, every fourth year has an extra day in it, which is placed in February, thus making 29 days in that month. When this occurs the year is called leap year. This correction, however, is a little too much, so that *every* 100th year is not a leap year, but only those the first two figures of which are exactly divisible by 4, e.g. the year 1900 was not a leap year, but the year 2000 will be. At all other times every year is a leap year, the last two figures of which are exactly divisible by 4, as 1884 and 1892.

Thirty days hath September,
April, June, and November;
February hath twenty-eight alone,
All the rest have thirty-one.
Except in leap year, once in four,
February's days are one day more.

Diurnal Motion of the Earth.

REDUCED TO TIME.

360 degrees	=	24 hours.
15 degrees	=	1 hour.
1 degree	=	4 minutes.

NOTE.—From this it will be seen that for every degree of distance on the earth's surface, east or west, there is a difference of 4 minutes of time respectively; it is noon 4 minutes later than at Greenwich for every degree west of the first meridian, and 4 minutes earlier for every degree east of that meridian.

Astronomical Motion.

60 seconds (″)	=	1 minute (′)
60 minutes	=	1 degree (°)
30 degrees	=	1 sign of the Zodiac.
90 degrees	=	1 quadrant.

12 signs, or 4 quadrants, or 360 degrees, are the circumference of the Zodiac, which is an imaginary belt encompassing the heavens; it extends eight degrees on each side of the ecliptic. When fixed at this width it contained the paths of all the known planets, but many *ultra zodiacal* planets have since been discovered. The astronomical day now commences at 12 o'clock, midnight, and the common or civil day begins at the same time. Every circle is divided into 360 parts or degrees, which are sub-divided into minutes and seconds.

Quarter Days.

ENGLAND AND IRELAND.

Lady Day	25th March.
Midsummer	24th June.
Michaelmas	29th September.
Christmas	25th December.

SCOTLAND.

Candlemas Day	2nd February.
Whitsunday	15th May.
Lammas Day	1st August.
Martinmas	11th November.

NOTE.—Easter Sunday is the first Sunday after the first full moon on or after the 21st of March.

Whit Sunday is the seventh Sunday after Easter Sunday.

Bank Holidays are Easter Monday, Whit-Monday, the first Monday in August and Boxing Day (December 26th).

The Seasons.

Spring commences March 21st and lasts 92 days 21 hours (*Vernal Equinox*).
Summer commences June 22nd and lasts 93 days 14 hours (*Summer Solstice*).
Autumn commences Sept. 23rd and lasts 89 days 17¼ hours (*Autumn Equinox*).
Winter commences December 22nd and lasts 89 days 1 hour (*Winter Solstice*).

The longest day is the 21st of June. The shortest day is the 21st of December. Two days in the year are equally divided into day and night, viz., the 21st of March and the 23rd of September.

General.

12 articles	=	1 dozen.
12 dozen	=	1 gross.
12 gross	=	1 great gross.
20 articles	=	1 score.
5 score	=	1 hundred.
6 score	=	1 great hundred.

WEIGHT.

Imperial Standard . . . . the pound.

The Imperial Standard pound is the weight in vacuo of the platinum weight used for determining the Imperial Standard pound.

"The Imperial Standard for determining the weight of the imperial standard pound is of platinum, the form being that of a cylinder nearly 1·35 inch in height and 1·15 inch in diameter, with a groove or channel round it, whose middle is about 0·34 inch below the top of the cylinder, for insertion of the points of the ivory fork by which it is to be lifted; the edges are carefully rounded off, and such standard pound is marked, 'P.S. 1844, 1 lb.'"—*Weights and Measures Act*, 1878.

The **Avoirdupois** pound is .. .. 7,000 grains.
The **Troy** pound is .. .. .. 5,760 grains.
(The grain is one seven thousandth part of the Imperial Standard pound, and does not vary, but is the same in all tables).

Board of Trade Standards.

(*Prepared for the use of Inspectors in testing Weights—See Introduction*).

Avoirdupois Weights.—56, 28, 14, 7, 4, 2, and 1 pounds; 8, 4, 2, and 1 ounces; 8, 4, 2, 1, and ½ drams.
240 grains, commonly called 10 pennyweights.
120 grains, commonly called 5 pennyweights.
72 grains, commonly called 3 pennyweights.
48 grains, commonly called 2 pennyweights.
24 grains, commonly called 1 pennyweight.

Troy Bullion Weights.—500, 400, 300, 200, 100, 50, 40, 30, 20, 10, 5, 4, 3, 2, 1, 0·5, 0·4, 0·3, 0·2, 0·1, 0·05, 0.04, 0·03, 0·02, 0·01, 0·005, 0·004, 0·003, 0·002, 0·001 ounces.

Decimal Grain Weights.—4000, 2000, 1000, 500, 300, 200, 100, 50, 30, 20, 10, 5, 3, 2, 1, 0·5, 0·3, 0·2, 0·1, 0·05, 0·03, 0·02, 0·01 grains.

Weights to be used.

"All articles sold by weight must be sold by Avoirdupois weight; except that—

(1) Gold and silver, and articles made thereof, including gold and silver thread, lace, or fringe; also platinum, diamonds, and other precious metals or stones, may be sold by the ounce troy or by any decimal parts of such ounce.

(2) Drugs, when sold by retail, may be sold by apothecaries' weight."

Weights and Measures Act, 1878.

Avoirdupois weights being used so very much more than any others, it is not necessary to name the system when quoting those weights, but when referring to others it is better to do so (e.g. 10 ounces troy).

Troy Weight.

Jewelry made of gold is described as of so many carats. This is not the *weight* of the article, but the *proportion* of gold used in its manufacture. Articles are not made of pure gold, the metal being too soft. Each article is supposed to be divided into 24 equal parts or carats, and is composed of so many parts gold and so many alloy. Thus 18 carat gold is made of 18 parts gold and 6 alloy. The gold in general use is either 9, 15, 18, or 22 carat.

The British sovereign is 22 carat gold. It weighs 123·274 grains, 113 of which is gold.

3·17 grains	=	1 carat.	
24 grains	=	1 pennyweight.	*dwt.*
20 pennyweights	=	1 ounce.	*oz.*
12 ounces (5,760 grains)	=	1 pound.	*lb.*
100 pounds	=	1 hundredweight	*cwt.*

Apothecaries' Weight

Now only used by Physicians in their prescriptions and Chemists in dispensing the same. Avoirdupois weight is used in the British Pharmacopœia.

20 grains or minims	=	1 scruple.	℈
3 scruples	=	1 drachm.	ʒ
8 drachms	=	1 ounce.	℥

Avoirdupois Weight.

27·34375 grains	=	1 dram.	*dr.*
16 drams	=	1 ounce.	*oz.*
16 ounces	=	1 pound	*lb.*
14 pounds	=	1 stone.	*st.*
28 pounds	=	1 quarter.	*qr.*
4 quarters (112 pounds)	=	1 hundredweight	*cwt.*
20 hundredweight	=	1 ton.	
100 pounds	=	1 cental.	
8 pounds	=	1 stone of butcher's meat.	

Bread Weight.

		lbs.	ozs.	drs.
A peck loaf	=	17	6	2
A half-peck loaf	=	8	11	1
*A quartern loaf	=	4	5	8½
A quartern (or quarter-peck) of flour	=	3	8	0

* Bread is now usually sold in 4lb. and 2lb. loaves—popularly known as quartern and half-quartern loaves—which must be weighed in the presence of the purchaser (fancy bread excepted).

Bakers are forbidden by Statute to sell bread by the peck or quartern.

Butter and Cheese Weight

8 pounds	=	1 clove.
56 pounds	=	1 firkin.
84 pounds	=	1 tub.
112 pounds	=	1 Dutch cask.
224 pounds	=	1 barrel.
256 pounds	=	1 Suffolk wey.
336 pounds	=	1 Essex wey.

Coal Weight.

14 pounds	=	1 stone.
28 pounds	=	1 quarter.
112 pounds	=	1 hundredweight.
20 hundredweight	=	1 ton.
1 sack	=	1 hundredweight.
1 large sack	=	2 hundredweight.
21 tons 4 cwt.	=	1 barge or keel.
20 keels (424 tons)	=	1 shipload.
7 tons	=	1 room.

Truckloads vary, but contain from 7 to 10 tons.

"All coal shall be sold by weight only, except where by the written consent of the purchaser it is sold by boat load or by waggons or tubs delivered from the colliery into the works of the purchaser."

Where any quantity of coal exceeding two hundredweight is delivered by means of any vehicle to a purchaser, the seller of the coal shall deliver, or cause to be delivered, or to be sent by post or otherwise, to the purchaser or to his servant, before any part of the coal is unloaded, a ticket or note according to a prescribed form

Fish Weight and Measure.

1 barrel (of anchovies)	=	30 pounds.
1 quintal	=	112 pounds.
1 box (of salmon)	=	120 to 130 pounds.
4 fish	=	1 warp.
33 warps (132 fish)	=	1 long hundred.
10 long hundred (1,320 fish)	=	1 thousand.
10 thousand (13,200 fish)	=	1 last.
500 herrings	=	1 cade.
1000 sprats	=	1 cade.
600 herrings	=	1 mease.
615 herrings	=	1 maze.

Flour Weight.

14 pounds	=	1 peck or stone.
56 pounds	=	1 bushel.
40 pounds	=	1 boll.
196 pounds	=	1 barrel.
280 pounds	=	1 sack.

Hay Weight.

56 pounds	=	1 truss of old hay.
60 pounds	=	1 truss of new hay.
36 trusses	=	1 load.
1 square yard	=	6 stone of new hay.
1 square yard	=	8 stone of oldish hay.
1 square yard	=	9 stone of old hay.

Straw Weight.

36 pounds	=	1 truss.
11 cwt. 64 lbs.	=	1 load.
36 trusses	=	1 load.

Wool Weight.

Wool is weighed by wool weight only.

7 pounds	=	1 clove.
2 cloves (14 pounds)	=	1 stone.
2 stone (28 pounds)	=	1 tod.
6½ tods (182 pounds	=	1 wey.
2 weys (364 pounds)	=	1 sack.
12 sacks	=	1 last.
20 pounds	=	1 score.
12 score (240 pounds)	=	1 pack.

Miscellaneous Weights.

Almonds	basket	1¼ to 1½ cwt.
„	seron	1¼ to 2 cwt.
„	box (Jordan)	25 lbs.
Arsenic	cask	4 cwt.
Ashes	cask (American)	3½ to 5 cwt.
„	cask (Russian)	10 cwt.
Beef	tierce of 38 pieces (Irish)	304 lbs.
Bristles	cask	10 cwt.
Bullion	bar	15 to 30 lbs.
Camphor	box	1 cwt.
Candles	barrel	120 lbs.
Cassia	chest	60 lbs.
Cinnamon	bale	92½ lbs.
Clover seed	sack	2 to 3½ cwt.
„ seed	cask	7 to 9 cwt.
Cloves	matt	80 lbs.
„	chest	200 lbs.
Cochineal	seron	140 lbs.
„	bag	200 lbs.
„		70,000 insects to 1 lb.
Cocoa	bag	1 cwt.
„	cask	1¼ cwt.
Coffee	barrel or robin	1 to 1½ cwt.
„	bag	1¼ to 1½ cwt.
„	tierce	5 to 7 cwt.
„	bale (Mocha)	2 to 2½ cwt.
Copperas	hhd	16 to 20 cwt.
Cotton	bale (American)	400 to 500 lbs.
„	bale (Egyptian)	700 to 740 lbs.
„	bale (Indian)	500 to 600 lbs.
Currants	caroteel	5 to 9 cwt.
„	butt	15 to 20 cwt.
Feathers	bale	1 cwt.
Figs	drum (Turkey)	24 lbs.
„	frail (Faro)	32 lbs.
„	frail (Malaga)	56 lbs.
Flax	matt. (Dutch)	126 lbs.
„	bale (Flemish)	2 cwt.
„	bale (Russian)	5 to 6 cwt.
Galls	sack	3½ cwt.
Ginger	bag (Jamaica)	1 cwt.
„	bag (E. Indies)	1 cwt.
„	bag (Barbadoes)	1¼ cwt.
Glass	stone	5 lbs.
„	seam	24 stone.
Gum	chest (Turkey)	4 cwt.
„ Arabic	chest (E. Indies)	6 cwt.
Gunpowder	barrel	100 lbs.
„	last (24 barrels)	2,400 lbs.
Hemp	stone	32 lbs.
Hops	pocket	1 to 2 cwt.
„	bag	2½ cwt.
Honey	gallon	12 lbs.
Indigo	seron	250 lbs.
Jute	bale	400 lbs.
Lead	fodder or fother	19½ cwt.
Liquorice juice	case	1½ cwt.
Mace	case	1½ cwt.
Madder	cask	15 to 23 cwt.
Magnesia	chest	1 cwt.
Meat	stone	8 lbs.
Molasses	punch	10 to 12 cwt.
Mustard	cask (small)	9 to 18 lbs.
„	cask (large)	18 to 36 lbs.
Nutmegs	cask	200 lbs.
Nuts	bag (Barcelona)	126 lbs.
„	bag (Messina)	1½ to 1¾ cwt.
Opium	chest (Turkey)	136 lbs
„	chest (E. Indies)	149⅓ lbs.
Pepper	bag (free trade)	¼, ½, or 1 cwt.
„	bag (white)	168 lbs.
„	bag (black)	316 lbs.
Pimento	bag	1 cwt.
Plums	carton	9 lbs.
„	¼ box	20 lbs.
Pork	firkin (Irish)	100 lbs.
„	tierce	320 lbs.
Potash	barrel	200 lbs.
Potatoes	cwt.	120 lbs.
Prunes	barrel	1 to 3 cwt.
„	puncheon	10 cwt.
Quicksilver	bottle	84 lbs.
Rags	bale (Hamburg)	2¼ cwt.
„	bale (Mediterranean)	4¼ to 5 cwt.
Resin	barrel	about 2 cwt.
Raisins	drum (Valencia)	24 lbs.
„	box „	30 to 40 lbs.
„	cask (Malaga)	1 cwt.
„	box „	22 lbs.
„	cask (Turkey)	2½ cwt.
Rice	bag (E. Indies)	1½ cwt.
„	cask (America)	6 cwt.
Sago	bag	1 cwt.
Salmon	box	120 to 130 lbs.
Salt	bushel	56 lbs.
Saltpetre	bag	1½ cwt.
„	barrel	1 cwt.
Shellac	chest	1 to 3 cwt.
Soap	firkin	64 lbs.
„	barrel	256 lbs.
„	chest	3¼ cwt.
Soda	cask	3 to 4 cwt.
Steel	fagot	120 lbs.
Sugar	bag (E. Indies)	1 to 1¾ cwt.
„	matt or bag (Mauritius)	1 to 1½ cwt.
„	tierce (W. Indies)	7 to 9 cwt.
„	hhd. (W. Indies)	13 to 16 cwt.
Sugar Candy	box	70 lbs.
Tallow	cask	9 cwt.
Tapioca	barrel	1¼ cwt.
Tea	chest (Congou)	80 lbs.
„	„ (Hyson)	60 to 80 lbs.
„	„ (ordinary)	84 lbs.
Tiles	load	1,000
Tobacco	hhd	12 to 18 cwt.
Turpentine	barrel	2 to 2½ cwt.
Vermilion	bag	50 lbs.
Walnuts	bag	1 cwt.

CAPACITY.

Imperial Standard . . . . . the gallon.

The Imperial Standard gallon contains ten Imperial Standard pounds weight of distilled water weighed in air against brass weights, with the water and the air at the temperature of sixty-two degrees Fahrenheit, and with the barometer at thirty inches.

"The brass gallon marked 'Imperial Standard Gallon, Anno Domini MDCCCXXIV., Anno V. G iv Regis,' which has a diameter equal to its height, and made in pursuance of 5 Geo. 4, c. 74, s. 6., and is at the passing of this act in the custody of the Warden of the Standards, shall be deemed to be a Board of Trade Standard for the gallon."—*Weights and Measures Act*, 1878.

The Imperial Standard gallon measures 277·274 cubic inches.

Board of Trade Standards.

Prepared for the use of Inspectors in testing Measures—See Introduction.)

Measures of Capacity.—Bushel, half-bushel, peck, gallon, half-gallon, quart, pint, half-pint, gill, half-gill, quarter-gill.
Measures used in the sale of Drugs.—Fluid ounces.—4, 3, 2, 1. Fluid drachms.—4, 3, 2, 1. Minims.—30, 20, 10, 5, 4, 3, 2, 1.

Dry Measure.

4 gills	=	1 pint.
2 pints	=	1 quart.
2 quarts (4 pints)	=	1 pottle.
2 pottles (4 quarts)	=	1 gallon.
2 gallons	=	1 peck.
4 pecks	=	1 bushel.
3 bushels	=	1 bag.
4 bushels	=	1 coomb.
5 bushels (or porter's load)	=	1 sack of flour.
8 bushels	=	1 quarter.
12 bags (36 bushels)	=	1 chaldron.
5 quarters (40 bushels)	=	1 wey or horse-load.
2 weys (10 quarters)	=	1 last.

Ale and Beer Measure.

4 gills	=	1 pint.
2 pints	=	1 quart.
4 quarts	=	1 gallon.
9 gallons	=	1 firkin.
2 firkins (18 gallons)	=	1 kilderkin.
2 kilderkins	=	1 barrel.
1½ barrel	=	1 hogshead.
2 hogsheads	=	1 butt.
2 butts	=	1 tun.

Wine Measure.

4 gills	=	1 pint.
2 pints	=	1 quart.
4 quarts	=	1 gallon.
10 gallons	=	1 anker.
18 gallons	=	1 runlet.
31½ gallons	=	1 barrel.
42 gallons	=	1 tierce.
63 gallons	=	1 hogshead.
84 gallons	=	1 puncheon.
2 hogsheads	=	1 pipe or butt.
2 pipes	=	1 tun.

Miscellaneous Wine and Spirit Measures.

1 hogshead of Claret	=	46 gallons.
1 butt of Sherry	=	108 ,,
1 pipe of Port	=	115 ,,
1 pipe of Madeira	=	92 ,,
1 pipe of Teneriffe	=	100 ,,
1 pipe of Lisbon	=	115 ,,
1 butt of Malaga	=	105 ,,
1 aum of Hock, Rhine, or Moselle	=	30 ,,
1 pipe of Cape	=	92 ,,
1 hogshead of Tent	=	54 ,,
1 pipe of Marsala	=	93 ,,
1 puncheon of S. Whisky	=	112 to 120 ,,
1 puncheon of Brandy	=	100 to 110 ,,
1 hogshead of Brandy	=	45 to 55 ,,
Quarter-cask of Brandy	=	26 to 28 ,,
1 pipe of Cider	=	100 to 118 ,,
1 piece of Geneva	=	about 116 ,,
1 puncheon of Rum	=	90 to 100 ,,
1 hogshead of Rum	=	45 to 50 ,,
1 tun of Wine	=	240 ,,
1 pipe or butt	=	108 to 117 ,,

Fluid Measure.

60 Minims (drops)	=	1 drachm.
8 drachms	=	1 ounce.
20 ounces	=	1 pint.
1 Tea-spoonful	=	1 drachm.
1 Dessert-spoonful	=	2 drachms.
1 Table-spoonful	=	4 drachms.

It is advisable to use a graduated glass measure to measure the spoonfuls.

FOREIGN WEIGHTS AND MEASURES.

Full particulars of the Metric System will be found on p. 692.

ARGENTINA.

Metric System.

AUSTRIA.

The Metric System is compulsory, but the names used are the same as in Germany.

BELGIUM.

The Metric System has been long adopted but not rigidly enforced. The "Livre" = half a Kilogram and the "Aune" = $\frac{1}{10}$ of a metre are still in common use.

BOLIVIA.

Old Spanish (See *Spain*).

BRAZIL.

Measure :—Pollegada = 1.093 inches; Covado (24 Pollegadas) = 26.247 inches; Vara (40 Pollegadas) = 1.215 yards.
Weight :—Arratel = 1.0118 lbs.; Arroba (32 Arratel) = 32.384 lbs.; Quintal (100 Arratel) = 101.18 lbs.
Capacity :—Almude = 3.684 galls.; Alqueire = 1.1 bushels.
The Metric System is also in use.

CENTRAL AMERICAN STATES.

(Guatemala, Honduras, San Salvador, Nicaragua, Costa Rica.)
The Metric System and Old Spanish (See *Spain*).

CHILE.

The Metric System and Old Spanish (See *Spain*).

CHINA.

Measure :—Fan = .141 inches; Tsun (10 Fan) = 1.41 inches; Chih (10 Tsun) = 14.1 inches; Chang (10 Chih) = 141 inches; Li = 705 yards; Ching = 121 square feet.
Weight :—3 Taels = 4 ounces; 1 Cattie or Chin (16 Tael) = 1⅓ lbs.; 84 Catties = 1 cwt.; 1 Picul (100 Catties) = 133⅓ lbs.; Money Tael = 580 grains.
Capacity :—Ho = 2 pints; Sheng = 20 pints; Tou = 100 pints.
At Hong Kong and the Treaty Ports, British Weights and Measures are also used.

DENMARK.

Measure :—Tomme = 1.029 inches; Fod (12 Tommer) = 1.029 feet; Alen (2 Fod) = 2.059 feet; Favn (3 Alen) = 6.178 feet; Tonde = 1.363 acres.
Weight :—Pund (16 Unser or 32 Lod) = 1.102 lbs.; Centner (100 Pund) = 110.231 lbs.
Capacity :—Pot (3 Pœgle) = 1.699 pints; Kande (2 Pot) = 3.398 pints; Viertel (4 Kande) = 1.699 gallons; Anker = 8.07 gallons; Tonde = 28.885 gallons; Oxehoved = 48.425 gallons. Tonde (8 Skepper or 4 Fjerdingkar) = 3.823 bushels.

EGYPT.

Measure :—Pik = 27 inches; Gasab = 3 yards; Feddan = about one acre.
Weight :—Cantar (100 Rottoli) = 98.046 lbs.; Oke = 2.723 lbs.
Capacity :—The Ardeb is the only legal measure for grain, and it varies considerably. The Cairo Ardeb = 5 bushels.

FRANCE.

Metric System.

GERMANY.

The Metric System (*q.v.*) is used, but with German names as follows :—
Stab for Metre; Neuzoll for Centimetre; Strich for Millimetre; Kette for Decametre; Kanne for Litre; Schoppen for Half-litre; Fass for Hectolitre; Neuloth for Decagram; Centner = 50 Kilograms; Tonne = 1,000 Kilograms.

GREECE.

The Metric System is used, but with Greek names as follows:—

Pecheus for Metre; Gramme for Millimetre; Daktylos for Centimetre; Palame for Decimetre; Stadion for Kilometre; Skionis for Myriametre; Stremma for Are; Litra for Litre; Kybos for Millilitre; Mystron for Centilitre; Kotyle for Decilitre; Koilon for Hectolitre; Drachme for Gram; Kokkos for Centigram; Obolos for Decigram; Mna = Half Kilogram.

ITALY.

The Metric System is used, but with Italian names as follows:—

Metro for Metre; Decametro for Decametre; Ettometro for Hectometre; Chilometro for Kilometre; Miriametro for Myriametre; Decimetro for Decimetre; Centimetro for Centimetre; Millimetro for Millimetre; Ara for Are; Ettara for Hectare; Centiara for Centiare; Litro for Litre; Decalitro for Decalitre; Ettolitro for Hectolitre; Chilolitro for Kilolitre; Decilitro for Decilitre; Gramma for Gram; Decagramma for Decagram; Ettogramma for Hectogram; Chilogramma for Kilogram; Miriagramma for Myriagram; Decigramma for Decigram; Centigramma for Centigram; Milligramma for Milligram.

JAPAN.

Measure:—Ken (6 Shaku or 60 Sun) = 6 feet; Cho (60 Ken) = 119.3 yards; Ri = 2½ miles; Square Cho = 2½ acres.
Weight:—Kin (160 Momme) = 1⅓ lbs.; Tan (100 Kin) = 133⅓ lbs.
Capacity:—To (10 Sho) = 3.703 gallons; Koku (10 To) = 4.96 bushels.

MEXICO.

Metric System and Old Spanish (See *Spain*).

NETHERLANDS.

The Metric System is used, but with names as follows:—

El for Metre; Streep for Millimetre; Duim for Centimetre; Palm for Decimetre; Roede for Decametre; Mijle for Kilometre; Kan for Litre; Vingerhoed for Centilitre; Maatje for Decilitre; Vat for Hectolitre; Wigtje for Gram; Korrel for Decigram; Lood for Decagram; Onze for Hectogram; Pond for Kilogram.

NORWAY.

Metric System.

PERSIA.

Measure:—The Guz or Zer varies from 36 to 44 inches; Fersakh or Parasang = 4½ miles.
Weight:—Miskal = 47.5 grains; Maund = 6½ lbs.
Capacity:—Chenica = .289 gallons; Capicha = .578 gallons; Artata = 1.809 bushels

PERU.

Old Spanish (See *Spain*).

RUSSIA.

Measure:—Stopa (8 Vershok) = 14 inches; Arschine (2 Stopa) = 28 inches; Saschen (3 Arschine) = 7 feet; Verst (500 Saschen) = 1166.66 yards; Desatine = 2.7 acres.
Weight:—Funt = .9028 lbs.; Poud (40 Funt) = 36.114 lbs.; Berkowitz = 361.273 lbs.
Capacity:—Vedro = 2.704 gallons; Anker = 8.114 gallons; Chetvert = 46.2 gallons.

SERVIA.

Metric System.

SPAIN.

The Metric System (*q.v.*) is now used, with the simple alteration of changing the last letter of the names into o, e.g., Metro, Litro, Gramo. The Are is called the Area.

OLD SPANISH.

Measure:—Spanish foot = 10.958 inches; Vara (36 Pulgadas) varies in different parts, but is usually reckoned as 2.782 feet; Fanegada = about 1½ acres.
Weight:—Castilian Libra (16 Onzas) = 1.014 lbs; Quintal (100 Libra) = 101.443 lbs.
Capacity:—Arroba Mayor (4 Cuartillas or 8 Azumbres or 32 Cuartillos) = 3.551 gallons; Fanega = 1½ bushels.

SWEDEN.

Metric System.

SWITZERLAND.

Metric System.

TURKEY.

The Metric System is used, with the following alterations in the names:—

Arshin for Metre; Nal for Kilometre; Shinik for Decalitre; Kileh for Hectolitre; Evlek for Are; Djeril for Hectare; Oke for Kilogram; Batman = 10 Kilograms; Cantar = 100 Kilograms; Tcheki = 1000 Kilograms.

UNITED STATES.

The same as Great Britain, but the old Winchester measures are used (See below)

The following table of FOREIGN WEIGHTS and MEASURES, with English equivalents, has been drawn up at the Commercial Department of the BOARD OF TRADE.

Countries.	Foreign Weights and Measures.	British Equivalents.
Russia	Poud	36 lbs.
Sweden	Mètre	1.09 yard.
German Empire	Cubic Mètre	1.308 cubic yd.
Holland	Kilogramme	2.201 lbs.
Belgium	Quintal metrique	220.4 lbs.
France	Centner	220.4 lbs.
Switzerland	Tonneau (coals)	2.201 lbs.
Austria-Hungary	Litre	1.76 Imp. pint.
Portugal	Hectolitre (liquid)	22 Imp. gallons.
Spain	,, (cereals)	2.75 Imp. bush.
Italy	Decalitre	2.2 Imp. gallons.

Countries.	Foreign Weights and Measures.	British Equivalents.
Egypt	Cantar	99 lbs.
	Ardeb	5.445 Imp. bushels.
United States	Bushel (Winchester)	0.9694 Imp. bush. or 33 Winchester bushels = 32 Imp. bushels.
	Gallon (Old English)	0.833 Imp. gall., or 6 United States gallons = 5 Imperial gallons.
	Barrel of Flour	196 lbs.
	Short Ton	2000 lbs.
	Long Ton	2.240 lbs.
Japan	Picul	133⅓ lbs.
	Kin	1.3251 lbs.

COLONIAL WEIGHTS AND MEASURES.

Colonies and Possessions.	Colonial Weights and Measures.	British Equivalents.
British India	Maund	82⅔ lbs.
Straits Settlements, Hong Kong, Labuan, B. North Borneo and Sarawak	Tahil	1⅓ ozs.
	Pikul	133⅓ lbs.
	Catty	1⅓ lbs.
	Gantang	1 gallon.
Mauritius and Seychelles	Kilogramme	2.204 lbs.
	Metre	1.09 yards.
	Hectolitre (liquid)	22 Imp. gallons.
	,, (cereals)	2.75 Imp. bush.
	Litre	1.76 Imp. pints.
	Arpent	1.05 acre.
Cape of Good Hope	Leaguer	128 Imp. gallons.
	Muid	3 Imp. bushels.
	Morgen	2.116 acres.
	Short Ton	2000 lbs.
	Long Ton	2240 lbs.

Colonies and Possessions.	Colonial Weights and Measures.	British Equivalents.
Dominion of Canada	Gallon, Bushel, Yard	Same as Imperial.
	Short Ton	2000 lbs.
	Bushel of Wheat	60 lbs.
	,, ,, Potatoes	
	,, ,, Turnips	
	,, ,, Indian Corn	56 lbs.
	,, ,, Barley	48 lbs.
	,, ,, Oats	34 lbs.
Malta	Cafliso	4½ Imp. gallons.
	Salma	8 Imp. bushels.
	Cantar	175 lbs.
Cyprus	Oke	2.8 lbs.
	,, (liquid)	1⅜ quarts.
	Cantar (44 okes)	123.2 lbs.
	,, Aleppo (180 okes)	504 lbs.
	Kilé	1 Imp. bushel.

SCRIPTURE WEIGHTS AND MEASURES.

Long Measure.

		ft.	ins.
1 digit or finger	=	0	0·912
1 hand or palm (4 digits)	=	0	3·648
1 span (3 palms)	=	0	10·944
1 cubit (2 spans)	=	1	9·888
1 fathom (4 cubits)	=	7	3·552
1 Ezekiel's reed (1½ fathoms)	=	10	11·328
1 Arabian pole	=	14	7·104
1 Measuring line (10 Arabian poles)	=	145	11·04
		mls.	yds.
1 stadium or furlong	=	0	243¼
1 Sabbath day's journey (5 stadiums)	=	0	1,216
1 Eastern mile (2 Sabbath day's journies)	=	1	672
1 day's journey (24 Eastern miles)	=	33	288

Liquid Measure.

		gals.	pts.
1 caph	=	0	0·625
1 log	=	0	0·833
1 cab (4 logs)	=	0	3·333

1 bekah	=	5	dwts. ,,
1 shekel	=	10	,, ,,
1 maneh (60 shekels)	=	30	ozs. ,,
1 talent of silver (3,000 shekels)	=	125	lbs. ,,
1 talent of gold (6,000 shekels)	=	250	,, ,,

Time Measure.

In Holy Scripture the day is always reckoned from the sunset of the previous evening. Both the day and night were divided into four equal parts.

THE WATCHES.

The first Watch was from *sun-set* to the *third hour* of the night.
The second or middle Watch was from the *third hour* to the *sixth*.
The third Watch, or Cock-crowing, was from the *sixth* to the *ninth*.
The fourth, or Morning Watch, was from the *ninth hour* to *sun-rise*.

BRITISH AND FOREIGN COINAGE.

The monetary systems of the various countries of the world are chiefly distinguished by what constitutes standard money, which in some countries is *monometallic*, consisting of either gold or silver, and in other countries *bimetallic*, consisting of both gold and silver. By "standard money" is meant that which is legal tender to any amount. Thus in the United Kingdom gold only is unlimited tender; in India silver enjoys that prerogative; and in France both gold and silver. The great objection to silver being taken as standard money is the great variation, from time to time, in the market value of silver, whereas the price of gold is almost stationary. Hence for the purpose of international trade, in the case of countries that have a double standard, gold only forms the basis of all trade transactions, and in the case of countries with a silver standard only, the exchange rate varies with the price of silver; for obviously in dealings between different countries the standard coinage of one country will only be accepted by another at its intrinsic value, and that depends on the actual value of the metals of which it is composed.

In comparing the intrinsic value of coins of different countries the fineness of the metal must be taken into consideration as well as the weight of the coin. Gold and silver are not hard enough to stand the wear and tear of circulation, and are mixed with an alloy to harden them, e.g., the English pound is $\frac{11}{12}$ths gold and $\frac{1}{12}$th alloy, and the United States dollar is $\frac{9}{10}$ths gold and $\frac{1}{10}$th alloy.

Though in international trade money is taken at its intrinsic value only, yet for the purposes of internal trade in any country, and of the payment of debts in the country itself, a certain amount of token money may form part of the currency without any inconvenience. "Token coins" are such as contain less metal, or metals of less value, than their face value represents. Thus, in the United Kingdom silver and bronze coins are mere tokens; for the amount of silver, say in a shilling, is worth much less than $\frac{1}{20}$th of a pound. But no one objects to take such coins at their nominal value, because they are limited to small payments, no persons being compelled to accept silver for any amount over £2, or bronze for any amount over one shilling.

Each country has a certain coin which serves as a Unit to which all its other coins are related either as multiples or submultiples, e.g., the English sovereign, the French franc, and the United States dollar. Two groups of countries have formed Unions, each group adopting the same Unit and agreeing to issue coins of the same weight and fineness. They are—(1) The SCANDINAVIAN UNION, comprising Norway, Sweden, and Denmark, which have taken the *Krona* as their unit. (2) The LATIN UNION, comprising France, Belgium, Italy, Switzerland, and Greece. (Servia, Bulgaria, and Roumania have in great measure adopted the same system). All of this group have taken the *Franc*, under different names, as their unit.

BRITISH IMPERIAL COINAGE.

In the Middle Ages, in England, the standard measure of value was the pound-weight of silver, but the actual medium of exchange consisted of silver pennies. Since the primary object of coinage was to affix a stamp to certify a certain weight and fineness, all metallic money was at first what it professed to be. Thus a pound of silver was coined into 240 pennies, whose aggregate weight, accordingly, was actually a pound. This fact is preserved in the table of Troy Weight; 20 pennyweights (i.e. the weight of 20 pennies)=1 oz: 12 ozs.=1 pound. Hence originally 240 silver pennies weighed one pound, and from this fact has arisen the present relation between a penny and a pound sterling.

The following table gives the weights of the coins when issued, the amount of variation allowed to the Mint (called the "Remedy"), and the least a gold coin can weigh without being withdrawn from circulation.

Coin.	Standard Weight.	Least Current Weight.	Remedy.
GOLD:	grains.	grains.	grains.
Sovereign	123·27447	122·50000	0·20000
Half-Sovereign	61·63723	61·12500	0·10000
SILVER:			
Crown	436·36363	..	2·000
Half-Crown	218·18181	..	1·264
Florin	174·54545	..	0·997
Shilling	87·27272	..	0·578
Sixpence	43·63636	..	0·346
Threepence	21·81818	..	0·212
BRONZE:			
Penny	145·83333	..	2·91666
Halfpenny	87·50000	..	1·75000
Farthing	43·75000	..	0·87500

There are also two gold coins, of the value of 5 sovereigns (**£5**) and 2 sovereigns (**£2**) respectively, issued on special occasions, the last being King Edward VII.'s Coronation year, 1902.

The **gold coins** are made of metal composed of $\frac{11}{12}$ths pure gold and $\frac{1}{12}$th alloy.

The **silver coins** are made of metal composed of $\frac{37}{40}$ths of fine metal and $\frac{3}{40}$ths of alloy.

The **bronze coins** are made of metal composed of 95 % of copper, 4 % of tin, and 1 % of zinc.

Bank of England Notes are issued for £5, £10, £20, £50, £100, £200, £500, and £1,000, and can be exchanged for gold at the Bank of England at any time during the legal Banking hours. They are legal tender in England and Wales.

Turkey	Turkish £=100 piastres	18 0
United States	Dollar (gold)=100 cents	4 1
Uruguay	Peso (gold)=100 centimos	4 2

* The exchange value of paper money fluctuates considerably in countries where it is not readily convertible, at its face value, into gold.

OBS. From the above table it will be seen that many colonies and dependencies of the Empire have their own system of coinage, although British money is current in most of them. In Hong Kong and Labuan, the Mexican, British, and Hong Kong silver dollars (about 2s. 2d.) are current. In the **Straits Settlements** the Straits Settlements silver dollar (about 2s. 4d.) is the standard coin of the colony. Since 31st August, 1904, the Mexican and British silver dollars have ceased to be legal tender there.

In countries where silver is legal tender to any amount the exchange varies greatly, as in **Central America**, where the "peso" about 1s. 10d., at the present date (1906), is the standard coin. In **China**, the only coins in use are a British, Hong Kong, or Mexican silver dollar, and a native coin called "cash" (made of copper, iron and tin), about twenty-five of which are only worth a penny. In the Exchange Rates relating to China the value of the tael is quoted. The "tael" is a weight of silver about 2s. 9d. in value, and it is equivalent to 10 "mace" or 100 "candareens." In **Persia**, the standard coin is a "kran," the intrinsic value of which, at the present price of silver (31d. an ounce), is only 4½d. (Refer to "Exchange Rates" in *Index*.)

MONEYS COINED 1895—1903.

* Double Florins are not now coined. The total value of these coins issued from the date of their introduction in 1887 until 1890, when the coinage was discontinued, amounted to £533,125. Of these £238,525 have already been withdrawn from circulation.

†Coins struck for distribution by the Sovereign of England to poor persons, at Whitehall, on Maundy Thursday (the Thursday in Passion Week). These pieces are only now struck for this purpose and not for ordinary circulation.

SIMPLE INTEREST TABLE.

From the following table the simple interest on any amount can be obtained for any number of days from 1 to 365.

In the table the interest on £100 for each day, 1 to 365, at 2 %, 3 %, 4 %, and 5 % is given. It will be found that any rate per cent. can be obtained from these: e.g. 2½ % is one half of 5 %; 4¼ % is 4 % + one-eighth of 2 %; 3¾ % is 3 % + one fourth of 3 %.

Having found the interest on £100, the interest on any amount is easily calculated.

EXAMPLES.

Find the interest on £40 for 73 days at 2 %:—

The table shows the interest on £100 is 8s. The interest on £40 is therefore $\frac{40}{100}$ of 8s. = 3s. 2½d.

Find the interest on £130 for 146 days at 2½ %:—

The table shows the interest on £100 at 5 % is £2 0s. 0d. Half of this, £1 0s. 0d., is therefore the interest on £100 at 2½ %. The interest on £130 is therefore $\frac{130}{100}$ of £1 0s. 0d. = £1 6s. 0d.

Find the interest on £75 for 120 days at 3¼ %:—

The table shows the interest on £100 at 3 % is 19s. 8¾d. and at ¼ % (i.e. one eighth of 2 %) is 1s. 7¾d. 19s. 8¾d. + 1s. 7¾d. = £1 1s. 4½d. = the interest on £100 at 3¼ %. The interest on £75 is therefore $\frac{75}{100}$ of £1 1s. 4½d. = 16s. 0½d.

Interest on £100 at 2 %, 3 %, 4 % and 5 % for any number of days from 1 to 365.

COMPOUND INTEREST TABLES.

Giving:—The amount a sum accumulates to at Compound Interest: The sum an Annuity amounts to: Present Values of Annuities, Leases, etc.: Capitalization of Incomes, Pensions, etc.: Repayment of Loans.

The working out of any kind of calculation where Compound Interest is concerned is naturally a long process, but with the aid of the Tables given on the next two pages, it will be found comparatively simple.

Table A gives the amount £1 will accumulate to at 2½ %, 3 %, 3½ %, 4 %, 4½ %, and 5 %, for any number of years from 1 to 60.

Table B gives the sum an Annuity of £1 will amount to at 2½ %, 3 %, 3½ % 4 %, 4½ % and 5 % for any number of years from 1 to 60.

From these two Tables a number of calculations can easily be made, as the following explanations will show.

To find the amount a sum will accumulate to at Compound Interest at a given rate for a given number of years.

Table A gives the amount £1 will accumulate to: Multiply this by the sum and the result is the amount required.

Example:—Find the amount £75 will accumulate to at Compound Interest in 23 years at 4 %.

Table A shows that £1 in 23 years at 4 % accumulates to £2·464712.

2·464712 × 75 = 184·8534 = £184 17s. 1d. = the amount £75 accumulates to in 23 years at 4 %.

To find the sum to be invested to accumulate to a given amount at Compound Interest at a given rate for a given number of years.

Table A gives the amount £1 will accumulate to; Divide the amount by this and the product is the sum required.

Example:—A child is born and it is required to invest a sum at 3 % compound interest for the child to receive £1,000 when it is 21 years of age.

Table A shows that £1 in 21 years at 3 % accumulates to £1·860296.

1,000 ÷ 1·860296 = 537·5488 = £537 10s. 11d. = the sum to be invested.

To find the sum an Annuity will amount to at a given rate for a given number of years.

Table B gives the sum an Annuity of £1 will amount to: Multiply this by the Annuity and the result is the sum required.

Example:—Find the sum an Annuity of £260 will amount to at 3 % in 52 years.

Table B shows that an Annuity of £1 at 3 % in 52 years amounts to £121·696302.

121·696302 × 260 = 31,641·038520 = £31,641 0s. 9d., the sum an Annuity of £260 amounts to in 52 years at 3 %.

To find the present value of an Annuity at a given rate.

If it is a Life Annuity, the number of years the Annuitant may expect to live will be found in the table at the foot of this page.

Multiply the Annuity by the figure given in Table B and divide the result by the figure given in Table A.

Example (*):—Find the present value of an Annuity of £60 received by a person 22 years of age, at 5 %.

The Table below shows that a person 22 years of age may expect to live 40 years.

The figure in Table B for 40 years at 5 % is 120·799797.

The figure in Table A for 40 years at 5 % is 7·039993.

$\frac{120·799797 \times 60}{7·039993} = 1029·5448 = £1029\ 10s.\ 11d.$ = the present value required.

What Annuity will a stated sum buy at a given rate?

Multiply the sum by the figure given in Table A and divide the result by the figure given in Table B.

Example:—A person 67 years of age has £1,000, what Annuity will this purchase at 3½ %?

The expectation of life is about 10 years.

The figure in Table A for 10 years at 3½ % is 1·410598.

The figure in Table B for 10 years at 3½ % is 11·731397.

$\frac{1,000 \times 1·410598}{11·731397} = 120·2412 = £120\ 4s.\ 10d.$ = the Annuity £1,000 should buy.

To find the present value of a Lease at a given rate.

This is worked in the same way as an Annuity, *e.g.*, the last example (*) but one given above could read.

Find the present value of a Lease bringing in £60 per annum (after all deductions for repairs, etc., are made) which has 40 years to run; at 5%. The answer would be the same as the Annuity, £1029 10s. 11d.

To find the capital value of an income or pension.

This is really the present value of the income or pension, and example (*) could read as follows:

It is desired to capitalize a life income (or pension) of £60 per annum received by a person 22 years of age, at 5 %. The answer would be the same as the Annuity, £1029 10s. 11d.

To find the equal annual instalment payable for a Loan for a stated period at a given rate.

Multiply the amount borrowed by the figure given in Table A and divide the result by the figure given in Table B.

Example:—A loan of £5,400 is borrowed at 5 % and is to be repaid in 10 equal annual instalments.

The figure in Table A for 10 years at 5 % is 1·628894.

The figure in Table B for 10 years at 5 % is 12·577890.

$\frac{1·628894 \times 5400}{12·577890} = 699·3245 = £699\ 6s.\ 6d.$ = the annual instalments required.

EXPECTATION OF LIFE.

There are a number of Mortality Tables, compiled at different times and for different periods, giving exact figures of the expectation of life at all ages. The figures given in the following table are, however, quite exact enough for ordinary purposes.

Age.	*	Age.	*	Age.	*	Age.	*	Age.	*	Age.	*	Age.	*	Age.	*
0	40	**20**	41	**32**	33	**44**	24½	**56**	16½	**68**	9½	**80**	5	**92**	2
5	50	**21**	41	**33**	32	**45**	24	**57**	16	**69**	9	**81**	4½	**93**	2
10	48	**22**	40	**34**	31	**46**	23½	**58**	15	**70**	8½	**82**	4	**94**	2
11	48	**23**	39	**35**	31	**47**	22½	**59**	14½	**71**	8	**83**	4	**95**	2
12	47	**24**	39	**36**	30	**48**	22	**60**	14	**72**	7½	**84**	4	**96**	1½
13	46	**25**	38	**37**	29	**49**	21	**61**	13½	**73**	7	**85**	3½	**97**	1½
14	45	**26**	37	**38**	29	**50**	20	**62**	13	**74**	7	**86**	3½	**98**	1
15	45	**27**	36	**39**	28	**51**	19½	**63**	12½	**75**	6½	**87**	3	**99**	1
16	44	**28**	36	**40**	28	**52**	19	**64**	12	**76**	6	**88**	3	**100**	1
17	43	**29**	35	**41**	27	**53**	18	**65**	11	**77**	6	**89**	2½		
18	43	**30**	34	**42**	26	**54**	17½	**66**	10½	**78**	5½	**90**	2½		
19	42	**31**	33	**43**	25	**55**	17	**67**	10	**79**	5	**91**	2½		

* These columns give the expectation of life of a person at the age given in the preceding column.

COMPOUND INTEREST TABLES.

TABLE A.

The amount £1 accumulates to at different percentages for any number of years from 1 to 60.

Years.	2½ %	Years.	3 %	Years.	3½ %	Years.	4 %	Years.	4½ %	Years	5 %
1	1·025	1	1·03	1	1·035	1	1·04	1	1·045	1	1·05

×	13	14	15	16	17	18	×	19	20	21	22	23	24	25	×

The above table gives, at a glance, the product of any two numbers from 13 to 25 inclusive. Find one of the numbers in one of the vertical lines marked × × × and the other in one of the horizontal lines marked × × ×, and where these lines cross will be found the product. Thus the product of 23 × 19 will be found to be 437.

The square of each number will be found enclosed in a thick lined space. Thus the square of 21=441.

STANDARD TIME.—In Great Britain, Greenwich Time is adopted as the *Standard Time* all over the country. The same is also adopted over Belgium, Holland, and Spain. In France, Paris time (9 minutes *fast* of Greenwich) is the standard. In countries of great extent it is impossible to adopt one *Standard Time* and meridians 15° apart have been chosen, and each place within 7½° of these meridians have the same *Standard Time*. Thus: Mid Europe (Sweden, Denmark, Germany, Austria, Switzerland Italy, and Servia), 1 hour *fast* of Greenwich; East Europe (Roumania, Bulgaria, Turkey, Egypt), 2 hours *fast* of Greenwich; Cape Colony, 1½ hours *fast* of Greenwich; Natal, 2 hours *fast* of Greenwich; India, 5½ hours *fast* of Greenwich; Burma 6½ hours *fast* of Greenwich; Japan, 9 hours *fast* of Greenwich; West Australia, 8 hours *fast* of Greenwich; South Australia, 9½ hours *fast* of Greenwich; New South Wales, Queensland, Victoria, and Tasmania, 10 hours *fast* of Greenwich, New Zealand, 11½ hours *fast* of Greenwich; America—Inter-Colonial 4 hours, Eastern 5 hours, Central 6 hours, Mountain 7 hours, and Pacific 8 hours *slow* of Greenwich.

GUIDE TO EDUCATION AND THE PROFESSIONS.

PREFATORY REMARKS ON CHOOSING A CALLING.

This section of the work consists of two distinct parts which are, however, closely related to each other. The first part is intended to show how best to obtain a good general education, whilst the aim of the second part is to indicate how best to turn this education to practical account. In the part on EDUCATION a parent may ascertain the facilities offered for enabling a boy or girl of more than ordinary ability to ascend the educational ladder at the least expense. In the part on the PROFESSIONS a parent, it is hoped, may be guided in selecting that career for his son (or daughter) which seems to accord best with his natural aptitude and ability, and which, in view of financial considerations and local circumstances, seems most practicable. No attempt has been made to include all kinds of callings suited to a well-educated man or woman, but only such as admit of the employment of a large number of persons, whilst limited to those who follow a particular course of study and training.

It may be useful to indicate here some of the points to be considered in *Choosing a Calling* even before treating of Education, for to a certain extent the proposed calling should determine the kind of Education to be given at school or college. At the outset it must be clearly understood that there is no royal road to success, and that whatever the occupation adopted, everything will depend upon the qualities brought to bear in working it. It is not of course true that all occupations offer equal chances of success, but each one has its advantages and disadvantages, and these are more evenly balanced than is generally supposed. No one can formulate any exact rules to be followed in the choice of a calling. In practical life we must be guided by probabilities. Certainty in regard to the future is unattainable. Businesses are ever altering in circumstances and character. Time, locality, discovery, invention, political and social changes, and a hundred other matters are ever affecting the prospects of trades and professions. Nevertheless, much may be done to avoid fatal blunders in the choice of a profession. There are considerations which will affect different persons in different ways, but which none can wisely ignore.

If this question of choosing of a calling affects one class more than another, it is that large section of the community known as the "Middle Class." Among the upper circles of society a parent has usually some clear course before him. It is a part of the traditions of his order that his sons shall go into the Church, the Army, the Navy, or the Diplomatic service, although of late there has been less reluctance to engage in trade. The case of the "Lower Class" is different, but, perhaps, not more difficult. The boy either follows the employment of his father, or else is placed in the most eligible position that offers, eligibility being usually determined by the amount of wages that can be forthwith obtained. It is, therefore, to parents of the Middle Class that we especially address our remarks in the hope of assisting them to solve the problem of what to do with "our boys." Now let us glance at some of the considerations, which must carefully be weighed, if a wise decision is to be made.

BETTERING HIS POSITION. Every parent is naturally anxious that his son should better his position. But what does this bettering one's position mean. Speaking broadly, it means one of two things—improving one's financial resources or rising in the social scale. Few parents clearly distinguish between these alternatives, and fewer still, perhaps, see that as a rule they are alternatives. But as a matter of fact, a choice has to be made between these two. One or the other must become the primary object to be aimed at and worked for. Parents who have bettered their position by financial success can afford, it may be, to aim at a rise in the social scale for their son. On the other hand, those who have found their income too narrow for the comfortable maintenance of their position in society may think it well to place their son in the way of bettering his position by success in a "paying" business, leaving the social question to take care of itself. The point we are insisting on is the wisdom of making a deliberate choice between the alternatives we have mentioned. It is well for every one to realise as early as possible that as a rule financial success and a rise in the social scale are incompatible as aims in the choice of a calling, although the former may ultimately lead to the latter.

The desire of bettering one's position from a social point of view is answerable for many irremediable blunders. It has ruined the once honourable position of a clerk, and lowered certain other professions in the estimation of the public on account of the excessive number of applicants for "genteel" employments. In thus straining after a higher social position, the substance is sacrificed for the shadow. In your desire to see your son take a good position in society, you throw on him responsibilities which for lack of means he is unable to bear. The dismal result may be summed up in two words—*straitened circumstances.* How many a poor lad has been devoted to a life of anxious care because his mother set her heart on seeing him a clergyman, or his uncle wanted a doctor in the family! Before coming to a decision then it is of the utmost importance that you should make perfectly sure that you are really considering your son's interest, and

not your own personal ambition. Success alone will justify you in the attempt to place your son on a higher rung of the social ladder; and success, remember, can only be reasonably expected when one or both of the following conditions are fulfilled: (1) The possession of sufficient means to enable your son to keep up to the right level while waiting for an adequate income from the practice of his profession; (2) The possession on his part of exceptional ability of the right kind for the particular profession he has adopted. Supposing you have decided which shall be the chief aim—financial success or social advancement, you have next to consider which career in particular is most likely to lead to the desired result. In working out this problem there are certain questions which deserve your close attention, on each of which we propose to offer a few suggestions.

INFLUENCE smooths and shortens the road to success. A parent's own personal or family influence may be of the greatest service when the boy has passed through his novitiate and is anxious to start business on his own account. A parent's influence is often confined to his own calling in life, and, therefore, such influence is lost in the case of a son who follows another calling. Too often another calling is chosen because it looks easier and less taxing. This is frequently a false assumption arising from the fact that we are naturally prone to exaggerate the difficulties of our own business or profession and to imagine that others are less irksome and exigent.

HEALTH is an important factor; with weakly children the most important. Country life, or at least, outdoor employment, is to be desired for the weakly. Occupations demanding both physical and mental energy should in such cases be especially avoided. The medical profession, for instance, is one in which bodily health and stamina are of vital moment, since it involves both mental and physical strain, much anxiety, long hours, and a life spent among unhealthy surroundings. The mortality of doctors is conspicuously high, and yet numbers of weakly young fellows are continually being thrust into the profession. The Civil Service may be found a suitable occupation for lads not naturally robust, as although the working hours are spent indoors, the work is regular and mostly easy. It does not involve strain and worry—a great consideration where health is concerned.

BENT AND APTITUDE. These form a most important element when they can be discovered, but the generality of boys display no decided bent whatever. Bent, like genius, is sure to assert itself when it exists. If in any case the bent is strong and unmistakable, and the requisite aptitude, as usually happens, accompanies it, then nothing but the strongest necessity would justify a parent in ignoring nature's signals. Such cases, however, are exceptional. Boys, indeed, are not slow in naming a pursuit they wish to engage in, but too often it is the outcome of some passing fancy arising from a conversation with some schoolfellow, whose opinion he regards as infallible. Many are the instances in which parents have to blame themselves in after years for having permitted such fancies to overrule their better judgment. Too late they perceive that the boy has been misled by imperfect knowledge and mere glamour. We all know, for instance, the charm a sailor's life has for a spirited boy, and how little he knows of what that life really means. It is scarcely necessary to add that in making his choice, the lad has never for one moment considered the *financial* prospect of the calling. No such mercenary ideas find a place in the ingenuous mind of youth. The wisest way is to hear sympathetically all the lad has to say, and then ascertain, as far as possible, what special qualifications he has for the proposed pursuit, not relying wholly on your own judgment, which is naturally biassed, but sharing your counsels with a friend or two to whom your son is well known. If on due reflection you come to the conclusion that your son is well-fitted for the career he has named, it still remains for you to take into careful consideration the question of health, financial prospects and resources, and other matters which he ignores, and then decide for him.

CAPITAL. The amount of capital at command is a factor that should never be left out of account. It is obvious that the wholesale and manufacturing businesses for the most part require large capital. To a less extent the same may be said of most of the Professions. The preliminary education and training entails considerable outlay, and the subsequent progress is exceedingly slow. The public, as a rule, look askance at the young professional, and the parent must not be surprised if he is called upon to supplement his income for no inconsiderable period. Retail trades are the best for small capitalists who desire to early become their own masters, but for those who are willing to act as subordinates, the wholesale and manufacturing businesses are open, as they offer many more or less remunerative positions as departmental managers, etc., and these may even lead up to partnerships. Putting aside the question of capital, there is much to be said in favour of placing a lad into the retail as a start. In this way he will learn more of the details of the business than if placed at once into a wholesale house, where he will be placed in a department and kept there, acquiring as a rule but little knowledge of the general trade.

In concluding these general remarks on Choosing a Calling we would warn parents against the danger of being influenced by what we may term *surface considerations*. A friend, for instance, has made a fortune in some given line of business, and it is at once assumed without further inquiry that this business is an exceptionally good one. Then there are certain *showy* trades which attract the unwary, such as the jeweller's and the bookseller's, but in reality such businesses are often the least remunerative.

After all we may say or do, much, very much, must depend upon the lad himself. It is not merely the calling, but rather what he makes of it that is the main consideration. Energy, perseverance, adaptability and tact usually ensure success; but without these qualities there is but little hope of any good result. Parents can do much, during his apprenticeship, to foster and develop these qualities and so awaken in him the true business instinct without which there is seldom any great financial success. This business instinct, it must be remembered, is required in professional as well as in commercial life.

NOTE. For much of the foregoing the writer is indebted to a book entitled "Choosing a Calling," published by the Educational Supply Association, 42 Holborn Viaduct—a book, in which the whole question is fully and ably discussed.

EDUCATION.

INTRODUCTORY.

There are two standards commonly applied to measure the value of education—how far it succeeds in developing the powers of the individual pupil, and how far it fits him for his particular work in life. But there is a close connection between the two; for the sake alike of each citizen and of the State it is necessary that the life's work of the individual should be what his particular faculties best fit him for. These depend partly on circumstances, such as rank or wealth, but much more on inborn powers of intellect and character, and personal tastes; and often it is difficult to estimate the nature of these powers until a child has reached the age of 14 or 15. Consequently up to that age education needs to be of a general character, while from that time it is often possible to begin specializing in whatever direction is selected; yet even then the danger of over-specializing is great, and it is well to bear in mind the old definition of a well-educated man, even though the advance of knowledge makes its realization increasingly impossible—"he knows something of everything, and everything of something." The purpose then of this article is to deal with the first half of the problem—how to obtain a good general education, that shall both discover and develop the particular powers of the individual. A *good* education must therefore be relative to the circumstances and faculties of the pupil. The other half of the problem is left to later treatment—how on this groundwork to superadd the special training necessary for work which demands highly developed skill or special technical training.

It is commonly supposed that England falls behind many nations (e.g., Scotland or Germany) in the educational advantages it can offer. To whatever extent this reproach may have been true, it is fast being wiped out by the enthusiastic efforts of many public bodies as well as private persons, and by a general eagerness to make our system of education comprehensive and elastic. At the present moment the most serious drawback lies in another direction—comparatively rarely do parents either know, or trouble to find out, what opportunities are within their children's reach; they are often accustomed to let education go on in a haphazard way until it is time for the child to leave school, when they begin to consider what is best for the future; and then often they discover that the future might have been made far different, if they had taken thought a year or two earlier for the child's career. It is the case now, as numerous examples in history show it to have always been so, that accidents of birth and wealth need bar no one from almost any position in the land, however exalted; and though the machinery which made this possible five or six centuries ago has been much altered, the possibility still remains and is perhaps greater that ever. There is in existence an "educational ladder" leading from the bottom of the social scale to the top. Every year some of the highest honours at the universities, and some of the most promising positions in the professions, are won by those who have started in the primary schools—as, for instance, the Senior Wrangler of 1902, who won his way entirely by scholarships from a Board School to a Secondary School, and thence again to Cambridge—and this is rather an example of what is practicable than an exception, as numerous instances would show. While on the one hand the various authorities are now more than ever alert to co-ordinate the different grades of schools, and to make the passage from one to another easier and simpler for those who have the ability to rise, yet their efforts must necessarily be comparatively fruitless, unless parents inform themselves, before it is too late, of the possibilities that have been created. To help them in this task, the present article proceeds to trace the steps of this ladder from the lowest to the highest.

ELEMENTARY OR PRIMARY SCHOOLS.

A brief review of the events of the last hundred years may help one most effectually to gain an understanding of the present condition of Elementary Education. In many respects, and not least in education, the 18th century witnessed a set-back in our national progress. In the previous two centuries numerous grammar-schools had been founded throughout the country, and facilities for a higher education were fairly within the reach of any who showed a marked aptitude; but various causes, religious, social and political, prevented a development of this state of things under the Georges, and probably opportunities of education for the poorer classes were less during the 18th century than at any time during the previous 500 years. The revival from this depression commenced with the 19th century in the work of Joseph Lancaster and the British and Foreign School Society among non-Churchmen, and of Andrew Bell and the National Society (developed from the Education Committee of the S.P.C.K.) among Churchmen. Town and village schools again sprang up to provide the rudiments of education; and gradually these voluntary efforts received first the help and then the direction of the State. So there grew up the system of Government grants in aid of education, administered according to the results of inspection by the Education Department. Hitherto the schools had been all voluntary and all distinctively denominational—Church, Wesleyan, British, Roman Catholic, &c. But voluntary effort proved inadequate for a task which was peculiarly national, and so Mr. W. E. Forster's Education Act of 1870 was passed, which created School Boards to build schools to supplement the existing Voluntary ones, these Board Schools being supported partly by Government grants and partly by the rates. In them the Cowper-Temple Clause forbade the teaching of any catechism or formulary distinctive of any religious denomination, while the Conscience Clause enabled parents to withdraw their children from religious instruction in any schools—Board or Voluntary—if they chose. In 1876 attendance at school was made compulsory, unless other provision was made for the child's education, while in 1891 it was made free. The education Act of 1902 (applied, with modifications, to London in 1903) replaced the School Boards, which had been elected *ad hoc*, i.e., specially for educational business, by the County, Borough, and Urban District Councils acting through committees. The Act placed under their control the secular education in all elementary schools, Voluntary and Board alike (now called Non-Provided and Provided respectively), giving to all these Council Schools an equal title to rate-aid. It also brought them into closer relation with the Secondary Schools which had been already largely helped and controlled by the Councils through their Technical Instruction Committees. Meanwhile the Board of Education Act of 1899 had amalgamated the Science and Art Department at South Kensington with the Education Department at Whitehall, the duty of this "Board of Education" being to ensure the educational efficiency of all Primary, Technical, Secondary, and Higher Schools in the country, while leaving their financial and particular administration to the local authorities already described.

These public elementary schools provide, on the whole, an excellent elementary education for children up to the age of

15. The quality of their work of course has varied greatly, according to the personnel of the staff, the buildings and appliances, the neighbourhood, &c. It has been by no means rare, and is growing commoner, for professional and business men of narrow means to begin their children's education at such schools; while there is developing an organized system of scholarships to enable the more promising pupils to pass up from the primary to the secondary schools—a change which is best made at the age of 11 or 12 at the latest, as that leaves time for the pupil to get acclimatized to his new surroundings, and to derive real benefit from them. The system of the London County Council's scholarships may be taken as an illustration of what is going on in most parts of the country.

JUNIOR COUNTY SCHOLARSHIPS. These scholarships are awarded each year to such as attain a certain standard of proficiency, and are between the ages of 11 and 12. They entitle each holder to free education in a secondary school for three years, and they are "subject to renewal for two more years provided that the scholar is satisfactory alike in conduct and attainments." Candidates not coming from public elementary schools must be the children of parents whose income is less than £160 a year; and an annual maintenance allowance of £6 for three years and £15 for two is attached to the scholarship held by the children of such parents. In the examination held for determining the winners of these scholarships an English composition exercise and a problem paper in arithmetic take a foremost place.

PROBATIONER SCHOLARSHIPS. These are open to boys and girls who are not less than 14 and not more than 16 years of age. They are confined to candidates who promise to become pupil-teachers, and are offered on the results of an examination of an elementary character. These scholarships, which are tenable for two years, provide free education at a secondary school or pupil-teacher centre, and a maintenance grant of £15 a year.

INTERMEDIATE SCHOLARSHIPS. These scholarships (we are still speaking of the regulations of the London County Council) are offered to candidates between 15 and 17 years of age. There is no restriction as to the nature of the school at which candidates have been in attendance, but in no case must the parent's income exceed £400 a year. The scholarships are tenable to the end of the school year in which the scholar attains the age of 18. They provide free education at an approved secondary school or technical college and a maintenance grant ranging from £25 to £35 a year. About 100 such scholarships are awarded each year.

SENIOR SCHOLARSHIPS. These are intended to assist candidates to proceed to a university, technical college, or institution of university rank. They must, as a rule, be not more than 22 years of age on 31st July in the year of the competition. The value of the scholarships will vary with the needs and qualifications of the candidate, but in no case will exceed £60 a year for maintenance and £30 a year for fees, &c. The scholarships are confined to candidates whose parents' annual income does not exceed £400. They are not awarded on the results of a competitive examination, but on past achievements, financial requirements, and the recommendations of the teachers under whom they have worked. About 50 of these scholarships are awarded each year.

OTHER SCHOLARSHIPS. Special attention should also be given by parents to the Christ's Hospital Scholarships, awarded to boys and girls on the recommendation of the London County Council. They are tenable for four years and are worth about £70 per annum. The examination for Junior County Scholarships is utilised for the purpose of awarding these scholarships. Candidates must be not less than 9 and not more than 12 years of age on the first day of the examination, and must have attended for three consecutive years at public elementary schools in London. Similar facilities to these are to be found in greater or less degree throughout the country, and it is hoped that one result of the Education Acts of 1902 and 1903 will be to bring primary and secondary education into still closer accord, and to make the passage from the one to the other still easier than it is at present. The Gilchrist Education Trust also provides numerous scholarships of various grades from those of University rank downwards (offices at 1 Plowden Buildings, Temple, E.C.), while the London Parochial Charities give considerable assistance specially in the support of Polytechnic Institutes (apply to the Trustees, 3 Temple Gardens, E.C.).

CONTINUATION SCHOOLS. However, in the case of a pupil who has not been able to win such a scholarship or for other reasons has been unable to go to a Secondary School, but has had to leave the Primary School at the age of 14 or 15, there is no reason why education should come entirely to a standstill. The various School Authorities have provided evening classes to form continuation schools, where for almost nominal fees the various subjects of the day school's curriculum can be further studied: book-keeping, drawing, manual work of all sorts, modern languages, &c., are thus provided for. The chief need at present is that pupils should be urged not to let their studies drop for a year or two, and then try to resume them—a disheartening task—but to continue them without any interval on leaving school. Here, too, the value of the various Polytechnic and similar institutions that are springing up in all large centres of population is great. The fees are within the reach of almost every one, and the subjects taught cater for nearly every taste or requirement; while the classes are held in the evening as well as in the day, to meet the necessities of those who have to earn their own living. To judge from the report of the Mosely Commission (consisting, with others, of members of British trades unions who in 1902 made a tour of the United States to inspect the conditions of life and labour there) our crying need at present is for a more general system of technical education. The children of the working classes in America often remain at school until the age of 17 or 18, without costing their parents anything. Similar provision is to some extent being made among ourselves, and would doubtless be made to a much more adequate extent, were there manifested among our workers more signs of the self-denial necessarily involved in utilising such advantages. Indeed this is the most hopeful direction in which to look for any permanent rise in the condition of the working-classes, or for any increase in our ability to maintain our ground against foreign competition. Here, therefore, we turn aside from the course of the "educational ladder" to speak of technical education in some detail.

TECHNICAL EDUCATION.

This is a wide term, and may be taken to include such humble matters as manual training, wood work, metal work, &c., and to extend to the highly specialised work done in the laboratories for research, attached to some of our leading manufacturing businesses. The advanced work done by our Universities and University Colleges will be referred to when those bodies are described; here an outline will be given of the other efforts which are being made to render our technical instruction systematic and efficient. In addition to private benevolence, endowments, and special assistance from educational bodies, public funds have been largely and increasingly utilised for this purpose. The Technical Instruction Act of 1889 empowered County Councils to levy a rate of 1d. in the £, while the Education Act of 1902 allows the local educational authorities to spend on technical and secondary education such sums as they deem necessary (limited in the case of counties, but not of County boroughs, to the proceeds of a rate of 2d. in the £). Further, the Local Taxation (Customs and Excise) Act of 1890 directs an annual sum to be contributed from the Treasury to the Councils, which now amounts to about a million sterling. This money is expended partly on the provision of the Senior, Intermediate, and Junior Scholarships already described, and partly on the maintenance or subsidising of the various Polytechnics and Technical Institutes which are being created in many

districts, though some of these bodies receive no such help. Among them the pioneer was the *City and Guilds of London Institute*, Gresham College, E.C., in connection with which are the *Finsbury Technical College*, Leonard Street, E.C. (which is famous for its work in Chemistry and Electrical and Mechanical Engineering), and the *City and Guilds Central Technical College*, Exhibition Road, S.W.

TECHNICAL INSTITUTES. In the Metropolis the chief Technical Institutes maintained in whole or part by the County Council are the following :—

The Battersea Polytechnic, Battersea Park Road, S.W. ; the Borough Polytechnic, Borough Road, S.E. (including Herold's Institute for the Leather Trades, Drummond Road, Bermondsey, and the West Norwood Technical Institute) ; the City Polytechnic (including the Birkbeck College, Bream's Buildings, Chancery Lane, W.C. ; the City f London College, White Street, Moorfields, E.C. ; and the orthampton Institute, Clerkenwell, E.C.) ; the Northern Polytechnic, Holloway Road, N. ; the Regent Street Polytechnic, W. ; the South-Western Polytechnic, Manresa Road, Chelsea, S.W. ; the Woolwich Polytechnic ; the Brixton Technical Institute, Ferndale Road, S.W. ; the Hackney Institute at Hackney Downs, and at Cassland Road, N.E. ; the Paddington Technical Institute, Saltram Crescent, N.W. ; the Shoreditch Technical Institute, Pitfield Street, Hoxton, N. ; the Sir John Cass's Technical Institute, Aldgate, E.C., ; the Wandsworth Technical Institute, High Street, S.W. ; and the Westminster Technical Institute, Vincent Square, S.W, ; also the Blackheath (S.E.), Camden (N.), Clapham (S.W.), Clapton (N.E.), Hammersmith (W.), Lambeth (S.W.) and Putney (S.W.) Schools of Art ; the Camberwell School of Arts and Crafts, Peckham Road, S.E. ; the Central School of Arts and Crafts, Regent Street, W. ; the St. Bride Foundation Institute for Printing Trades, Bride Lane, E.C. ; the Carriage-Building School, Balderton Street, W. ; and the School of Photo-Engraving and Lithography, Bolt Court, Fleet Street, E.C. Connected with the City and Guilds of London Institute are Schools of Art at the Finsbury Technical College, and at 122 Kennington Park Road, S.E. ; and other Metropolitan Institutions are the Goldsmith's Institute, New Cross, S.E. (recently transferred from the Goldsmith's Company to the University of London) ; the People's Palace (East London Technical College), Mile End Road, E. ; the Morley Memorial College, Waterloo Road, S.E. ; the Working Men's College, Great Ormond Street, W.C. ; the Crystal Palace School of Practical Engineering ; the Electrical Training Institution, Faraday House, Charing Cross Road, W.C. ; the Bell Lane Trade and Technical School, Spitalfields, E. ; the City and Guilds Leather Trade School, Bethnal Green Road, N.E. ; the Trades Training School, Great Titchfield Street, W. ; the Aldenham Institute, Pancras Road, N.W. ; and the Westbourne Park Institute, Porchester Road, W.

Outside the metropolitan area, to give the more prominent instances, may be named the Technical Schools or Colleges at :—

Ashton under Lyne (the Heginbotham Technical School), Bath, Birmingham, Blackburn, Bolton, Bradford (with over 300 scholarships, conferring free tuition in the day or evening classes), Brighton, Bristol (the Merchant Venturers' College, at which the Bristol County Scholarships are tenable), Bury, Cambridge, Cardiff, Coventry, Darlington, Darwen, Derby, Dewsbury, Halifax, Huddersfield, Hull, Leicester, Lincoln, Liverpool, Longton, (the Sutherland Technical Institute), Manchester (with 15 entrance scholarships of £30 a year for three years ; the new buildings have cost £300,000). Northampton, Norwich, Oldham, Plymouth, Portsmouth, Rochdale, Stockport, Swansea, Swindon, Warrington, West Bromwich, West Ham, and Wolverhampton—nearly all of these being Municipal ; and in addition there are the Mechanics' Institute, Burnley ; the Keighley Institute ; the Leeds School of Science and Technology ; the Harris Institute, Preston ; the Royal Technical Institute, Salford ; the Gamble Institute, St. Helens ; the Rutherford College, Newcastle-on-Tyne ; and Technical Departments in various University Colleges, such as those at Nottingham, Reading, Sheffield and Southampton. In Scotland may be mentioned the George Heriot's and Heriot-Watt Colleges at Edinburgh ; the Glasgow and West of Scotland Technical College at Glasgow ; and the Technical School at Paisley ; while in Ireland there is the Municipal Technical Institute at Belfast.

In nearly all these institutions, both Metropolitan and Provincial, there are Schools of Art as well as of the Applied Sciences, and the instruction is thoroughly practical throughout, and adapted to every grade of proficiency.

With all this apparatus for the diffusion of technical instruction throughout the country, one thing is still lacking, which there is every reason to hope will soon be supplied. Lord Rosebery, in a letter addressed to Lord Monkswell as chairman of the L.C.C. in 1903, made public the generous offer of Messrs. Wernher, Beit & Co., to place a large sum of money in the hands of trustees to be applied towards the cost of the building and equipment of a College of Applied Science in London similar to that of the famous German College at Charlottenburg. There is now (1907) every reasonable prospect of this being done. The "Imperial Technical College," soon to be founded, will work in close co-operation with the Royal College of Science, the Royal School of Mines, and the Central Technical College. It will aim at giving the most perfect and expert instruction possible in chemical technology, electrical engineering, metallurgy, shipbuilding, etc., and also at being the home of scientific research of all sorts. In this way London may hope to become in scientific matters the "Educational centre of the Empire," and to provide a central authority able to guide and stimulate the efforts of the various bodies engaged throughout the country in technical education. Much of this ideal scheme has already taken practical shape at the University of Birmingham, which in some respects has improved upon its Charlottenburg model, and won for itself a unique position.

Attached to most of the Technical Institutes above mentioned are DAY SCHOOLS, where the pupils can commence their technical education at an early age, and have the use of appliances and apparatus mostly out of the reach of less favoured schools ; but care should be taken that due attention is given to the literary subjects of an ordinary curriculum. Appended is a list of the more important of such schools in the Metropolis and elsewhere. The school age is mostly from 8 to 17, unless otherwise specified ; the fees per annum are added in the case of some of the London Schools, so as to be a guide for the rest ; and schools marked (‡) are for both boys and girls.

DAY SCHOOLS attached to Technical Institutes in the Metropolis :—

Battersea Polytechnic ‡, 13–18, £3.
Beckenham Technical Institute, 12–17, 5 guineas.
Borough Polytechnic, Borough Road, Southwark S.E.
Carpenters' Technical Institute, Stratford, E. (Carpenters' Company), 12–19, £1 15s.
Northern Polytechnic ‡, Holloway, N., 11–17, £7.
Regent Street Polytechnic, W., 5 to 12 guineas.
Shoreditch Technical Institute, E.
South Western Polytechnic ‡, Manresa Road, Chelsea, S.W., £4 10s. to £6.
Technical Institute ‡, Leyton, E., 12–17, £4 3s.
Tottenham Polytechnic, N., (Tottenham County School), 4½ guineas.
Walthamstow Technical Institute ‡, E., 13–17, £2 5s.
Wandsworth Technical Institute, S.W.
Woolwich Polytechnic ‡, £4 10s.

There are schools of a similar character at the following places :—

Accrington ‡, Banbury ‡, Bideford ‡, Birmingham, Blackburn, Bournemouth ‡, Bristol (the Boys' Day School connected with the Merchant Venturers' College), Chester, (School of Science), Claycross, Dover, Durham ‡ (Johnson Technical School), Glossop, Gravesend ‡, Handsworth, Heanor ‡, Huddersfield (Technical College), Hull, Keighley (Trade and Grammar School), King's Lynn, Leamington ‡, Lincoln, Longton ‡ (Staffordshire), Lowestoft, Mansfield ‡ (Brunt's Technical Institute), Nelson ‡ (Lancashire), Newcastle-on-Tyne ‡ (Rutherford College), Oxford ‡, Plymouth, Runcorn, Scarborough ‡, Southampton (Taunton's Trade School), Southend ‡, Stockport ‡, Swindon ‡, Trowbridge ‡, Ulverston ‡ (Victoria Institute), Walsall, West Lavington ‡ (Wiltshire : the Dauntsey Agricultural College), Winsford ‡ (Cheshire ; the Verdin Technical School), Wolverton ‡, and Worcester ‡ (Victoria Institute).

SECONDARY EDUCATION.

The term "secondary" can be applied to all education lower than that of university rank and higher than that given in the primary schools. It really includes technical instruction, which as a matter of fact is given in greater

or less degree in all our secondary schools; but it has been convenient for purposes of arrangement to deal separately with those institutions in which the curriculum has been mainly technical, i.e., chiefly concerned with the practical application to industries of the principles of science and art. The Board of Education has recently defined the term "Secondary School" as including "any Day or Boarding School which offers to each of its scholars, up to and beyond the age of 16, a general education, physical, mental, and moral, given through a complete graded course of instruction of wider scope and more advanced degree than that given in Elementary Schools"; and the Board specially emphasises the fact that "the instruction must be *general*, i.e., must be such as gives a reasonable degree of exercise and development to the whole of the faculties, and does not confine this development to a particular channel, whether that of pure and applied science, of literary and linguistic study, or of that kind of acquirement which is directed simply at fitting a boy or girl to enter business in a subordinate capacity with some previous knowledge of what he or she will be set to do." Considering, then, secondary education in its broader sense, the problem that lies before the Education Committee of the County and Borough Councils is to define more exactly and to organise more thoroughly this branch of education; to see that there is no overlapping among the various institutions engaged in it in any district, and no consequent waste of effort; to see that there is sufficient provision to meet the needs of each locality, and provision of such special character as is required by the peculiarities of that locality; and finally, to take care that such education shall be within the reach of all pupils who are qualified to benefit by it, without hindrance on the ground of inadequate means. This latter point has already received considerable attention, and hence has arisen the scheme of Minor, Intermediate, and Major Scholarships previously described under the heading of Primary Schools.

But on the other points there is considerable confusion, which has partly been caused by the functions of School Boards being limited by law to the provision of elementary education (which in practice received a very generous definition at their hands). However, now that one and the same public body has charge of both primary and secondary instruction in each area, there is every reason for hoping that the present overlapping and confusion will be removed.

There has been also a tendency to magnify scientific studies at the cost of literary, and so to identify secondary education with technical. This has been encouraged by such regulations as those of the Technical Education Board of the London and other County Councils, which required at least 13 hours a week out of the ordinary 25, to be devoted to science and mathematics in schools aided by them. Consequently general education and wide culture have been in danger, and the development of the pupils has been narrowed into one particular groove. A re-action is now setting in, and the attempt is being made to render the curriculum of secondary schools more generous and liberal. There is reason to hope that premature specialising will soon be a thing of the past, and that secondary education will embrace and cultivate literature and language without excluding a general acquaintance with physical science and mathematics.

Leaving out of count the great public schools, which will be dealt with in a separate section, secondary education has been hitherto imparted in schools which may conveniently fall into four classes: Higher Elementary Schools, true Secondary Schools (including the day schools often attached to the Polytechnics and Technical Institutes), the older established Grammar Schools, and numerous Private Schools; but in many cases these institutions have been hampered by having to provide both primary and secondary instruction.

PRIVATE SCHOOLS. A parent needs to exercise considerable judgment in availing himself of their help. Very many of them are most efficient, and afford the great advantage of a wider freedom in the arrangement of time-tables, and in the cultivation of particular studies, than is possible to a school under public control. The classes also in private schools are mostly smaller, and consequently each pupil can get a greater share of individual attention and help from his teacher, while it is easier for eccentricities of mind or character to be duly kept in check. Of course, as these schools receive no public financial aid, their fees are bound to be higher; but in many cases the extra expense in which the parent is involved is well worth incurring, for the sake of the benefits named. It is to be hoped, however, that some amount of public money may, under suitable restrictions, find its way to these schools, at least as an aid to their permanent equipment, apparatus, &c.

But care should be exercised in ascertaining that the private school selected is really a good one: the qualifications of the head teacher and staff (university degrees, teaching diplomas, &c.) should be considered; it should be seen that the number of qualified members of the staff is adequate to the variety of ages and attainments of the pupils; and that the provision of apparatus, class-rooms, laboratories, &c., is adequate. Above all, special enquiry should be made as to the results of the teaching, when submitted to the test of public examinations.

> For children between 14 and 16 years of age, the Oxford Junior Local Examination (held in July by a delegacy of examiners commissioned from the University), the Cambridge Junior Local Examination (held in December), or the examinations of the College of Preceptors (Bloomsbury Square, W.C.), or of the London and other Chambers of Commerce, afford a satisfactory means of estimating the quality of the instruction imparted. It should be seen that the results in these examinations are not due to the successes of a few brilliant pupils, but that a fair proportion (to hazard a figure not less than 8 per cent.) of the scholars are entered for such examinations, with a fair average of success all round. And these examinations may specially be selected, as the syllabus of study on which they are based is wide, and makes ample provision for individual requirements, while the reputation of the examining bodies themselves is deservedly high. For pupils over 16 years of age, the Oxford Senior Local, the Cambridge Senior Local, the London University Matriculation, and, for those more advanced, the Oxford and Cambridge Higher Locals, or the various Civil Service Examinations, enable one to gauge the quality of the teaching given in a secondary school.

Of course, the scope and aims of private schools vary widely: some give an excellent preparation for the universities; others for more professional studies (law, medicine, agriculture, applied science, &c.); others for the Civil Service (first or second class clerkships, the Excise, Customs, Post Office, &c.), the Army or the Navy, &c., and these points must be taken into consideration in selecting such a school. For girls also they often give a thorough training in music, and here their value can be estimated by enquiry as to results in such examinations as are held by the Royal Academy of Music (Tenterden Street, Hanover Square, W.), the London College of Music (Great Marlborough Street, W.), Trinity College of Music (Mandeville Place, Manchester Square, W.), and for more advanced students the Royal College of Music (Kensington Gore), or the Guildhall School of Music (Victoria Embankment). Perhaps before long a satisfactory scheme may be drawn up for the registration and inspection of private schools by public authority, and then it will be quite easy for a parent to distinguish the efficient (and highly valuable) schools from those which are incompetent; while the efficiency of the former class will be still more promoted if a judicious measure of public financial aid and inspection can be extended to them.

HIGHER ELEMENTARY SCHOOLS. As to these schools, little need here be said. They give valuable help to promising pupils who can be kept at School until the age of fifteen or sixteen. They mostly begin with Standard VI., and work upwards, and they give opportunities for the children to use the last three or four years of their school-life to greater advantage than if they remained at the ordinary primary school. From these schools three courses often open out: (1) to take one of the lower Civil Service examinations, such as the Second Division Clerkships, the Customs, or the Excise;

(2) to win one of the Intermediate Scholarships already described, and thus be able to proceed to some Technical Institute; or (3) to go to work at the age of 15 or 16, qualified, not only to make a better start in life, but also to take full advantage of the opportunities given in the evening classes, either of Continuation Schools or of Polytechnics, Literary Institutes, &c., and so perhaps to proceed later to a more highly-skilled and remunerative employment.

GRAMMAR SCHOOLS. No hard and fast line can be drawn between the two remaining classes of schools engaged in the task of secondary education—the Grammar Schools, and the so-called Secondary Schools: the former are as a rule of more ancient foundation, and often are endowed (in some cases richly), while not infrequently they make provision at very moderate charges for boarders as well as for day-scholars; the latter usually depend for their maintenance on subsidies from the County Councils, and grants from the Board of Education. In both cases the fees are nearly always far below the total cost of the education given; while neither class can be wholly differentiated from the other, or from what are more generally called the "Public Schools."

The bulk of their pupils leave school about 17, but it is often possible for them to remain till 18, or in some cases 19, and then to proceed direct to the universities. There are numerous entrance scholarships, which cover the cost of tuition and books, and perhaps part of the cost of maintenance as well; and, not infrequently, there are leaving scholarships to help the holders to a university or university college, or to professional education at a medical school, &c. The curriculum in both classes of schools is much about the same. Some grammar schools still pay special attention to the classics, but they nearly always have a modern or commercial side, in which modern languages, science, and mathematics receive attention. There are few secondary schools, whether of ancient or modern foundation, that do not make provision for the study of Latin.

In the selection of such a school, a parent should be guided by the considerations already named for private schools. Further, it is well worth enquiring what provision there is of leaving scholarships or exhibitions; and finally, if any particular career in life is already in view for the pupil, it must be seen whether the school makes special provision for such requirements—whether, for instance, if it is intended to keep the pupil at school till 18 or 19, the upper forms of the school are so arranged as to afford suitable instruction for pupils of that age. Indeed, herein lies the real differentiation of such schools: it is not primarily a question of classical studies versus modern, for most schools include both elements though in varying proportions; it is rather a question of whether the top form in the school has an average age of about 16, or of about 18. If the former, the school will usually lead more suitably to ordinary business in "the City," to clerkships in banks, or to the lower branches of the Civil Service; but if the latter, it will probably give suitable preparation for the Universities and Professions, the Army, or the higher branches of the Civil Service.

THE PUBLIC SCHOOLS. The line of demarcation between what are generally known as "Public Schools" and the Secondary Schools, which have been already described, is an arbitrary and even a shifting one. In its narrowest sense the term is limited to the great foundations of Winchester College, founded 1387, Eton College (1440), Rugby School (1587), and Harrow School (1571). But the name is now popularly extended in England to such institutions as are modelled upon one or other of these historic foundations, and in some cases possess venerable traditions; always give a first-class education, leading on to the great Universities or to "the Services," and are officered by a staff composed of high University Graduates; and afford a common life for the pupils and all the means for the pursuit of athletics, which has become more and more a passion with the youth of England. It would be invidious to make any selection of schools that fully answer to this description, and to make the attempt would be futile. Really some hundred schools, whose head masters are members of the Head Masters' Conference, are entitled to be classed together as the "Public Schools" of the country. No country in the world has institutions comparable to the great Public Schools of Great Britain, either in the character of their aim, the singular blending of freedom and discipline in the daily life of the scholar, the attention given to the formation of lofty character, which seems to be acquired almost automatically, through the action of environment rather than of formal instruction; the survival of antique customs and terms, and above all the brilliant bead-roll of past and present pupils. With the exceptions natural to even the best of human institutions, the "public school man" bears a stamp moral, mental and physical which is easily recognised.

These schools are usually organized in three departments: (1) **Classical**, preparing for the universities, certain professions, and higher branches of the Civil Service; (2) **Modern**, preparing for the army, engineering, and the leading positions in commercial and industrial pursuits; and (3) **Junior**, for the younger boys who have not yet decided whether to enter the Classical or the Modern side. The usual age for admission, except to the Junior School, is twelve, with fifteen as the extreme limit; pupils remain as a rule till nineteen. Application for admission has often to be made three or four years or even longer beforehand. Entrance Scholarships and Exhibitions are in some cases fairly numerous, but they are rarely won except by boys who have attended a preparatory school practically connected with some public school, or who have worked with a private tutor, whose tuition has been especially directed towards this particular object. A list of well-known preparatory schools can be found in the *Public Schools Year Book* (Swan Sonnenschein & Co., 2s. 6d.), where also can be obtained full information about more than one hundred of the most important Public Schools.

THE UNIVERSITIES.

As the expansion of trade in the Middle Ages both led to, and was fostered by, the formation of Trade Guilds, so also the prosecution of learning by the Schoolmen both produced, and was developed by, the formation of Universities; for to these could Scholars and pupils alike resort, the former to benefit by the exchange of ideas, the latter by the communication of the best knowledge that the time afforded. It was in the 13th century that Oxford and Cambridge followed the example already set by Italy and France, and speedily won a commanding position in the world of letters; yet, throughout their history, the instruction they have been able to impart has been at least equalled in value by the mutual intercourse and social life they have been able to promote among their members. Within the Universities, the benevolence of "pious founders" left endowments of land or money, and often made provision of buildings as well, to enable scholars to devote their time exclusively to the pursuit of learning.

Thus arose the "colleges," whose members were all on "the foundation," the pecuniary help they received being their "scholarship," which now is only sufficient to pay some part of the expenses of a university career. All the members of such a college were "scholars," the senior ones being engaged in teaching, the junior in learning; the former were, as equals of one another, designated "fellows," but the old comradeship between seniors and juniors has left its mark in the name "students," which is still the title of the Fellows of Christ Church, Oxford. When the pupils (said to be in "statu pupillari") had satisfactorily completed their course of study, their proficiency was marked by the "degree" conferred on them, and they became "graduates"; till that was accomplished, they were "undergraduates."

After a time, the colleges began to admit to their lectures other persons, who paid for this privilege, but were not on the foundation. These people lived in private lodgings, or in "halls" specially made for their accommodation.

Received at first on sufferance, they now constitute the large majority of the junior members of either university, being called "commoners" at Oxford and "pensioners" at Cambridge. Here again a relic of the old days survives at Oxford, for at All Souls' College no commoners are admitted, its four undergraduate members being Bible-Clerks on the foundation.

At the present time the teachers appointed by the University are styled "professors," and they are largely assisted by "readers" or "lecturers"; but each College also provides teachers, who are called "tutors," and are mostly drawn from the number of the Fellows. However, the Colleges now mostly combine to divide the lecturing work among their tutors, and admit equally to these lectures all the students of the combining colleges, thus preventing overlapping or waste of power, and promoting efficiency. The existence of this historical collegiate system, side by side with the professorial university system, and the constitution of the university as a collection of corporate bodies or colleges, not as a mere aggregation of individuals, are the two marks which chiefly distinguish Oxford and Cambridge from the Scotch and German university systems; and hence arises the characteristic value of the former in their community of life and wider "humanity." Discipline over those "in statu pupillari" is maintained in public by the university officials—the Proctors or Procurators, with their assistants the Pro-Proctors, each attended while patrolling the streets by a couple of college servants or "bull-dogs"; within the college precincts, the conduct of the students is under the control of one of the tutors, often the Dean.

In later times the conferring degrees has frequently been viewed as the main duty of a University, whence came into existence a purely examining body such as the University of London was a few years ago; but the value of a University *training* is now more widely recognised, and numerous attempts are being made to put it within the reach of those who cannot afford the time or money necessary for three years' residence at Oxford or Cambridge. Thus London University now makes teaching as well as examining a part of its business; and several new universities are springing up, such as the University of Wales, by means of which Colleges already at work in various places have been brought into union, or at least co-ordination, with one another, so as to adopt a common course of study, and a common standard of examination. Yet this method of constitution of a university by affiliation of pre-existent colleges is, historically at least, distinct from the older method, whereby each collegiate body was created as a sort of nucleus within the pre-existent organism of the university.

The last thirty years have witnessed the triumph of women's demands for the advantages of a university training on an equal footing with men. The University of London was the first to admit women to degrees, and Durham has followed suit, with all the modern universities as well as the Scotch ones. Oxford and Cambridge still withhold the degree, but make ample provision for women to pursue the same courses of study as men (see the section on Women's Education and the remarks on each university).

The minimum length of a university course is usually three years (two at Durham), but five (combined with hospital practice) for medical degrees. Each year or session consists of three terms (nominally four at Oxford), commencing in October and ending in June. Each term lasts for about eight weeks at the older universities and about eleven weeks at the younger. Students have usually to be over 16 years of age, and in the case of women often over 21, unless they are residing with their parents or guardians. Before admission the candidate or his friends have mostly to forward certificates of birth and good character, and often there is an entrance examination to prove that the candidate is sufficiently advanced to be able to benefit by the prescribed course of study. If there is an examination for Matriculation, this usually serves as the entrance examination. Then for the degree there are usually two subsequent examinations—the Intermediate, to be taken about the end of the first year; and the Final, about the end of the third year. The regulations on these and other points differ widely at different colleges and universities, but the various authorities are always ready to afford every possible information, if communication is made with them, and the earlier this is done the better.

SCHOLARSHIPS AND EXHIBITIONS. University scholarships are numerous, and a fairly well-educated candidate has an excellent chance of obtaining one; but if he is not at a school where there is special preparation, he should make enquiries widely at various colleges, a year or two before he intends to commence residence, and so he will obtain capital advice and guidance. Most scholarships are now "open" to competition, and are awarded on the results of examination. Candidates usually must be under 19 years of age, and the scholarship is awarded either definitely for two or three years (as at the modern universities), or for two years renewable for another two in case of good conduct and satisfactory progress, and for a fifth year if the circumstances warrant it (as mostly at Oxford and Cambridge). Some scholarships are "close," i.e., confined to candidates of certain parentage, or from a particular school or district.

Exhibitions are similar to scholarships, but commonly are subject to no limit of age, and are given only to candidates in need of pecuniary assistance. Usually there is at a college a fund for awarding prizes and money help to deserving candidates. The tendency is to award scholarships and exhibitions rather to those who discover signs of promise, than to those who merely show some amount of acquired knowledge. Often a candidate for a classical scholarship has the opportunity of displaying his acquaintance with mathematics, and vice versa, while an English essay and a paper to show general intelligence and reading are commonly set. But here again, a note of enquiry addressed to one of the college tutors will elicit the fullest and most accurate information possible.

Besides university and college scholarships and exhibitions, most of the public schools have awards at their disposal to help their pupils to the universities; while public bodies, such as the London County Council, are increasingly devoting their funds to a system of Senior Scholarships, with a similar end in view. The City Companies also often offer Exhibitions to help students at Oxford or Cambridge. Usually there is no limit of age, but candidates must be necessitous, and mostly must have already commenced residence. The exhibitions are awarded sometimes by examination, sometimes on recommendation of the college authorities, often on the Company's nomination (after consideration of the candidate's pecuniary circumstances, qualifications, testimonials, &c.). Application should be made to the Clerk of the Company at the Company's Hall (the addresses can be seen in Whitaker's Almanack), who will forward the regulations and a form of petition. As there is a general ignorance about this valuable source of help, the following list has been drawn up which, we believe, is exhaustive. It must be remembered that the exhibitions are mostly granted for three or four years, and that the number given below is the total number, not the number vacant each year, unless specially so stated. The exhibitions are tenable at either university, unless it is said otherwise.

CARPENTERS, 1 of £35 at Cambridge, 2 † of £25; CORDWAINERS, 3 of £25; CLOTHWORKERS, 4 * † each year of £30 for non-Collegiate students (apply to the Censors at the University); DRAPERS, 1 of £30 at Oxford and Cambridge in rotation (Russell's); FISHMONGERS, of £40 at Oxford, Cambridge, King's and University Colleges, London; GOLDSMITHS, 16 † each year of £50 (after examination in Classics, Mathematics and Divinity); GROCERS, of £50 ' HABERDASHERS, 3 of £50 at Trinity, Cambridge (Jeston); 11 of £11 or under, at various prescribed Colleges; IRONMONGERS, 2 † of £15 (Lewin's); 1 * of £9 (Price's); 2 of £4 (Hallwood's); LEATHERSELLERS, 8 † of £25, for Non-Collegiate students (apply to the Censors); 4 * † of £40; 2 of £65; 2 † of £30; MERCERS, 4 * of £40 at Cambridge (Mrs. Robinson): 4 of £25 (Lady North); 1 * of £25 at Magdalen, Oxford (Mrs. Barrett); SALTERS, £10 a year paid into the

Scholarship Funds of Jesus College, Oxford, and S. John's College, Cambridge, and since the Royal Commission of 1877, entirely merged in those funds (apply to the Heads of these Colleges for general particulars as to Scholarships); SKINNERS, 4 * † of £21 (Sir James Lancaster); 1 of £21 at Cambridge (Lewis). There are also various Charities which give assistance to poor students, such as the Tancred's Charities: these, when vacant, are mostly advertised in the leading London Papers, and a list of some of them with much other very useful information, can be found in the section on Education in the Annual Charities Register and Digest (Longmans, Green & Co., 5s.).

* For students intending to take Holy Orders in the Church of England.

† Half of this number tenable at Oxford and half at Cambridge.

CHOICE OF A UNIVERSITY. On this topic little can be said to help the enquirer, because so much must be regulated by individual circumstances. Much depends on the personal character and intellectual tastes of the student. Oxford is pre-eminently devoted to classics and philosophy, Cambridge to mathematics and science, but by no means exclusively so in either case; whilst the modern universities are specially cultivating the application of science to industry and commerce. Theology is ably pursued, yet with characteristic differences, at Oxford, Cambridge, and Durham, (to take a few prominent examples), whilst medical schools exist in connection with nearly every university. Provision for the training of elementary and secondary teachers in the art of education is almost universal, as also is some scheme for post-graduate study and research. Broadly it may be put that there are three avenues which open to a degree: (1) to go through the course of a residential University, such as Oxford or Cambridge, which affords special advantages in the collegiate system and consequent corporate life, and in the prestige and historical associations connected with the place. This can be done with strict economy for £100 a year or even less, while an income of £120 to £150 will enable a careful student to reap full benefit from the life of the university; (2) to join one of the modern universities, thus receiving systematic tuition and training in the course of study adopted, but living an isolated life in lodgings. This can be done for as little as £50 a year, and the numerous clubs and societies in each university go far to supply the social influence which is so valuable; or (3) to map out one's course of study according to the requirements of such universities as London and Dublin, and by private study with help from any teaching bodies available to pass the prescribed examinations. This can be done by a diligent student endowed with good working powers by evening study alone, while in the day-time he is pursuing his ordinary occupation.

EXPENSE. As the question of finance is mostly a vital factor in the choice of a university, it may be well to tabulate the chief headings under which the expenses fall: (1) *fixed university charges*—examination and degree fees, dues, &c.; (2) *fixed college charges*—entrance fee, caution deposit (returnable in whole or part on taking the degree, or on removing one's name from the college books), tuition fees, degree fee, &c.; (3) *varying college charges*—rent of rooms (with rates and taxes), varying according to situation and accommodation; charge for necessary furniture, which is either taken over at a valuation from the college or from the outgoing tenant, or else is let out on hire by the college at a fixed charge; expenses of board, the account of which is given in the weekly "battels" or bills, and which vary according to the style of living and amount of entertaining done by the student. These varying college charges are escaped by students who live in lodgings, where the scale of expense is as varied as in London, some being quite cheap, some very expensive; (4) *optional expenses*—fees to servants (often a prescribed amount), and tips (which cannot be altogether omitted); subscriptions to college clubs, which are mostly amalgamated into one total, and sometimes included in the battels, but are always optional; outside subscriptions, such as to the Union Debating Society, &c; and (5) *personal expenses*—for clothes, books, travelling, and vacations (which amount to about half the year).

Often the cost of living during the vacations can be covered by work in tuition, which the college authorities can sometimes assist a diligent, well-qualified student to obtain. In selecting a college, of course many points will have to be considered; but as far as expense goes, the Unattached or Non-Collegiate system of Oxford, Cambridge or Durham presents the cheapest course. Colleges with a fixed inclusive charge, such as Keble College, Oxford, enable one to ascertain the cost beforehand more exactly; and as a rule the larger colleges give greater opportunities for economy than the smaller ones, as in them a poor man *need* do little entertaining, and can find a larger circle of men similarly situated to himself. The college authorities are always ready to give applicants an estimate of necessary expenditure, while they use their influence (in which they are supported by the feeling of the better men) to maintain a tradition for plain living, and to discourage unnecessary extravagance.

The following brief account of the Universities of the United Kingdom needs to be supplemented from the respective Calendars and other sources of information indicated; especially is this the case with regard to scholarships, exhibitions, and prizes, the regulations for which vary so widely in different cases; but an attempt has been made to sketch the characteristic features of each university, and to present an approximate estimate of the expenses necessarily involved. The universities of Oxford and Cambridge are more fully treated than the other universities, but much that is said of those two will also apply to the others, *mutatis mutandis*.

I. THE UNIVERSITY OF OXFORD.

The head of the University is the Chancellor, but as he is non-resident his duties are performed by the Vice-Chancellor, who is selected in rotation from the Heads of Colleges. The supreme governing body of the University is the *Hebdomadal Council*, which consists of the Chancellor, Vice-Chancellor, ex-Vice-Chancellor, Proctors, various Heads of Colleges, and others. The Masters of Arts and Doctors of Divinity, Medicine, and Civil Law form the *Convocation* of the University, which body has the power of either accepting or rejecting the proposals of the Hebdomadal Council; while the resident members of Convocation form the *Congregation* of the University, and this body can not only accept or reject, but also amend the proposals laid before it. The University has the privilege of sending two members to Parliament.

The ACADEMICAL YEAR commences in October, and consists of four terms—*Michaelmas* (October 10 to December 17); *Hilary* or *Lent* (January 14 to Saturday before Palm Sunday); *Easter* (Wednesday in Easter week to Friday before Whit Sunday); and *Trinity* or *Act* (Saturday before Whit Sunday to a day near the end of July). Forty-two days' residence is required in each of the former two terms, 21 days' in each of the latter two (or 48 days' in the two together), to enable them to be counted as completed TERMS OF RESIDENCE. The colleges, however, mostly require a minimum of eight weeks in each of the Michaelmas and Lent Terms, and of eight weeks in the Easter and Trinity Terms conjointly. Residence consists of sleeping within a radius of 1½ miles from Carfax, either within the College precincts, or in lodgings licensed by the University. TERMS OF STANDING are counted from the date of Matriculation, and are those during which one's name has been kept on the College books, irrespective of residence.

EXAMINATIONS. Membership of the University is obtained by Matriculation, for which there is not (as there is in most of the younger Universities) any examination, but which is granted on the recommendation of the College authorities (University fee, £3 10s.). A student desiring to enter on residence must therefore first select his College, and satisfy its requirements by passing either its entrance examination, or some examination recognised as an equivalent (e.g., Responsions). To attain the degree of Bachelor of Arts (B.A.), it is necessary to have kept twelve terms of residence, and to have passed three examinations;

(1) Responsions (familiarly known as "Smalls"); (2) the First Public Examination or Moderations (Pass or Honours); (3) the Second Public Examination (Pass or Honours), which is often called "Greats."

1. **Responsions** are held four times a year, and can be taken by any one who intends to enter the University. For those who wish to read for Honours, it is a great advantage to pass Responsions before matriculating, so as to have no hindrance to one's more serious studies; while for all it is very useful, as Responsions mostly excuses from the College Entrance Examination. The subjects are Arithmetic, Euclid or Algebra, and Greek and Latin Grammar and Translation, with Latin Prose Composition. Various public examinations are accepted as substitutes for Responsions. The fee is two guineas.

2. **The First Public Examination** (Moderations) falls into two parts—(1) Holy Scripture (two Gospels in Greek, and the subject matter of the Acts or some portion of the Old Testament), *or*, in case of religious objections, a Greek author; fee, £1: (2) Pass or Honours Moderations; fee, £2. The Pass Examination, like that in Holy Scripture, is held three times a year; its subjects are Greek, Latin, and Logic (or Algebra and Euclid). The Honours Examination is in either Classics or Mathematics: the former is held in March, and comprises the works of Homer, Virgil, Demosthenes, and Cicero, with at least three special authors selected by the candidate, and Prose and Verse Composition; the latter is held in June, and includes Algebra, Trigonometry, Geometry, Calculus and Mechanics. A candidate who takes honours in Mathematics is required to take an "additional subject" in Responsions, before proceeding to the degree examination.

3. **The Second Public Examination**, which is really the degree examination, can be taken in Pass subjects or Honours. The Pass Examination is held twice a year, at the close of the Michaelmas and Trinity Terms, in four groups, of which the candidate must take three (not necessarily at one time)—Group A, Classics; Group B, Modern Languages; Group C, Mathematics; Group D, Theology. The fee for each group is £1, and on receiving the degree of B.A., a fee of £7 10s. has to be paid to the University (in addition to the degree fees of the College).

4. **The Final Honours Examinations** are held in the Trinity Term, and are in eight Schools or subjects, of which the candidate takes one. He is not eligible till his 11th term of standing, nor after his 16th; but if, having already taken one school (which is sufficient for the degree), he elects to take a second, he is eligible for this till his 20th term of standing. The eight Schools are:—Literae Humaniores (Classics, Philosophy, and History—the Oxford ideal), known as "Lit. Hum."; Mathematics; Natural Science; Jurisprudence; Modern History; Theology; Oriental Studies; and English Language and Literature; while a ninth School, in modern European Languages, is just being established.

For all Pass Examinations there is simply drawn up a list of candidates who have passed without any division into classes; for the Honours Examinations, the names of successful candidates are arranged in three (sometimes four) classes, alphabetically in each class.

Undoubtedly the ideal course for an able student, who can afford the time and money, is to take Responsions before matriculating; enter on residence in October; take Honour Moderations in his second year (preferably Classics); and take one Final Honour School at the end of his fourth year (preferably Lit. Hum.), and another at the end of his fifth.

DEGREES. Besides the B.A., the University confers the following degrees:—Master of Arts (M.A.), for which every B.A. is eligible when in his 27th term of standing (fee to University, £12); Bachelor of Divinity (B.D.), for which candidates must have been M.A. for three years, be in Priest's Orders, and read two public dissertations; Doctor of Divinity (D.D.), for which candidates must have been B.D. for four years, and give three public expositions in Theology; Bachelor of Civil Law (B.C.L.), for which candidates must be of 27 terms' standing, and if not B.A. must have taken a similar course in which legal subjects predominate; Doctor of Civil Law (D.C.L.), for which candidates must have been B.C.L. for five years, and read a public dissertation on Civil Law, or submit a book written by them; Bachelor of Medicine (B.M.). for which candidates must be B.A., and pass two further examinations; a B.M. becomes *ipso facto* a Bachelor of Surgery (B.Ch.), and when of standing for the M.A., a Master of Surgery (M.Ch.); Doctor of Medicine (D.M), for which candidates must be B.M. of 39 terms' standing, and must read a public dissertation. For the degrees in Music residence is not necessary: bachelors (B.Mus.) have to pass a general preliminary examination, and three other examinations in Music; Doctors (D.Mus.), must have been B.Mus. for five years, and must pass two examinations. Also the degrees of Bachelor and Doctor of Letters (B. Litt., D. Litt.), and Bachelor and Doctor of Science (B. Sc., D. Sc.), are conferred for special post-graduate study and research, which can be conducted under the guidance of the University Professors, and under conditions which give the student every opportunity of specializing in whatever direction his tastes may lead him. The University fees for these degrees vary from £8 to £14 in the case of Bachelors (in addition to a fee of about £2 for each examination), and £25 to £40 for Doctors. The University also grants diplomas in Education, Geography, Public Health, and Economics.

HIGHER SCHOLARSHIPS AND PRIZES. The most famous University Scholarships and Prizes (granted to members of the University, not on entrance, as are the College Scholarships) are:—*In Classics*, the Hertford, Ireland and Craven Scholarships, and to those who are qualified for a degree, the Derby Scholarship and the Craven Fellowships; the Gaisford Prizes for Greek Prose and Verse; the Chancellor's Prizes for Latin Verse and Latin Essay: *in History*, the Stanhope, Lothian, and Arnold Prizes: *in Law*, the Vinerian Scholarship: *in Divinity*, the Denyer and Johnson Scholarships, the Ellerton, Hall, and Hall-Houghton Prizes: and *in English Verse*, the Newdigate Prize. There are also various prizes in Political Economy, Physical Science, Mathematics, Geography, Modern and Oriental Languages, &c.

FELLOWSHIPS. Each College can confer Fellowships on Bachelors of Arts whose academical careers have been distinguished. These are awarded mostly by open examination, and may be either "Prize" Fellowships, i.e., they involve no collegiate duties, or "Official" Fellowships, i.e., they are attached to tutorial, and sometimes to professorial, work. Their value is mostly at least £200 a year, with allowances and often rooms, and they are conferred for periods of from 7 to 15 years. Honorary Fellowships and Degrees (*honoris causâ*) are often conferred on distinguished persons.

The best books for further reference are the "Examination Statutes," (Clarendon Press, 1s.) which give all regulations as to the examinations; the "Oxford University Gazette," (Clarendon Press, 7s. 6d. per annum, post free), which is the official record of dates of university terms and examinations, approaching examinations for scholarships, lists of lectures by professors and tutors, &c.; the "Calendar" (ready in November each year, 5s.); but, practically, the most useful book for enquirers is the "Student's Handbook to the University of Oxford," (Clarendon Press, 2s. 6d., post free 2s. 9d.), which contains full information as to the various College and University Scholarships, Prizes, and Examinations, with ample details as to the course and expense of university life, and the different college regulations. Any questions that may still arise are best referred to the particular authority involved, by whom they are always courteously answered. The Examination Questions are published year by year, and can be obtained from any of the Oxford booksellers.

The COLLEGES OF OXFORD, with the dates of their foundation, are as follows (the numbers in brackets showing how many undergraduates were on the College books in **1903**):—

1249, University (200); 1262, Balliol (244); 1264, Merton (129); 1314, Exeter (165); 1326, Oriel (136); 1340, Queen's (138); 1379, New (290); 1427, Lincoln (98); 1437, All Souls' (4); 1456, Magdalen (186); 1509, Brasenose (130); 1516, Corpus Christi (100); 1532, Christ Church

(298); 1554, Trinity (192); 1555, St. John's (151); 1571, Jesus (134); 1612, Wadham (103); 1624, Pembroke (97); 1714, Worcester (92); 1874, Hertford (121); 1269, St. Edmund Hall (36); 1870, Keble (230); 1868, Non-Collegiate (207). There are also private Halls—Grindle's, Marcon's, Pope's, Hunter-Blair's, and Addis'—which are simply licensed lodgings for groups of undergraduates, under the supervision of a senior member of the University.

The halls for the residence and education of women at Oxford are Lady Margaret Hall, Somerville College, St. Hugh's Hall, and St. Hilda's Hall, (see section on Women's education). The colleges affiliated, in whole or in part, to the University are St. David's College, Lampeter; University College, Nottingham; University College, Sheffield; and Reading College.

EXPENSE. To revert to the question of expense. It will be seen from the above particulars that the *fixed university charges*, from Matriculation to the B.A. degree inclusive, amount to £16 2s. As to *fixed college charges* (1) the entrance fee is mostly between £3 and £5 (Lincoln, Magdalen, and Corpus Christi have no entrance fee); (2) the caution deposit varies from £20 to £30, but is often lower for scholars (All Souls', Magdalen, Corpus Christi, and St. John's charge their scholars nothing, whilst the caution deposit at St. Edmund Hall is as low as £14, and for Non-Collegiate students is merely £2); (3) tuition fees lie between £21 and £27 a year (St. Edmund Hall, 15 guineas, Non-Collegiate, 6 guineas, with £6 10s. 6d. for University and Delegacy dues); (4) the college fee on taking the B.A. degree is from £1 to £7 (none to Non-Collegiate).

Under the heading of *varying college charges*, the rent of furnished rooms, with establishment charges, sometimes reaches nearly £60 a year (as at Exeter), but is as low as £25 at Jesus. Comparisons here are fallacious, as items are sometimes included by one college under this head, and excluded by another. In some colleges a student is allowed to live in lodgings throughout his course; in others only during his last year. If he has rooms in college, he has to provide his own linen, china, glass, cutlery, and plate. Battels (including kitchen, buttery, coal, laundry, and all other necessary charges) can with economy be kept between £1 10s. and £2 a week.

Sometimes there is a prepayment system: e.g., at *Queen's*, entrance fee £5. caution deposit £10, tuition £7 10s. a term, and all other charges (except fuel, laundry, groceries, and beer) £30 a term; at *Keble*, entrance fee £5, no caution deposit, and a fixed annual charge for everything else (except laundry, lights, and beer) of £82, a third of which has to be paid in advance at the beginning of each term; and at *St. Edmund Hall* no entrance fee or caution deposit, an inclusive charge of £24 a term for everything else (except fuel, laundry, and lights), paid in advance.

Thus at the cheaper colleges an economical student can keep his total college account between £80 and £90, while a Non-Collegiate student may, if necessary, bring his whole expenses while in residence down to as little as £50 a year (including *fixed university charges*, but of course excluding *optional expenses* and *personal expenses*), but so low a figure is by no means desirable. Lodgings can be procured at from 10s. to 15s. a week, and board and lodging at from 25s. to 30s.

The usual value of a scholarship is £80 a year (sometimes with further privileges) for four or five years, as previously explained. Mention may here be made of the Rhodes Scholarships, which are tenable at any College in the University of Oxford for three years: 20 each year of £300 for candidates from the colonies; 24 each year of £300 for candidates from the United States; and 5 each year of £250 for German candidates nominated by the German Emperor (apply to the Secretaries of the Rhodes Trust, 171 Temple Chambers, Temple Avenue, E.C.).

II. THE UNIVERSITY OF CAMBRIDGE.

At the head of the University are the Chancellor and Vice-Chancellor. The supreme governing body is the *Senate*, which, like Convocation at Oxford, consists of all Masters of Arts or Laws of the University, whether resident or non-resident. The decrees of the Senate are called "Graces," but no proposal can be made in the Senate which has not first received the approval of the *Council*—an executive committee of the Senate consisting of the Vice-Chancellor and sixteen members. These members are elected by the *Electoral Roll*, or resident members of the Senate, corresponding to Congregation at Oxford. The Senate has the privilege of sending two representatives to Parliament.

The ACADEMICAL YEAR commences in October, and consists of three terms—Michaelmas (October 1 to December 19); Lent (January 8 to about the end of March); and Easter (about middle of April to June 24). "Full Term," during which undergraduates have to be in residence, consists of a period of about 60 days within the limits fixed by the Council of the Senate. Residence is also permitted in the Long Vacation during July and August, but only to students who are reading for Honours or to Medical students. Such residence is chiefly valuable for those whose studies necessitate resort to the University libraries or laboratories, and does not count towards the nine terms of residence necessary for a degree. For Matriculation (university fee, £5) there is no examination; the college recommendation is sufficient guarantee of the candidate's fitness. Each college, as a rule, has its own entrance examination, from which it exempts those who have won scholarships, or passed some recognised public examination (such as the Senior Local), or the University "Previous Examination," which can be taken before entering on residence. Some colleges, such as St. John's, will accept a Certificate of Attainments signed by the Head Master or House Master of the school at which the candidate has been for the previous two years; others, such as Downing, Magdalene, Peterhouse, and St. Catharine's only require satisfactory evidence of the candidate's being able to pass the Previous within reasonable time. To attain the degree of B.A., it is necessary to have kept nine terms of residence (i.e., to live in College, or in licensed lodgings situated not more than 2½ miles from Great St. Mary's Church), and to pass the examinations here described. The letters indicating the degree a man has gained do not fully show its worth. That depends on the examinations which have been passed in order to gain it. Degrees accordingly are divisible into *Pass Degrees* and *Honours Degrees*.

FOR A PASS DEGREE the following Examinations must be successfully taken:—

1. **The Previous Examination**, known as the "Little Go," in two parts, held four times a year, in October, December, March and June; university fee, £1 5s. each part. This examination, as already stated, can be taken before a student enters on residence. PART I. *Classics*:—A Gospel in Greek, or instead a Greek author; a set author in Greek, and another in Latin, with grammar questions in each language chiefly arising out of the set authors; Latin Unprepared Translation, for which the use of a dictionary is permitted. PART II. *Mathematics*:—Paley's Evidences or Elementary Logic; Practical and Theoretical Geometry; Arithmetic; Elementary Algebra; English Essay, on a subject arising from a set English author, such as one of Shakespeare's plays. Various public examinations exempt from either or both parts or from portions of them. Candidates who pass are placed in four classes, the names in each class being arranged alphabetically.

2. **The General Examination** in two parts, held twice a year, in June and December; university fee, £1 each part. Candidates must be in at least their third term of residence. PART I:—A set author in Greek and another in Latin; Algebra, Elementary Statics and Trigonometry; Latin Prose Composition (optional). PART II: The Acts of the Apostles, in Greek; a selected portion of English History; an English essay, on a subject taken from the period of English History; Elementary Hydrostatics and Heat; a paper on some play of Shakespeare, or on some portion of Milton's works (optional). The class lists in each part are arranged as in each part of the Previous examination.

3. **Special Examinations**: university fee, £3. The candidate has to select one of the following subjects:—Chemistry, Classics, History, Law, Mathematics, Mechanics,

and Applied Science, Modern Languages, Physics, Political Economy, Theology (in each of these the examination is held twice a year, beginning at the end of November and at the end of May; each examination is in two parts), Botany, Geology, Logic, Physiology, Zoology (in each of these the examination is held once a year in the Easter Term, and is part of the corresponding Tripos examination; each examination is undivided into any parts), Agricultural Science (held twice a year like the former group, but undivided like the latter), and Music (held in December and May) in two parts. Candidates who pass are divided into three classes (only two in Music), the names in the first class being arranged in order of merit, and in the other classes alphabetically. If the examination is not in two parts, candidates must have entered on their eighth term of residence; if in two parts, they cannot take Part I. before their sixth term, nor Part II. before their ninth.

FOR AN HONOURS DEGREE students are required to keep their nine terms of residence consecutively, except in special cases of illness, &c. and to pass the following examinations:—

1. **The Previous Examination,** in Parts I. and II., as described above, with an extra examination in an additional subject—either Mechanics (with some Trigonometry), or French or German (including a set author); university fee for the additional subject, £1 5s.

2. The **Tripos Examination,** held once a year in the Easter Term. For their first Tripos examination candidates must usually be in not less than the sixth or more than the ninth term of residence; university fee, £3. The Triposes are eleven in number:—Mathematics (the most famous of the Cambridge faculties), Classics, Moral Sciences, Natural Sciences, Theology, Mechanical Sciences (each of these Triposes is in two parts, but Part I. alone qualifies for a degree; comparatively few students stay up a fourth year in order to take Part II.), Law, History, Economics (each in two parts, but Part I. alone does not qualify for the B.A.), Mediæval and Modern Languages (in six sections, two of which qualify for a degree), and Oriental Languages (undivided). The successful candidates in each Tripos are divided into three classes; the names in each class being arranged alphabetically. The Mathematical Tripos is now no exception to this arrangement, and the proud distinction of being *Senior Wrangler* will, therefore, be no longer attainable. The members of Class I., however, will still be called "Wranglers," of Class II. "Senior Optimes," and of Class III. "Junior Optimes." Students can take Part I. of the Tripos at the end of their second year, but if they do so, they must add a "Special Examination" (see above) in their third year to qualify for a degree, even in those Triposes in which Part I. alone (when taken at the end of the third year) would qualify for the B.A.

The best course is, for those who can afford the time and money, to take Part I. of the Tripos at the end of the third year, and then to remain in residence as Bachelors for a fourth year, reading either for Part II. of the same Tripos, or for Part I. or II. of some other Tripos (for which they are then eligible). The fee to the University on taking the B.A. degree is £7, in addition to the fee charged by each college.

For full information as to examinations, courses of study, expenses, scholarships, &c., the most convenient book is the "Student's Handbook to the University and Colleges of Cambridge," 3s.; the "University Reporter," (2s. 6d. a term) corresponds to the Oxford University Gazette; the "Compendium of University Regulations," (6d.) is full and official; the "Cambridge Pocket Diary," (1s.) is useful for dates; all these books are published by the University Press, and are also issued by C. J. Clay and Sons, Ave Maria Lane, London, whence also can be obtained sets of examination questions, at 2s. 6d. each; the "Calendar" is published by Deighton, Bell, & Co., (7s. 6d.); while for those unacquainted with "Varsity Life," and its etiquette, a little book called the "Fresher's Don't" (Redin & Co., Trinity Street, Cambridge, 6d.), contains some valuable hints.

DEGREES. The other degrees of the University are M.A.; in Divinity, B.D. and D.D.; in Law, LL.B., LL.M. (Master of Law), and LL.D.; in Medicine, M.B., B.C. (Bachelor of Surgery), M.D. and M.C.; in Music, Mus. B., Mus. M. (Master of Music), and Mus. D.; and for advancement of Science or Learning, Sc. D. and Litt. D. For the M.A. a candidate must be in at least the nineteenth term from his matriculation, and pay a University fee of £12. For the B.D. a candidate must be in Priests' Orders, and must either "keep an Act" (i.e., read a Latin thesis before the Regius Professor of Divinity) or print a dissertation on some theological subject; a B.D. of five years' standing can proceed to the D.D. on printing another dissertation approved by the Regius Professor. In Law, students who obtained honours in both parts of the Law Tripos, or in one part of it and in another Tripos, are entitled to the LL.B., and if in the first class to the LL.M.; while they can submit any original work in Law as a qualification for the LL.D. In Medicine, three years' residence with five years' medical study (in or out of the University) is required for the B.C.; besides the Previous Examination, three medical examinations have to be passed, much of the ground of which is covered by the Natural Sciences Tripos; and if in addition the candidate "keeps an Act" before the Regius Professor of Physic, he is entitled to the M.B.; while after three more years, and after keeping another Act, he can proceed to the M.D.; and a B.C. can, after three years, become an M.C. In Music, nine terms of residence are required for the Bachelor's degree, while candidates have to pass the Previous Examination, and an examination in Music in two parts (held in the Easter Term); after two years a Mus. B. can proceed to the Mus. M. by passing a further examination in two parts; and the Mus. D. is conferred for distinction in musical composition on any graduate who submits three satisfactory original works. The research degrees of Sc. D. and Litt. D. are obtainable by Masters of Arts, Law, Surgery, or Music of five years' standing, who submit satisfactory original contributions to the advancement of science or learning. The fees for the various examinations are mostly two or three guineas; for C.M. and Mus. D., five guineas; for LL.D., ten guineas. Diplomas are also granted in Agriculture and in Public Health, to persons who are not members of the University (apply respectively to the Secretary to the Department of Agriculture, University Chemical Laboratory; and to the Secretary to the State Medicine Syndicate).

FELLOWSHIPS AND PRIZES. Fellowships are awarded much as at Oxford, while the chief University Scholarships and Prizes are:—the Chancellor's Gold Medals for Classics, English Verse, and English Law; the Browne Medals for Greek and Latin Epigrams and Greek and Latin Verse; the Craven, Browne, and Porson Scholarships for Classics; the Bell Scholarships for Classics, Mathematics, and Divinity combined; and the Norrisian, Burney, and Maitland Prizes in Divinity. But the blue riband of the University is the Senior Wranglership, won by the student who heads the first class of Part I. of the Mathematical Tripos. The Colleges of Cambridge, with the dates of their foundation, are as follows (the numbers in brackets shewing how many undergraduates were on the College books in 1903):—

1284, Peterhouse (55); 1326, Clare (186); 1347, Pembroke (236); 1348, Gonville and Caius (243); 1350, Trinity Hall (181); 1352, Corpus Christi (36); 1441, King's (149); 1448, Queen's (91); 1473, St. Catharine's (54); 1496, Jesus (107); 1505, Christ's (169); 1511, St. John's (231); 1519, Magdalene (42); 1546, Trinity (634); 1584, Emmanuel (186); 1596, Sidney Sussex (75); 1800, Downing (53); 1882, Selwyn, for members of the Church of England, (90); and 1869, Non-Collegiate (82). Also for women there are Girton and Newnham Colleges, (see section on Women's Education). The Colleges affiliated to the University in whole or in part are the University Colleges of Aberystwyth, Cardiff, and Nottingham; St. David's College, Lampeter; University College, Sheffield; Hartley University College, Southampton; and St. Edmund's College, Old Hall, Ware. Through these affiliated colleges, one year's residence and part or the whole of the previous Examination are often excused.

EXPENSE. As to expenses, the *fixed university charges*, from Matriculation to the B.A. degree inclusive, amount

to about £19. In the *fixed college charges* the entrance fee is mostly £2, the caution deposit about £15 (some Colleges allow payment in advance as an alternative), the tuition fee between £18 and £24 a year, establishment charges about 10 guineas a year, the university capitation tax £2 a year, and the college degree fee mostly £5. In the *varying college charges*, rent of unfurnished rooms would rarely be as low as £10 a year, and might well reach £25 to £30, furniture being taken at a valuation from the preceding tenant. Furnished lodgings in the town are mostly between £6 and £15 a term, the tenant providing his own linen, cutlery, glass, and crockery.

A student reading for the Mathematical Tripos may need a private tutor, whose charge (for three hours a week) is mostly £9 a term, and 10 guineas in the Long Vacation, while a student making use of the university laboratories will have to pay about 20 guineas a year extra.

At *Emmanuel*, a hostel for 33 students has been started, with fixed charges of £75 to £85 a year to cover the fixed and varying college charges, providing meat-breakfast and lunch in the Common Room and dinner in the College Hall (no caution deposit: entrance fee £1 15s.). At *Selwyn*, as at Keble College, Oxford, the equivalent charge is £81 a year, all meals being taken in Hall. *Queen's* and *Downing* have a similar prepayment system.

Non-Collegiate students have been known to bring all their expenses down to about £12 a term (apart from the fixed university charges, and from dues to the Non-Collegiate Students' Board, which amount to £6 10s. a year, besides the entrance fee of £6 15s.), thus making the three years' course cost from £165 to £180; but this is possible only with the strictest economy. The only satisfactory way to estimate expenses is to write to the College selected, whence all information may be gained, and also all particulars of College Scholarships, Sizarships, Exhibitions, &c. The Student's Handbook mentioned above also gives full details of these matters.

III. THE UNIVERSITY OF DURHAM.

It was founded by Act of Parliament in 1833, the Dean and Chapter devoting to it £3,000 a year of the Cathedral revenues. The Dean still is *ex officio* the Warden, and the chairs of Greek and Divinity are filled by two of the Canons. The governing body is the Senate (consisting of the various Professors, Principals, &c.), while Convocation is constituted much as at Oxford. Residence is compulsory, except for degrees in Law or Music, but the system of instruction is professorial, as in Germany, not tutorial, as at Oxford and Cambridge.

The **Faculties** are Theology, Arts, Law, Medicine, Science, Music, and Letters. The **Degrees** in all these faculties, except Theology, are open to both sexes equally (since 1895). The degree of B.A. is obtainable after residence for two years, i.e., six terms of about eight weeks each, on passing two examinations (Pass or Honours). Residence for a seventh term, and a further examination, entitle to the Licentiate in Theology (L. Th.) which is described in the article on Holy Orders. The other degrees granted are M.A. (no examination), B.D. and D.D. (for which graduates of other universities are eligible), B.C.L., B.Litt., B.Mus., D.Mus., and after study at one of the Newcastle Colleges, M.B., M.D., B.S. (Surgery), M.S., B.Hy. (Hygiene), D.Hy. and B.Sc.

The **University Fees** are £2 on entrance, £7 per term for degree tuition, £1 10s. for each examination, and £3 fee—thus totalling £50 for the degree of B.A. There are numerous **Scholarships** and **Exhibitions** from £70 a year downwards, mostly without any age-limit: full particulars of these and other university matters can be found in the Calendar (Whittaker, London, 1s. 6d.), or the Student's Guide to the University of Durham (Andrews, Durham, 1s. 6d.). The constituent bodies of the University are as follows:—

(1) **University College**, founded in 1837, when the Hall and Chapel of the old Castle were devoted to the use of the College. All students reside within the College. There is a caution deposit of £15 (returnable on leaving), rent of furnished rooms is £6 a term, and College charges about seven guineas (including club subscriptions), while the cost of board varies between £8 and £18 a term. Apply to the Master, the Castle, Durham.

(2) **Bishop Hatfield's Hall**, opened in 1846, to provide as economical a course as possible. All rooms are let furnished, and meals are taken in common. The caution deposit (returnable) is £15, and there is an inclusive charge of £15 16s. a term for Battels, which covers board, furnished rooms, club subscriptions, &c. Apply to the Principal.

(3) **St. Chad's Hall**, opened in 1904, to assist earnest Candidates for Holy Orders who have not sufficient means for the necessary training. Apply to the Principal.

(4) Unattached or **Non-collegiate Students** first admitted in 1871. They must be at least 23 years old, and reside in lodgings approved by the Warden and Proctors. Cost of board and lodging varies from £25 to £50 a year. Apply to the Censor.

Thus the cost of the two years' course necessary for the B.A. degree is, in addition to £50 for University fees, between £130 and £190 at University College, £95 upwards at Hatfield Hall, and £50 upwards as Unattached.

In 1852 the Newcastle-upon-Tyne College of Medicine was affiliated to the University, and in 1892 students of what is now known as the Armstrong College, Newcastle, were permitted to proceed to the degree of B.A. as well as to the various science degrees, the courses of training being in the various branches of Engineering, Mining, Metallurgy, Naval Architecture, Agriculture, &c., as well as in Literature and the Fine Arts. Codrington College, Barbados, was affiliated in 1875, and Fourah Bay College, Sierra Leone, in 1876.

A Hostel for women has been opened at *Abbey House*. The fees are £16 a term for a study-bedroom, but £12 a term if study and bedroom are shared between two. There is a scholarship of £70 and an exhibition of £20. Apply to the Lady Principal.

IV. THE UNIVERSITY OF LONDON.

Until the early years of the 19th century, the only body in the Metropolis which approached university rank was Gresham College, Basinghall Street, named after Sir Thomas Gresham, who in 1548 founded seven Professorships (in Divinity, Music, &c.), to bring university advantages within reach of Londoners. In 1828 University College, Gower Street, was founded on an undenominational basis, with faculties in Arts, Laws, and Medicine. The following year witnessed the incorporation of King's College, Strand, which was definitely associated with the Church of England. At last, in 1836, the University of London was constituted by Royal Charter, empowering the Senate to confer degrees on qualified pupils from these colleges or from any other colleges which might be affiliated. Most of the Nonconformist and Roman Catholic colleges were thus enrolled, but the University could exercise little control over its constituent elements, and consequently the supplemental Charter of 1858 abolished the affiliation of those colleges, and threw the University's examinations and degrees open to all persons equally, without regard to their place of study. In 1878 the door of the university was opened to women, who were placed on precisely the same footing with men for degrees, honours, etc.

Thus the four main features of the university were—the absence of religious tests, the conferring degrees after examination only, the entire equality of the sexes, and the dispensing with any requirements as to residence or tuition.

Its Re-Organisation. But it became clear that such a body could not meet the educational needs of the Metropolis, and after lengthy deliberation and two Royal Commissions (which reported in 1888 and 1894), the University was modified and re-organised, under the Act of 1898, so as to add to its functions of awarding degrees by examination the task of co-ordinating the higher education imparted by various bodies in London. The area of its jurisdiction was restricted within a radius of 30 miles from the headquarters of the University (which were moved in 1900 from Burlington Gardens to South Kensington).

Its students, therefore, fall into two classes: **Internal**, who are studying either in the Schools of the University or under teachers who have been appointed or recognised by it (see below); and **External**, i.e., any other persons who can satisfy the examiners' tests, often private students, and often students from other universities (such as Wales, Liverpool, and Manchester) who appreciate the stringency of the standard of examination, and the consequent high value of the degree.

There are eight **Faculties**, conferring degrees in Theology, Arts, Laws, Music, Medicine, Science, Engineering, and Economics and Political Science. These are sub-divided so as to be under the supervision and co-ordination of 32 Boards of Studies. The fee for the Matriculation examination is £2, and for most of the other examinations £5, but there is no additional fee for proceeding to the degree.

The Calendar contains all information; Volume I. is of a general nature (3s. 6d. net.); Volume II. deals with Internal Students, the Schools of the University, and Institutions at which there are recognised teachers, as well as the numerous Scholarships and Prizes that are obtainable (5s. net.); Volume III. deals with External Students, and gives the examination papers (5s. net.).

THE SCHOOLS OF THE UNIVERSITY are as follows:—

In all faculties but Theology and Music: University College, Gower Street, which awards entrance scholarships of about £450 a year, and over £1000 a year in scholarships and prizes to its more successful students.

In all faculties but Music: King's College, Strand, which awards entrance scholarships of about £350 a year, and many others to its more successful students.

In Theology: Hackney College, Hampstead; New College, Hampstead; Regent's Park College; Cheshunt College; Richmond Wesleyan College; St. John's, Highbury (London College of Divinity).

In Arts and Science: Royal Holloway College (for women); Bedford College (for women).

In Arts: Westfield College, Hampstead (for women).

In Science: Royal College of Science, South Kensington; and, for agriculture only, the South Eastern Agricultural College, Wye, Kent, which falls outside the University area, but is included under a special clause.

In Medicine: the medical schools of St. Bartholomew's, London, Guy's, St. Thomas', St. George's, St. Mary's, the Middlesex, Charing Cross, Westminster and Royal Free Hospitals.

In Engineering: City and Guilds of London Institute, South Kensington.

In Economics: London School of Economics, Clare Market, Strand.

Many of these institutions are more fully treated in the section on Women's Education, or in the article on the Professions. It may be expedient, however, to state here, with regard to the Royal College of Science, South Kensington, that its students are chiefly selected by the Board of Education on results of examinations throughout the country, and these receive free tuition. Some are Science teachers doing advanced work, who receive a maintenance allowance in addition, and there are some private students who pay fees. The schools in which there are recognised teachers of the University, comprise most of the Technical Institutes, Training Colleges, Dental and other Medical Schools, and Colleges of Music in the Metropolis. An important step has this year (1906) been taken towards the conversion of the University into a "Teaching University," namely, the incorporation of University College, Gower Street, with the university itself. The large sums required for freeing the buildings from debt and adapting them to the work of the University have been supplied chiefly by Sir Donald Currie and the Drapers' Company. The Goldsmiths' Company has also done much to promote the same object, by presenting to the University their Institute at New Cross, with the promise of £5000 a year for five years towards its maintenance.

Candidates for a degree must have passed the Matriculation Examination, which is held three times a year, in January, in June, and in September, fee £2. Applications for Form of Entry and Regulations for Matriculation must be made to "The Principal, University of London, South Kensington, S.W."

V. THE UNIVERSITY OF MANCHESTER.

It obtained its charter in 1880, under the name of the Victoria University, and from 1887 to 1903 had three constituent colleges:—Owen's College, Manchester; University College, Liverpool; and Yorkshire College, Leeds. These three colleges are now independent universities, and are entirely separate, except that they have a common Matriculation Examination, in which they are joined by the University of Sheffield. This examination is held twice in each year, in July and in September, in the buildings of each of these four universities. All information as to fees, &c., may be obtained by application to the Secretary, Joint Matriculation Board, Owen's College, Manchester.

Full information as to degrees, scholarships, prizes, &c., will be found in the Calendar published at the University Press, price 3s. by post 3s. 4d.; but most of the necessary information may be obtained from the Prospectus, sent free on application to the Registrar, The University, Manchester, from whom may also be obtained information respecting the Day Training College for Men and Women Teachers.

Residence is provided at *Dalton Hall*, Victoria Park, for fifty-two students, at £90 a year; at *Hulme Hall*, Plymouth Grove, for thirty students, at £63 a year (five scholarships from £20 to £50 are awarded each year); and for women, at *Ashbourne House*, Victoria Park, from thirty-six to fifty guineas a year. *Victoria Church Hostel*, 266 Oxford Road, for women students of the University Training College, £15 a year exclusive of University fees.

VI. THE UNIVERSITY OF BIRMINGHAM.

It was founded in 1900, being developed from the Mason University College, founded in 1875. Every student has to pass the Matriculation Examination (fee £2) or one of its equivalents—the Oxford Responsions, Cambridge Previous Senior Locals, &c.

The Matriculation Examination is held twice a year, in July and September. Candidates should apply to the Registrar for a form of entry. Copies of previous examination papers may be obtained from Cornish Bros., New Street, Birmingham, price 6d.

There are four **Faculties**—Science, Arts, Commerce, and Medicine, the fee at an Intermediate Examination being mostly £3, and at a Final Examination £4. The fees for each subject in the prescribed courses of study are usually three or four guineas a year. These can be covered in the case of medical students by a Composition Fee of £85 (providing for five years' work), while the total cost of a degree in medicine can be as little as £155, which includes matriculation, membership, and all examination fees, university tuition and hospital practice; but of course does not include board and lodging.

The **Faculty of Commerce** is a novel and characteristic departure. It includes such subjects as Modern Languages, Science applicable to Manufacture, History, and Banking, and the degree of B. Com. is conferred. There is a special school of Modern Languages, and schools of Engineering, Metallurgy, Mining, and Brewing, in which subjects University Diplomas are granted at a moderate cost, e.g., the Diploma in Malting and Brewing can be obtained at an inclusive cost of £87 for three years' work. A register of suitable lodgings is kept by the Secretary of the University.

No residence is provided for men, but a register of suitable lodgings is kept by the Secretary of the University. There is a hall of residence for women students, namely, University House, 215 Hagley Road. Terms from 33 to 50 guineas per annum, according to accommodation.

VII. THE UNIVERSITY OF LIVERPOOL.

It was originally University College, Liverpool, which was founded in 1881, and became a constituent College of the Victoria University in 1884. By its Charter of 1903 it was created an independent university, with the power of incorporating the Liverpool Royal Institution (founded in 1821), and of affiliating any qualified educational bodies (such as the School of Architecture and Applied Art).

The Calendar (published by the University Press, Liverpool, 1s. 6d., post free 1s. 10d.) gives all information as to courses of study, fellowship, scholarships (including some 30 entrance scholarships, mostly about £35 each), and Prizes, together with the Scholarship examination papers.

The faculties are Arts (with Litt. D.), Science, Engineering, Law, and Medicine, and there are Honours courses in Arts and Science. A special form of the ordinary B.A. degree may be taken by students preparing for a commercial career, a special syllabus having been drawn up to suit their requirements. Special regulations also have been made for Evening Students to enable them by a five years' course to obtain the ordinary B.A. degree. Affiliated to the University are the Training Colleges at Edge Hill and Mount Pleasant, in which special courses for the first year of study for the ordinary B.A. degree are held. (See "Joint Matriculation Board" under *University of Manchester.*)

Residence is provided for men at the *Hall of Residence*, 44–46 Upper Parliament Street, at £1 5s. a week; and for women at the *University Hall*, Holly Road, Fairfield, from £35 a year; apply to the Warden in each case.

VIII. THE UNIVERSITY OF LEEDS.

It was originally the Yorkshire College, but was constituted an independent university by Royal Charter, 1904. The university grants degrees in Arts, Science, Medicine, Commerce, and Law; and in accordance with its original intention specialises in the application of science to industries: civil, mechanical, electrical, mining and sanitary engineering; dyeing, cloth and leather manufactures; analytical chemistry; agriculture and commerce. There is also a capital Medical School, forming the oldest department of the University, having been founded in 1832. (See "Joint Matriculation Board" under *University of Manchester.*)

The fees can be ascertained from the calendar according to the subjects taken up. Residence is provided at *Lyddon Hall*, Virginia Road, at sixty guineas a year, in arts and science (thirty three-weeks); sixty-nine guineas in medicine (thirty-eight weeks); apply to the Warden.

IX. THE UNIVERSITY OF SHEFFIELD.

This university was constituted in 1905, and is a development of the University College, which was formed in 1897 by the amalgamation of the Sheffield School of Medicine (founded 1828), the Firth College (founded 1879), and the Sheffield Technical School (founded 1886). It holds both day and evening courses of lectures, and besides the three faculties of Arts, Science, and Medicine, its departments include Technology (Engineering, Metallurgy, and Mining), Commerce, Dentistry, and Practical Sanitation. Its Calendar contains all details relating to degrees, scholarships, prizes, examinations (with papers) and fees. (See "Joint Matriculation Board" under *University of Manchester.*)

X. THE UNIVERSITY OF WALES.

It was founded by Royal Charter in 1893, and comprises the three constituent colleges named below. Its faculties are Arts, Science, and Medicine, and it has departments in Music, Applied Sciences and Teaching. The regulations as to degrees, scholarships, and prizes are contained in the prospectuses, which can be obtained post free from the Registrar, University Buildings, Brecon, or from one of the College Registrars. The fee for the Matriculation examination is £2; for the Intermediate, Ordinary, and Special Examinations 15s., and for the Honours examination £1 10s. Students must reside either in the Halls or in licensed lodgings. The cost of board and residence for a year (i.e., a session of three terms of about 11 weeks each) can be kept between £30 and £40.

(1) University College, **Aberystwith**, founded in 1871. Registration fee, £1 a year; tuition fee, £10 a year, with extra charges for laboratory work. There is a Men's Hostel at 1 Marine Terrace, which charges from 30 to 51 guineas a year for board and residence (apply to the Warden). And for women the Alexandra Hall charges from 27 to 51 guineas (apply to the Lady Principal).

(2) University College, **Bangor**, founded in 1884. Registration fee, a guinea a year; annual tuition fee, £10 in Arts, 14 guineas in Science. There is a Hall of Residence for women at *University Hall*, accommodating 52 students, opened by Miss Helen Gladstone in 1897, to which has been added an adjoining mansion, Caederwen, for 13 students. The cost of board and residence is 30 to 40 guineas a year; apply to the Warden.

(3) University College, **Cardiff**, founded in 1882. Matriculation fee, one guinea; annual tuition fee, £10 in Arts, 13 guineas in Science. *Aberdare Hall* is a woman's hostel, charging from £32 to £42 10s. a year for board and residence, and offering scholarships of from £10 to £35; apply to the Lady Principal.

XI VARIOUS COLLEGES OF UNIVERSITY RANK.

To make the account of the English Universities more complete, a few words must be added about certain Colleges whose work is definitely of a university standard, although they are not incorporated with any university.

1. ST. DAVID'S COLLEGE, **Lampeter**, will be spoken of more fully in the article on Holy Orders (see *The Christian Ministry*). It is affiliated to Oxford and Cambridge Universities, and has by charter the power of conferring the degrees of B.A. and B.D.

2. The HARTLEY UNIVERSITY COLLEGE, **Southampton**, is open equally to men and women. It is affiliated to Oxford and Cambridge Universities (thus excusing a year's residence for students who have attended the College for three sessions, and passed certain examinations), and it has a Hall of Residence for Women students. Its courses of instruction are specially arranged with regard to the degrees of Oxford, Cambridge, London, and St. Andrews Universities; while it gives especial attention to Civil and Mechanical Engineering, and provides for the requirements of Medical and Dental Students. The fees per session are 12 guineas (15 guineas where use of the laboratories is needed), while the fees per term are 5 and 6 guineas respectively. There is an entrance scholarship of £30 a year for three years, besides for local candidates four scholarships of about £30 for two or three years, and four exhibitions of about 12 to 15 guineas for three years (age 16 to 19).

3. UNIVERSITY COLLEGE, **Bristol**, works on similar lines, and besides ordinary university courses, affords systematic instruction in the branches of Applied Science that are more nearly connected with the Arts and Manufactures; in Engineering, Surveying, &c., and in Medical studies. The fees for the university courses are about 13 guineas a session, while the three years' courses in Engineering cost from 75 to 80 guineas, and the Medical course from 55 to 65 guineas. There are numerous scholarships and exhibitions, particulars of which can be obtained from the prospectus (post free).

4. Other institutions of the same rank and working on similar lines, are Reading College; the Royal Albert Memorial College, Exeter; the Rutherford College, Newcastle-on-Tyne; and the University College, Nottingham.

XII. THE SCOTTISH UNIVERSITIES.

The four universities of St. Andrews, Glasgow, Aberdeen, and Edinburgh can be treated together, as they are organised on the same basis and have much in common. Their present constitution is due to the arrangements of the Scottish University Commissioners in 1889, and their system is entirely professorial. No distinction is made as to creed, and women are admitted to degrees equally with men. The students have to attend the university courses of lectures in the subjects which they offer for examination, and must make their own arrangements for board and lodging.

The **Faculties** are five in number: Arts, Science, Medicine, Law, and Divinity, while Edinburgh adds Music. The Scottish Universities do not grant the degree of B.A. at all, but the M.A. is obtainable after the three years' course of study detailed below.

The other degrees are B. Sc., D. Sc., (in pure Science, Engineering, or Agriculture); D. Litt. and D. Phil.; B.D. (obtainable after a special course of study subsequent to the M.A. course); the usual Bachelor's and Doctor's degrees in Law, Medicine, and (at Edinburgh) Music; and the honorary degrees of LL.D. and D.D.; diplomas are also granted in Education, Public Health, &c.

The **Academical Year** consists of two sessions—the winter session of about 20 weeks, from October to March (with about 3 weeks' vacation at Christmas); and the summer session of about 10 weeks, from April to early in July. The curriculum for the M.A. and B.Sc. degrees extends over three winter sessions, or two winter and three summer sessions. Seven subjects have to be taken out of a list of 13, and a full course of lectures attended in each (100 lectures usually qualify in each course). Or if honours are sought, one of the nine honours groups has to be selected, consisting of two subjects (e.g., the Classics group comprises Greek and Latin); and, in addition, three of the ordinary or pass subjects must be offered by the candidate. Before admission to the University course each student has to pass the Preliminary Examination (fee, 10s. 6d.) which is held under the direction of a Joint Board of Examiners for the four universities.

The **Fees** are moderate; the matriculation fee is a guinea, and there is an enrolment fee of a guinea a year; the fee for the course of lectures in each subject is mostly 3 guineas, but reaches as much as 6 guineas in some of the science subjects; while the examination fee in each subject is a guinea, until a total of five guineas has been reached, when there are no further fees for the degree. Thus the total cost of the M.A. or B.Sc. degree (beside board and lodging) is about 30 guineas.

The **Carnegie Trust** was founded in 1901, by Mr. Andrew Carnegie, to improve and extend scientific study and research, and to enable the youth of Scotland, however poor, to have the advantages of a university training. One-half of its income is devoted chiefly to giving research scholarships in science, medicine, economics, history, or modern languages; the other half to paying the fees in whole or part of necessitous Scotch students who are over 16 years of age: any balance accruing may be devoted to paying for evening lectures or university extension work. (Offices of the Trust, 14 Hanover Street, Edinburgh.)

The Calendars may be obtained from the various universities for between 3s. and 4s., and these contain a list of bursaries, scholarships, and prizes, with the examination regulations and questions, &c. St. Andrews and Edinburgh unite in sending a member to Parliament, as do Glasgow and Aberdeen. A few details are appended about each university.

(1) **St. Andrews,** founded in 1411, and consisting of *St. Salvator's College* (founded 1450) and *St. Leonard's* (1512), which were united in 1747; *St. Mary's College* (1537); and *University College, Dundee* (1880), which was affiliated to the University in 1897. The Janitor at the United College keeps a list of suitable lodgings, and a common dining table is maintained, which provides dinners on five days a week at a charge of £3 15s. for the winter session, and half that amount for the summer session. At the *University Hall for Women* (opened in 1896), board and residence can be obtained for the winter session at a cost of between £30 and £50, and for the summer session at half that figure.

(2) **Glasgow,** founded in 1451. The lectures for women in Arts and Medicine are given chiefly at *Queen Margaret College*, to which there is attached a *Hall of Residence*, which provides board and lodging for between £30 and £40 a year.

(3) **Aberdeen,** founded in 1494 by William Elphinstone, Bishop of Aberdeen, and consisting of *St. Mary's College* (founded 1505), later called King's, where now the Arts and Divinity courses are held; and *Marischal College* (1593), now used for Science, Law, and Medicine. The two colleges were united in 1858.

(4) **Edinburgh,** founded in 1582, and justly renowned for its medical faculty, to accommodate which splendid new buildings were opened in 1880. There are various halls of residence for men, the largest being *University Hall*, St. Giles' House, 22 St. Giles' Street, where room-rent varies from 8s. to 18s. a week, and board can be obtained for about 13s.; while for women there are *Masson Hall*, 31 George Square (apply to the Warden), and *Muir Hall* for students of medicine, 12 George Square (apply to the Lady Superintendent).

XIII. THE UNIVERSITY OF DUBLIN.

including only Trinity College, Dublin, was founded in 1591. In 1873 the previously existing restrictions which confined its advantages to members of the Church of Ireland were removed. And now all classes, examinations and degrees are open to women. Its governing body consists of the Provost, Senior Fellows, Junior Fellows, and Professors, the two latter classes forming the lecturing body, while all take part in the examining work. Residence is optional, except for the four professional schools of Divinity, Law, Medicine, and Engineering, which require attendance at lectures as well as success in examinations.

Academical Year. There are three terms in each year—Michaelmas, Hilary, and Trinity. The academic year begins in November, with the lectures of the Michaelmas term; then comes Hilary term, commencing with examinations on the Michaelmas lectures; then Trinity term, commencing with examinations on the Hilary lectures; and finally, the November examinations on the Trinity term lectures, and these close the year. In the first and second years students are called Junior and Senior Freshmen respectively; in the third and fourth years, Junior and Senior Sophisters.

Fees. The entrance fee for Pensioners (ordinary students) is £15. Then follow eight half-yearly fees of eight guineas each, payable in April and October, and the degree fee is £1, thus making a total of £83 4s. Sizars (i.e., poor scholars) pay an entrance fee of £1 1s. 3d. and receive free tuition and commons. While the ordinary course is for four years, it is possible to reduce this period to two years and eight months; but the fees will be the same.

Degrees. To gain the degree of B.A., a student must pass the Matriculation or Entrance Examination, and "keep" eight terms. Terms can be kept either by attending with diligence the lectures, five-sixths of the maximum number being generally required; or by passing the examination held in the term. The former method involves residence, but, if it is adopted, at least two of the terminal examinations must be taken, viz., those of the final Freshman's term (November at end of second year), and of the final Sophister's term (the degree examination). The latter method does not require residence, but the student has to travel to Dublin to take the examinations. A student wishing to take honours may substitute one of the Moderatorships (the eight honours courses) for the ordinary degree examination. Moderators placed in the first class (Senior Moderators) receive gold medals; those in the second class (Junior Moderators), silver medals. The degrees granted by the University are the ordinary ones, and, in addition, those of Bachelor and Master in Obstetric Science (B.A.O.; M.A.O.), and in Civil Engineering (B.A.I.; M.A.I.).

From students residing within the University there is required a caution deposit of from £8 to £30; the rent of rooms varies from £4 to £18 a year (mostly providing accommodation for two students), and commons cost from 10s. a week. The Calendar is published by Hodges, Figgis, & Co., Grafton Street, Dublin (price 2s.), and contains all information about sizarships, scholarships, honours, prizes, etc., with the examination papers. The University elects two members of parliament.

XIV. THE ROYAL UNIVERSITY OF IRELAND.

This is an examining body, formed in 1880, with official buildings at Earlsfoot Terrace, Dublin. It replaces the old Queen's University (founded in 1850), which was the central examining body for students from the three Queen's Colleges of Belfast, Cork, and Galway (each founded in 1845), and for those only. The degrees of the Royal University are open to any candidates whatever, though these three colleges still supply a large proportion

ot the examinees. No residence is required by the University, except that medical studies must have been pursued at one of the institutions recognised by the Senate. There are no religious tests, and women are admitted to degrees equally with men.

For the B.A. degree, four examinations have to be passed: the Matriculation, First and Second University, and the Degree examinations, a year at least elapsing between each; the fee for each examination is £1, and on taking the degree £2. At the expiration of another year, a B.A. can take the M.A. examination (examination fee and degree fee, each £2). The usual degrees in Law, Science, and Medicine are granted, with Bachelor and Master in Surgery (B.Ch.; M.Ch.), Obstetrics (B.A.O.; M.A.O.), and Engineering (B.E.; M.E.). Diplomas are issued in Engineering, Sanitary Science, Mental Diseases, Agriculture, and Teaching.

The Calendar (price 2s. 6d., by post 3s.), contains the syllabuses and courses of study, its supplement (price 2s. 6d.) contains the examination papers, while a pamphlet (price 4d., by post 5½d.), contains the general regulations for degrees and diplomas, except in medicine, which are issued separately (price 2d., by post 2½d.)—all being obtainable from the University Printers, 87 Abbey Street, Dublin.

At each of the Queen's Colleges named above, the matriculation fee is 10s., the class fee for each course is from £2 to £5 per session, and the instruction is intended to prepare for the B.A., M.A., D.Litt., and D.Sc. degrees of the Royal University, or of London University. There are faculties in Arts, Law, and Medicine, and a school of Engineering.

Schemes are at present under consideration for providing a University in Ireland that will be satisfactory to the Roman Catholics. The Royal Commission, in 1903, proposed a teaching university, constituted of the three Queen's Colleges, and a Roman Catholic College at Dublin, considering the present constitution of the Royal University unsatisfactory. An alternative scheme is to do away with the colleges at Cork and Galway, make the college at Belfast a Presbyterian one, and create a Roman Catholic college at Dublin—the two latter joining with Trinity College as constituent colleges of the Dublin University. Another Royal Commission was appointed in 1906, "To inquire into and report upon the present state of Trinity College, Dublin." What will be the ultimate solution of the problem is still uncertain (1907). At present the Roman Catholic colleges in Ireland of university rank are those at Maynooth, University College (St. Stephen's Green, Dublin), Blackrock, Carlow, Clonliffe, and the Medical School at Cecilia Street, Dublin.

XV. UNIVERSITY EXTENSION SCHEMES.

A few words must be added on the work known as "University Extension." In the section on primary schools it was urged that the exigencies of earning a livelihood need debar few, if any, from continuing their education and carrying on at least one branch of study in which their school days had taught them to take pleasure. While the agencies already described are doing much to help on such a good object, the universities also are endeavouring to spread their light and learning beyond the areas immediately ministered to by them.

Competent lecturers are engaged to visit busy centres of population, and there give courses of lectures on the subjects with which they are specially qualified to deal. These lectures are mostly delivered in the evening, and the fees charged are so moderate as to be within the reach of all. The subjects are most varied, including not only science in all its developments, but also literature and history, both ancient and modern. All that goes to the making of a good citizen falls within their ken: economics, ethics and political philosophy, as well as subjects of more general interest, such as geography and commerce.

The lectures are intended to help and stimulate the ordinary intelligent enquirer, while also giving direction and aid to the more professed student. Books are recommended for reading, courses of study mapped out, and examinations held (conferring university certificates) for those who choose to submit to the ordeal; while everything possible is done to make the lectures generally interesting and useful, by employing abundant illustrations, and by making excursions under skilled guidance, either to the various museums or on geological, botanical, and other such quests. After each formal lecture is held a class in which the subject of the lecture is treated in greater detail, and the students have an opportunity of receiving help in their individual difficulties. Paper work is set and corrected, each week, for those who wish to avail themselves of such an aid to methodical study. At the end of July is held the "Summer Meeting," mostly at Oxford or Cambridge, when students are able to spend a week or a fortnight under the same conditions as mark the every-day life of the more highly-favoured undergraduate.

The four universities specially engaged in this work are those of Oxford, Cambridge, London, and Manchester (the Victoria University).

The arrangements for their courses of lectures, and much other interesting matter, may be found in the *University Extension Journal* (Archibald Constable & Co., 2 Whitehall Gardens, S.W.), which is published, under the official sanction of the Universities, nine times a year—on the first of each month from October to May, and in July (3d. each number: 2s. 6d. per annum post free).

The universities of Wales and of St. Andrews are also taking up this work; and thus university teaching and a part of its culture are being placed within the reach of nearly every one. The system of Local Examinations of schools by the Universities has already been mentioned in the section of this article dealing with Secondary Schools.

THE EDUCATION OF WOMEN.

The last half century has reason to be proud of the progress it has made in the efficiency and extension of women's education. In men's education, as has already been mentioned, we of the present day are not far in advance of the 15th century. The educational ladder which we have been reconstructing was then in existence, and was quite as adequate to the needs of its own times as anything we have produced is to the needs of ours. But in women's education the case is far different. Except for what Egyptian and Babylonian records may have to tell us of ages that are at present called pre-historic, it may safely be asserted that never before has there been an age so advanced as our own in all that pertains to woman's intellectual development. And this triumph is the more complete, in that it is so universally welcomed; while opinions are still much divided on the thorny question of "woman's rights," educated men are as unanimous as any woman could be in cordially appreciating the aims, efforts and successes of the pioneers in the field of woman's education. And this must needs be the case, if true education has the double function that has been alluded to—the developing the best that there is in each individual and the qualifying as perfectly as possible each individual for life's work and station. It was only when this double function was ignored, and women's qualities and necessities were supposed to be identical with men's, that some of the early attempts at women's education became unfruitful. But now that the novelty has worn off, and that experience has accumulated to correct the mistakes inevitably associated with any movement in its early days, all are happily agreed on the value of the movement itself. The mother who has been well educated can be a far wiser guide and truer friend in early life to her children than the one who has not; while outside the limits of the home, most provinces of social activity are alike being penetrated and purified by women, whose native capacities have been developed under a generous education. As doctors and surgeons, as missionaries and teachers, as poor-law guardians and members of school-committees, in the work of sanitary inspection and in

factory reform, in City firms and in West End businesses, and in countless other callings, women have demonstrated conclusively that they can supply to the common life a healthy and beneficial influence that must otherwise be lost to the community, and do a work for the lack of which all alike would suffer. Here we propose to give a slight sketch of the system and organisation at present in existence for women's education, and specially to dwell on the facilities offered for overcoming any difficulties in the matter of expense.

Primary Education of Girls. In Primary Education little need be added to what has been already said. It should be specially noted that the system of Junior Scholarships (from primary schools to secondary); Intermediate Scholarships (for maintenance at secondary schools); and Senior Scholarships (leading to university education), which has been inaugurated by the London and other County Councils, makes provision for girls as well as boys. Similarly, the Christ's Hospital Scholarships (see p. 717) are open to both sexes. But while boys may quite well start in the primary schools, and thence proceed higher, many people qualified to judge consider that it is better for girls, when possible, to start at once in the secondary school; for, in the case of the latter, there is more danger of their losing delicacy of manner from the indiscriminate associations which are often to be found in a primary school.

Technical Education of Girls. Nor need more than a few words be said as to Technical Education of girls. As a rule, the various institutions give instruction to both sexes (as shewn by the mark ‡ in the list above). In the schools attached to the technical institutes, the system is what is known sometimes as dual, sometimes as mixed. Strictly, in dual schools, the classes are duplicated, for boys and girls respectively, though under a single organisation; while in mixed schools, boys and girls work together for most subjects in one class (though the girls have a separate entrance and playground). The latter is the system of many of the Welsh Intermediate or County Schools, although the name "dual" is commonly applied to it. It presents some advantages, but there is a considerable body of expert opinion which judges that on the whole girls lose more than they gain by it. These technical schools not only provide for those girls who wish it, the elements of a scientific education such as the boys receive, but also give special attention to Dressmaking and Dresscutting, Cookery, Hygiene, and the various other branches of Domestic Economy. They also provide excellent opportunities for the study of Art in the simpler forms of drawing, and in the more elaborate work of designing and colouring; while Physical Culture is an object of great care, and is attended with marked success, as any one can testify who has witnessed the gymnastic displays such as are given (to take a prominent example) by the South-Western Polytechnic, Chelsea. The commanding advantage of these schools is that, as they have been but recently built, they are planned on the best and most commodious models, and they contain an abundance of apparatus fitted for every age or need, such as is beyond the means of many other schools to provide.

Secondary Education of Girls. In Secondary Education, considered apart from the Higher-Grade and Technical Schools, the conditions for girls are somewhat different from those for boys. Private Schools cover a far larger part of the ground, while publicly endowed schools, corresponding to the old Grammar Schools, are proportionally fewer; and till recent years the attempts to provide Public Schools for girls, similar to either the Major or Minor Public Schools for boys, have been lamentably few. As regards private schools, what has been said in the case of boys' schools applies with even more force to girls'. Some of them are excellent, while others are unsatisfactory and even absolutely inefficient. It is by no means always the case that the more expensive schools are superior to the less expensive; but there is great need of a common standard which shall be generally applied, so as to enable a parent justly to discriminate between the excellent, the good, and the inferior schools. A slight step in this direction has been made in the requirements for teachers' registration in schools desirous of gaining the recognition of the Board of Education; but this direct testimony to the teachers' capabilities is only an indirect evidence of a school's merits. And just because the day when private schools for girls can be dispensed with is far distant (even if such a thing were desirable), it is the more necessary that some means should be devised for according public recognition to such schools as deserve it—a matter which should not be impossible if public funds (for the provision of apparatus, etc.) were granted to those private schools which submit to official inspection and receive favourable reports. Meanwhile, the parent is left to exercise private judgment, and it is hoped that the tests which have been mentioned in connection with private schools for boys may be of considerable assistance in this task. (See p. 719).

In most of our towns of any size, there are now public schools for girls which have been established by public bodies, and are able to offer a good education at a moderate cost. The Girls' Public Day School Trust, and the Church Schools Company, have made valuable provision in many cases; so that, except in rural districts or the smaller towns, a parent ought to be able to procure a good education for girls at a fee of between 9 and 16 guineas per annum. A full list of these schools may be seen in the *Englishwoman's Year-Book* (A. & C. Black). Here can only be appended the names and particulars of a few of these schools, which may be taken as a fair sample of the rest:—

The High Schools of the Girls' Public Day School Trust (21 Queen Anne's Gate, Westminster, S.W.) are intended to provide for girls an education as thorough as that received by boys in public schools of the highest class. At each school there is a preparatory department for children under seven; at schools marked (*) there are licensed boarding-houses: the entrance fee is one guinea, and the annual fees for pupils under ten, 10 guineas; for those remaining after ten and for pupils entering between ten and thirteen £13 10s.; entering after thirteen £16 10s.

The Metropolitan Schools are at *Blackheath** (Wemyss Road), *Bromley* (Elmfield Road), *Clapham* (High School,* and Modern School, both on Clapham Common), *Dulwich** (Thurlow Park Road), *Highbury and Islington* (Canonbury Place), *Kensington** (St. Alban's Road), *Notting Hill and Bayswater* (Norland Square), *Paddington and Maida Vale* (Elgin Avenue), *East Putney* (Carlton Road and Upper Richmond Road), *South Hampstead* (Maresfield Gardens), *Streatham Hill and Brixton** (Wavertree Road) *Sydenham** (West Hill), and *Wimbledon** (Mansel Road). Outside the Metropolis there are schools at *Bath**, *Birkenhead*, *Brighton and Hove**, *Carlisle*, *Croydon*,* *Dover**, *Gateshead*, *Ipswich**, *Liverpool**, *East Liverpool*, *Newcastle*, *Norwich**, *Nottingham*, *Oxford**, *Portsmouth**, *Sheffield**, *Shrewsbury**, *Sutton**, *Tunbridge Wells**, and *York*.

The Church Schools Company (Church House, Dean's Yard, Westminster) charges annual fees of from 9 to 15 guineas, and has schools at—

*Kensington Park**, *Streatham*, and *Stroud Green* in the Metropolis; and, in the provinces, at *Derby*, *Durham*,* *Gloucester*, *Guildford*, *Hull*, *Kendal*, *Leicester*, *Newcastle-on-Tyne*, *Northampton*, *Reading*, *Reigate*, *Richmond* (Surrey), *St. Albans**, *Sunderland*, *Surbiton*, *Wigan*, *Yarmouth*, and *York*. To most of these schools Kindergarten Departments are attached (fees, 6 guineas.)

Various Anglican and Roman Catholic Sisterhoods supply an excellent education for girls. Mostly there is no question of creed for admission, nor is religious instruction given where not desired; still the religious atmosphere must have its influence, although no bias may be intentionally imparted. On the other hand, the sisters are mostly ladies who devote their lives to the work of education, and the example of their culture and refinement is of incalculable value. Among the Anglicans there are—

In the Metropolis *St. Mary's College*, *Paddington*, and the schools of the Sisters of the Church (Randolph Gardens, Kilburn), at *Harlesden*, *Kentish Town*, *Kilburn*, and *West Hampstead*; while outside the Metropolis, the most famous are at *Clewer** (Sisterhood of St. John the Baptist, fees from 60 guineas in St. Stephen's College, and from 30 guineas in St. Stephen's High School), *Ditchingham*

(Sisterhood of All Hallows), *East Grinstead** (St. Margaret's Convent: St. Agnes' School, £55 to £60 ; St. Margaret's College, £36), and *Wantage** (Sisterhood of St. Mary the Virgin · St. Mary's School, 40 to 60 guineas; St. Katharine's School, £30). Here should be named the Woodard School for Girls at *St. Anne's*, Abbots Bromley (£50–£60); *St. Mary's*, Abbots Bromley (24 guineas); *St. Michael's*, Bangor (£60–£75); and *St. Winifred's*, Bangor (£35–£42).

Among other Metropolitan Secondary Schools are:—

Aske's (the Haberdashers'), at New Cross and at West Acton; the *Burlington Middle*, Boyle Street, W.; *Catford and Lewisham; Central Foundation*, Spital Square, E.C.; *Coborn*, Bow; *Grey Coat Hospital*, Westminster; *Holborn Estate*, Houghton Street, Strand; *James Allen's*, Dulwich; *Lady Holles'*, Hackney; *Mary Datchelor*, The Grove, Camberwell; *Owen's*, Islington; *Roan*, Greenwich; *St. Martin's*, Charing Cross Road; and *St. Saviour's and St. Olave's*, New Kent Road.

Of schools which more strictly correspond to **Public Schools** for boys, there are in the Metropolis:—

*Baker Street High School** (tuition 18 to 24 guineas; board, 70 to 85 guineas extra); *Brondesbury and Kilburn High School; City of London School for Girls*, Victoria Embankment; *Graham Street High School**, Eaton Square (tuition 12 to 24 guineas; board, £80 to £90 extra); *North London Collegiate School**, (Frances Mary Buss Schools) at *Sandall Road*, N.W. (founded 1850), entrance fee £1, tuition 17 to 21 guineas, board 51 to 70 guineas extra, with £350 a year in Scholarships, besides one leaving scholarship each year of £50 for three years; and at *Prince of Wales' Road**, (the Camden School), tuition 9 guineas; *Queen's College School*, Harley Street, W., (12 to 24 guineas); and *St. Paul's*, Brook Green, Hammersmith.

Other schools for girls, which merit the title of **Public Schools**, and receive boarders, are at:—

Bath (High School), *Berkhamsted*, *Birkenhead*, *Blackburn*, *Blackheath*, *Bolton*, *Bournemouth*, (High School, and Collegiate School), *Bradford*, *Brighton* (Roedean), *Caversham* (Queen Anne's), *Chester* (Queen's School), *Clifton*, *Colwyn Bay*, *Ealing* (Princess Helena College), *Edgbaston*, *Exeter*, *Grimsby*, *Ipswich*, *Leamington*, *Leeds*, *Preston*, *Salisbury* (Godolphin), *Warwick* (King's High School), *Winchester*, and *Worcester*. Also there should be named the Clergy Daughters' Schools at *Bristol* (fees £23 on nomination); *Casterton*, Kirkby Lonsdale, Westmoreland (£28); and *Warrington* (£20 to £45); *Milton Mount College*, Gravesend, (for daughters of Congregational ministers, fees from £15); *St. Margaret's School*, Twickenham (for Naval and Marine Officers' daughters, fees £50), and *Lansdown Royal School*, Bath (for Army Officers' daughters, fees £45); *St. Margaret's*, Bushey, Hertfordshire, (Clergy Orphan Corporation); *St. Catherine's*, Bramley; and *St. Anne's*, Redhill.

Special mention should be made of two Colleges for Ladies which approach the rank of University institutions. **Queen's College**, Harley Street, London, W. (founded in 1848), gives a course of instruction for pupils up to the age of 20 or even higher, with the intention, not of preparing for particular examinations, but of fitting pupils for their duties in society: the fees are 30 guineas a year for tuition, with extras; boarders, 75 guineas extra. The **Cheltenham Ladies' College** (established in 1854), gives special preparation for the B.A. and B.Sc. courses of London University, as well as for the Cambridge Higher Local and other advanced examinations, and has highly successful departments in Art, Music, and Gymnastics. The fees are from 12 to 24 guineas per annum, while there are 14 boarding houses whose fees vary from 54 to 93 guineas. Each year there is awarded at least one scholarship of from £25 to £45 at St. Hilda's Hall, Oxford, which was originally founded to receive the elder students of Cheltenham College.

UNIVERSITY EDUCATION OF WOMEN.

With regard to the Universities, woman's triumph has been almost complete. At Oxford and Cambridge women are examined and classed, but degrees are not yet granted them. In 1896 the proposal was made at both universities to admit women to the B.A., and was reported on favourably by the committees appointed to consider the question. But in each case the committee's recommendation was subsequently rejected by the governing body of the university—not on the ground of the lack of merit, but simply from unwillingness to admit women to a share in the government of the university, a result which, though disowned by the advocates of the change, would seem naturally to follow; for the B.A. would lead to the M.A., and the latter might be expected to confer membership of the Convocation or Senate. Still, it is undoubtedly a great hardship that women students at Oxford or Cambridge should be placed at a disadvantage with their rivals at other universities, who are entitled to place after their names the letters to mark the degrees which they have won. At the other universities, women are admitted to degrees on the same terms as men, almost without exception: London University led the way in 1875; the Scotch Universities followed suit in 1892; and Durham in 1895. Trinity College, Dublin, also, has admitted women on the same terms as men. The younger universities have throughout their existence received women; and the University of Wales admits them to a share in the management of the university, exactly as it does men. In most cases special provision has been made for the residence of women students, while usually they have shared the tuition offered to the men (though sometimes they have their own lectures, as at Cambridge and Glasgow). Account has already been given of the hostels for residence under the headings of Durham University, Victoria University, Liverpool University, the University of Wales, St. Andrews University, Glasgow University, and Edinburgh University. It has also been explained that women are admitted equally with men to lectures, though no special provision is made for their residence, at certain Colleges of university rank. It now only remains to give fuller details as to points connected with Oxford, Cambridge, London, and St. Andrews Universities.

UNIVERSITY OF OXFORD. Women are admitted to all the examinations (pass and honours), for B.A., B.Mus., and D.Mus., while a special honours examination is held for them in modern languages, but they are not admitted to examinations in medicine. They are under the guidance of the Council of the Association for the Education of Women (offices at the Clarendon Buildings, Broad Street, Oxford), and are admitted to nearly all the university or college lectures. There are four halls of residence: Lady Margaret Hall, Somerville College, St. Hugh's Hall, and St. Hilda's Hall. Other women students form the Society of Oxford Home-Students (like the Non-Collegiate men students), and live with parents or guardians, or arrangements are made for their accommodation in private families (for about 2 guineas a week), or in lodgings (from about 25s. a week).

1. **Lady Margaret Hall** was founded in 1879 according to the principles of the Church of England, but with full religious liberty for the members of other denominations. Each student has a bed-sitting room, while meals are served in common in the dining-hall. The Hall charges are £75 per annum inclusive (except personal expenses, and the tuition fees of about £28 per annum, which have to be paid to the Association), but two students sharing the same room pay £65 each. Some scholarships of from £25 to £50 for three years are awarded in March each year. For admission, students must have passed Responsions, or one of its equivalents, and as a rule they must intend to read for honours. The number of students is 53.

2. **Somerville College** was founded in 1879 as Somerville Hall, and took its present name in 1894. The buildings consist of the Old Hall (with three cottages adjacent) and the West Buildings, thus accommodating 72 students. The inclusive college charges are from £87 to £93 per annum, including tuition; each student has a separate bed-sitting room. The College is undenominational, and students are expected to read for honours. Responsions, or some equivalent examination (which includes two languages and mathematics), is taken for entrance; in April each year there are offered two scholarships of £50, and one or more exhibitions of £25 upwards, all for three years.

3. **St. Hugh's Hall** was founded in 1886, and is intended for members of the Church of England. The inclusive charge (with tuition) is £90 per annum, though a few small rooms can be had at £80, and students sharing the same room pay £70 each. There is accommodation for 34 students, but there is no staff of lecturers separate from those of the Women's Association. In March each year a scholarship of £25 for three years is awarded, and every third year one of £40 open, and one of £40 for pupils from the Worcester High School.

4. **St. Hilda's Hall** was founded in 1893 by Miss Dorothea Beale, on the same religious basis as Lady Margaret Hall. The fees are £75 per annum, with tuition extra; there are several scholarships and exhibitions, some of which are limited to pupils from the Cheltenham Ladies' College.

UNIVERSITY OF CAMBRIDGE. Women are admitted to the various Tripos or Honours Examinations (with their preliminary, the Previous Examination); to the Examination in Spoken French and Spoken German (after passing the Mediæval and Modern Languages Tripos); and to the Examinations for Bachelor and Master of Music, but not to any other examination for a Pass degree. There are two residential colleges for women—Girton and Newnham.

1. **Girton College** was founded at Hitchin in 1869, and moved to its present site in 1873. There is accommodation for 150 students beside the members of the staff. Lectures are given in the College for the Mathematical and Classical Tripos, Part I.; for the other Triposes, the students usually attend the university and inter-collegiate lectures. The inclusive charges (tuition as well) are 100 guineas per annum. The entrance examination is held in London each December, and at Girton in March and June (the London Matriculation, Oxford or Cambridge Senior Local, etc., are recognised as substitutes). Numerous scholarships are offered at entrance (one of £88 for four years, one of £45 for three years, two of £40 for three years, as well as three Clothworkers' Company's Exhibitions of £60 for three years, two Drapers' Company's Scholarships of £50 for three years, two Goldsmiths' Company's Exhibitions of £60 and £40 for three years, and one Skinners' Company's Scholarship of £50 for three years), while there are also awarded various studentships and prizes at different times in the three years' course.

2. **Newnham College** was founded in 1871, and consists of three Halls (Sidgwick Hall, Clough Hall, and Old Hall), each under a Vice-Principal, which communicate with one another, and each contains between 50 and 60 students. Out-students are also admitted, either those who live with their parents or guardians in Cambridge, or women over 30 years of age who for special reasons are allowed to live in lodgings. The fees, including tuition, are £90 or £96 a year, or £105 for a double set of rooms. Out-students pay £36; residence in the Long Vacation costs a guinea a week. The entrance examination is held at Newnham in June; exemption from it can be obtained by passing examinations similar to those accepted at Girton. There are various entrance scholarships of from £35 to £50 for three years offered each year for success in the Cambridge Higher Local Examination; also one of £50 in Classics, one of £50 in Literature, one of £40 and one of £60. There are besides various prizes and grants to students in need of assistance, studentships to those who have passed their Tripos examination, and a Research Fellowship of £100 a year for three years.

UNIVERSITY OF LONDON. The "Schools of the University" for women are Bedford College, the Royal Holloway College, and Westfield College. In addition, there are the *College Hall*, Byng Place, Gordon Square, providing residence for forty women students at University College or at the London School of Medicine for Women; and the Women's Department of King's College at 13 Kensington Square, with a house of residence at *King's Hall*, 32 De Vere Gardens.

1. **Bedford College**, York Place, Baker Street, was founded in 1849, and is a School of the University in Arts and Science. The fees for the University courses are from 27 to 40 guineas a session (3 terms of 10 weeks each), while fees for special lectures are from 1½ guineas a term upwards. Board and residence are provided for fifty students at charges of from 58 to 68 guineas a year. There are eight entrance scholarships of from 30 guineas to £50 for three years, two or three of which fall vacant each year, as well as other scholarships and prizes.

2. **The Royal Holloway College**, Englefield Green, Surrey, was built by the munificence of Mr. Thomas Holloway (1887), to accommodate 200 residents, and is a School of the University in Arts and Science, also providing preparation for certain of the honours examinations at Oxford, or permitting students to follow special courses of study. There is an entrance examination, whose equivalents are the same as at Newnham College, Cambridge. The inclusive terms are £90 a year, and to non-residents £30. Every year there are awarded ten to twelve entrance scholarships of from £35 to £75 for three years, and bursaries of £30; for students who have completed one year's residence there are every year twelve Founder's Scholarships of £30 for two years, and three Driver Scholarships of £30 for three years.

3. **Westfield College**, Finchley Road, Hampstead, was established in 1882, and is a School of the University in Arts. Its religious teaching is "strictly Protestant, in conformity with the principles of the Reformation, and in harmony with the doctrines of the Church of England." There is accommodation for 44 students, each having a separate bed-room and sitting-room; the fees are 100 guineas a year, to non-residents £45. Entrance scholarships of from £35 to £60 for three years are offered every year. The entrance examination is similar to that of the Royal Holloway College.

UNIVERSITY OF ST. ANDREWS. The L.L.A. diploma for women was devised at a time when women found it impossible to obtain a degree or literary title at any university, but it is still recognised as a valuable testimonial to scholarship. A candidate has to pass in seven subjects, except that honours in one subject is reckoned as equivalent to a pass in two. The subjects are those taught in the university, with the addition of Italian, Astronomy, Fine Art, Music, and Hygiene. The subjects can be taken at separate examinations, and no residence is necessary. The examinations are held at the end of May at numerous centres (for all particulars apply to the Secretary, L.L.A. Scheme, The University), the fee for each subject being a guinea, with a further fee of four guineas for the diploma.

N.B.—For further information regarding the Education of Women refer to *Girls' School Year Book* published by Swan Sonnenschein & Co., at 2s. 6d. net.

THE PROFESSIONS.

THE CHRISTIAN MINISTRY.

The distinctive tenets of the various religious bodies amongst us will most conveniently be dealt with in the article on Religions: here we will take these differences for granted, and simply endeavour to show what steps are necessary for one who wishes to enter the ministry of one of these bodies. Accordingly, this article will be divided into three sections, dealing respectively with the Church of England, the Roman Catholics, and the more important Nonconformist bodies.

1. THE CHURCH OF ENGLAND.

Under this heading we shall include the sister churches of Scotland and Ireland. The educational requirements for Holy Orders in the Church of England depend entirely on each individual bishop's decision. The last twenty years have witnessed a marked tendency towards a uniformity of standard in the various dioceses, and this, happily, has been due to the laxer dioceses levelling up to the standard of the more exacting. Still it must be remembered that each bishop has full power to dispense with any of the conditions he ordinarily imposes, or to increase their stringency, and this power he not infrequently exercises. Consequently, any candidate for the ministry should at an early date place himself in communication with the bishop of the diocese which he selects (by writing to his domestic chaplain at the Bishop's Palace), and thus learn what exactly will be demanded in his own case. The Book of Common Prayer requires a man to be at least twenty-three years old before he is ordained Deacon, and twenty-four before he is raised to the Priesthood. As a rule bishops are unwilling to ordain any one after he is 30, unless he can show good reason for having so long deferred his candidature; but this limit is by no means invariable, even in dioceses where it is stated among the regulations. Likewise the bishop's discretion alone is the final arbiter as to whether an ordinand must have a degree, or must have passed through a theological college, &c. Accordingly we commence by giving a list of the dioceses in the United Kingdom, adding, in brackets, the abbreviation, or ancient name, that the bishop mostly uses in his signature.

DIOCESES. 1. **In England:** (*a*) PROVINCE OF CANTERBURY:—Canterbury (Cantuar), London (Londin), Winchester (Winton), Bangor, Bath and Wells (Bath. & Well.), Birmingham, Bristol, Chichester (Cicestr.), Ely, Exeter (Exon), Gloucester, Hereford, Lichfield, Lincoln, Llandaff, Norwich (Norvic), Oxford (Oxon), Peterborough (Petriburg), Rochester (Roffen), St. Albans (Alban), St. Asaph (Asaph), St. Davids, Salisbury (Sarum), Southwark, Southwell, Truro (Truron), and Worcester (Wigorn). (*b*) PROVINCE OF YORK:—York (Ebor), Durham (Dunelm), Carlisle, Chester (Cestr.), Liverpool, Manchester, Newcastle, Ripon, Wakefield, and Sodor and Man.

2. **In Scotland:** The dioceses of the Episcopal Church have been united as follows:—Aberdeen and Orkney; Argyle and the Isles; Brechin; Edinburgh; Glasgow and Galloway; Moray, Ross, and Caithness; and St. Andrews, Dunkeld, and Dunblane.

3. **In Ireland:** (*a*) PROVINCE OF ARMAGH: Armagh; Clogher; Derry and Raphoe; Down, Connor, and Dromore; Kilmore, Elphin, and Ardagh; Meath; and Tuam, Killala, and Achonry. (*b*) PROVINCE OF DUBLIN:—Dublin, Glendalough, and Kildare; Cashel, Emby, Waterford, and Lismore; Cork, Cloyne, and Ross; Killaloe, Clonfert, and Kilmacduagh; Limerick, Ardfert, and Aghadoe; and Ossory, Leighlin, and Ferns.

GOVERNMENT. The Church of England is nominally governed by Convocation, but nothing is legally binding on its members except what has been enacted by Parliament. The CONVOCATION OF CANTERBURY consists of two Houses: the *Upper*, comprising the bishops of the Province under their archbishop; and the *Lower*, whose members are all the deans and archdeacons, with three proctors from each diocese, one of whom is elected by the cathedral chapter and the other two by the beneficed clergy. The CONVOCATION OF YORK is similarly constituted, except that in the Lower House two proctors are elected by the clergy of each archdeaconry instead of by those of each diocese.

The Episcopal Church in Scotland is controlled in matters of finance (but not of doctrine, worship, or discipline) by the *Representative Church Council*, which consists of the bishops, all instituted and licensed presbyters, diocesan officials, and a lay representative from each congregation and mission in the Church.

The Church of Ireland (which was disestablished in 1869) is governed by its *General Synod* in two Houses—the Bishops, and the Representatives (208 clergy and 416 laymen.) This Synod elects and controls the Representative Body of the Church, and may alter or abrogate laws or canons or any act of the diocesan Synods. The *Representative Body* consists of the two archbishops and eleven bishops, with one clergyman for each of the thirteen dioceses elected by the clerical members of the House of Representatives; two laymen for each diocese, elected by the lay members; and thirteen co-opted members. This Representative Body controls finance, and can hold Church property in trust, and is really an executive committee of the Synod.

REQUIREMENTS FOR ORDINATION. Any one desiring to be ordained should first select the diocese in which he wishes to work, and write to the Bishop at least three (in some dioceses six) months before the proposed date of ordination. (Ordinations are held usually, but not always, at the four Ember Seasons, *i.e.*, on the Second Sunday in Lent, on Trinity Sunday, about the end of September, and on the Sunday before Christmas Day). From the Bishop alone can the candidate learn for certain whether he must (*a*) be a graduate; or (*b*) have been trained at a Theological College; or (*c*) have fulfilled any other requirements. Usually a B.A. of Oxford or Cambridge must produce certificates of having attended two courses of lectures by the Divinity Professors, unless he has taken honours in Theology, or spent a year at a Theological College, or passed the "Universities' Preliminary" [see Schedule B]. A graduate of Dublin must produce his DivinityTestimonium; a B.A. of Durham must produce his License in Theology; a graduate of any other university mostly has to pass the Universities' Preliminary. Non-graduates, or "Literates," must have spent two years at least at a Theological College (in some cases, three years), which period of residence must be preceded by passing the General Entrance Examination [see Schedule A], and is usually concluded by passing the Universities' Preliminary Examination. But in special cases the Bishop may be willing to accept other qualifications, and should one bishop refuse, another may possibly accede. After communicating with the Bishop, the candidate will receive a form of enquiry as to his past life and general fitness for the ministerial office, and when he has filled this up and returned it, a personal interview with the Bishop will be arranged, at which the candidate has to show that he can read clearly, and may be asked a few general questions on the Bible.

Some time within this preparatory period of three (or six) months, if not before, the candidate must procure a "title," *i.e.*, a nomination to a curacy by the incumbent of the parish in which he is going to serve. A post on the staff of certain schools, or as chaplain in some institution, will often

provide a sufficient title; but a title of some sort is indispensable, and what will be recognized as sufficient the Bishop alone can say. Great care should be exercised in the choice of a first curacy. It is all-important that the incumbent should be himself devout and earnest; for many a ministerial career is made or marred by the character, the pursuit or neglect of study and duty, and the business-like habits (or the reverse) of the man under whom the novice first works. Further, it should be remembered that a curate is expected to retain his first title for at least two years—the year of his diaconate and the first year of his priesthood.

About six weeks before the day of ordination the candidate has to transmit to the Bishop's Registrar the following papers:—(1) Certificate of baptism; (2) Testimonials as to character and attainments from the college at which he has been trained; (3) Certificates of his degree and other necessary qualifications; (4) Testimonials as to character and general fitness for the ministry from three beneficed clergymen to whom the candidate is personally known, such testimonials to cover the previous three years, or such shorter time as has elapsed since the candidate left college; and (5) Nomination to a curacy by the incumbent. Mostly about four weeks before the ordination, the Bishop's examination is held, as a rule at his palace [see Schedule C]. Candidates who are successful in this examination must get their *Si Quis* (public notice of their candidature, to enable any one to object to their fitness, for due reason shown) read in their parish church, signed by its minister, and transmitted to the Bishop's Registrar. It is becoming increasingly common for the three or four days previous to ordination to be spent by the candidates in retreat with the Bishop, free from any distraction or outside cares. On the day of ordination the candidates assemble in clerical attire, and robed in cassock, surplice, and hood; and they make on oath three declarations—(1) of general assent to the Articles and Prayer-Book; (2) of allegiance to the King; and (3) of canonical obedience to the Bishop.

There is no need to speak fully here of admission to the Priesthood. The candidate has to send a testimonial of character signed by three beneficed clergymen (for the time which has elapsed since ordination as a deacon), and to forward the *Si Quis*; while he has, of course, to pass the Bishop's examination (which is sometimes in two parts, one at the end of each half-year; but sometimes undivided, falling at the end of the year of the diaconate).

TRAINING FOR THE MINISTRY. The training in a Theological College falls under three heads—devotional, intellectual, and practical. As to the DEVOTIONAL TRAINING, the example and influence of the Principal and Tutors, aided by the general tone of the College, are important factors. The cultivation of good and regular habits in the spiritual life is the very *raison d'être* of the College. As to INTELLECTUAL PREPARATION, non-graduates are received as probationers at many of the colleges and prepared for the Central Entrance Examination; but the two years' course of study only commences when this has been passed, and concludes, usually, with the Universities' Preliminary Examination. Graduates are, as a rule, expected to reside for one year, but they are often received for shorter periods. The PRACTICAL TRAINING consists of reading the Lessons in Chapel, preaching in Chapel, preparing and criticising sermon outlines, practising speaking in debates, receiving training in elocution and singing, and gaining parochial experience through Mission services, Sunday-School teaching, catechizing, visiting, &c.

The inclusive terms per annum for tuition, board, and furnished rooms are mentioned below, the only extra charges being for washing, sometimes for fuel and lights, and for club and library subscriptions (about 15s. a term). The admission fee varies from £2 to £5, and there are mostly three terms in a year of ten weeks each. Application for admission to the more popular colleges has often to be made at least six months previously. Each college has a distinctive hood for its students who have completed their course. The regular scholarships and exhibitions are named below, but the various Principals are often able to procure additional assistance for deserving students who are in pecuniary need.

Following this will be found a list of Colleges and Institutions devoted, in whole or part, to the study of Theology and the training of candidates for Holy Orders. They are grouped according to their aims into four classes:—

I. **Theological Colleges,** most of which are closely associated with University Teaching.

[Those marked * are for graduates only. In those marked † the students (who have resided two years and passed all the College Examinations) may obtain the degree of B.A., at Durham by residing three terms (*i.e.* one year) there, and passing the Final Examination in Arts].

ABERDARE (St. Michael's, founded 1892): £70.

†BIRKENHEAD (St. Aidan's, founded 1846): £72; non-resident £42; probationers 20 guineas a term or 2 guineas a week. Four bursaries of £30 to graduates of Oxford or Cambridge, three of £25 for one year to non-graduates at the beginning of each year of residence. Undergraduates of Liverpool University can receive preparation for their Arts' course concurrently with their theological training.

*CAMBRIDGE (Ridley Hall, founded 1880): £75; lectures only, 15 guineas. Several bursaries are awarded. Undergraduates of the university can attend the lectures.

†CHICHESTER (founded 1839): £90; non-resident £35. Exhibitions of £10 to £20 awarded to necessitous and meritorious students.

*CUDDESDON, Oxon (founded 1854): £90. Exhibition of £60 for organist.

*ELY (founded 1876): £120. Bursaries of £20 to £30.

†HIGHBURY (St. John's Hall, the London College of Divinity, founded 1863; recognised as a school in Theology by the University of London; avowedly "Protestant and Evangelical"): £75; non-resident £30. One exhibition of £30 and one of £25.

†ISLE OF MAN (Bishop Wilson School, Bishopscourt, Kirkmichael: re-founded 1879): £75; tuition only, 30 guineas. One scholarship of £10.

*LEEDS (Clergy School, founded 1876): £82 10s.

†LICHFIELD (founded 1857): £90; non-resident £40; probationers £30 a term, or £3 a week. Exhibitions of £15 to £40 for graduates, and of £20 for two years for non-graduates.

†LINCOLN (Scholae Cancellarii, founded 1874): £79 10s.; non-resident £30. Two bursaries of £60 for graduates, six of £40 for two years for non-graduates.

OXFORD (St. Stephen's House, founded 1876): 60 guineas; one exhibition of £15.

*OXFORD (Wycliffe Hall, founded 1878): £95. An Exhibition Fund to help necessitous students.

*RIPON (Ripon College): £75 for three Terms of 10½ weeks each. Exhibitions of from £15 to £30 a year for one or two years.

SALISBURY (founded 1860): £120; four exhibitions of £40.

*WELLS (founded 1840): £100; exhibition of £30 for organist.

II. **Theological Institutions** with special characteristics:—

†BIRMINGHAM (Queen's College): £75 first year, £63 second year; non-residents, who must live at home or with friends, 21 guineas; tuition for probationers, 3 guineas a term. Help is given for the B.A. course of the University of Birmingham.

HOOTON PAGNELL, Doncaster (St. Chad's Hostel). The Principal endeavours to find financial assistance for all men who satisfactorily demonstrate their vocation to Holy Orders. The entrance examination consists of simple questions on Scripture History and the Prayer Book, with Latin and Greek grammar to the end of the irregular verbs, and easy translation, and simple Logic. Successful students are prepared in their first year either for the Durham Arts Matriculation or the Central Entrance Examinations. Those who pass the former proceed at once to St. Chad's Hall, Durham, while those who pass the latter remain for another year at Hooton Pagnell, and then proceed for a final year to a Theological College selected for them.

KELHAM, near Newark (House of the Sacred Mission, transferred from Mildenhall). Maintenance and tuition are almost free, and as a rule for five years, but students are expected after ordination to re-pay the cost of their training (up to £250) out of their stipends. While in residence they have to conform to the rule of the Community, which they may join, but they are not asked to do so. Other students are prepared for manual work in the Foreign Mission Field.

*MANCHESTER (Ordsall Hall, near Salford, given by Earl Egerton of Tatton to be a Clergy School): £80. Some bursaries of £50. Intended to deepen the devotional

life of candidates for Holy Orders, and providing special preparation for the B.D. course of the Victoria University, Manchester (after a two years' course of study).

MANCHESTER (Scholae Episcopi), provides instruction for candidates for Holy Orders who have passed the Central Entrance Examination, at a nominal charge of £1 a term. The lectures are given in the West Porch of the Cathedral by some of the Cathedral and City clergy, and direction in pastoral work is also provided. Apply to the Bishop's Secretary.

MIRFIELD, near Wakefield (Community of the Resurrection), also trains candidates for the ministry. The course is three years in Arts followed by two years in systematic Theology. The college is intended for men from all classes, and as far as possible provides maintenance and tuition, free of charge, for men who would otherwise be debarred from fulfilling their vocation.

*NEWCASTLE-ON-TYNE (the Bishop's Hostel): £75. Some exhibitions of £10 to £35. Students are required to serve the first two years of their ministry in the diocese.

III. **Missionary Colleges.** These mostly give a three years' course, which leads up to the Universities' Preliminary Examination. Suitable instruction is also given in medicine and handicrafts, such as printing or carpentry, music, riding, &c.

†BURGH, Lincoln, (St. Paul's, founded 1879): £45, as the College defrays the cost of tuition (£20); there is no fixed entrance examination.

†CANTERBURY (St. Augustine's, founded 1848): £50. Numerous scholarships and studentships of £16 to £50.

†DORCHESTER, near Wallingford (SS. Peter and Paul, founded 1878): £60. Six exhibitions of £20.

†ISLINGTON (Church Missionary College, founded 1825): cost of training defrayed for accepted candidates who need help. Four years' course for those seeking Orders, two years for lay evangelists.

WARMINSTER (St. Boniface, founded 1860): £52.

IV. **Colleges with Special Classes in Theology.** The following offer a general education, with special facilities for the study of Theology:—

CAMBRIDGE (Clergy Training School). Graduates can become members (5 guineas a term); undergraduates are received as associates (1 guinea a year), though they continue to share in the life of their respective colleges. The lectures cover the ground of the Universities' Preliminary Examination, and direction is given in pastoral work, &c., while the devotional life is specially cultivated.

†KING'S COLLEGE, LONDON (a recognised school of the University of London), provides a two years' course for its Theological Associateship (A.K.C.), and one of three years for the London B.D., but these courses may be arranged to proceed contemporaneously. Instead of the two years' day course, two years of evening classes, followed by one year of day classes, may be substituted. Fees: 30 guineas per annum for day classes, £18 for evening classes, besides matriculation fee of £4 15s. 6d. There is a Hostel for residence at 42 Mecklenburgh Square, W.C. (fee £37 10s. per annum, for term time only). There are six exhibitions of £50 for one year, and five of £20 for two years, besides many others.

LAMPETER (St. David's College), affiliated to Oxford and Cambridge Universities. It has the right of conferring the degrees of B.A. and B.D., and a Licentiate in Divinity. Fees for resident students can be brought down as low as £47 (inclusive); for non-residents £22. Annually there are offered one scholarship of £50, two of £30, three of £25, two of £20, and many minor ones—all for three years. Candidates for Holy Orders can obtain the same practical training as in a Theological College.

†EDINBURGH (the Theological College of the Episcopal Church of Scotland; founded in 1810, transferred to Glenalmond in 1848, and brought back to Edinburgh in 1876). Tuition fee £24 a year; board and residence can be procured in the Principal's Hall for £1 7s. 6d. a week. There are numerous bursaries, ranging up to £120, some of which are confined to Scotsmen. The preparation is intended for those seeking English Orders, as well as those seeking Scotch.

DURHAM UNIVERSITY confers a Licentiate in Theology (L. Th.) after two years' residence. The examination for admission as a student in theology is the Central Entrance Examination, and there are examinations at the end of each year. After one extra term's residence, a L. Th. can proceed to the B.A. In theology there are six scholarships of £60, two of £30, and six exhibitions of £20, besides others.

DUBLIN UNIVERSITY (T.C.D.) provides an excellent course in Divinity, success in which is expected from candidates for Orders in the Church of Ireland.

EXHIBITIONS. A few further particulars may be useful as to sources of assistance for necessitous candidates for Holy Orders. The exhibitions offered by various CITY COMPANIES, and many other similar ones, have been mentioned (p. 721) in the article on Education. The TANCRED CHARITIES provide four Divinity Scholarships of £50 to £100 at Christ's College, Cambridge (apply to the Secretary, 28 Lincoln's Inn Fields, W.C.). The CHOLMONDELEY CHARITIES augment certain Postmasterships at Merton College, Oxford, and grant £800 a year in university exhibitions to sons of clergymen (apply to the Treasurer, Corporation House, Bloomsbury Square, W.C.). The WORDSWORTH STUDENTSHIPS of £40, and the STEEL STUDENTSHIPS of £30 to £40, are to encourage Cambridge graduates in honours to continue their theological studies (apply to the Regius Professor of Divinity). The CAMBRIDGE GRADUATES ORDINATION FUND gives exhibitions of about £25 with a similar object (apply to the Regius Professor of Divinity). The CAMBRIDGE CLERICAL EDUCATION SOCIETY aids resident undergraduates in unforeseen difficulties (apply to the Rev. G. A. Weekes, Sidney Sussex College). The ORDINATION CANDIDATES' EXHIBITION FUND gives exhibitions to students already in residence at Oxford, Cambridge, Durham, or a Theological College, and also endeavours to introduce necessitous cases to wealthy patrons, whereby help of £50 up to even £120 a year, may be obtained (apply to the Secretary, Albany Buildings, 39 Victoria Street, Westminster, S.W.). The BRISTOL CLERICAL EDUCATION SOCIETY assists candidates of Evangelical principles at the universities (apply to the Rev. P. A. Phelps, 29 Berkeley Square, Bristol), as does the ELLAND SOCIETY (apply to Canon Lamb, Clapham Vicarage, Lancaster). The LONDON CLERICAL EDUCATION SOCIETY spends nearly £800 a year in aid (apply to the Rev. H. F. S. Adams, The Vicarage, Streatham Common, S.W.). There are diocesan societies to help local candidates in Bangor and St. Asaph, Carlisle, Exeter, St. Albans, and Worcester, while help to missionary candidates is given through the Missionary Associations in various parts of the country. Earnest candidates for Holy Orders of insufficient means for the cost of a university education, are advised to apply for information as to financial assistance to the Principal of St. Chad's Hall, Durham.

SCHEDULE A. CENTRAL ENTRANCE EXAMINATION for Non-Graduate Students in Theological Colleges. It has been explained that the two years' training in a Theological College required of non-graduates can only reckon from the time when this examination has been passed, though several Colleges will admit students on probation, and give them the preparation necessary for this examination, if they are ready to spend the extra time and money thus involved. The council which manages the examination consists of representatives of the Bishops and Principals of Theological Colleges, with the Examiners (who are appointed by the two Archbishops and the Principals). The examination is held three times a year—on the Tuesday and Wednesday in the week beginning with the 4th Sunday in Lent, in the last week of July, and in the first week of December. Candidates have to apply, at least a month previously, to the Principal of the College they have selected (or of the College at which they are already residing), and have to pay a fee of 15s. The following are accepted as equivalents:—

The Oxford or Cambridge Senior Local Certificate; the Oxford and Cambridge Joint Board Higher Certificate; the London University Matriculation, if Latin and Greek were taken; Responsions at Oxford; the Previous at Cambridge, Part I. and Part II.; or the title of Associate in Arts at any of the University Colleges of England, provided that the candidate passed in Latin and Greek (See the section on the Universities in the article on Education).

To give an idea of the nature of the Entrance Examination, we give the subjects for 1904 and 1905:—

Xenophon's *Hiero;* Cicero's *De Senectute;* Outlines of Scripture History; St. John i.–xii., for translation and interpretation; Outlines of English History; and Euclid, Book I., *or* Elementary Logic. The Examiners have the power to recommend to the Principals for admission to a three years' course candidates for whom they deem the

ordinary two years' course an insufficient preparation. Copies of previous examination papers can be procured from Deighton, Bell, & Co. (Trinity Street, Cambridge), price 1s.: and any further details can be ascertained from the Secretary, Canon Daniell, Dulwich College, S.E.

SCHEDULE B. UNIVERSITIES' PRELIMINARY EXAMINATION of Candidates for Holy Orders. This examination has to be passed by (1) all *graduates*, except those of Oxford or Cambridge, who produce their divinity testimonials, or take honours in Theology, or spend a year at a Theological College; and also, except Dublin graduates who have their divinity testimonium, or Durham graduates who have their license in theology; (2) *non-graduate* members of Theological Colleges who have reached the last term of their two years' (or other period of) residence, for whom it serves as a leaving examination, and is necessary in order to obtain the College Testimonial required by the Bishops for ordination; and (3) any *other persons*, whom individual Bishops are prepared to ordain, to whom, consequently, they give a nomination admitting to the examination. The council controlling the examination consists of the Divinity Professors and two graduates in Divinity from Oxford and Cambridge, with one Examining Chaplain from each Bishop. The examination is held twice a year, about the beginning of April and of October. The centres hitherto have been Birkenhead, Canterbury, Chichester, Edinburgh, Lampeter, Lincoln, London (St. John's, Highbury, in April; King's College, in October), Manchester, Truro, and Warminster. Candidates have to pay a fee of 25s., and to send in their applications before March 1st or September 1st. To show the nature of the examination we give the subjects for 1905:—

The Bible (general contents); *Old Testament*, Psalms cvii.–cl., and 2 Samuel; *New Testament* (in Greek), St. Mark and 1 Corinthians; *Creeds and Thirty-Nine Articles; Prayer Book* (history and contents); *Ecclesiastical History*, of the whole Church to 451 A.D., and of the English Church to 1702 A.D.; *Latin*, St. Augustine, in Johannis Evangelium, Tract lxvii.–lxxix., with a passage for Latin Prose Composition; and *Elementary Hebrew* (optional), with 2 Samuel vi., vii., xi., xii., and xviii. in the Hebrew text.

The names of candidates who pass are placed alphabetically in three classes, while an asterisk is awarded to those who do creditably in the Hebrew. Copies of previous examination papers can be procured from Deighton, Bell & Co. (Trinity Street, Cambridge), price 1s. (post free 13 stamps).

SCHEDULE C. THE BISHOP'S EXAMINATION for Candidates for the Diaconate. The subjects vary in details according to the diocese, and the special books are changed each year (but in most cases they are so chosen that the special books for the Preliminary Examination and for the Bishop's Examination coincide). A knowledge of Hebrew is always optional, but of Latin and Greek compulsory, except that in the case of candidates for work in the Mission Field, Greek is sometimes dispensed with. The papers that are of the most importance are the general ones on the Old and New Testaments. The subjects for 1904 in the diocese of London, which may be taken as a typical example, are as follows, the authors, which vary from year to year, being placed in brackets:—(1) *Old Testament:* General knowledge of the contents and interpretations; Special book [1 Samuel]; Hebrew (optional) [text of 1 Samuel vii.–xvi.]. (2) *New Testament*: General knowledge of the contents and interpretations; Special books [St. Mark and Galatians] in Greek; the four Gospels and the Acts, in Greek (oral examination). (3) *Prayer-Book and History:* History and contents of the Book of Common Prayer; History of the English Church to the accession of Queen Anne. (4) *The Thirty-Nine Articles.* (5) *Waterland on the Eucharist* (an edition is published by the Oxford University Press). (6) *Latin:* St. Augustine [In Johannis Evangelium, Tract lxvii.–lxxix]; Latin Prose Composition (a continuous passage of about twenty lines length). (7) *Evidences*—such books as Paley's Evidences or Row's Manual of Christian Evidences being suggested. As to the examination, full information can always be obtained from the Bishop's Resident Chaplain, who will often recommend books for reading, or name the most useful editions of the authors. In many cases the Bishops draw up a list of books on the various subjects for the use of candidates.

2. THE ROMAN CATHOLICS.

In England and Wales the Roman Catholic Church is organized under the Archbishop of Westminster, who has under him fifteen diocesan, or rather suffragan, bishops. In Scotland there are two Archbishops—St. Andrews and Edinburgh, and Glasgow—and four suffragans. In Ireland there are four Archbishops—Armagh, Dublin, Cashel, and Tuam—with twenty-four suffragans. No advantage would be gained by giving any account of the training given by Roman Catholics for the priesthood and minor orders; for their system is eminently characterized by the consideration of vocation as the essential for Holy Orders, and the disregard, or rather the surmounting, of all difficulties of birth, station, poverty, &c. It may be useful, however, to append a list of their ecclesiastical training institutions, which are as follows:—All Hallows, Drumcondra; Belmont Minster, Hereford; St. Bueno's, St. Asaph; St. Edward's, Everton; St. Joseph's, Leeds; St. Joseph's, Mill Hill; St. Mary's, Blairs, Aberdeen; St. Mary's, Oscott, Birmingham; St. Cuthbert's, Ushaw, Durham; St. Edmund's, Ware; St. Joseph's, Upholland, Lancashire; and St. Patrick's, Maynooth. In the article on Education some account has been given of the chief Roman Catholic schools, both for boys and girls; but special mention should be made of St. Edmund's House, Cambridge, which was founded by the Duke of Norfolk in 1896, to give an advanced University education to men already in Orders, or about to take Orders.

3. THE NONCONFORMIST BODIES.

Several of these denominations do not have a *professional* ministry, which is all that we are here concerned with. Some are rather inclined to distrust the existence of such a ministry, as tending to depreciate the value of a spiritual call, and leading to excessive centralization and organization. Consequently, much ministerial work, such as that of local preachers, class-leaders, &c., falls outside the scope of this article, but a few general remarks as to the more highly systematized ministries may be made.

With the CONGREGATIONALISTS, for example, a candidate must be at least eighteen years old, and must have been a member of his church for over a year. He must be recommended for the ministry by his church and its pastor. On proceeding to college he must answer a paper of questions which will be sent to him; and much importance is attached to any signs he may have given of preaching ability, and to any active work he may have done for his church. He must also submit a satisfactory medical certificate.

After passing an entrance examination (usually held in June), of about the standard of the London University Matriculation (or presenting a certificate of an equivalent examination), he is admitted to college as a probationer for three or six months. Then, if his aptitude is demonstrated, he settles down to his course of training. If not a graduate, he often begins by devoting three years to the obtaining a degree in arts, followed by three years' study in Theology. Frequently the former is dispensed with, and the regulations are always elastic enough to suit the special circumstances or abilities of any individual candidate. Often there are no fees for board, residence, or tuition, but the church recommending the candidate is required to contribute (by annual collections, &c.) a certain sum towards the cost of his training. In other cases, the candidate or his friends have to guarantee such a sum as the committee deem they can afford.

Let us take the WESLEYANS as another instance. A candidate for the ministry must be nominated by the superintendent of the Circuit in which he resides at its March Quarterly Meeting. Having received the recommendation of the Meeting, he has to preach a trial sermon before three ministers of his district, who report the result to the District Synod. In April is held the Preliminary Examination, the general paper on the Bible being required of all

candidates, but the literary paper (composition, grammar and analysis, history, geography, and arithmetic) need not be taken by graduates or those who have passed a recognized equivalent examination. In May there follows an oral examination before the district Synod—chiefly to test personal, rather than intellectual, qualifications. A second trial sermon has now to be preached, and a written sermon sent in to the General Examination Secretary. In July a second written examination is held at one of the colleges, (comprising a further literary paper and a paper on Christian doctrine), and the candidate has to undergo a medical examination and appear before the "July Committee" of ministers, which body recommends his acceptance or rejection by the Conference. The Conference makes its decision about the beginning of August, and successful candidates are expected to enter on residence at College in September. The cost of maintenance at college is £30 a year, and of tuition £35. If unable to meet this expense, the candidate has to make a confidential statement (to the July Committee) of his means, showing whether he is prepared to meet the maintenance charge in whole or in part, or what financial assistance he requires; rarely does expense bar the path of a well-qualified candidate. The course at college is for three or four years, during which the students have frequent preaching engagements on Sundays made for them. Then follows a four years' ministerial probation as a preacher on trial in a circuit, at the end of which time the candidate is ordained and received into full connexion.

In making a list of the Theological Colleges of the various Nonconformist bodies, we mention first three colleges closely connected with Oxford or Cambridge (though not constituent members of those universities), then the Metropolitan colleges, and lastly the provincial ones.

When a sum is specified in the following list of Colleges, it is the amount thus required per annum; and if it is called *inclusive*, it represents all payments (board, residence, tuition, &c.), except those of a purely personal character.

I. Theological Colleges connected with the Universities of Oxford and Cambridge:—

MANCHESTER COLLEGE, Oxford (does not insist upon the adoption of particular doctrines): three years' course for "regular" students, who must be graduate candidates for the ministry of some Christian body; "special" students are admitted for varying periods to study theology. All have to matriculate in the University. Each year four exhibitions of £40 for three years; also four of £75 for three years to undergraduates of Oxford (or of £50 to other undergraduates) who intend to enter Manchester College after graduation.

*MANSFIELD COLLEGE, Oxford (Congregational). No fees: non-residential, but students must reside in licensed lodgings, and if graduates of other universities must matriculate at Oxford. Some undergraduates are received, and allowed to join one of the colleges of the University until graduation. Three years' course: one scholarship of £60 for graduates who are reading theology and one of £60 for undergraduates: exhibitions up to £50.

*WESTMINSTER COLLEGE, Cambridge (Presbyterian Church of England: founded in London in 1844, moved to Cambridge in 1899). £45 inclusive; private students belonging to other denominations, £75. Three years' course: one scholarship of £50 for three years, three of £30, four of £25, and minor bursaries. Also for undergraduates of any university who intend to enter Westminster College after graduation, there are tenable the following scholarships for three years—two of £40, one of £30, one of £25, and three of £20.

II. Metropolitan Theological Colleges. (Those marked ‡ are recognised schools of Theology in the University of London.)

‡HACKNEY COLLEGE, Finchley Road, Hampstead (Congregationalist: but receives any "members of Christian Churches"): £15 inclusive. Two or three years' literary course for non-graduates, followed by three years' theological course. Two entrance exhibitions of £18, and scholarships of £28 and £25, and smaller ones.

‡NEW COLLEGE, Hampstead (Congregational). The Arts classes of New, Hackney, and Regent's Park Colleges meet in combination at New College. Ministerial students in the Theological course have all fees remitted. Five scholarships of £30 for three years, one of £25 for three years, one of £55 for one year, and exhibitions of £30, £25, and £20.

PASTOR'S COLLEGE, Temple Street, Newington, S.E. (Calvinistic Baptist). Students are expected to contribute to the College funds according to their ability. Only those who have already had experience in preaching are received.

‡REGENT'S PARK COLLEGE (Baptist). £50 inclusive, or less according to ability. Three years' course for London B.D.

‡RICHMOND, Surrey (Wesleyan). Three years: only admits candidates accepted by the Conference; chiefly for missionary candidates.

III. Provincial Theological Colleges (those marked ¶ are approved Theological Colleges of the University of Wales):—

ABERDEEN (United Free Church, Presbyterian). About £650 a year in scholarships: two fellowships of £50 to fourth-year students.

¶BALA (Calvinist Methodist). Free to Calvinist Methodists, to others £5. Three years: four scholarships of £50, and many others. Seven scholarships each year of £10 to University of Wales.

¶BANGOR (Baptist). No fees. Arts students attend University College, Bangor.

¶BANGOR (Independent College; Congregationalist).

BELFAST (Methodist): 44 guineas inclusive. Connected with the College is McArthur Hall, a first-grade boarding school for girls.

BELFAST (Presbyterian): two guineas for each class taken; free residence, &c., for forty students. Each year twenty scholarships of £10 to £25.

BRADFORD (Yorkshire United Independent College; Congregationalist): three years in theology, which may be preceded by a four years' literary course in any university; three scholarships of £60, four of £40, and various others.

¶BRECON (Memorial College; Congregationalist): no fees to ministerial students; scholarships of £40 to graduates, and three of £10.

BRISTOL (Baptist). Fees according to candidate's ability: two to six years.

BRISTOL (Western College; Congregationalist): £50 inclusive, or less according to candidate's ability. Full course, three years in Arts followed by three in Theology. Several scholarships from £23 downwards.

¶CARMARTHEN (Presbyterian College, but for "all Protestant Nonconformists without sectarian distinction"). Free to graduates preparing for B.D., for whom there are scholarships of £40 for three years; to others £8. Three years.

DERRY (Magee College; Presbyterian): two guineas for each class taken; three years' course in Arts, followed by three years in Theology, for the degrees of the Royal University. Numerous scholarships from £35 downwards.

DIDSBURY, Manchester (Wesleyan): three years; candidates must have been accepted by the Conference.

EDINBURGH (30 George Square; Congregationalist); no fees; non-residential; three summer and two winter sessions; three bursaries of £20 for two years.

EDINBURGH (New College; United Free Church, Presbyterian): £4 10s., four years.

GLASGOW (Baptist): no fees; non-residential; six years, for the M.A. degree, followed by a course in Theology; bursaries of £15 to £25.

GLASGOW (United Free Church, Presbyterian).

HANDSWORTH, Birmingham. As at Didsbury.

HEADINGLEY, Leeds. As at Didsbury.

MANCHESTER (Alexandra Road; Primitive Methodist).

MANCHESTER (Baptist).

MANCHESTER (Home Missionary College, Memorial Hall; Unitarian): £10 entrance fee; two years in Arts followed by two in Theology; one scholarship of £60 for three years, and one of £90 and one of £70 for one year.

MANCHESTER (Lancashire Independent College, Malley Range; Congregationalist); an associated college of Manchester University: £30 inclusive; several scholarships from £30 for three years downwards.

MANCHESTER (Victoria Park; Free Methodist).

NOTTINGHAM (Midland College; Baptist). At least £10; five years.

NOTTINGHAM (Congregational Institute): at least £14; four years; specially for evangelistic and pastoral training.

RANMOOR, Sheffield (Methodist New Connexion).

RAWDON, Leeds (Baptist).

TALGARTH, Brecon. (Trevecca College; Calvinist Methodist).

EXHIBITIONS. Besides the scholarships above mentioned, and other financial help that is given freely (as already explained) to deserving candidates, the following sources of aid should be borne in mind: DR. WILLIAMS' DIVINITY SCHOLARSHIPS of £50 for two years to graduates seeking a theological training for the "Ministry of Protestant Dissenters"; and his GLASGOW SCHOLARSHIPS of £40 for three years, tenable at the University of Glasgow (apply at Dr. Williams' Library, Gordon Square, W.C.). The HEWLEY EXHIBITIONS of £40 (apply to Mr. Alex. Armour, 11 Cereal Court, Brunswick Street, Liverpool). The ELMSLIE MEMORIAL SCHOLARSHIP, for Baptists, Congregationalists, or members of the Presbyterian Church of England (apply to Mr. G. Walter Knox, 16 Finsbury Circus, E.C.). The COWARD'S TRUST, with an income of £1,500 a year, to help candidates for the "Ministry among Protestant Dissenters" (apply to the Treasurer, 88 New Park Road, Brixton Hill, S.W.). And DR. WARD'S TRUST, which gives a preference to Baptists (apply to the Secretary, 16 Ellerdale Road, Hampstead, N.W.).

THE ARMY.

The British Army is smaller than that of any other great European Power. We trust mainly to our unrivalled navy to ward off danger from our shores. Whilst the navy rules the waves, no serious invasion need be apprehended; but as such supremacy does not render a sudden raid by a small force impossible, it is necessary to keep a small army, well equipped and highly trained, ready at any moment to take the field. It is also necessary to maintain a still larger army for the defence of India and the British possessions oversea. The Boer War brought to light the want of professional knowledge on the part of a large proportion of our officers. There is a wide-spread feeling that, speaking generally, they have not hitherto taken their profession seriously enough, and compare badly in this respect with officers in the German army. The "playing fields of Eton" are excellent, no doubt, for a first course of training; but modern tactics and strategy require serious and prolonged study, and something more is required besides eminence in sports for success on a modern battlefield.

It is quite certain, therefore, that boys who mean to enter the army as commissioned officers must be prepared for serious work. To such as are naturally of the right stamp and are prepared to work hard at their professional studies, the Army offers a splendid career. It has all the elements necessary to attract the generous-hearted boy of sound body and mind, with a love for adventure and a stirring life. His pay will not make him rich—nay, in some of the smart regiments it will not be sufficient to keep him; but such as cannot afford to supplement their pay can find regiments in which, after a year or two, it will be sufficient. At the present time "the one thing the British army lacks is enough trained commissioned officers"; and efforts are being made to limit the excessive expenditure which officers have hitherto been forced to incur, and to make the Army a possible profession to many who would enter it but cannot afford to do so.

THE ADMINISTRATION of the army is vested in *The Army Council*, composed of the Secretary of State for War, four Military Members, the Finance Member, and the Civil Member. It holds the same position with respect to the Army as the Admiralty Board with respect to the Navy. At the head of it stands the Secretary of State for War, who is directly responsible to Parliament, and who could, in the last resort, over-rule all his colleagues of the Council.

THE GENERAL STAFF, created in September 1906, is the brain of the Army. It is composed chiefly of officers who hold a Staff College Certificate (see below), and whose names have been placed on a list of specially qualified officers called the General Staff List. The General Staff has for its chief functions to advise on the strategical distribution of the army, to supervise the education of officers and the training and preparation of the Army for war, to study military schemes, to collect and collate military intelligence and to direct the general policy in Army matters. Approved service on the General Staff is recognised by accelerated promotion.

THE PERSONNEL of the army may be divided into: (1) Commissioned officers—military and civil, (2) Warrant officers, (3) Non-commissioned officers, (4) "Rank and file."

THE COMMISSIONED OFFICERS, with whom in the following pages we shall mostly have to do, may be thus divided:—

1. COMBATANT OFFICERS: (1) *General Officers:* field-marshals, generals, lieutenant-generals, major-generals; (2) *Field Officers:* colonels, lieutenant-colonels, majors; (3) *Regimental Officers:* captains, lieutenants, second lieutenants.

2. OFFICERS OF VARIOUS DEPARTMENTS: (1) *Army Ordnance Department:* principal ordnance officer, 1st, 2nd, 3rd, and 4th class ordnance officers, commissaries; (2) *Medical Department:* director-general and surgeons-general—forming the staff, colonels, lieutenant-colonels, majors, captains, lieutenants; (3) *Veterinary Department:* as in (2); (4) *Chaplain's Department:* Chaplain-general and 1st, 2nd, 3rd, and 4th class chaplains and chaplains on probation. (5) *Educational Officers:* governors, commandants, professors, etc.

PAY. The following particulars will be all that are necessary for the consideration of those who contemplate a commission in the Army. In the official documents the rates *per diem* are given: we here give them to the nearest pound *per annum*.

REGIMENTAL PAY TABLE.

	Cavalry of the Line.	Royal Horse Artillery.	Royal Engineers.	Infantry.	Army Service Corps.	Royal Army Medical Corps.
	£	£	£	£	£	£
Lieutenant-Colonel	376	452	328	328	328	650 to 900
Major	274 to 328	338	292	248 to 310	248 to 292	650
Captain	237 to 274	274 to 310	211 to 248	212 to 248	211 to 248	200 to 274
Lieutenant	164	161 to 179	125 to 143	119 to 137	119 to 137	200
Second Lieutenant	122	140	102	96	96	—

In addition to the above, there are many extra allowances for special duties, such as for acting as Adjutant, as Major second in command, etc. Staff officers receive much higher rates of pay—the Inspector-General being paid £4,500 a year; the Adjutant-General, £2,400; a Colonel on the Staff, £730; a Staff Lieutenant, £228.

The following particulars of pay in the other branches of the service may be found useful:—

Pay Department, £182 to £700.

Chaplains' Department, £182 to £411; the Chaplain-General, £1,000.

Educational Department, Professors, £300 to £600; Principals, £1,000 to £1,500.

Ordnance Officers, £400 to £1200.

Veterinary Officers, £250 to £456; the Director-General, £850.

The Director-General and Surgeon-General of the Army Medical Service receive £1,500 and £1,300 a year respectively; the rates for the other officers are given in the above table.

PROMOTION OF OFFICERS. Warrant officers and non-commissioned officers may be promoted from the ranks and receive commissions if they have obtained the rank of sergeant, be under twenty-six and unmarried, and hold a 1st Class certificate of education. Increase of regimental pay in any commissioned rank depends on length of service in that rank. Promotion from one rank to another, up to that of lieutenant-colonel, is by selection from amongst those who have passed the professional examination prescribed for the higher rank. The examination is sometimes

excused for distinguished service or for marked ability and gallantry. After the rank of lieutenant-colonel, promotion is by selection, but may always be granted to colonels, major-generals and lieutenant-generals for distinguished service, even when there are no vacancies on the establishment. Only the Sovereign can promote an officer to the rank of Field-Marshal.

HALF-PAY AND RETIRED PAY. Officers may be placed on half-pay on reduction of establishment, for medical unfitness and, in the case of lieutenant-colonels and colonels, at their own request. The age for compulsory retirement is forty-five for lieutenants and captains, and rises gradually for higher ranks to sixty-seven for a lieutenant-general. The retired pay at these ages begins at £200 for lieutenants and captains, and rises to £850 for lieutenant-generals, whilst generals get £1,000. Pensions to widows and compassionate allowances to children of officers are given where need of help is proved; those of officers killed in action receive the highest amounts. All particulars are given in the "Pay Warrant," published at 1s. by Wyman and Sons, Fetter Lane, E.C.

MILITARY COLLEGES AND SCHOOLS.

1. THE STAFF COLLEGE is close to Sandhurst. The surest way for an officer to get promotion is to graduate at this College; and those who have done so have the letters *P.S.C.* after their names in the Army List. Entrance is, in most cases, obtained by passing a competitive examination. Candidates must be recommended by their commanding officers, must have served five years, and must be under thirty-five. The course lasts two years, and thirty-two vacancies are filled annually, of which eight are by nomination.

2. THE ORDNANCE COLLEGE is at Woolwich. Its principal objects are to train officers for employment in the Ordnance Department, and to train military artificers for all the arms of the service. Officers who are candidates must be recommended by their commanding officers, must have served three years, and, if lieutenants, must, in most cases, have qualified for the rank of captain. If approved, they must pass a qualifying examination for entrance; and sixteen are admitted annually. The course lasts a year; but the best eight officers are retained for another year of study, and form the Advanced Class. These latter are denoted by the letters P.A.C. after their names in the Army List; the former by the letter O.

3. OTHER SPECIAL SCHOOLS for the instruction of officers are—(1) AT ALDERSHOT: the army service corps school, the school of gymnastics, the school of signalling, and the veterinary school. To gain admission into the first mentioned of these schools, candidates must have passed through the Staff College, or must be at least captains who have been recommended for that college. (2) AT CHATHAM, the school of military engineering. (3) AT HYTHE, the school of musketry.

4. THE ROYAL MILITARY ACADEMY, WOOLWICH. Here are trained candidates for commissions in the Royal Artillery and Royal Engineers. The methods of entry are described below. The course lasts two years or four terms, and for the first three is the same for all cadets.

5. THE ROYAL MILITARY COLLEGE, SANDHURST. This is for the training of cadets who are candidates for commissions in the cavalry, infantry, and West India Regiments. The standard of attainment necessary for entrance is not so high as for Woolwich; in fact those who fail to secure entrance into the latter, may have sufficient marks to get into Sandhurst. The course, as at Woolwich, now lasts two years—till recently it was one and a half years.

EDUCATION AND TRAINING FOR THE ARMY.

1. PRELIMINARY CONSIDERATIONS FOR PARENTS. Before deciding on a military career for a boy, his parents should make sure of the following points:—

(1) That the boy is healthy, well-developed for his age, and without physical defect; (2) That he is of fully average intelligence; (3) That, unless connected with the army, they can afford to spend between £400 and £500 on him during his Military College course of two years; and that they can, after he has received a commission, supplement his pay to the extent of at least £100 a year till promotion brings him enough to do without help; (4) that they are of pure European descent.

2. EDUCATION AT SCHOOL TILL THE AGE OF SEVENTEEN OR EIGHTEEN. In order to see the kind of school education an Army candidate requires, we had better get a clear idea of what he must know for entrance into Woolwich or Sandhurst—the question of university candidates need not be discussed here (see below). The following remarks apply to the new regulations, in force after June, 1905. Hitherto any one who thought he had a chance of getting into one of the two colleges, could pay his entrance fee and try; but now all candidates for this competitive examination must have previously obtained a certificate of general knowledge, which cannot be granted to any boy who is under seventeen years of age. "The object of this," we are officially told, "is to secure for all candidates a fair standard of general education, while deferring, as far as possible, the special preparation which tends to separate Army candidates from other boys during their school career, and to render them less fitted for other callings, if unsuccessful in the Army examination."

The required certificate may be obtained by a boy before leaving school, on passing a certain examination held under the auspices of the principal universities of the United Kingdom and the Scottish Education Department. Such certificate is known as a "Leaving Certificate," and to be accepted by the Army Council must state (1) that the holder of such certificate was over seventeen years of age when it was granted, (2) that he had attended a course of three years' continuous instruction in a properly inspected school, and (3) that he had satisfied the examiners in English; English History and General Geography; Elementary Mathematics; and in two of the following subjects: Science, French *or* German, Latin *or* Greek. Hence it is desirable that a boy destined for the army should attend a school at which he will be able to get a "Leaving Certificate," and should stay at the school until he is at least seventeen years of age.

Those who fail to get a "Leaving Certificate" may try for a "Qualifying Certificate," which covers the same ground. Examinations for it are held periodically by the principal universities and the Scottish Education Department; candidates who wish to take one of these examinations should apply to the body from whom the certificate is desired. Either of these certificates, once obtained, is valid on all occasions on which the candidate is otherwise eligible to compete under the regulations.

The school education must keep in view not only the certificates we have mentioned, but the requirements of the competitive examination for Woolwich or Sandhurst. For Woolwich, the compulsory subjects are English, French *or* German, and Mathematics I., together with two optional subjects chosen from Mathematics II., Science, History, German *or* French, Latin *or* Greek. For Sandhurst the requirements are similar, but Mathematics is not in the compulsory list.

Hitherto, Latin has been practically compulsory and Greek optional; now French, or else German, is compulsory and Latin *or* Greek optional. No one can take both Latin *and* Greek; whereas both French and German may be taken—one as a compulsory and the other as an optional subject. Some colloquial knowledge of French or German is essential; but boys who have the opportunity should learn to speak well some Oriental or foreign language. As officers, they may pass an examination in it, and be noted as "interpreters"; and if called upon to use their knowledge, with an army in the field, they may increase their pay by as much as 15s. a day.

Mathematics I. is fairly comprehensive, and includes trigonometry, dynamics, and statics with practical work; whilst Mathematics II. takes in the Differential and Integral Calculus and a good deal of practical physics. Science requires theoretical and practical knowledge of physics and inorganic chemistry. History includes general English

history, general ancient history (or else a period of European history, for which books are previously recommended by the Examiners), a military biography, prescribed annually, and the geography of all the countries studied. The questions in Latin or Greek are confined to (*a*) translation from and into the language, (*b*) its literature and (*c*) verse composition; but (*b*) and (*c*) are alternative.

We thus see the kind of educational foundation that must be gradually laid at school; and the course should include a good deal of physical training as well. The Competitive Examination for Woolwich or Sandhurst can be taken only between the ages of eighteen and nineteen and a half. This leaves but little time for special coaching after the "Leaving Certificate" has been obtained, which is exactly what the Army Council desire. They wish to put a stop to the system of taking boys from school and putting them under a "crammer" for two or more years; but special coaching in one or two subjects may still be advisable; and a few months might be usefully spent in France or Germany, or both.

3. COMPETITIVE EXAMINATION FOR WOOLWICH AND SANDHURST. We have already given an outline of the syllabus for this Examination, and it only remains to give a few more particulars. 2,000 marks are allotted to each subject taken and an additional 250 marks are given for freehand drawing; but this is a purely voluntary subject. The papers are the same for both colleges, and candidates who fail for Woolwich may still have enough marks to carry them into Sandhurst. The fee for the examination is £2 if taken in London but £3 if taken elsewhere. The first examination under these new regulations was held in November, 1905, and the last under the old in June, 1905.

4. THE MEDICAL EXAMINATION takes place after the Competitive Examination; and, as it is a searching one, intending candidates should make sure some time beforehand that they are likely to pass it. The best course is to undergo a preliminary medical examination by a military medical board not more than two years before they compete.

Applications for permission to do this must be addressed to the Under Secretary of State, War Office, and must be accompanied by a fee of £2 2s. Candidates found unfit by this board are not bound to accept its finding, but may continue their studies at their own risk. In any case, they *must* submit to the final medical examination. It would be out of place here to give a complete account of the physical tests to be satisfied by candidates who have passed the Competitive Examination. They can be seen in the Regulations for Woolwich or Sandhurst, which may be obtained, post free for 1½d., from Wyman and Sons, Fetter Lane, E.C.

It may, however, be useful to state that, at sixteen, a boy should be at least 64 inches high, and have a chest measurement of 34 inches when it is expanded and 32 inches when it is as empty as it can be made. At eighteen the corresponding figures must be at least 65, 35, 33. It is quite possible by proper training to bring boys up to these standards if they are not much below them. During the period of school training the teeth should receive constant attention, and any decayed ones immediately stopped. Loss or decay of ten teeth is a disqualification, but well-stopped teeth are considered sound. The feet and toes must not be injured by tight boots. Eyesight and hearing must be good, and there must be no impediment of speech.

5. COST OF TRAINING. The cost of uniform, books, etc., on entering at WOOLWICH or SANDHURST is £35; but the complete outfit will probably cost £100 besides. The fees for boys whose fathers are not, or have not been, connected with the army amount to £150 for each of the two years. The sons of officers pay only from £20 to £80, according to rank; and King's Cadets, that is those who are appointed by the Secretary of State for War from sons of military or naval officers killed in action, or who have died of wounds received in action, or of disease contracted in foreign service, pay nothing. All Cadets nominally receive 3s. a day to cover expenses of uniform, messing, washing, etc. They never actually receive any of it, but if incidental expenses are not covered by this allowance, the excess is charged to the parents.

SPECIAL WAYS OF GETTING A COMMISSION.

1. UNIVERSITY CANDIDATES. The new scheme recommended by the Advisory Board on Military Education came into force in September, 1905, the last examination under the old regulations having been held in the preceding June. Before selection, a candidate must have graduated at a residential University approved by the Secretary of State, and with a view to encouraging him to pursue his studies therein as long as possible, and to take honours, candidates for commissions from any such University or group of Universities, on the recognised list, who have graduated with first-class honours, or with other distinctions approved by the Secretary of State as being equivalent thereto, in any recognised branch of study, may, under certain conditions, be entitled to count one year of seniority on receiving their commissions.

First-class honours are defined as follows: (1) At Oxford, a first-class in any final school; (2) at Cambridge, a first-class in any tripos; (3) at Trinity College, Dublin, the standard of silver medal at the Degree Examination in Honours; (4) at the Scottish Universities, a first-class in any honours group; (5) any other distinction recognised by the Secretary of State for War as equivalent to first-class honours in any approved branch of study.

Each University or group of Universities appoints a Nomination Board, to which the War Office adds one or more military members, who have a veto on any selection. Arrangements for the instruction of candidates, during their University course, in military subjects are supervised by the military authorities. To be eligible for selection, a candidate must be between the ages of twenty and twenty-five, and is required, in addition to the military instruction mentioned above, to be attached to a Regular unit for six weeks in each of two consecutive years, or twelve weeks in one year, and to obtain a satisfactory certificate as to proficiency. If the candidate is an officer of the Militia or Yeomanry, two trainings with his Militia or Yeomanry unit count as equivalent to six weeks with a regular unit. He is also required to qualify in military subjects at one of the examinations held in March and September of each year.

2. MILITIA AND YEOMANRY OFFICERS. The military qualifications required under the Old Regulations from Officers of the Militia and Yeomanry are maintained under the New, but an attachment to a regular unit is added. No Officer of these forces is allowed to present himself for the competitive examination before he is twenty years of age. The literary qualifications of Militia and Yeomanry candidates is the same as for candidates for Woolwich and Sandhurst, i.e., they must have either a Leaving or a Qualifying Certificate. Candidates for the Royal Artillery must, in addition, obtain the Woolwich standard in Mathematics I. and II. The grant of Army commissions to Militia and Yeomanry candidates is determined by a competitive examination in military subjects.

3. By a regulation, of a temporary character, issued October, 1905, Candidates for Commissions in the Cavalry can be accepted, under certain easy conditions, on probation. After two years' service on probation, and subject to passing the professional examinations and to being well reported on in every respect, Candidates will be permanently gazetted as second lieutenants.

4. PROMOTION FROM THE RANKS (See above under *Promotion of Officers*). This method of obtaining a commission is well worth the attention of well educated young men of grit and determination, who cannot afford to get one in the usual way. It is said that some seven hundred officers of our present army have won their commissions by promotion from the ranks.

ROYAL MARINES. Hitherto candidates for commissions in the Royal Marines have been trained at the Royal Naval College, and have gained entrance thereto by means of the competitive examinations for entrance into Woolwich and Sandhurst. This system will remain in force only till June, 1908. All Commissioned Officers of the

Royal Marines appointed after that date must have been through the course of training prescribed for Naval Officers (See under *Navy*).

OFFICERS' EXPENSES. Officers who go on foreign service can, and often do, live from the first on their pay. Those who remain in England should not be expected to do so; and even an infantry subaltern should receive at least £60 a year beyond his pay. Cavalry regiments are the most expensive; and a cavalry officer cannot do with less than £300 a year from private sources, unless he is stationed abroad. Even then this sum is not reduced by much more than £50. Parents whose means are limited should write to the colonel of the regiment their sons wish to join, and ascertain the amount they may be called upon to contribute. Much attention is being paid by our Army authorities to the possibility of limiting the expenditure of officers, and it is probable that it will in the near future be considerably reduced.

THE NAVY.

The British Navy is by far the most powerful in the world; in fact, our policy is to make it sufficiently powerful to be more than a match for any probable hostile combination of powers. This policy is forced upon us by our circumstances; for it is no exaggeration to say that, not only the maintenance of our Empire, but our very existence as a nation depends on the efficiency of our Navy. In case of war it would have to attack our foes and preserve the various parts of our scattered Empire from invasion by sea. But this is by no means all. One of the main objects of our enemy would be to cripple our mercantile marine; and, could he succeed, we should be quickly starved into surrender, for we import far more of our necessary food than we produce. Our vast fleet of fast cruisers would have, then, to protect our merchant ships all over the world. Further, it would be necessary to transport troops to attack vulnerable parts of our enemy's dominions, e.g. his colonies; and these transports, too, would have to be protected by fighting vessels. Finally, a war with a hostile combination of maritime powers would be disastrous to our commerce, whatever the final result; consequently it is very much to our advantage to remain at peace as long as possible; and nothing will enable us to do so better than a navy that no combination of powers could hope to defeat without serious damage to themselves.

OF WHAT OUR NAVY CONSISTS. The two great classes of fighting vessels are *Battle Ships* and *Cruisers*. The former are twice as thickly plated with iron as the latter and carry more and heavier guns; but a Cruiser can steam three or four knots an hour faster than a Battle Ship. In case of war, it would be the business of the stronger vessels to try to blockade our enemy's warships in his own ports, and to engage his vessels of the same class, whilst the Cruisers would protect our mercantile marine and try to destroy his.

After Battle Ships and Cruisers come *Sloops* and *Gun Boats* for patrolling rivers and islands, protection of fisheries, &c., even in times of general peace; *Torpedo Boats*, built for speed and for launching the deadly torpedo; *Torpedo Destroyers*, faster still and originally designed to catch and destroy the former; and finally, *Submarines*, which are still at the experimental stage, but which bid fair to become of the greatest importance.

THE PERSONNEL OF THE NAVY may be divided into 1. Commissioned Officers—Military and Civil. 2. Chief Gunners, Boatswains and Carpenters. 3. Warrant Officers. 4. Ship's Company.

The Commissioned Officers, with whom, in the following pages, we are chiefly concerned, are thus divided:

1. Executive Branch: Flag Officers (Admiral of the Fleet, Admirals, Vice-Admirals, Rear-Admirals), Captains, Commanders, Lieutenants, Sub-Lieutenants, Acting-Sub-Lieutenants, Midshipmen, Naval Cadets. 2. Engineer Branch: Rear-Admirals (E), Captains (E), &c., as in Executive Branch. 3. Royal Marines: Lieutenant-Colonel, Major, Captain, Lieutenant, Sub-Lieutenants. 4. Medical Branch: Inspectors-General, Deputy Inspectors-General, Fleet Surgeons, Staff Surgeons, Surgeons. 5. Accountant Branch: Secretaries, Paymasters, Clerks, Assistant-Clerks. 6. Chaplains. 7. Naval Instructors.

PAY. The following table will show the various grades of the Naval and Marine Officers, and their ordinary pay, as settled by the New Regulations (1903). In addition to the sums stated below there are many extra allowances for special duties, which may amount to £45 in the case of a Sub-Lieutenant, to £73 in that of a Lieutenant, and so on, rising to as much as £328 in the case of a Captain. Midshipmen during their three years of service on board receive £32 a year, and afterwards as Sub-Lieutenants £91 a year.

PAY TABLE

for Executive, Engineer and Marine Officers.

NAVAL OFFICERS.	Pay.	
	Executive.	Engineers.
	£	£
Lieutenant	182 to 292	219 to 365
Commander	365	438 to 602
Captain	410 to 602	638 to 730
Rear-Admiral	1095	1095
Vice-Admiral	1460	—
Admiral	1825	—
Admiral of the Fleet	2190	—

ROYAL MARINE OFFICERS.	Pay.
	£
Lieutenant	182 to 200
Captain	219 to 274
Major	365 to 474
Lieutenant-Colonel	547 to 857

The following particulars of pay in the other branches mentioned above will give an idea of the opportunities they offer.

Medical Branch: £255 to £1300.

Accountant Branch: Assistant Paymasters receive from £91 to £210; Paymasters from £255 to £602.

Chaplains and Naval Instructors: £219 to £401.

The number of officers, seamen, boys, and marines provided for naval services in one year (taking 1905–6 as a fair example) amounted to 129,000, and the wages paid for their services totalled £6,672,000; whilst no less a sum than two millions was expended for half-pay, reserved and retired pay, naval and marine pensions, gratuities, and compassionate allowances.

PROMOTION, HALF PAY, AND PENSIONS. Increase of ordinary pay in any rank depends on length of service in that rank. Promotion from one rank to a higher, up to and including that of Lieutenant, depends absolutely on the results of examinations. Thence it is by selection up to the rank of Captain, after which it is by pure seniority. An officer unable, through illness contracted on service, to perform his duties, is allowed three months' leave on Full Pay, after which, if still incapacitated for duty, he is put on Half Pay. A few officers, fit and willing for active service, are obliged to go on Half Pay because there are not enough ships in commission to give them employment. The Retired Pay is on a liberal scale, and special pensions are granted to officers for distinguished service. Pensions to widows are given provided the parties were married whilst the officers were on the active List. Widows of officers killed in action receive a much greater pension than they otherwise would. For all particulars of Half and Retired Pay, see the "Quarterly Navy List."

DOCKYARDS (ROYAL). A complete dockyard is an enclosure containing every appliance for the building, repairing, fitting, victualling and coaling of ships. Most of our warships are built at the Royal Dockyards, situated at Sheerness, Chatham, Portsmouth, Pembroke, Devonport and Haulbowline (Cork Harbour), which are under the sole

control of the Admiralty; but many are built in private yards, such as those near, or at, Newcastle, Glasgow, Barrow, and Belfast.

A complete list of the warships afloat may be seen in such books as Whitaker's Almanac or the Navy List, and need not be given here. Look, in either of these publications at the long list of our warships of all kinds, try to imagine the vast army of designers, constructors, artificers, paymasters, clerks and unskilled labourers that must have been employed in their construction and equipment; notice that not more than half a dozen of these vessels are 20 years old, and that in 20 years' time others more numerous and powerful will have taken their places; think further of the work involved in arming, victualling and storing them with coal and in docking and repairing them, and, finally, of the works required to protect the enclosures, with their mazes of shops and store-houses, where all this work is performed, and you will be able to form some idea of what a modern dockyard must be like. And now think of the distribution of our Navy all over the Globe and of the necessity of having dockyards where vessels can be repaired and re-stored without having to return to England, and you will appreciate the activity of the Admiralty, especially since 1895, in providing and extending dockyard accommodation in such places as Gibraltar, Malta, Hong Kong and Simon's Bay (Cape of Good Hope).

All the best posts in these yards, as well as on the ships of the Navy, are given to officers who have undergone the training provided by the Admiralty for its Naval Officers.

NAVAL COLLEGES AND SCHOOLS.

1. ROYAL NAVAL COLLEGES, OSBORNE and DARTMOUTH. At Osborne is the Naval School in which practically all future cadets will receive their first professional training. They enter it at twelve years of age, and stay two years, after which they proceed to the Naval College at Dartmouth. Formerly cadets intended for the Executive Branch of the Service entered on their period of training at the age of 14½—15½ and spent the first two years on board the Britannia, off Dartmouth; but in 1905 the Britannia ceased to be used as a training ship, and the training, begun at Osborne, is now carried on at the magnificent Royal Naval College recently erected at Dartmouth. Osborne College consists of a number of bungalows erected on land belonging to the former Royal Residence of Osborne, near Cowes, in the Isle of Wight, which, on the death of Queen Victoria, was presented to the nation by King Edward VII. The house and surrounding grounds are used as a Convalescent Home for Naval and Military Officers; and the remainder of the estate belongs to the Naval College. The Cadets receive an excellent general education; but the time usually given in our Public Schools to classical studies is devoted at Osborne to Seamanship, Navigation and Practical Engineering. Particulars as to fees, entrance, &c., are given below; see *Cost of Training*.

2. ROYAL NAVAL ENGINEERING COLLEGE, DEVONPORT, is usually called Keyham College, because it is situated at Keyham, a little north of Devonport. Under the old regulations, Engineer Cadets began their training at Keyham between the ages of 14½ and 16½. The last examinations under this scheme were held in March, 1905, and March, 1906, and now only those are eligible as Engineer Officers who have passed through Osborne and Dartmouth.

3. ROYAL NAVAL COLLEGE, GREENWICH, occupies the buildings of the former Greenwich Hospital, which was closed as such in 1869. The College is organised to provide for the instruction of Naval and Marine Officers in all branches of theoretical and scientific study bearing upon their profession. Even Flag Officers *may* here take a course of instruction. Arrangements, too, are made for the admission to the courses of study of private students in Marine Engineering and Naval Architecture and of government students in the latter subject. As far as the buildings will permit, Naval Officers pursuing courses of study are given free quarters within the precincts; and they are allowed, in addition to their full pay, 1s. 6d. a day towards mess expenses.

Examinations are held at the end of each course, although Captains and Commanders need not take them. In other cases, the class of Certificate gained determines, to some extent, the time of promotion, with accompanying increase of pay. Acting Sub-Lieutenants who fail twice in their First Examination, held two months after their admission, are discharged from the service. There are many valuable prizes for those who do best in the Examinations.

EDUCATION AND TRAINING FOR THE NAVY.

1. PRELIMINARY CONSIDERATIONS FOR PARENTS. Before deciding on a Naval career for a boy, his parents should make sure of the following points:

1. That the boy is healthy, well developed for his age, and without physical defect. 2. That he is of fully average intelligence. 3. That they can give satisfactory proof that he is of good moral character. 4. That they can afford to spend an *average* of rather more than £100 a year on his training between the ages of 12 and 20, and then supplement his pay till it amounts to £150. 5. That he is of pure European descent; and that they are, themselves, either natural-born British subjects, or have been naturalized in the United Kingdom.

2. EDUCATION AT SCHOOL TILL THE AGE OF 12. The early education of the boy is of supreme importance. So far as the mere subjects of his instruction are concerned, they form part of the curriculum of any good Secondary School; but something more is wanted than ability to pass an examination. Before he is allowed, at the age of 12, to sit for the Qualifying Examination (see below), he will have to appear before a Committee appointed by the First Lord of the Admiralty, who will try to assure themselves, in conversation with him, that he is of the right stamp for a Naval Officer. The boy who appeared utterly dull and conspicuously awkward and self-conscious at this interview, would have but a small chance of a nomination; whilst the boy who exhibited that aplomb which is acquired by frequent and intimate association with well-bred people, would have a good chance of securing one. By the age of 12 he should be well grounded, for his age, in the subjects of the Qualifying Examination (see below). He need spend no time on Greek or Science, but must be taught either German, *or* French orally, and much attention should be paid to his physical development.

3. NOMINATION. As soon as a boy intended for a naval career is 12 years old, his parents should apply for a nomination to the First Lord of the Admiralty, addressing the application to his Assistant Private Secretary, Whitehall. The Interview mentioned above, and on which his Nomination depends, will not take place till he is 12 years and 8 months, and a few weeks before one of the three dates fixed for the Qualifying Examination. There is no such thing as special preparation for this interview. The candidate may be asked all sorts of queer questions designed to test his powers of self-possession. Influence *should* not count; but membership of the family of a well-known officer is a useful qualification. No nomination will be given to a boy whose parents or guardians do not promise on his behalf that he is prepared to enter any one of the three great branches of the Service—Executive, Engineers, Royal Marines—when he has completed his probationary period of service afloat.

4. MEDICAL EXAMINATION. Boys who have secured nominations must next undergo the Medical Examination and must be found physically fit for the Navy. Defects of body, speech, sight or hearing, and any predisposition to disease would disqualify them. "It should be particularly noted that full normal vision—as determined by Snellen's tests—is required."

5. QUALIFYING EXAMINATION. A boy who has secured a nomination and passed the doctor, will be required, within a few weeks, to present himself at one of the Qualifying Examinations, held every year in March,

July and December. He will be examined in the following subjects:—

1. English (dictation, composition, reproduction of a passage read out, &c.) 2. History and Geography, with special reference to the British Empire. 3. Arithmetic and Algebra (to Simple Equations). 4. Geometry, Practical and Theoretical. 5. French *or* German (with an oral examination). 6. Latin (easy translations from and into English and simple grammar).

6. PERIOD OF TRAINING. Having passed his Examination, the candidate for a naval training becomes a Naval Cadet and will be required in about six weeks to go into residence at Osborne, where he will remain for two years. The next two years will be passed at Dartmouth. If he does not prove himself a good student he is asked to retire; but, if he does, he becomes a Midshipman and spends the next three years at sea. At the end of this period, having passed a satisfactory examination, he is promoted to the rank of Acting Sub-Lieutenant and once more becomes a student on shore—for 6½ months at Greenwich and 18 weeks at Portsmouth. If he again passes his examination satisfactorily he becomes a sub-lieutenant and is drafted into one of the three branches of the Service: if into the Executive, he goes to sea for two years; if into the Engineers, he goes to Keyham; and if into the Royal Marines, he will spend the next two years in acquiring military training, partly at the depôt of his corps and partly at the Royal Naval College, Greenwich.

7. COST OF TRAINING. Although the cost of a naval training is considerable, it is less than that of education in most of the Public Schools. The following is a rough estimate of it, to which must be added travelling expenses and those incurred during the holidays, which amount to 13 weeks in each of the first four years.

1. First year at Osborne (12–13), total cost about £135. Fees £75, outfit £40, minor expenses £15, pocket money £5.

N.B.—To a limited number of cadets, who must be sons of officers of the Navy, Army, or Marines, or Civil Service under the Admiralty, the fees charged are £40. This also applies to the following period.

2. Next three years at Osborne and Dartmouth (13–16), total cost about £315:—Fees for the three years £225, minor expenses £75, pocket money £15.

3. First year as Midshipman (16–17), net cost about £115: compulsory private allowance £50, outfit and minor expenses £47, extra for messing and service £50. Pay received £32.

4. Second and third years as Midshipman (17–19), net cost about £216 —compulsory allowance (at £50 a year) £100, minor expenses and renewals, £80, extra for messing and service £100; pay received £64.

5. As Acting Sub-Lieutenant (19–20), the net cost will probably be about £90:—new uniform from £30 to £40; messing about 3s. a day beyond the government allowance (1s. 6d. a day); total expenditure can hardly fall below £180; against which must be set his pay of £91.

6. As Sub-Lieutenant (20–22) he cannot live on his pay (£91), and his parents may expect to have to contribute £50 a year till he becomes Lieutenant.

7. As Lieutenant, he *can* live on his pay (£182), and most Lieutenants do. The Admiralty discourages all extravagance in messing expenses.

ACCOUNTANT BRANCH. Candidates for admission to this Branch must receive a nomination from the Admiralty, must be between 17 and 18 years of age, pass the doctor, and be able to swim. Boys of good ability who have been educated at any good Secondary School should be able to pass the examination, provided they have taken Latin and have been taught French conversationally. Aptitude for accounts is essential for success in this branch of the Service.

The successful candidate begins as Assistant Clerk at £45 a year, and may rise through the grades of Clerk and Assistant Paymaster to the rank of Paymaster. As Assistant Paymaster the pay ranges from £91 to £210, and as Paymaster from £255 to £602.

THE MERCANTILE MARINE.

The Mercantile Marine consists of all the vessels—sailing or steam—engaged in the carriage by sea of goods and passengers. These range from little sailing smacks of 200 tons displacement to huge cargo steamers of a gross tonnage of 20,000 going 15 knots an hour, and stately liners of 16,000 going at the rate of 23½ knots. The gross tonnage of the mercantile marine of the United Kingdom is something over 16,000,000, and is far greater than that of all the rest of Europe put together. If we include our Indian and Colonial merchant ships the gross tonnage amounts to 17,600,000, or nearly as much as that of all other countries. As might be expected, the number of sailing ships is on the decline. In 1886 the gross tonnage of registered sailing ships belonging to the United Kingdom was 35% of that of steam and sailing ships combined; whilst in 1901 it had fallen to 14%. Still, the number of sailing vessels is considerable. The biggest of them are engaged in the jute trade of India, the grain trade of California and British Columbia, and the nitrate trade of Chile. When outward bound, they usually carry coal.

In 1902, the number of British seamen of all ranks—excluding Asiatics and Colonials—engaged in the Merchant Service was nearly 175,000. Many of the posts are extremely well paid—indeed the average pay is fairly high. Captains in the big liners (the P. & O. for instance) may get £800 a year; Chief Officers £200, and Second Officers, £132. Promotion depends upon (1) general physique and capacity, (2) early training, (3) obtaining the Board of Trade Certificates (see below), and (4) *very* much upon length and character of service.

THE PERSONNEL is divided into Officers, Midshipmen or Apprentices (there is usually little or no difference), and Crew (or Deck hands).

The Officers consist of the Captain, 1st Mate, 2nd Mate, and sometimes 3rd, 4th, 5th, and even 6th Mate; and, on steam ships, also of 1st Engineer, 2nd Engineer, and 3rd Engineer. On liners, Mates prefer the more dignified title of Officer—1st Officer, 2nd Officer, and so on. *Midshipmen or Apprentices* are lads training to become officers. *Deck Hands* consist of Petty Officers (Boatswain, Carpenters, Sailmakers, &c.), Able Seamen, Ordinary Seamen, and Boys.

THE PAY depends largely on the size and character of the vessel in which a man is serving. With the exception of Engineers in small vessels (under 500 tons), food and service are given in addition to the amounts stated below; so that the only considerable necessary expenditure is for clothing—a very different state of things from that which obtains in the Navy, where messing expenses and service may be heavy. The social position of Mercantile Officers is below that of Naval Officers; but their average pay is better. A Captain's pay on the large liners varies from £400 to £800, and, on the smaller, seldom less than £250. On sailing ships, Mates (1st, 2nd, and 3rd) get from £40 to £100 a year; on steam ships from £70 to £140. In the bigger steam ships, Engineers (1st, 2nd, and 3rd) draw from £80 to £220 a year. It must be noted that the above sums are *rates* only, wages being usually paid by the month. When on leave, between voyages, officers draw no pay.

TRAINING FOR THE MERCANTILE MARINE. Parents who think of sending their boys into the Merchant Service, should first make sure that they are not colour-blind. If they are, they can never become officers. They can be tested at the Mercantile Marine Offices, in any of the chief ports, for 1s. each. (For detailed information, see "Regulations for Examinations of Masters and Mates in the Mercantile Marine," price 1s. through any bookseller.) If their colour vision is normal, and their parents can afford the expense, they are strongly urged to send them to one of the Mercantile Training Ships: the *Conway* at Liverpool or the *Worcester* at Greenhithe, Kent. The fact of their having passed two years in one of these ships gives them an advantage over most other lads. The latter must pass four years at sea before they can be examined for a 2nd Mate's Certificate, the former need pass only three; and generally speaking, Shipowners and Captains prefer Conway and Worcester boys. Some particulars relating to entrance, fees, &c., are given below; but full information can be obtained gratis on application to the Commander, H.M.S. Conway, Rock Ferry, Liverpool, or

to the Captain-Superintendent, H.M.S. Worcester, Greenhithe, Kent.

Another course open to parents who can afford the outlay, is to get their sons taken as Midshipmen on one of the big sailing ships of Messrs. Devitt and Moore, 39 Fenchurch Street, E.C., from whom full particulars may be obtained. Boys are taken as Midshipmen on easier terms by Messrs. Elder, Dempster and Co., Canada House, Bristol. They must be well educated, of good physique, and willing to work hard. No premium is required and no wages paid. At the end of their apprenticeship, suitable lads are retained in the service of the Company. (A list of shipowners who take apprentices with the outlines of their terms is given in "The Sea," by F. W. Gardner, published at 1s. by Spottiswoode & Co., 54 Gracechurch Street, E.C.).

TRAINING SHIPS FOR THE MERCANTILE MARINE.

1. THE CONWAY is stationed in the Mersey, off Rock Ferry, Liverpool. She is under the general management of the Mercantile Marine Association; and parents of "Cadets" may rest assured that everything in reason is done for the health, education and happiness of their boys. Boys are received between the ages of 12 and 16. They must be fairly well educated for their age, must not be colour-blind and must be in good health. The fees charged are £63 a year, and include uniform and outer clothing, food, medical attendance, washing, use of books and school stationery. A new complete outfit (not including cricket and football clothing) would cost nearly £18, of which articles costing £10 9s. must be bought of the Committee's Contractors, (Clothing Store, Sailors' Home, Canning Place, Liverpool). Most boys, however, would have many of the articles required.

2. THE WORCESTER lies off Greenhithe, Kent, in the mouth of the Thames. The fees vary slightly from those charged on board the Conway, and in both ships the advantages offered are nearly on a par.

On both training ships a special class is held, called the Royal Navy Class, for which an extra fee is charged, of the more promising lads, with a view to their competing for cadetships in the Royal Navy, six of which are offered by the Admiralty every year to the boys who have been trained for not less than four terms in either the Conway or the Worcester. The boy who stands highest in the competition in any year receives from the King a prize of a Binocular Glass, suitably inscribed, and £35 towards the expenses of his outfit for his new post in the Navy.

In appointments made by the Secretary of State for India to the *Bengal Pilot Service*, preference is given to candidates who have passed through the Conway or the Worcester. In this service both social position and pay are good and the pensions fair.

OFFICERS' CERTIFICATES. Midshipmen and apprentices who have reached the age of 17, and have served four years at sea (in the case of Conway and Worcester boys, three years) can sit for the Second Mate's Certificate; at 19, with one year's service more, for the First Mate's; and at 21, with six years' service, for the Master's. Without these certificates, promotion in the Mercantile Marine is impossible. (For particulars respecting these examinations consult the "Regulations for Examinations of Masters and Mates in the Mercantile Marine," already mentioned). It must not be supposed that the possession of any one of these Certificates carries with it the certainty of employment in the rank indicated thereon. In the P. & O. nearly all the chief officers and second officers hold a Master's Certificate, and most of the third officers hold a First Mate's Certificate.

THE ROYAL NAVAL RESERVE consists of the *élite* of the Officers of the Mercantile Marine; and those who enter the latter as Midshipmen or Apprentices should make up their minds to join it if they can. If they succeed, they improve their social position, for Officers of the R.N.R. rank with, though after, Officers of the R.N. of their corresponding rank; they improve their chances of promotion in the Merchant Service, for many ship owners will give them the preference; they may increase their pay by £25 a year; in case of war, they may be appointed to the Royal Navy and receive precisely the same pay and treatment as Naval Officers of their own rank. The total number of R.N.R. Officers is 1950, of whom 400 may be Engineers. The remainder consist of lieutenants, sub-lieutenants and midshipmen. Direct entries as Lieutenants are not at present made.

Mates of British steam-ships are, under certain conditions as to sea-service, eligible for appointment as Sub-Lieutenants if they hold a Master's Certificate and are under 30 years of age. A Midshipman must, as a rule, have passed through a course of instruction for two years in either the *Worcester* or the *Conway;* those who have not, must have served for a year on board a First-Class British ship before their applications can be considered. And no application will be considered if the candidate is over 18½. Engineers, to be eligible, must possess a First-Class Engineer's Certificate of Competency, and must have served at least 7 years at sea as Engineer. For information as to qualifications apply to Secretary, Naval Reserve Office, Admiralty. Applications for admission into the R.N.R. are addressed to the "Registrar General of Shipping and Seamen, Carlisle Place, Westminster." For full official information, see the *Quarterly Navy List*, 3s. through any bookseller.

THE CIVIL SERVICE.

The greatest attraction the Civil Service has to offer is the practical certainty of employment for life and of a pension to retire on. The salaries are not, as a rule, great, although the gifted and fortunate may get £1,000 a year, or more. The mass, however, will never rise to more than £300 or £400. The competition for the better posts is very keen; and those will have the best chance of success who deliberately train for it for years before the actual competition takes place. Generally speaking, not half of those who compete win prizes; and the proportion of successful ones tends to decrease with the increase of opportunities for getting an advanced education. In only one of the great Departments of the Service, the Post Office, are there appointments open to competition to women; and these must be given up on marriage. There are nearly 4,000 of them, with salaries ranging from 10s. a week to £500 a year. There are, however, a few female typists employed in the various Departments; but for these posts a nomination is required.

The general character of the work in the Government Offices is for some years, speaking generally of course, dull and of somewhat deadening effect; but the hours are not long—seven hours a day for the clerical staff, and at least a Saturday half holiday every other week. The very great majority of Civil Service appointments are given to those who do best in open competitive examinations, provided they can also pass the medical examination. All competitors must be natural-born British subjects, and the limits of age are rigorously fixed for each examination; they must give satisfactory evidence of good character, and must pay an examination fee, ranging from 5s. for Boy Clerks to £6 for the best appointments. There are posts open to public competition to men of all ages from 14½ to 45, but, as a rule, those over 25 and not already in the Service, are required to possess practical knowledge of the work of the Department into which they seek admission. In the case of women the higher limit of age is 20.

PREPARATION FOR THE CIVIL SERVICE. Formerly those who wished to enter the Civil Service were almost bound to put themselves into the hands of special coaches; but the changes made within the last few years have made the crammer less and less indispensable. The great necessity is, in nearly every case, a good education of a secondary type as a foundation, with additions according

to the examination in view. For the majority of such as are taken between the ages of 15 and 19, no additions are necessary, all the subjects required for passing forming part of the curriculum of every good Secondary School. Now there is hardly a clever boy in the kingdom, however poor, who cannot, by means of scholarships, get into a Secondary School and qualify himself for a Civil Service appointment by simply working hard at the ordinary subjects he is required to take up. There is nearly always a choice; and he will soon find out which will suit him best. But there are certain subjects to which he must always pay very great attention, viz., handwriting, spelling, English composition and arithmetic. Greek is never, in the examinations of which we are now speaking, given, even as an alternative, except for some Admiralty appointments, the India Forest and Police Service and for Student Interpreterships. Latin is seldom necessary, but often given as an alternative. A good knowledge of Latin and French or German may be of very great use for some of the better posts; but, if it is desirable that boys should enter the Service before they are 19, they should fix their chief attention on one language only.

Candidates, however, should remember that all the subjects of a good school curriculum, such as Latin, German, History, Geography and Science, even if unnecessary for the first examination taken, may be of great use in future ones for higher posts, and that they will never have so good an opportunity for laying a foundational knowledge of them as during their school days. The best posts, as will be shown below, are within the reach only of those who have been educated at a first-class school and at a University; and even those who aim at posts not so good as these will find that the longer they can remain at school, the better their chances of securing good appointments. But would-be candidates must never forget that health is of prime importance. It is quite possible for them to pass a given examination and be rejected by the doctor afterwards. General health, teeth, hearing and eyesight, should all be kept in good condition.

Girls who intend to compete for Civil Service Appointments in the Post Office as Women Clerks (18—20), or Girl Clerks (16—18) will, just as men, require a good all-round secondary education, including two languages (Latin, French, German) and either algebra or shorthand. Those, however, who are content to try for less well paid posts as Learners (15—18) or Sorters (15—18), require nothing beyond a good elementary school training; although even these will have a better chance of success if they can spend two or three years in a Secondary School.

Particulars are given below of the best posts open to competition in the Civil Service; but, as it would be impossible in a work of this kind to give anything like an exhaustive account of all of them, intending candidates are advised to get the latest edition of the *Civil Service Year Book* (2s., through any bookseller), which will give them all the particulars they are likely to want of the Service in general. The dates of the various examinations about to be held are always published in the daily papers, usually on Thursdays.

It is useful occasionally to look through sets of recent examination papers, which can be purchased from the Civil Service Commissioners for 6d. or 1s. per set; and a good many will be found in the *Civil Service Year Book*. But too much time should not be wasted in hunting up answers to the questions: they should be used mainly to test the candidate's general state of preparedness. Finally, he should remember that nothing great or difficult is likely to be done except by him who really means to do it—"Whatsoever thy hand findeth to do, do it with thy might."

SPECIAL COACHING is not necessary for those of good ability who find they usually do well in their school tests; and the more young people learn to depend upon their own efforts the more likely they are to rise in the Civil Service as elsewhere. Special training as arranged for in many good schools is not of the nature of cramming, and may safely be recommended. Those, however, who do not agree with us, or who do not feel strong enough to stand on their own feet, will find *in the Civil Service Year Book* the advertisements of plenty of men willing to assist them.

PENSIONS may be given after ten years' service; but they are not granted to any under 60, unless they are incapable from infirmity of mind or body to discharge their duties. A pension amounts to $\frac{1}{80}$ of the annual salary for each year of service, but can never exceed £.

If, for three years previous to retirement, a Civil Servant has been in receipt of the same salary, his pension is computed thereon—if not, on the average for the three years preceding his last "rise."

AGE OF COMPETITORS. Competitors must be, to *a day*, within the limits of age assigned to each examination, and will have to produce, as evidence that they are so, either their birth certificate or other satisfactory testimony; but this latter will only be accepted when the Commissioners have been convinced that the birth certificate cannot be obtained. Persons, however, who have been employed for at least two consecutive years in the Civil Service, or as Boy Clerks, may, when competing for other posts, deduct from their actual age any time not exceeding *five* years, which they may have spent in such service; unless the post be that of Assistant of Excise, when only *one* year can be deducted; of Assistant of Customs, or of Second Class Clerk for Port Service, when only *two* can be deducted.

Forms of Application for permission to sit at any advertised examination are obtainable from The Secretary, Civil Service Commission, Burlington Gardens, W.

SOME HOME APPOINTMENTS OPEN TO COMPETITION.

1. CLERKSHIPS, CLASS 1. Age, 22—24. Fee, £6. The Examination, which is identical with that for the Indian Civil Service and for Eastern Cadetships, takes place in August and is extremely difficult. In fact, it is almost hopeless for any but distinguished University men to attempt it. Twenty-three subjects may be taken, of which none is compulsory. In August, 1903, the top man took fourteen, but one successful competitor, an exceptionally good mathematician, scored marks in eight only, which did not include a single language other than English. Although he took French he lost all his marks in that subject, as they fell below the minimum required; "a candidate is allowed no marks for a subject in which he is a mere smatterer."

It is possible for 2nd Division Clerks, after eight years' service, to be promoted to this higher Division; but such promotions do not amount to more than one or two a year. They can, of course, take the Examination, and are eligible to do so up to the age of 29, under the rule quoted above.

Successful candidates are allowed, according to their position on the list, to choose one of 22 offices in which there may be vacancies—and need not at once choose any. The best are the Home Office, India Office (Correspondence Department), the Treasury and the Colonial Office. In these the salary begins at £200 and may rise to £1,000 or £1,200. In other offices the minimum is £150, and the maximum from £800 to £1,000.

The prospects of Higher Division Clerks are not, however, limited to those offered by the fixed scales of pay: Secretaryships, Assistant Secretaryships and other posts may be offered to them; and they may increase their incomes by holding private Secretaryships or by doing special work. In the Treasury alone, eleven men thus receive extra emoluments, ranging from £100 to £400.

Higher Division Clerks work seven hours a day, have Saturday afternoon once a fortnight, and holidays amounting to 36 week days in the year, exclusive of Christmas Day, Good Friday, and, probably, but not certainly, Bank Holidays. After ten years' service the annual leave amounts to 48 week days.

2. SECOND DIVISION CLERKSHIPS. Age 17—20. Fee, £2.

Obligatory Subjects: (1) Handwriting, Spelling, and Copying MS.; (2) Arithmetic; (3) English Composition.

Optional Subjects:—(4) Précis, Indexing and Digest of Returns; (5) Book-keeping and Shorthand; (6) Geography and English History; Translation from and into (7)

Latin, (8) French (9) German; (10) Mathematics (Euclid, I.–IV., Algebra, up to and including Binomial Theorem); (11) Inorganic Chemistry and Physics.

Only four of the eight optional subjects may be taken, which must not include more than two languages.

The examination is of a searching character; and no amount of mere cramming would enable a boy to pass. If a language is taken, the candidate must have read widely in it and must have had plenty of practice in composition; but there are no tricky grammatical questions and, at present, no oral tests. In the science subjects no practical tests are given; but a candidate would have no chance of passing unless he had done a good deal of practical work. We should advise intending candidates of good ability to learn Latin, and either French or German, even if they do not take them in the examination; as they will find themselves thus equipped for competitions which may be announced for better posts, and for which such languages are required. Thus the Junior appointments in the Supply and Accounting Departments of the Admiralty are better than Second Division Clerkships and may be competed for by any holding the latter, up to the age of 25; but such candidates would have practically no chance without a fairly advanced knowledge of Latin *and* French or German. A similar remark applies to Junior Clerkships in the Ecclesiastical Commission, for which Second Division Clerks could compete up to the age of 27. Those about to try for a Second Division Clerkship should ascertain if an examination is to be held at the same time for Clerkships for Port Service. If so, an extra fee of £1 will enable them to compete for both at the same examination, except that they may take five of the optional subjects instead of four, which must not, however, include both Latin *and* German. In the Port Service they will have better prospects.

Successful Second Division Candidates may be drafted into any one of 34 London Offices; but, out of about 3,050 Second Division Clerks employed in London, over 1,100 are to be found in the Post Office. They are allowed, however, to select the departments in which they prefer to serve; and, *if possible*, effect is given to their preference.

The minimum salary in the Second Division is £70, and the maximum £250. In 1890 a higher grade of the Second Division was established, with salaries commencing at £250 and rising by £10 a year to £350. Promotion from the lower to this higher grade is made according to merit and not seniority.

After eight years' service a specially meritorious Second Division Clerk may be promoted to a First Class Clerkship, and there are other appointments in the Admiralty, Inland Revenue Department, War Office and a few others, reserved for Clerks of this Division, and in which the salaries range from £300 to £500.

Second Division Clerks work for not less than seven hours a day, and have alternate Saturday afternoons free. Their annual holiday is 14 working days for the first five years, and 21 afterwards, with the addition of Christmas Day, Good Friday, King's Birthday, and *perhaps* the four Bank Holidays.

3. BOY CLERKS. Age 15—17. Fee, 5s. *Subjects:*

(1) Writing and spelling; (2) Arithmetic; (3) English Composition; (4) Copying MS.; and *any two* of the following: (5) Geography; (6) English History; translation *from* (7) Latin, (8) French, (9) German; (10) Mathematics (subject matter of Euclid I. and II., Algebra to Simple Equations); (11) Rudiments of Chemistry and Physics.

A well taught boy of 15 who has spent two or three years in a Secondary School, would find little difficulty in passing the examination with no special preparation whatsoever; and, if he has been taught to read the languages at sight, we should advise him to choose one. If he takes science he must have done practical work in it, although no practical tests are given. Candidates should have been used to working examples in the Metric System; and those who take Mathematics should have some knowledge of Graphs.

Successful candidates are not necessarily employed at once: they are placed upon a register and summoned for employment in any of the Public Departments as they are wanted. The pay is small: 15s. a week for the first year, 16s. the next, 17s. the next, 18s. the next, and 19s. after four years' service. No Boy Clerk is retained as such after he has reached the age of 20. If by that time he has not successfully competed for a permanent post in the Service he must seek employment elsewhere; and no period of service as a Boy Clerk counts towards a pension. Consequently those who can stay at school till they are old enough to try for a higher post should not become Boy Clerks. Still, if they are forced to begin earning money at an early age they need not despair of promotion even though they begin as Boy Clerks, if they will make up their minds to work hard in their spare time to prepare themselves for the Examination for Assistant Clerks (or Abstractors) to which none but Boy Clerks are at present admitted; or better still, for Examinations for Clerkships in the 2nd Division or in the Customs Port Service, or for Assistantships in the Customs or Excise. If they take the 2nd Division Examination they are allowed "service marks" at the rate of so many marks for each period of three months' service up to a certain maximum. Both *rate* and *maximum* may vary: they are usually five and forty respectively. If competing in any of the examinations for the four posts last named, they are allowed to make deductions from their actual age in accordance with the rule previously given.

Boy Clerks are engaged and paid by the week of 39 hours, viz.: seven hours a day on each week-day except Saturday, when they only work four hours. Their annual holiday cannot exceed 12 days.

4. ASSISTANT CLERKS (ABSTRACTORS). Age 19—21. Fee 10s. *Subjects:*

(1) Writing, (2) Spelling, (3) Arithmetic, (4) English Composition, (5) Digesting Returns into Summaries, (6) Geography.

Salary, £55, rising by £4 a year to £75, then by £5 a year to £100. If a Clerk is promoted to the higher grade, his salary again increases by £5 a year to £150. Only Boy Clerks are allowed to compete for these Clerkships. The prospect is poor; but service as an Assistant Clerk counts towards a pension and there is a chance, after six years' service (of which two may have been as Boy Clerk), of promotion without examination to the 2nd Division. Assistant Clerks can also compete in any of the Examinations for the higher posts mentioned above (see Boy Clerks) and are allowed the usual deductions from their age.

5. JUNIOR APPOINTMENTS in the Supply and Accounting Departments of the Admiralty, and in the Royal Ordnance Factories of the War Office. Age 18—20. Fee £6. *Subjects:*

Class I. (1) Elementary Mathematics (including Arithmetic), (2) Latin, (3) French *or* German, (4) English Composition, (5) Geography. *Class* II. (6) Advanced Mathematics, (7) German or French, (8) Greek, (9) English History, (10) Chemistry and Heat, (11) Physics, (12) Physiography and Geology. All the subjects of Class I. may be taken up, but only two of Class II., and if one of these latter is a modern language it must be different from that taken in Class I.

The Examination is undoubtedly difficult and the competition is very keen, there being as a rule not more than a dozen vacancies a year. If the science subjects (Nos. 10, 11) are taken, candidates must be prepared to do practical work; and those who take modern languages will have to write a dictation test. Boys who have had a good oral training in the latter would find no difficulty in this; but they must read widely and carefully long before they sit for examination.

The minimum salary is £100 and the maximum £350. Officers must be prepared to serve in any of the Royal Dockyards at home or abroad; if abroad, they will be given a residence and extra pay. The prospects are excellent, and the 2nd Division Clerks are advised to read steadily for the examination, which they can take up to the age of 25 years.

6. CUSTOMS: CLERKS FOR PORT SERVICE. Age, 17—20. Fee £3. The examination has already been described (See "Second Division Clerkships," above). The prospects are rather better than in the 2nd Division

and the work less monotonous. The salary begins at £70 and may rise to £500.

7. CUSTOMS: ASSISTANTS OF CUSTOMS. Age 18—21. *Subjects*:—

(1) Writing, (2) Arithmetic, (3) English Composition and Spelling, (4) General Geography, (5) Digesting Returns into Summaries, (6) Copying MS.

Candidates must have normal sight, be at least 5 ft. 4 in. in height, and their chest measurement must not fall short of the normal standard corresponding to their height —not short of 34 inches.

Those who are successful spend six months on probation, and when definitely admitted as qualified Assistants are not allowed for two years to compete for posts in other departments of the service. Their salary begins at £70 and rises by £5 a year to £105. Assistants are promoted by seniority into the 2nd Class of Examining Officers, and their salary, starting at £100, *may* rise to £250 without further promotion. If promoted into the First Class their pay may rise to £340; but such promotion is subject to ability to pass a test examination of a technical nature. Senior Examining Officers may become Surveyors and Inspectors, with maximum salaries of £550 and £650 respectively. The hours of employment may be somewhat irregular, but seldom exceed eight hours a day.

8. INLAND REVENUE: ASSISTANT SURVEYORS OF TAXES. Age 19—22. Fee, £6. *Subjects*:—

(1) Arithmetic, (2) English Composition, Spelling and Writing, (3) Geography, (4) Book-keeping, (5) Translation from and into French *or* German *or* Latin, (6) Euclid I.–IV. and VI., (7) Algebra, (8) Political Economy.

The Examinations take place every year in January or February, and there are usually from 10 to 30 vacancies.

An Assistant Surveyor starts at £100 a year, rising by £10 a year to £180. If he gets his promotions as Third, Second, and First Class Surveyor, he will finally receive £650 a year. The post is a suitable one for Second Division Clerks to aim at; but they must use their spare time well. There are usually fully ten competitors for every vacancy.

9. INLAND REVENUE: ASSISTANT OF EXCISE. Age 19—22. Fee £1. *Subjects*:—

(1) Writing, (2) English Composition and Spelling, (3) Arithmetic, (4) Higher Arithmetic, (5) General Geography.

Examinations are usually held in May and November, and the comparative simplicity of the syllabus brings numerous competitors into the field.

The salary begins at £50 and rises by £5 a year to £80, when the Assistant becomes a Second Class Officer with a salary of £115, rising by £7 10s. a year to £160. If he is then qualified for promotion he may become a First Class Officer with a salary of £180 rising to £250. If, however, there are no vacancies in the First Class his salary will increase after 15 years' approved service to £167 10s. and rise by £7 10s. a year till a vacancy occurs. First Class Officers of two years' seniority may pass an Examination and become Supervisors (£250 to £400); and First Class Supervisors may qualify themselves by examination for the rank of Inspectors (£450 to £700); and there are a few, very few, higher posts still. Second Class Inspectors may become Collectors, and as such will have salaries ranging from £500 to £800.

Since the work of an Excise Officer may lie in any part of the country, there are special allowances for travelling or for keeping a horse. Assistant Supervisors have "officiating allowances" of £25, if able to reside at home, otherwise, £75.

Assistants of Excise and of Customs may, after six months' service, take the Examination for entrance to the Government Laboratory and undergo a training as Government Analysts, with salaries ranging from £160 to £1,500. After one year's service, Assistants of Excise may get appointments on the Excise Clerical Staff, in which the salaries range from £100 to £400.

10. PATENT OFFICE: ASSISTANT EXAMINERSHIPS. Age, 20—25. Fee, £5. *Subjects*:

(1) English Composition, Spelling and Writing, (2) Plane and Solid Geometry, (3) Mechanics and Mechanism, (4) Chemistry, (5) Electricity and Magnetism, (6) General Physics, (7) French *or* German.

As will be seen, the examination is only suitable for those who have undergone a sound scientific training. The prospects are good, the salary ranging from £150 to £800. The difficulty of the examination limits the number of competitors; but none can pass who does not reach a qualifying standard of marks.

11. OTHER COMPETITIVE HOME APPOINTMENTS. We have now given particulars of the chief posts open to competition in the Home Service, and shall only briefly glance at others.

Well educated men between 18 and 22, who are pretty safe in Latin and French (or German) should look out for vacancies for Junior Clerks in the Ecclesiastical Commission, if they can be content with a salary of £70 rising to £350, and a chance of entrance by examination later on to a higher post.

Those who have received a legal training can take the Examination for Clerkship in the Estate Duty Office of the Inland Revenue, and, if successful, will start at £150, and may rise to £500 or even more.

If their legal knowledge has been gained by three years' service in a solicitor's office, they may compete for vacant posts in the Office of Woods as Second Class Clerks, and as such will receive salaries of from £100 to £400, with opportunities of securing still higher appointments. Other good posts suitable for those who have had a legal training may be won in the Irish Land Commission (18—22) and in the Dublin Metropolitan Police Courts (17—25). In both, the salary begins at £80 and may rise to £450 in the first, and to £500 in the second.

For the numerous other posts for which technical knowledge is required we must refer the reader to the *Civil Service Year Book*, as they are not posts for which boys usually deliberately train themselves. For Male Learners in the Post Office (age 15—18. Fee, 4s.), the examination is the same as for female learners (see below). The arrangements for learning telegraphy and counter duties are also similar; but the pay starts at 8s. a week instead of 7s., should rise to 20s. a week at 19, and thence increase by £6 a year to a maximum of £112 a year.

COMPETITIONS OPEN TO UNMARRIED WOMEN OR WIDOWS.

1. WOMEN CLERKS. Age, 18—20. Fee, 7s. 6d. *Subjects*:

(1) English Composition, Spelling, and Writing, (2) Arithmetic, (3) Geography, (4) Latin, (5) French, (6) German, (7) English History, (8) Algebra, (9) Shorthand.

Only two languages may be taken and only two of the subjects 7 to 9. Candidates must be at least 5 feet in height without boots.

For well educated girls the examination is not really difficult, but the competition is, at some examinations, very keen. A successful competitor begins as Second Class Clerk at a salary of £55 rising in six years to £70, in six more to £100, and if promoted to the rank of First Class Clerk her salary will, after 18 years' service, be £130. After this the various grades of promotion are: Principal Clerk (£140 to £190), Assistant Superintendent (£200 to £240), Senior Assistant Superintendent (£250 to £300), Superintendent (£320 to £500). The best Branch, to which the above grades and salaries all apply, is the Savings Bank. Women Clerks are employed almost entirely in the Central Offices of the three capitals and are quite separated from the male staff. They are employed for seven hours a day and have no "counter" work. Their annual leave is a month, plus Bank Holidays. They must resign their position on marriage, but receive a wedding gratuity at the rate of one month's pay for each year of service up to a maximum of twelve months' pay, provided they have served six years. The rules as to pensions are the same as for men.

2. GIRL CLERKS. Age, 16—18. Fee, 7s. 6d. The subjects of examination and general regulations are the same as for women clerks. Salary £35 rising to £37 10s. in the second year of service, after which they are eligible for promotion to the rank of Women Clerks. If they fail to get promotion they become Female Sorters, probably in the Savings Bank and Money Order Branches, starting with the salary they were receiving as Girl Clerks.

3. FEMALE SORTERS. Age 15—18. Fee 2s. 6d. *Subjects*: (1) Reading and Copying MS., (2) Writing, (3) Spelling, (4) Simple Arithmetic, (5) Geography of United Kingdom. Candidates must be at least 5 ft. in height. Salary 12s. to 30s. a week. Female Sorters are employed for eight hours a day, mostly in the Savings Bank and Money and Postal Order Branches, but may be called upon to work in any department in London that may be assigned to them; they are not required to work on Sundays. The rule as to marriage is the same as for Women and Girl Clerks.

4. FEMALE LEARNERS. Age, 15—18. Fee, 3s. *Subjects*: (1) English Composition, Writing and Spelling, (2) Arithmetic, (3) General Geography. Successful candidates, for about a year, spend half their time learning telegraphy and counter duties. When certified as efficient, they must wait for vacancies. Learners receive 7s. a week and work eight hours a day, but begin at 14s. a week when appointed to the Established Class. The salary does not exceed 15s. 6d. a week till the age of 19 is reached, after which it may rise gradually to 38s. a week. Sunday work may have to be performed. The regulations as to height, marriage and pensions are the same as for Women Clerks.

POSTS FILLED BY NOMINATION AND LIMITED COMPETITION.

Some posts are filled by nomination followed by only a qualifying examination or by no examination at all; but a far greater number are filled by limited competition between nominated candidates. Of all the posts filled in this way the most desirable are those for Clerks in the FOREIGN OFFICE and for Attachés in the DIPLOMATIC SERVICE (age, 19—25; fee, £6; Nominator, Secretary of State for Foreign Affairs). Only those are likely to be successful who have an advanced knowledge of Latin, and who have had exceptional opportunities of acquiring fluency in speaking German, French and at least one other foreign language (Italian, Spanish, Portuguese, Russian). Once a Junior Clerk in the Foreign Office (£100 to £600), a man may reasonably expect to become a Senior Clerk with £1,000 a year, or he may join the Diplomatic Service and ultimately become an Ambassador at a foreign capital with a salary of from £5,000 to £9,000 a year.

Those with expert knowledge of the work in any one of the departments of the BRITISH MUSEUM or of the NATURAL HISTORY MUSEUM may obtain appointments therein as Assistants (age, 20—25; fee, £5; nominators, Lord Chancellor, Archbishop of Canterbury, Speaker of the House of Commons). In most cases they must have a thorough knowledge not only of their favourite subjects, but of Greek, Latin, French and German as well. The commencing salary is £150 rising to £500, with a chance of securing still better paid posts.

There are appointments similar to the above in the VICTORIA AND ALBERT MUSEUM, South Kensington, (age, 18—25; fee, £5; nominator, President of the Board of Education), requiring advanced knowledge of Art or Science and of two languages (Greek, Latin, French, German). The salaries range from £120 to £300, but there are good chances of promotion to higher posts.

For those who can face the examination for First Class Clerks there are occasional openings as Junior Clerks in the HOUSE OF COMMONS—two or three a year, perhaps. They must be between 22 and 24 and must be nominated by the Clerk of the House. The salary is small to start with, £100; but there is a good prospect of ultimately receiving £1,000 a year.

Both men and women who have practical acquaintance with the management of factories have a chance of securing excellent appointments as INSPECTORS OF FACTORIES (age 21 to 40 for women, to 38 for men), provided they can get a nomination from the Home Secretary. They will be examined, amongst other things, in Factory Legislation, Chemistry, Physics and Mechanics. The salary ranges from £200 to £1,200. The same class of persons, if less ambitious, may apply to the same authority for a nomination to compete for an Assistant Inspectorship, for which the examination is very simple, but contains questions requiring a knowledge of the "Factory and Workshops Acts Consolidation Act."

Only Second Division Clerks are allowed to compete for Clerkships in the METROPOLITAN POLICE COURTS. They must be between 20 and 30, must be nominated by the Head of one of the Departments, must have some acquaintance, which is easily acquired, with certain specified legal subjects, and must take one language (Latin, French or German). Successful competitors start at £120, and have a reasonable prospect of ultimately securing £650.

Any officer who has given two years' service in the Post Office may compete for a Clerkship in the SUPPLEMENTARY ESTABLISHMENT of the Secretary's Office of his Department, and in certain other offices. He must be between 19 and 26, and must be prepared for examination in the same subjects as are prescribed for Women Clerks. The salary varies with the office into which the successful candidate is drafted. It may start at £75, £80 or £100, and may rise to £200 or £400. Only a few can hope to get more.

About 100 WOMEN TYPISTS are employed in various departments of the service. They may be nominated singly by the Head of the Department in which a typist is required and, in that case, will have to pass only a medical and a qualifying examination; or more may be nominated than there are vacancies to fill, and then a competitive examination is held in Typewriting, perhaps Shorthand, and in a few other elementary subjects. The pay ranges from 16s. to 25s. a week. After six years' service they are entitled to a gratuity if they marry, which amounts to a month's pay for each year of service, but cannot exceed twelve months' pay. If they marry, however, they must resign their posts.

INDIAN CIVIL SERVICE. Age, 21—23. If a young man can contemplate, without misgiving, exile from home and the disadvantages of a hot climate, he could hardly do better than work hard for an appointment in the "I.C.S.": but he will have a poor chance of success unless he has had a first class education completed at one of the older Universities. The days of the crammer are probably numbered, for it is found that the proportion of successful uncrammed candidates is at least as great as that of the crammed. The first examination to be passed is that set for First Class Clerks in the Home Service and for Eastern Cadets in the Colonial Service; and the wise candidate enters his name for all three appointments, which he can do without extra charge—£6. If he is fortunate enough to be amongst the selected for the I.C.S., he will have to pass one year on probation; and if he spends it at an approved University, as he should, he will receive £100 towards his expenses. During this year he must learn to ride, if he has not already acquired that accomplishment, and must read up Indian Law and History and must learn the most important vernacular language of the Province to which he has been assigned—on his own choice, if possible. If he is going to Burma he must learn Chinese: if not, he must prepare for examination in Hindu and Mohammedan Law *or* Sanskrit *or* Chinese *or* Arabic *or* Persian. If he took one of these last in his first examination he cannot choose it for his "Final." Having signed his "Covenant," and stamped it with a £1 stamp, he proceeds to India with a free First Class passage. Within a certain time of his arrival he will have to make his choice of service—either in the Judicial or the Executive Branch of the Administration. If he chooses the latter, he may rise to be Lieutenant-Governor of a Province, if the former, a Judge in the High Court. His salary will be reckoned in rupees *per mensem*, and may be taken at about £300 a year to begin with. It may ultimately rise to £2,000 or £3,000, perhaps much more. After 35 years' service the covenanted civilian *must* retire; but he *may* retire on £1,000 a year after 25 years' service, of which 21 must have been "active." Pensions are paid in pounds sterling—not rupees. The leave amounts to one-fourth of the active service.

OTHER INDIAN AND COLONIAL APPOINTMENTS which are obtained by means of open competitions, conducted by the Civil Service Commissioners, are the Indian Forest Service, the Indian Police Service and Eastern Cadetships. The examination for the last has been mentioned above (see *Indian Civil Service*). Eastern Cadets supply the Civil Service of Ceylon, Hong Kong, the Straits Settlements and the Protected States of the Malay Peninsula. Salaries and pensions are on a liberal scale. The examinations for the Indian Forest and Police Services are held concurrently. The limits of age are, for the former, 17 and 20; and, for the latter, 19 and 21. The subjects for the Forest Service include German, Botany, Chemistry and Heat and Drawing, and a choice of two must be made from Mathematics, Latin, Greek, French, English History, Physics, Physiography and Geology. For the Police Service, French may be substituted for German as an obligatory subject, Botany disappears and Chemistry and Heat form one of the optional subjects. Excellent health and physique are essential for all these Services. After passing for the Forest Service, there is training lasting three years to be undergone, which is not required for the Police Service and which costs between £600 and £700. Salaries and pensions are good. Full particulars may be obtained from the Secretary, Civil Service Commission, Burlington Gardens, W.

STUDENT INTERPRETERSHIPS. Age, 18—24. There are two examinations, one for those intended for Service in China, Japan or Siam, which includes Latin, French, German and Criminal and Mercantile Law, and another for those who will go to the Ottoman Dominions, Persia, Greece or Morocco, in which Greek, Italian and Spanish are substituted for Law. Those who take the former and are successful, proceed at once to their destination and are paid £200 a year: those who pass the latter proceed to a University selected by the Secretary of State, and also receive £200 a year. Their University course lasts two years, after which they proceed to the country to which they have been assigned. Those who ultimately become Consuls will receive salaries ranging from £500 to £1,800. Full particulars will be sent on application to the Secretary to the Civil Service Commission, Burlington Gardens, W.

LAW.

The legal profession embraces two classes of men—barristers and solicitors, who are sometimes said to form the upper and lower branches of their common profession. This distinction, true enough in the main, does not hold in every particular, the work of a solicitor being often not of a more elementary nature than that of a barrister, but different in kind. Still it is, as we say, true enough in the main. Thus both barristers and solicitors can practise in the lower courts—County and Police Courts—but only barristers in the higher courts. Here each has his own special function. The barrister conducts the case in open court, the solicitor previously ascertains the facts of the case for his information and guidance. The barrister takes the facts from the solicitor, decides their relative importance for the securing of a verdict, and uses them accordingly. In brief, solicitors do most of their work in private at their own office, barristers are chiefly engaged in open court in pleading the cases of their clients.

From what we have said it will be seen that barristers are employed by solicitors—a very important fact. A young barrister, backed by influential solicitors, has the best chance of showing his worth and of securing other briefs than those given him by his personal friends. Without such help he may have, however clever, to wait long for the recognition of his powers. So important to barristers is their acquaintance with solicitors, that legal etiquette forbids them to unduly cultivate it. The highest legal appointments are closed to solicitors: judgeships, stipendiary magistracies, recorderships, etc., are within the reach only of those who have been called to the bar.

We thus see that, though both classes of lawyers must have a firm grasp of law, the work of each differs materially from that of the other in all but the commoner cases, and that the natural qualities required are therefore different. So far as the cost of qualifying is concerned, there is little difference, as we shall show; but a barrister must, as a rule, wait longer than a solicitor for a fair return for the capital expended on his training. When, however, a barrister has made a really good start, his progress is far more rapid, and he is likely to go much farther.

So much by way of preface: now let us examine into the details of each class separately.

1. BARRISTERS.

QUALIFICATIONS AND EARLY EDUCATION. To be an eminent barrister, a man must be "a scholar and a gentleman"; he must have fluency of speech, a knowledge of men, and a keen insight into character; he must have the type of mind which, in Goethe's words, "sieht das Grosse gross, das Kleine klein"; he must have the power of "thinking on his legs," of fitting new facts at once into their right places in his scheme of attack or defence, and of modifying his plans to suit altered circumstances; he must have perfect confidence in himself—more important, for moderate success, than some of the finer qualities; he must have a good memory and a good physique. There is no such thing in his case as "sick pay": illness means loss of fees, and of that continuity of *touch* in the legal world which to him is all-important. The members of the bar form one of the most brilliant sections of society; and he who would be of it must be fit for it. He must have the best possible education at school and college; and, at both, the embryo barrister should train his powers of speech at debating societies connected therewith. He should by all means try to graduate either at Oxford or Cambridge. Here he will have opportunities of interchanging thought and shafts of wit with the brightest intellects, of forming valuable friendships, and of joining debating societies of world-wide reputation. Many successful barristers, it is true, have had no university training; but they are the exception, and can have neither the professional standing nor the prospects of their more fortunate fellows with equal natural gifts. Finally, he who means to live by law alone, must be prepared to spend £300 a year for at least ten years after being called to the Bar, independently of any income that might possibly accrue from the exercise of his profession.

To any one who is contemplating the Bar as his career, the following outline will indicate the general course to pursue. To one who has made up his mind to adopt this as his profession, further details are necessary. Such details may be found in some "Guide to the Bar"; the best we know, and quite up to date, is Ball's "Students' Guide to the Bar," published at 2s. 6d. by Macmillan.

CHOICE OF AN INN. ENTRANCE AS A STUDENT. Whilst still an undergraduate, or at the age of about twenty, the candidate should choose that one of the Inns of Court he desires to enter—it matters little which, except that available scholarships and prizes are more valuable at some than others (see below under "Scholarships"). There are four Inns (or Societies): Lincoln's Inn, Gray's Inn, Middle Temple and Inner Temple: all, except Gray's, close to the London Law Courts. Each Inn appoints five of its benchers to form the Council of Legal Education; and this Council arranges for the admission, training and examination of all students. The candidate should, therefore, before applying to any Inn for admission, send for the Regulations of the Council, addressing the letter to the Secretary of the Council of Legal Education, 15 Old Square, Lincoln's Inn. Before admission, he will have either to present a certificate showing that he has had a good general education, or else pass the special Entrance Examination held by the Council. Those who have passed certain university examinations—London Matriculation, Oxford Responsions, Cambridge Previous, etc.,—are exempted from the Entrance Examination. When a candidate has

somehow qualified for admission, paid his guinea for the Admission Form of the particular Inn he has chosen and returned it properly filled up, he will, in all probability, be entered as a student of the same. Women are not accepted as students; neither are men in Holy Orders unless, for a year, they have performed no clerical function and declare their intention of ceasing for the future to act as clergymen. Amongst others excluded are solicitors and their clerks, although not their pupils. Solicitors, however, can become eligible if they retire from practice as such, and have their names removed from the Roll.

ENTRANCE FEES. CAUTION MONEY. The entrance fee at each Inn is within a few shillings of £40. Each one requires its students either to deposit a certain sum as "Caution Money"—usually £50, but £100 at the Inner Temple—or else to give a personal bond for £50 with two sureties. Members of most British Universities are allowed the choice of a deposit or bond with sureties. When "called" a student gets back his caution money, less any sums due to his Inn; and in case of his withdrawal or death before call, the like amount is paid to him or to his representatives.

RESIDENTIAL QUALIFICATIONS FOR CALL. The student of an Inn of Court is a member of a kind of Legal University, of which his Inn is a constituent College. He can hire rooms therein, and, for £1 a year, can use the dining-hall, common-room, library, garden, chapel, etc. But he *need* not reside there: all he need do, so far as residential qualification for call is concerned, is to keep twelve terms, which will take him three years. But he can keep as many more than twelve as he likes, and he need not keep them consecutively. To keep any one term, all that is necessary is to eat so many dinners in the Hall of one's own Inn during that term. Members of British Universities need eat only three: others must eat six—not necessarily consecutively.

> There are four dining terms in the year, called "Inns of Court Law (Dining) Terms." They do not begin and end on the same days every year; but they will be found on the first page after the index of Whitaker's Almanac. They are known by the following names: Hilary (about three weeks in January), Easter (about four weeks in April and May), Trinity (three weeks in June and July), and Michaelmas (about three weeks in November).

LEGAL STUDIES AND EXAMINATIONS. Before his call to the bar, every student must pass a written and oral examination, which is divided into four parts: (1) Roman Law, (2) English and Colonial Constitutional Law and Legal History, (3) Evidence, Procedure and Criminal Law, (4) certain departments of English Law and Equity, which are not the same every year. Part 4 cannot be taken till the end of six Terms, about 1½ years from admission; the others can be taken at any time. Exemption can be obtained from the examination in Part 1 by passing a satisfactory one elsewhere in Roman Law. Although no other exemptions are obtainable, members of universities could quite well get Parts 1 and 2 over before coming to London. There are various ways of preparing for these examinations:

1. LECTURES. The Council of Legal Education has arranged for its students a system of free lectures. Many law students have private coaches, and many others are still at universities, and need not or cannot attend the lectures; but all who can should attend them, as the examinations correspond to some extent with the work they have covered.

2. READING IN CHAMBERS. Those who mean to follow law as their profession, should spend a portion of their studentship as pupils of some practising barrister, or, better still, of two or three in succession; and the period of such pupilage often extends beyond the call. The cost of this "reading in chambers" is about £100 a year, including holidays. It is often possible, however, to arrange a six months' course for £50, which does not include holidays. A well educated, self-reliant man would pick up most in the chambers of a busy barrister than one with less practice and more time to give to his pupils.

3. LECTURES, PRIVATE READING AND ATTENDANCE AT THE COURTS. This method of preparing for the Examinations in law is a sufficiently good one for those who are aiming at a call merely as a necessary or desirable qualification for certain posts in the army and medical profession, or for the social distinction it confers.

SCHOLARSHIPS, PRIZES AND CERTIFICATES. There are many scholarships and prizes available for competition amongst law students. Some are open to all, without distinction of Inn; others are confined to students of a particular Inn.

1. GIVEN BY THE COUNCIL AND OPEN TO ALL STUDENTS:
   (1) Studentship of £105 a year for three years to the best candidate in Part 4. Age limit, twenty-five. Open for competition twice a year—in May and December.
   (2) Prize of £50 each to the best candidates in Parts 2 and 3 respectively. Age limit, twenty-five.
   (3) "Barstow Scholarship." About £70 a year for two years. The examination is a special one, and particulars should be obtained from the office of the Council. No age limit.
   (4) Certificates of Honour are granted to all who reach a certain high percentage of marks in Part 4. The value of these certificates will be seen in the following section.
2. CLOSE SCHOLARSHIPS AND PRIZES.
   (1) Every Inn gives a prize of £50 to each of its students who gains a Certificate of Honour (see preceding paragraph).
   (2) Gray's Inn gives scholarships of £15 and £40, each for two years, for excellence in Political and Constitutional History, the details of which vary; one of £60 a year for three years after call for a special examination, the subjects of which differ from year to year; and a prize of £25 for an essay on some subject announced about nine months before the essay is to be sent in.
   (3) Lincoln's Inn has occasionally a valuable scholarship to offer under the Tancred Trust. It is worth nearly £100 a year for about five years. Students to be eligible must be between nineteen and twenty-three. No vacancy is expected till 1907. Details can be obtained from Messrs. Frere, Foster & Co., Lincoln's Inn Fields.

CALL TO THE BAR. The call to the Bar is the seal to a man's certificate of qualification to practise as a barrister. The usual age for call is from twenty-three to twenty-six; and it is of little use in ordinary cases to try to qualify earlier, since few barristers begin actual practice before the age of thirty. The call fees amount to nearly £100, of which £50 is for a government stamp.

IRISH BARRISTERS AND SCOTCH ADVOCATES. In Ireland there is but one Inn—King's Inn, Dublin; but the general course and cost of qualifying are pretty much the same as in London. An Irish barrister of three years' standing can become a member of an English Inn by keeping only three terms; and his call fees are less than for an English barrister by £50—the cost of the government stamp, which he has already paid.

The legal system of Scotland is quite different from that of England: barristers are there represented by *Advocates*, and solicitors by *Writers to the Signet*. Those who desire to be advocates first, as a rule, graduate in laws either at Glasgow or Edinburgh, and then enter the Faculty of Advocates. If they have not graduated at some recognised university, they must pass an examination in general subjects before they can be admitted to the Faculty as "intrants." After a year the private examination in law can be taken, and successful candidates must then go through the form of the Public Examination, consisting of the reading and defence in public of a thesis. The total fees amount to nearly £340, the greater part of which is devoted to the magnificent library of the faculty.

KING'S COUNSEL are the leaders of the Bar appointed to their honorary office by letters patent. They wear a silk gown instead of the alpaca one worn by "utter" (outer) barristers; hence a barrister who becomes a K.C. is said to have "taken silk." Taking silk is not always an advantage, since a K.C. is not allowed to undertake a good deal of business that fell to his share as a member of the Junior Bar; but it is a necessary step in the career of those who aim at the highest posts. King's Counsel do not take pupils, nor do they accept conveyancing or pleading; but in court they are the leaders.

PROSPECTS. Turn to p. 444, and you will find under "Administrators of the Law" what handsome incomes

are available for distinguished members of the bar. The Lord Chancellor gets £10,000 a year, the Attorney-General £7,000 and fees—sometimes over £6,000; the Solicitor-General £6,000 and fees; the Lord Chief Justice gets £8,000, the Lords of Appeal each £6,000, the other Lord Justices each £5,000, whilst County Court Judges must be content with the modest stipend of £1,500 a year. These sums, however, are surpassed by the incomes earned in private practice by some of our most eminent barristers; whilst a moderate amount of success is rewarded by incomes that run into four figures.

Many men, however, are called to the bar without any intention to practise. Doctors, with this additional qualification, are more likely to get coronerships, worth anything up to £2,000 a year; the most valuable town-clerkships, often worth more than £1,000 a year, are held by barristers; journalists, who can style themselves "barristers-at-law," find their literary abilities more likely to find scope, and membership of the bar adds weight to the claims of the would-be member of parliament, and to the decisions of the country J.P.

For those who do not mind emigrating, there are good public appointments in the Colonies, and good opportunities for lucrative practice at the local bars. The official salaries of judges in the various colonies can all be seen in Whitaker, under the different sections of Greater Britain.

2. SOLICITORS.

The cost of training for qualification as a solicitor is, in most cases, as great and sometimes greater than that for qualification as a barrister; but the chances of failing afterwards to make a living are by no means as great. There is room here for men of good abilities, but who, as barristers, would certainly fail. The chief necessary mental qualities are a good memory, and a capacity for steady work and for taking pains. Capital is, of course, indispensable at first to pay for the necessary training. If any remains to the solicitor when his business begins to be fairly remunerative, he will have excellent opportunities of placing it advantageously, one of the principal duties of his profession being the negotiation of mortgages and the sale of property of all descriptions.

The body that controls the admission, training and examination of students who wish to be solicitors, as well as the general discipline of the whole profession, is the *Law Society*, Chancery Lane, London, to whose Secretary applications for current regulations should be addressed.

EARLY TRAINING. Given the necessary natural qualities, the well-educated solicitor has the best chances of success, since, having the entry into a wider social circle than others, he has better opportunities for becoming known to people likely to need and able to pay for his services. He who can afford it should certainly go to a university, or should, at any rate, secure a university degree in arts or laws. He must at school learn Latin, but not necessarily Greek; and he should try to pass some such public examination as the Matriculation of the London University, the First Class of the College of Preceptors, or the Oxford or Cambridge Senior Locals. A boy may quite well start his special legal studies at sixteen or seventeen; but if he does, he will have, in most cases, to spend five years over them; whereas the university graduate need only spend three.

PRELIMINARY EXAMINATION. The Law Society holds its Preliminary Examination four times a year, and at various centres; in their own Hall in Chancery Lane; and in Birmingham, Bristol, Leeds, Liverpool, Manchester, Newcastle-on-Tyne. Occasionally they are held in other towns.

> The subjects are Latin, English dictation and composition, arithmetic, geography of Europe, history of England and two of the following: (1) Mathematics, including algebra to simple equations and the first four books of Euclid, (2) more advanced Latin, (3) Greek, (4) French, (5) German, (6) Spanish, (7) Italian.

Those who have passed certain examinations, such as those already named under "Early Training," are exempted from the necessity to take the Preliminary; but until this Examination has been passed, or some certificate has been definitely accepted by the Law Society in lieu thereof, no time spent in training can count towards enrolment.

PROFESSIONAL TRAINING. Having passed the preliminary examination or its equivalent, the candidate must be articled to a solicitor or firm of solicitors. The usual term of such service is five years, but for graduates of any British University, or for barristers of less than five years' standing, it is only three years. The stamp duty on the articles is £80. The premium charged by a solicitor for a pupil varies with his standing from £100 to £400, or occasionally more; and he pays him no stipend. The pupil will have to do a good deal of work that may appear to him to be drudgery; but it is drudgery that must be got through. A good deal of a solicitor's business is connected with conveyancing; and in the documents connected therewith, as in fact in all legal documents, exact legal phraseology is all-important. Since the Conveyancing Act of 1881 such documents are no longer as long as when a solicitor's fee for drawing one up depended on its length. But in legal matters there are stereotyped methods of procedure which must be learnt gradually by the pupil in the only way they can be learnt—by actual practice.

During his period under articles the pupil can, in London, attend the courses of Lectures held by the Law Society, or those held in the various colleges of the London University; and there are law classes held in many large provincial towns. Every articled clerk, with certain exceptions, is required to pass the *Intermediate Examination*; and he may present himself at any time after completing twelve months' service. The subjects are such elementary works on the Laws of England as the Examination Committee of the Law Society may from time to time select. The fee for the first entry is £6. and for each renewal after failure £3.

If a candidate fails to pass the Intermediate within a year of completing one-half of his term of service, he will probably be unable to take his Final near the end of such term; that is, the date of his qualification to practise will be postponed. For the Final Examination the entrance fee is £10, and for each fresh trial after failure half that sum. Both the Intermediate and Final are held in London only, in the Hall of the Law Society, Chancery Lane. Those who do exceptionally well in the Final are allowed, two days after its completion, to take an Honours Examination at an extra fee of £1.

SCHOLARSHIPS. In 1906 the Law Society awarded ten scholarships, each of the annual value of £50, and tenable for three years. Some of these were awarded to young men intending to enter into articles of clerkship and others to clerks already articled. The Society does not bind itself to offer such scholarships every year; but the current regulations relating to them may be obtained from the Secretary.

Other scholarships and prizes are offered in connection with the Final Examination:—

> (1) TRAVERS-SMITH SCHOLARSHIP. £50 a year for three years. Age limit, twenty-six. Open to all candidates for the Final.
>
> (2) SCOTT SCHOLARSHIP. About £57, tenable for one year, given on the result of the Honours Examination.
>
> (3) PRIZES AND MEDALS of various values, from £4 to £25, are given on the result of the Honours Examination.

ADMISSION TO THE ROLL. No candidate can be enrolled as a solicitor who has not passed the Final Examination, who is under twenty-one years of age, or who has not completed the prescribed term of service. He who has satisfied all these conditions obtains an Admission Certificate, which has to be impressed with the revenue stamp of £25. A payment of £5 has to be made to the Law Society, and the Certificate must be sent to the Master of the Rolls for his signature. When the document has been duly signed, the applicant's name is entered on the Roll of Solicitors.

SOLICITORS' CLERKS must be carefully distinguished from *articled pupils*. Occasionally they are allowed to

earn their articles by their services. and may thus, on passing their examinations, be put on the Roll. Many of them are extremely able men, and may earn, as clerks, from £70 to £500 a year.

PROSPECTS. Solicitors cannot expect to make the handsome incomes earned by prominent barristers. Still those in good practice often earn from £1,000 to £2,000 a year; and one here and there may get considerably more. Fixed salaries paid to solicitors as managing clerks to big firms of solicitors may reach £700 or even £800 a year; and many separate sums of from £50 to £100 a year may be made by a solicitor as Clerk to various boards of management. Solicitors, too, are eligible for appointment as town clerks, clerks of the peace, magistrates' clerks, vestry clerks, and so on. In the Civil Service, vacancies frequently occur for Clerks in the Estate Duty Office of the Inland Revenue. Candidates must be qualified solicitors, and between the age of twenty-one and twenty-seven. The salary ranges from £150 to £500. One of the best official appointments open to a solicitor is that of Taxing Master, for which the usual salary is £1,500.

MEDICINE.

1. PHYSICIANS AND SURGEONS.

We are very far removed in more than time from the state of things that obtained when Molière could never mention the *médecin* without contempt, representing him as a mere bombastic quack; and, allowing for the poet's creative faculty which led him to make classes out of individuals, we know that his contempt was too often deserved. But *nous avons changé tout cela*, and to-day the doctor is held in general esteem as a man of science, whose treatment is based on scientific, and not *a priori* principles. We know that a mere clumsy fool like Flaubert's *Charles Bovary* could never pass the tests of knowledge and skill prescribed by the General Medical Council for all candidates for leave to practise medicine in England; and we know that the knowledge shown is not mere cram that will be as quickly lost as gained, but knowledge that has been acquired during a long course of study, from experts in medical science, and from actual work in hospitals. Everything that affects the health, not only of individuals but of communities, and even nations, is, or has been, the subject of the doctor's investigations; and he could find, perhaps, no more fitting motto for himself than Terence's well-known words—*humani nihil a me alienum puto.*

THE GENERAL QUALIFICATIONS for a doctor—outside those special ones gained by professional training—are numerous. He should be a well-bred man, or at least one of those men of natural refinement who, though born in humble circumstances, easily catch the tone of a higher stratum of society than their own. Culture and refinement are certainly prime elements of success in the medical profession. Nor should anyone of less than fully average ability attempt to enter the profession: the training and the tests are severe, and the competition, even amongst clever qualified men, is very keen. Good physique is an essential qualification, not only on account of the strain involved in training, but of that of general practice. The doctor's time is never his own, except during his four or five weeks' holiday in the summer: Sunday brings him no rest from the "daily round," his nights are frequently broken and his meals are movable feasts. He must be a man of character—capable of firmness and swift decision in emergencies; but, for all that, he must be a man of tact, for he has to depend for his living on the good opinion of people of the most varied dispositions.

COST OF A MEDICAL TRAINING. He who would be a doctor must have access to a well-filled purse. His special training cannot begin before he is sixteen, and cannot last less than five years; and several years may elapse between the time when he is qualified to practise, and the time when he can earn enough to keep himself decently. Without going at present into particulars, we may say that the total cost of a five years' medical training varies from about £600 to £1,000, the higher limit being taken when the student qualifies at one of the older Universities. The cost may, however, be considerably reduced when the student can live at home, and when he is fortunate enough to win one of the entrance scholarships attached to nearly every Medical School, and one or more of those obtainable after entrance. We give further particulars of scholarships below; our object here is to give parents some general idea of the expenses to be faced if they think of allowing their sons to train for the Medical profession.

QUALIFICATIONS FOR REGISTRATION. Every intending medical student should register his name as such at one of the offices of the General Medical Council: London, 299 Oxford Street, W.; Edinburgh, 54 George Square; Dublin, 35 Dawson Street. Before, however, he can do this he must have passed some Preliminary Examination recognised by the Council, and he must be at least sixteen years old. The list of examinations, success in which is held to qualify for registration, is too long for insertion here; but we may mention that it includes the Oxford and Cambridge Junior Local and their higher Examinations, the Preliminary Medical and the First Class Certificate Examinations of the College of Preceptors, the Matriculation Examinations of the Universities of London, Birmingham, Wales, Ireland (Royal), and the equivalent Examination of other Universities in the United Kingdom. A complete list can be seen in the Educational number of the *British Medical Journal* or *Lancet*, each of which appears early in September, and can be obtained post free for 6½d. from the office of the Journal. But, whichever examination is chosen, it must include certain subjects, which are at present:

> English, English History, Geography, Latin, (including translation from unprescribed Latin books, grammar, and translation into Latin of continuous prose), Mathematics (including Algebra to Quadratics and the subject matter of Euclid I., II., III.,) and either Greek or a modern language. If a modern language is chosen, the examination in it must be similar to that in Latin; if Greek, the continuous prose may be omitted.

We thus have a guide to the kind of early education to be given to our embryo doctors.

Our advice to most English boys would be to get the Oxford or Cambridge Junior Local Certificate first, and then work hard for the Senior Certificate or for the London Matriculation. Provided certain subjects have been successfully taken for the Senior Certificate, the holder is now held to have passed the London Matriculation. If the Junior Certificate states that the necessary subjects were successfully taken, it will serve for registration; and for the latter examination two sciences may be taken up—say Chemistry and Physics—which will be of great value when the student actually begins his professional course. The London Matriculation over, the registered medical student will be able to start work at once for his London Medical Degrees, which are those in view at all the great London Colleges and Hospital Schools. If a boy is bound for Oxford, Cambridge, or some other University, there to begin or complete his medical training, he *need* not, of course, take the London Matriculation certificate, but he will probably find it a useful possession.

MEDICAL DIPLOMAS AND DEGREES. In the medical profession there are four classes of practitioners: family doctors, consulting physicians, consulting surgeons, and specialists on the eye, throat, etc., who attend only to one part of the body. Before any one can practise as a doctor, he must be placed on the *Medical Register* of the General Medical Council, and none can be placed thereon who has not certain specified certificates of proficiency. These are granted by the various English, Scottish and Irish Universities, by the Conjoint Board of the Royal Colleges of Physicians and Surgeons, by the Society of Apothecaries of London, and by the Apothecaries' Hall of Ireland. The most usual method of qualifying for admission to the Medical Register is by means of the examinations

held by the Royal College of Physicians and Surgeons. The doctor thus qualified may write the letters M.R.C.S., L.R.C.P. after his name; but he cannot, any more than the L.S.A. or the L.A.H., be properly styled Dr. So and So. It is becoming increasingly usual for doctors to qualify by means of University Courses and Examinations, so that they may be entitled to use the extremely useful letters M.D.; and of all the examinations by means of which this distinction may be won, those of the London University are now held in highest repute. As, however, it is considered that the attainment of the Diploma of the "Conjoint Board" is a matter of greater certainty than that of a degree, most students first make certain of the former, and then try for the latter. Even those who begin their medical course at Oxford or Cambridge usually finish it in London, on account of the unrivalled opportunities for varied experience offered by the London Hospitals. This is the chief reason for our advice to intending medical students to try hard to pass the London Matriculation before leaving their ordinary school.

CHOICE OF A MEDICAL SCHOOL. All the great Hospitals of London, Edinburgh, and Dublin have Medical Schools attached, and on one of these the choice usually falls; but the schools attached to the universities of Liverpool, Manchester, Sheffield, Leeds, Birmingham, and Glasgow offer a training which may be relied upon as amply sufficient for all purposes. The choice will, in many instances, depend on the cost of the qualifying course, and the opportunities offered of reducing it by means of Scholarships; and we consequently discuss these questions in our next two sections.

FEES FOR MEDICAL TRAINING AND EXAMINATION. It must be clearly understood that the fees for instruction charged by the Medical Schools are quite separate from those for examination, the latter depending on the diploma or degree for which the student is working. It is generally possible to pay a "Composition Fee," on entrance, for lectures and hospital practice throughout the five years' medical course, instead of paying the fees by instalments. By taking the former course, a few pounds may be saved; and the only difficulty likely to arise is that of changing the School, should it at any time be necessary to do so. Here are the composition fees in guineas of some of the typical Medical Schools:—

St. Bartholomew's Hospital, 150; London Hospital, 120; Middlesex Hospital, 135; Charing Cross Hospital, 115; King's College (London), 141; St. George's Hospital, 115; Bristol, University College, 100; Manchester, Owen's College, 121; Birmingham University, 81; Durham University, 103; Edinburgh University, 110. The total cost, if the fees are paid by instalments, may usually be reckoned as *about* ½ more than the composition fee.

The Examination fees for the diplomas of the "Conjoint Board" amount to £42, and will be more if re-examination is needed in weak subjects.

If now a boy has settled on his Medical School, he can, with fair accuracy, forecast the total expense of qualifying. But while, on the one hand, he must not forget that books and apparatus may cost him from £40 to £50, and that, if he cannot live at home, board and lodging will cost him from £60 to £100 a year more; so on the other hand, it should be remembered that the expense may be sensibly reduced by gaining one of the numerous scholarships offered. The complete course, as we have said, takes five years; but it lasts longer for those who do not get through their various examinations at the first attempt. And of course, those who are ambitious of taking a medical degree at some university, in addition to the diploma of the Colleges of Surgeons and Physicians, will require additional time and money for finishing their degree work and paying the examination fees.

SCHOLARSHIPS. The number of scholarships and money prizes offered for competition to candidates for admission to the various Medical Schools and Colleges, as well as to those qualifying in them, is very great, and we can only mention a few of them here. A complete list, in any case, can only be obtained from the School or College in question; but a fairly complete list of the more valuable is given in the *Public Schools Year Book*, published at 2s. 6d. by Swan Sonnenschein & Co., and the conditions attached to them are given too. A fuller list, with conditions, is given in the Educational Number of the *British Medical Journal* or *Lancet* already referred to. Pupils of Epsom College, which is largely, but by no means exclusively, attended by the sons of medical men, have perhaps the best chance of winning Entrance Scholarships to the London Hospitals. No less than nine are annually offered to leaving boys, which exempt them from payment of the Composition Fee. There are Entrance Scholarships to the College of the value of £30 each; so that a boy who had gained one would be boarded and educated for £48 per annum, or for £38, if the son of a medical man, and would have, on leaving school, if diligent and successful there, an excellent chance of a Medical Scholarship. Nearly every Public School, indeed, has a number of Leaving Scholarships, tenable at Universities where medical studies may be pursued. A great many are described in the *Public Schools Year Book;* but complete lists and conditions can only be obtained from the individual schools.

We here give, as samples of the value of Entrance Scholarships open to competition, those offered by well-known medical schools in the metropolis:—

Charing Cross Hospital, £105, £63, £57¾, £42
St. George's Hospital, two at £100, £50.
Guy's Hospital, £150, £100, £60, £50.
King's College, three at £100, £60, £40, £20.
London Hospital, £120, £60, £35, £30, £20.
St. Mary's Hospital, £145, £78¾, two at £63, two at £52½.
Middlesex Hospital, £100, £60.
St. Thomas's Hospital, £150, £60.
University College, £120, two at £63.
Westminster Hospital, two at £60, two at £40, £30.

The various universities also offer to medical students a number of scholarships equivalent to those offered by the London Hospital Schools. Besides the entrance scholarships above mentioned, are others for competition among actual students, for an account of which we must refer our readers to the publications already mentioned, or to the calendars and prospectuses of the various schools and colleges at which they are offered.

MEDICAL CURRICULUM. We have already mentioned that the period that must elapse from the time of registration to the time of the final qualifying examination for a diploma or medical degree is five years. This time may all be passed in Medical Schools and Hospitals, and generally is. Many students, however, prefer to take the first year's course in chemistry, physics and biology at other schools or colleges recognised as efficient by the General Medical Council. But, whichever course he adopts, it is of the utmost importance that every student should pass his examination in physics, chemistry and biology within his first year of study, since he *must* spend four years over his other subjects after passing this first examination. For students in London Medical Schools and recognised Colleges, as well as for all others, who are aiming at a London degree, this first examination is the "Preliminary Scientific"; for those who mean to take the double diploma of the Conjoint Board, it is the "First Examination" of that Board. Although this examination does not include anatomy, students in Hospital Schools usually do some anatomy and dissecting during their first year, so as to be the better prepared for the Second Examination of the Conjoint Board, which can be taken a year after the first, and which is devoted entirely to anatomy and physiology. Those, however, who are aiming at a London degree may leave dissection till they have passed the Preliminary Scientific, as, after passing it, they must spend two years at a recognised medical school before they can take the "Intermediate Examination" in Medicine, which corresponds with the "Second Examination" of the Conjoint Board, but includes pharmacology, in addition to anatomy and physiology. The "Third or Final Examination" of the Conjoint Board cannot be taken before the end of five years from the date of registration; and the two to three years left after passing the Intermediate

(London) or the Second (Conjoint) Examination, are none too long for the necessary preparation for the difficult and comprehensive "Final," success in which qualifies for practice. Students who pass the Final Examination in Medicine held by Universities receive the degrees of Bachelor of Medicine (M.B.), and Bachelor of Surgery (B.S.) or their equivalent; whilst those who successfully take that held by the Conjoint Board may style themselves L.R.C.P., M.R.C.S., that is, Licentiate of the Royal College of Physicians, and Member of the Royal College of Surgeons. Whichever university is chosen as the examining body for a medical degree, the subjects of examination *must* be the same up to the completion of the degree which qualifies a man or woman for admission to the Medical Register as a "Registered Practitioner."

BETWEEN QUALIFICATION AND REGULAR PRACTICE. After qualification comes the need of experience. This is gained by the best men in practice at their own hospital, as "House Surgeons" or "House Physicians," their appointment depending on the results of a competitive examination or on their record during their residence as students. Others find it by taking a post as medical officer on board passenger vessels, or on private yachts. Others hold temporary posts as *locum tenens*, or attach themselves to some busy doctor as assistant; whilst others find employment as House Physician or Surgeon in a provincial hospital or asylum. When sufficient experience has been gained, the time has come for buying a practice or partnership, or for setting up on one's own account in some growing neighbourhood.

PUBLIC APPOINTMENTS. Those who desire to hold one of the numerous appointments open to medical men under Government or local control, should take the diploma in Public Health (D.P.H.) granted, after examination, by most of the universities, and by the Conjoint Board. Medical officers of health of large districts are well paid, the salaries ranging from £350 to over £1,000. In small districts the medical officers of health often combine their public duties with private practice. For men with experience and the ordinary qualifications, there are posts in the workhouse infirmaries, prisons, and convict settlements, carrying salaries ranging from £200 to £550, and for men of more than ordinary ability, there are appointments as resident medical officers in the various hospitals and asylums throughout the country. Medical appointments for certain colonies are filled from time to time by the Colonial Office.

Commissions as surgeons may be obtained in the Navy, the Army, and the Indian Service. Candidates must hold a diploma entitling them to practise medicine, and must also pass a special entrance examination according to the Service he wishes to join. And after the successful candidate has received his commission he will be required to attend certain courses of instruction, and to pass an examination at the end of each course. As an indication of the value of such appointments, we may mention the pay of surgeons in the navy: *Surgeons* receive from £255 to £365; *Staff Surgeons* from £438 to £492; and *Fleet Surgeons* from £547 to £657 per annum. On retirement, there is either a pension or a gratuity. There have been substantial improvements recently in the Army Medical Service; but the Indian Medical Service is still much superior.

MEDICAL TRAINING OF WOMEN. Women who wish to qualify for medical practice are subject, in the same way as men, to the regulations of the General Medical Council. Most British Universities, except those of Oxford and Cambridge, allow women to take their degrees; and the London Society of Apothecaries, as well as the Conjoint Board of the Royal Colleges of Physicians and Surgeons of Scotland and Ireland, admit them to their examinations for diplomas. Women only, are trained at the London (Royal Free Hospital) School of Medicine, the Medical College for Women at Edinburgh, and the Queen Margaret College, Glasgow. There are many medical appointments open to women in England in connection with the Post Office, factories, girls' schools, etc., and many make good incomes in private practice. In India there are more chances of success, owing to the fact that only women are allowed to enter the women's quarters of the rich natives. A good many women doctors go to India as medical missionaries. Valuable scholarships, confined to women candidates, are offered at the London Royal Free Hospital, at Owen's College (Manchester), and at the Queen Margaret College (Glasgow).

2. DENTISTS.

It is rare in these days to be able to say of a lucrative profession that the competition for service in it is not keen. Such, however, is the case with dentistry. There is much more work for dentists to do, since many more people now really look after their teeth than was formerly the case, and there are fewer to do the required work, owing to the fact that no one may now legally style himself a dentist who has not been through a four years' course of training for his profession. Since the regulations for the training and registration of dentists were undertaken by the General Medical Council, the time of preparation has grown longer and more expensive; and candidates with the necessary capital have not come forward in numbers sufficiently large. Yet the former social disabilities under which dentists laboured are fast disappearing. The properly trained dentist belongs to a branch of the medical profession, and insists on being treated accordingly; and his claims are becoming more generally admitted.

REGISTRATION. Dental students must now register themselves as such, in the same way as medical students, and at the same offices; and, before they can register, they must have passed one of the same Preliminary Examinations (see above, under *Qualifications for Registration* in the case of Medical Students).

DIPLOMAS. No one can practise as a Licentiate of Dental Surgery (L.D.S.), unless he has gained one of the diplomas granted by a licensing body, i.e. at present by one of the following: the Royal College of Surgeons (1) of England, (2) of Scotland, (3) of Ireland, and the Faculty of Physicians and Surgeons of Glasgow.

PROFESSIONAL TRAINING. After registration, a dental student must spend at least four years in professional studies, and three in mechanical dentistry. He must receive instruction, in the same way as medical students, in chemistry and physics, at an institution recognised as efficient (see above, under *Medical Curriculum*). His three years' study of mechanical dentistry may be passed at a dental hospital, at the dental department of a general hospital, or as an apprentice to a registered dentist. He must take courses, extending over two years, in dental surgery, at a recognised dental hospital and school, or in the dental department of a general hospital; he must have performed dissections at a recognised medical school for at least twelve months; and he must have attended, during two winter sessions, at a recognised hospital or hospitals, the practice of surgery and clinical lectures on surgery. He cannot present himself for the final examination for his diploma till he is 21. Several of the above courses can be taken concurrently; but it is usual for students to spend five or even six years in preparation for their last examination, instead of the regulation four. At the Royal Dental Hospital, Leicester Square, the cost of the three years' course in mechanical dentistry is £150, and the four years' courses in dental and general surgery cost about £110. Books and instruments may cost £35, and the examination fees of the English Royal College of Surgeons amount to £21, including the Preliminary Science Examination in Chemistry and Physics.

In addition to the hospitals already mentioned, the necessary instructions in special dental subjects may be obtained at the following: Guy's Hospital, the Birmingham University, the Liverpool Dental Hospital, the Devon and Exeter Dental Hospital, the Incorporated Edinburgh Dental Hospital and School, the Glasgow Royal Infirmary, the Anderson's College Medical School, Glasgow, the Sheffield University, and at the institutions mentioned in the following paragraph.

SCHOLARSHIPS. Dental students who enter for their courses at a general hospital can try for some of the scholarships already mentioned. Some are open to competition amongst dental students only: one of £30 at Charing Cross Hospital; one of £20 at Westminster Hospital; one of £35 at Owen's College, Manchester; one of £40 and one of £20 at the National Dental Hospital, Great Portland and Devonshire Streets, W.

PROSPECTS. The prospects of a really clever dentist are extremely good, although, as with doctors, a certain number of lean years have to be lived through, whilst the dentist is acquiring experience and inspiring confidence. He will probably act at first as an assistant before buying a practice or making one. There is one piece of advice he should lay to heart—not to be in too great a hurry to grow rich; patients change their dentists with less hesitation than their doctors.

3. VETERINARY SURGEONS.

Until 1881 practically anyone could call himself a Veterinary Surgeon; but an Act passed in that year made it illegal to do so unless the practitioner had been properly trained for the work he undertook. The result has been a decrease in the number of veterinary surgeons; and the profession now offers extremely good prospects for trained skilled men. The "vet's." work is chiefly connected with the diseases of the larger domestic animals—horses, cows, sheep, etc.; but it is by no means confined to these, and we know of one who has made a considerable income by the successful treatment of *gastritis* in cats. There are good incomes to be made as general practitioners in large towns, as consulting surgeons to tram and 'bus companies, and to firms who largely use horses; whilst the Army and Indian Civil Veterinary Departments offer not only fair salaries but good pensions too. There are also good openings in the Colonies; and it has been said that, "could the diseases which attack horses and cattle in South Africa be prevented, that would do more for the permanent prosperity of the country than cheap Chinese labour."

THE R.C.V.S. There is only one body in the British Islands licensed to grant diplomas in veterinary surgery—the Royal College of Veterinary Surgeons, 10, Red Lion Square, London. He who has passed the four professional examinations, known as the A, B, C and D examinations, may be registered as M.R.C.V.S., and is allowed to practise. The higher diploma, F.R.C.V.S., can only be obtained by examination and after five years' experience as a veterinary surgeon. Candidates for the A Examination for the M.R.C.V.S. diploma must have spent a session (practically a year) in a Veterinary College, and must previously have gained one of the certificates recognised by the General Medical Council as exempting medical students from the Preliminary Arts Examination. Those who have none of these certificates, must take the Veterinary Preliminary Examination conducted by the College of Preceptors, London, or that conducted by the Educational Institute of Scotland. No certificate is accepted which does not state that the candidate has passed in all the following subjects at the same examination:—English, Latin, Mathematics, and *one* other optional subject, viz., Greek *or* any modern language (other than English) *or* Logic. Those who intend to take up veterinary surgery should by all means get the Preliminary over before they enter on their professional studies in a College, which last four years.

VETERINARY COLLEGES. There are not many colleges where complete courses can be taken for the M.R.C.V.S. diploma. In England there are two: the Royal Veterinary College, Great College Street, Camden Town, London, N.W.; and the New Veterinary College at Liverpool, which, till October, 1904, was located in Leith Walk, Edinburgh, but is now connected with the Liverpool University. In Scotland, also, there are two: the Royal (Dick) Veterinary College, Clyde Street, Edinburgh, and the Glasgow Veterinary College. In all of them students enter at 16. As an indication of the growing importance attached to Veterinary Surgery, it may be mentioned that the Liverpool University has instituted (1904) a new Diploma in Veterinary Hygiene (D.V.H.), the course for which can only be taken by those who hold the M.R.C.V.S. diploma.

COST OF TRAINING This includes cost of living, college fees, books and instruments, and examination fees. The first, away from home, amounts to between £60 and £100 a year; books and instruments cost about £25; and examination and registration fees come to £21. The college fees vary, e.g., in London (Camden Town) they are £84; in Edinburgh (Dick), £58; in Glasgow, £63. In both the Scottish Colleges, however, students who can pass a considerably more difficult Preliminary Examination than that described above have all their fees paid for them by the Carnegie Trustees, but only those are eligible who are of Scottish birth or extraction, or who have, after the age of 14, spent two years in a school or institution under the inspection of the Scotch Education Department.

ARMY VETERINARY DEPARTMENT. Candidates must be between 21 and 27, and unmarried; they must be suitable in every way to hold commissions; and they must possess the M.R.C.V.S. diploma. Applications must be sent to the Under Secretary of State, War Office, London, S.W. If the applications are considered, candidates have an interview with the Director-General of the Veterinary Department, and, this over, are examined in professional subjects. Successful candidates go through a six months' course at Aldershot, with an examination at the end of it, and then, for six months, are Veterinary Officers on probation. If the probationary period is satisfactory, the officer is dubbed Veterinary-Lieutenant, and receives £250 a year. He is now on the ladder leading to promotion, increased pay, and a good pension on retirement.

INDIAN CIVIL VETERINARY DEPARTMENT. The Officers of the Indian Civil Veterinary Department perform or supervise all official veterinary work in India, other than that of the army, and are debarred from private practice in India. Their duties include: (*a*) Educational work in veterinary colleges, (*b*) horse and mule breeding, (*c*) cattle disease and cattle breeding. Candidates, who must not be over 26, and must have the M.R.C.V.S. diploma, should apply to the Revenue Secretary, India Office, London, S.W. If, on examination into their qualifications they are accepted on probation, they have a free first-class passage to India, with the prospect of good pay and a good pension on retiring.

TEACHING.

If we reflect that the whole nation passes through the hands of teachers, we shall recognise the enormous national importance of having as schoolmasters and mistresses those who are capable of making the most of their opportunities. At no time has this question been so prominent as now; and our Board of Education is at last paying some attention to the advice of the late Mr. Matthew Arnold, given some fifty years ago: "Organise your Secondary Education." At present this organisation is very partial, and only directly affects such of our Secondary Schools as come within the jurisdiction of the Board of Education. Indirectly, however, a large proportion of Secondary Schools are affected by recent legislation. In 1902 a Teachers' Registration Council was formed, whose business it is to keep a register of properly qualified teachers. Those qualified for work in Elementary Schools are placed on Column A, and those for work in Secondary Schools on Column B. One of the requirements for a place on the latter is a certain amount of time spent in a Secondary School recognised by the Council as efficient; and as such recognition is by no means an empty form, it will soon be difficult or impossible for inefficient Schools to get young teachers, except such as are themselves manifestly inefficient. Again, no new teacher can find a place in Column B

who has no degree or its equivalent, and who has not undergone a course of training in the theory and practice of Education, and, at the end of it, gained a Teacher's Diploma. (Should the Teachers' Register, as seems probable, soon cease to exist, the qualifications required for a place in Column B will still be found necessary for the better posts.) Thus the Teaching Profession is becoming a far more real profession than formerly; and one for which in future candidates must deliberately train. We should demand that those to whom we entrust the education of our children shall be trained for their difficult work, just as doctors, lawyers and architects must be trained for theirs. At present the conditions of service in the profession are not such as to attract a sufficient number of well-qualified men. To women, however, teaching offers as good a prospect as they would, as a rule, find in any other pursuit; and there is consequently an adequate supply. Even elementary school teaching attracts a far better class of young women than was the case a few years ago. One effect of the "stringing-up" of the requirements for the qualification of teachers is, as we have pointed out, a diminution of the supply; and this has had a very noticeable effect on the salaries offered. A few years ago it was no uncommon thing for an assistant master in a grammar school, or its equivalent, to start at £80 a year; now, if registered, he can command from £120 to £150. Speaking generally, we may say that the whole profession has improved, not only financially, but in public esteem, and now offers a fair career for clever men and women —especially women.

1. SECONDARY SCHOOL TEACHING.

QUALIFICATIONS OF THE TEACHER. *Nascitur non fit*, "born not made," may be as true of the *great* teacher as of the poet, but certainly not of teachers in general. As a matter of fact, any healthy young man or woman of good moral character, sufficient education, and with plenty of "go"—who "means business," in fact—can with patience and hard work become a successful if not a brilliant teacher. Those who are shy, diffident, or irritable should, however, choose some other profession. The greatest difficulty that meets the beginner in teaching is discipline; but any one who can hold his own with his fellows need have no fear of surmounting it. Above all, it must be borne in mind that the effect of the personality of a teacher is the greatest factor of the total effect of his work. It pervades the air of his classroom: he cannot hide it; and the mental and moral gain or loss to his pupils due to his assocation with them depends upon his own character. If he is in real earnest about his work, his pupils as a whole will be in earnest about theirs. He may bluster and punish as much as he likes if he does not really work with and for his pupils, they will make but a feeble response to his efforts.

EDUCATION REQUIRED FOR SECONDARY TEACHING. It was formerly possible for those who had been trained as elementary school teachers to work for two or three years in Elementary Schools, and then, fortified with a London or Dublin degree, to get a post as assistant in a Secondary School. Many present head masters of such schools were thus trained for their work and have fully justified their promotion. But this opening into higher educational work is becoming more and more difficult of access, and may, in the near future, become practically impossible. Those who mean to engage in secondary teaching should now have nothing to do with teaching in Elementary Schools. Boys and girls who get their early education in Elementary Schools will have a good chance of getting posts in the schools we are considering, if they win scholarships that will give them three or four years' education in a Secondary School, and enable them to proceed to a University degree. But those who aim high in the teaching profession must have spent some of their early years in a school of high standing. The headmaster of one of our Public Schools once remarked to the writer: "It is not sufficient for me to know that a candidate for a post in my school has the requisite knowledge; I want to know how and where he acquired it." A degree of some British University or its equivalent is now essential for all; but the best in general estimation are those granted by the Universities of Oxford and Cambridge after three or four years' residence. Now that London is a Teaching University, its ordinary degrees are more valued; but our best schools are in the hands of Oxford and Cambridge men, and they give Oxford and Cambridge men the preference. Only Public School men who have won distinction at one of these two Universities have any chance of getting a post in a Public School or in one of the larger Preparatory Schools. As a rule they must be good athletes, too, especially for the latter. Still there are good posts available for men and women with pass degrees if they go through the course of training recognised as suitable and sufficient by the Board of Education.

PROFESSIONAL TRAINING FOR SECONDARY TEACHERS. The attempt to form a register of teachers divided into columns A and B (the former for teachers of elementary schools, and the latter for teachers of secondary schools) has proved a failure. This is now (1906) fully recognised by the Board of Education, who will probably secure the results aimed at by registration in another way. The Board have announced three important changes in regard to secondary schools and teachers in England and Wales:—

(1) They intend to establish a list, to be issued periodically, of secondary schools recognised after full inspection as efficient in respect of their staff, course of instruction, premises and equipment. This list will include both schools receiving grants under the regulations of the Board, and schools, whether public or private, which for one reason or another are not in receipt of State aid.

(2) Their regulations for secondary schools also provide that after July 31st 1907, a certain proportion of all new appointments to the teaching staff of a school included in the above-named list of efficient secondary schools, whether State aided or not, may be required to have gone through a course of training recognised for the purpose. In applying this provision, the Board will take into consideration the teaching staff of the school as a whole. Any person, moreover, whose name has previously been entered on column B of the Teachers' Register may, subject to the Board's sanction, be counted in applying any such requirement to the school.

(3) The Board intend to issue regulations, instituting a system of grants in aid of courses of training specifically designed for the requirements of secondary school teaching.

It will, therefore, be wise on the part of any one who intends to become a teacher in a secondary school, after taking a degree or its equivalent, to go through a course of training in accordance with the regulations of the Board.

Diplomas or certificates in the Theory and Practice of Teaching in Secondary Schools are now granted by the following Universities:—

Oxford, Cambridge, London, Durham, Manchester, Birmingham, Liverpool, Leeds, Wales, Edinburgh, Aberdeen, Glasgow, Dublin, Royal (Ireland), and by the College of Preceptors and the National Frœbel Union.

Courses of training for the teachers of secondary schools are provided at many universities and institutions, including the following:—

Oxford, Cambridge (Day Training College, Secondary Department), Cambridge Training College for Women; at the Universities of Durham, Birmingham, Manchester, Liverpool and Leeds; at the University Colleges of Bangor, Cardiff, and Aberystwith in Wales; at the following institutions in London: Bedford College (Women), Maria Grey College (Women), Mary Datchelor College (Women), Catholic Training College (Cavendish Square), London Day Training College (Secondary Department), Royal College of Science, Clapham High School (Women), Frœbel Educational Institute; at the Ladies' College (Cheltenham), University Training College (Bristol), St. Mary's Hall (Stonyhurst, Blackburn, Roman Catholic), and at St. George's Training College, Edinburgh.

The course lasts a year; but at Oxford there is a Vacation Course which is allowed to count as one of the three terms. The fees vary: at Manchester they are £15; at Aberystwith, £10; at the London Day Training College they are £20, but students whose circumstances call for special consideration may have them reduced or remitted; at Oxford, £22; at the Cambridge Day Training College, £22 10s.; at the Cambridge Training College for Women, £75, including residence, or £65 if a room is shared with another student. At the Maria Grey Training College (for Women) the fees are £30 a year; and those who wish to live at the Winkworth Hall of Residence, just opposite, pay forty-eight guineas more. At both the last named there are a good many bursaries and scholarships available, of the value of from £10 to £25. These figures will serve as indications of the fees at other institutions.

In addition to the posts for regular Form Teachers in secondary schools, there are many openings for such Teachers of music, art, physical training, manual instruction, cookery, needlework, etc., as have gone through the needful training and proved themselves competent.

There is always a demand for teachers who can teach French conversationally, and those who wish to undertake general teaching are strongly advised to become as proficient as possible in it. The following notice, which was published in the English newspapers in August, 1904, is well worth the attention of those able to avail themselves of the offer it contains:—

The Board of Education have received from the French Government a notification of their intention to attach as temporary assistants to certain Lycées a number of young English Secondary schoolmasters, or intending schoolmasters who have undergone an approved course of training, and hold some recognised diploma for Secondary teachers. These assistants will not take any share in the regular work of the school, but will conduct small conversation groups under the direction of the Proviseur. Two hours' work a day will be expected of them. The rest of their time will be at the disposal of the assistants, who will thus be able to pursue their own studies. The assistants will receive no remuneration, but will be boarded and lodged at the Institutions to which they are attached. Candidates for such posts should forward their application to the Director of Special Enquiries and Reports, St. Stephen's House, Cannon Row, S.W., enclosing testimonials as to character, capacity, and teaching experience, and a medical certificate of health. It will also be necessary for each candidate to have a personal interview with the Director at his office, and should any candidate have any special desire as to date of interview, it would be well to indicate it when forwarding the application.

Holiday courses in France for English teachers are arranged every August, and particulars of them can be obtained of the Secretary of the Assistant Masters' Association, 27 Great James Street, S.W.

German is not so universally taught as French. In the thirty-seven London Secondary Schools whose language teaching was, early in 1904, inspected by the London University on behalf of the London County Council, French was, without exception, compulsory; whilst German was compulsory only in seven, and optional in eighteen. For men and women who are really proficient in French and German there are good openings as modern language teachers. It is found that such teachers secure better results in our schools than foreigners, and, curiously enough, impart a more accurate pronunciation. Spanish is taught in only four of the thirty-seven London Schools we have mentioned, and very little in the country generally.

Those who are interested in the subject of language teaching in schools should read the very interesting Report on the Inspection mentioned above, which can be obtained of the Executive Officer, L.C.C. Education Department, Victoria Embankment, W.C.

There are holiday courses held in Germany and Spain, similar to those we have mentioned in France. Vocal music and art and science are usually left to specialists; but a knowledge of geometrical drawing—plane and solid—is generally required of men teachers. In nearly every school, masters, and often mistresses too, are required to take part in the school sports; and superior athletic qualifications will often turn the scale against mere academic distinction. Except in the Public Schools and the best Preparatory Schools, Greek is seldom wanted; but Latin still forms an essential part of the curriculum of most Secondary Schools.

APPLICATION FOR POSTS. Most of the best posts in higher schools are advertised in the *Times*, the *Athenæum*, the *Journal of Education*, and often in other newspapers; but teachers in want of posts should have their names down at some Agency. One of the best is the Joint Agency, 23 Southampton Street, Bloomsbury, W.C., and there are others equally good connected with the Universities of Oxford and Cambridge. Private Agencies charge those for whom they arrange appointments from two and a half to five per cent. on the first year's salary. In applying for a post, pains should be taken to make the application clear and business-like. When there are many candidates for one post, their applications are, at first, necessarily read through somewhat hurriedly; and a carelessly written or worded one may be at once thrown into the "rejected" basket.

TRAINING FOR SCIENCE AND ART TEACHING. 1. SCIENCE TEACHERS. Those who wish for an appointment as Science Teacher must take a degree in science of some British or well-known foreign—preferably German—University. In fact, work in a good German laboratory, such as that of the Berlin or the Heidelberg University, is very valuable even to those who have graduated in Science in the United Kingdom. Those who aim high should take the Natural Science Tripos at Cambridge, or the D.Sc. Degree of London; but all who have obtained the B.Sc. of London, with Honours in Chemistry or Physics, will be practically certain of good posts, provided, of course, they prove themselves capable teachers. The value of any degree, however, will depend very greatly on the nature of the training which led to it. A London B.Sc. obtained by private study or after work in an obscure laboratory is of small value compared with the same degree obtained after work in one of the Colleges attached to the University—University College, King's College, East London Technical College, etc., or in the famous Royal College of Science, South Kensington. The last named is under the direction of the Board of Education, and the courses are specially arranged for those who wish to become science teachers. There are also many valuable scholarships available, giving free instruction and from £50 to £60 a year, tenable at either the Royal College of Science, London, or at the corresponding College at Dublin. Particulars of these courses and scholarships can be obtained from the Clerk, Royal College of Science, South Kensington, S.W.; and valuable practical advice could probably be obtained from the Science teachers in any one of the Polytechnics to be found in all our larger towns.

2. ART TEACHERS. For Art Teachers, the best all-round certificate is the ART MASTER'S CERTIFICATE of the Board of Education; and if they can add to their qualifications the fact that they have been employed as designers to some artistic trade—lace-making, iron-work, art-furniture, wall-paper, etc.,—so much the better. The lower certificate—the ART CLASS TEACHER'S—would be sufficient only for small schools, but would be a good extra qualification for general form work. Training for these certificates may be obtained or commenced at any of our numerous Municipal Polytechnics; but candidates for them should make up their minds to enter either by means of scholarships, or by paying the fees, the Royal College of Art, South Kensington. A prospectus of the College can be obtained for a penny from the Registrar. Valuable Training Scholarships are offered, giving free tuition and a maintenance grant of from 12s. 6d. to 43s. 6d. a week; and there are also a number of Free Studentships. The fees charged to the general public range from 5s. to £5 a term, according to the course taken. The Art Master's Certificate is almost a necessity to those who wish to teach in any of the Municipal Art Schools or Classes, or in the best Secondary Schools which are under the direction of the Board of Education; but those who have received their art instruction in any of the famous Art Schools of the country would have many posts open to them. The

best general art schools are in London—the Royal Academy Schools, the Slade School of University College, etc.; and full information about them can be found in Mackenzie's *Art Schools of London*, published at 2s. 6d. by Swan Sonnenschein & Co.

PROSPECTS. Fully qualified men teachers now get from £120 to £150 to start with, and women from £70 to £100. Form Masters in the lower grade of Secondary Schools—those whose pupils leave at sixteen—may expect to get a maximum of from £180 to £200, and Form Mistresses from £120 to £150. In the higher grade of Secondary Schools, which retain their pupils for another year or more, the salaries of Form Masters often rise to £300. In the Public Schools the income of a master who has the privilege of a boarding-house may rise to from £700 to £1,000. Science and Mathematical Masters get from £150 to £400, Modern Language Masters from £100 to £300. In residential posts the salaries are usually £50 lower than those given above. Head Masters of the lower grade of Secondary Schools receive from £300 to £700, and of the higher from £700 to £1,200. The salaries of Head Mistresses of the larger Girls' Schools range from £180 to £800. In exceptional cases Second Mistresses may get as much as £200. The salaries in private schools for boys vary very considerably: in the best they are as good as in those under public control; but in others they are often miserably poor. There are many good private schools for girls; and the salaries paid in them to assistants who have graduated are equal to, or even better than those paid in schools under boards of managers. Men and women who have taken high university honours and have made a thorough study of education may be able to enter the ranks of Junior Inspectors under the Board of Education, after they have given evidence of skill in teaching. The salary starts at £200 and rises to £400. If they are promoted to Inspectorships their salary rises to £800.

2. ELEMENTARY SCHOOL TEACHING.

There has been, within the last two or three years, nothing less than a revolution in the system of training Pupil Teachers, that is, young persons preparing for the profession of elementary school teaching. The old system under which boys and girls were employed all day in teaching, and got their own education as best they could in the early morning or in the evening, has happily been swept away. The law now protects them from the deadening influence of over much work and too little play; and protects also the scholars of our elementary schools from the teaching by boys and girls in such subjects as require skilled and experienced handling. Since the passing of the Education Act, 1902-3, a series of changes has been introduced which should result in supplying our elementary schools with teachers properly trained for their work and equipped with a wider knowledge of the general field of education than many of them have hitherto possessed. Till now they have had little or no knowledge of education other than elementary, and the system of payment by "results," too often restricted education to mere instruction. In future a large proportion of our elementary school teachers will have, themselves, spent at least three years as pupils in Secondary Schools. The new system of training, again, cannot fail to raise the elementary school teacher in the estimation of the public. Hitherto such teachers have from the time of their apprenticeship as pupil teachers been thrown too exclusively into the society of other teachers. In future it will not generally be known till they are sixteen years of age that they are going to be teachers; they will be ordinary scholars in Secondary Schools, and will form friendships and acquaintances from a far wider circle. In many cases they will be attached to their Secondary School till the age of eighteen, and may possibly for three years more study for their profession as members of a university. But there is one fact that must be borne in mind by those who submit themselves to the new system of training—a fact to which we have already called attention in speaking of secondary teaching: they must recognise that their life's work will be connected with elementary school teaching, and that passage into secondary teaching will be very difficult. This, however, will not be such a hardship as it would formerly have been, since elementary school teaching will be in every way a higher profession. At present, there are not sufficient boy candidates to supply the demand; and clever boys would be practically sure of a successful career. Education Committees all over the country are recognising the fact that they cannot attract clever men into their service unless they offer better salaries, and, consequently, salaries are everywhere increasing. For women, elementary school teaching offers good prospects, and girl candidates are consequently more numerous. It is gratifying, too, to know that they are being drawn from a better social class than formerly. There is one great advantage attached to this branch of education: the training is very cheap, as will appear on reading through the sections which follow.

NATURAL QUALIFICATIONS OF CANDIDATES. Boys and girls begin their training so early that it is barely possible for them to be sure that they are suited to the work; but fortunately the training they will undergo under the new regulations will fit them for many pursuits other than teaching if they find it distasteful or unsuitable to them. There is, however, very little fear but that bright, healthy and intelligent boys and girls will make successful teachers. Those, we repeat, who are shy, diffident, and irritable should not take up teaching at all; neither should those with any marked physical defect—especially of eyesight, hearing or speech.

EDUCATION TILL THE AGE OF SIXTEEN. Henceforth, except in rural districts, no boy or girl may be a pupil teacher till the age of sixteen; and all, as a rule, must serve two years. In rural districts they may, with the consent of the Board of Education, be engaged for three years from the age of fifteen. Considering that the bulk of our pupil-teachers have hitherto been taken from our elementary schools at the age of fourteen, when it is usually necessary for such children to contribute something towards their maintenance, such a rule would have had the effect of practically cutting off the supply had not special provision been made for the education and partial maintenance of intending pupil-teachers during the two intervening years—from fourteen to sixteen. As a matter of fact, one of the objects of the new rule was to limit the supply yielded by the elementary schools, and to attract some from secondary schools. This practically new source of supply is already yielding a certain number, but far more girls than boys. Most of the Education Committees of our big towns now offer scholarships to boys and girls of fourteen who wish to become pupil-teachers.

> These scholarships give free education for two years, either in special classes or, more often, in secondary schools, and a maintenance grant of from £10 to £20 a year. In some cases, as at Croydon, the scholarship lasts for four years (twelve to sixteen), but no maintenance grant is given during the first two years. It is probable that the example of Croydon will be followed by many, if not most, of our large towns. Nothing is required of these young people who are being educated at the public expense with a view to their becoming teachers, but that they shall be diligent both at work and play, and throw themselves heartily into the general life of their schools.

Before the age of sixteen they should possess a certificate of having passed one of the following examinations, to show that they have sufficient general education to justify the Board of Education in accepting them as pupil-teachers: Oxford or Cambridge Junior Local, Lower Certificate Examination of the Oxford and Cambridge Schools Examination Board, College of Preceptors (Second Class), Junior Certificate Examination of the Welsh Board. If they hold no such certificate, they will be required to pass an equivalent examination held or approved by the Board; but they will be granted no certificate which might be useful in future years, as those mentioned above very possibly would. It is not always possible to send to

secondary schools boys and girls who wish to be trained for pupil-teacherships; and in that case preparatory classes may be attached to those "Centres" in which pupil-teachers are taught. The Board, however, does not encourage the formation of such classes as not offering the possibility, it so much desires, for the intermingling of its young students with boys and girls destined for other pursuits.

PUPIL-TEACHERS are boys and girls, mostly over sixteen, who are receiving (*a*) Training in teaching in an elementary school, together with (*b*) Instruction approved by the Board. Candidates must be suitable in respect of character, health and freedom from personal defects, and must have been vaccinated. The usual date for admission is 1st August, and the names of candidates must be submitted to the Board not later than 1st July. Those, therefore, who hold one of the certificates mentioned in the previous section, or feel they could pass the special and, perhaps, easier examination of the Board, should send in their names to the authorities of the elementary school in which they wish to serve some time in June. Those who hold training scholarships will have all necessary arrangements made for them; but it is hoped that many ordinary secondary scholars will, at the close of their school course, become pupil-teachers. Should this fall within their seventeenth year *and they give evidence of special attainments*, their engagement may last for one year instead of the usual two. It would in fact be worth while for those who can do so to thus postpone their engagement in order to take one of such examinations as the London Matriculation or the Oxford or Cambridge Senior Local.

The life of pupil-teachers need now be neither hard nor unpleasant. They usually spend half their time in schools, learning the art of teaching, and the other half at the *Pupil-Teacher Centre*, where they pursue their own studies under competent teachers. The Board of Education is doing its best to induce Education Committees to attach their pupil-teacher centres to secondary schools; and at Croydon and some other towns the boys' centre is so attached.

> The half time spent in teaching may be variously distributed over the term of engagement: in some cases one-half of each week is spent in the schools and the other half at the centre; in others, six months in school and six at the centre. The division of time is decided by the school authorities—not by the pupil-teacher. The salaries vary considerably with the locality: in the larger towns the usual amount is from £20 to £30, but in country districts much less.

It would be out of place for us to give advice to pupil-teachers as to their course of life during the two years of their engagement, as they are pretty sure to be under competent teachers; but it may be worth while to point out to them the advantage of attending University Extension Lectures if they are engaged in towns large enough to have them. In some cases elementary school teachers are admitted to them at a nominal fee. It is a great mistake to suppose that true education depends on the mere extent of one's knowledge: it depends, also, largely on the style and quality of it; and this is influenced by contact with those who direct our studies. Young teachers should strive, therefore, to come under the influence of superior minds, such as are to be found amongst our Extension Lecturers. It should, however, be noted that no marks obtained at the examinations of Extension Lecturers will, henceforth, be available for the "Preliminary Examination for the Certificate."

PRELIMINARY EXAMINATION FOR THE CERTIFICATE. This replaces the old King's Scholarship Examination. It is divided into two parts, Part I. taken in December, and Part II. in April, following. Part I. consists of Reading, Repetition, Penmanship, Composition, Arithmetic, Drawing, Music, and (for women) Needlework. It is open to all Pupil-Teachers who have entered on the last year of their apprenticeship, and to all other persons who will be over eighteen years of age on August 1st, following the examination. Part II. is open only to candidates who have satisfied the examiners in Part I. The names of candidates for the Preliminary Examination for the Certificate must be notified to the Board of Education before October 1st. All candidates who pass the examination will be recognised as Uncertificated Teachers, eligible for employment in Elementary Schools, or for admission to a Training College. There are many alternative examinations which may be taken in lieu of the "Preliminary Examination," and which will open the doors of a Training College, or entitle the examinee who has successfully passed one of them to recognition as an UNCERTIFICATED TEACHER. (See Appendix B in "Regulations for the Instruction and Training of Pupil Teachers," published by Wyman and Sons, Fetter Lane, E.C.). The Board give fair notice that "recognition as an Uncertificated Teacher may at any time be recalled or suspended." It should therefore be the aim of such a teacher to pass the CERTIFICATE EXAMINATION as soon as practicable.

TRAINING COLLEGES are of two kinds—*Residential* and *Day*. There are sixteen Residential Colleges for Men, of which twelve are for students belonging to the Church of England, one for Roman Catholics, one for Wesleyans, and two are undenominational. The total number of students under training in these colleges in 1905 was 1668, of which forty-one were day students. There are thirty-two Residential Colleges for Women, educating 3,796 students, including 450 day students. Of these, *twenty* are for Church of England students, *four* for Roman Catholics, *one* for Wesleyans, and *seven* are undenominational. At Upper Norwood, London, there is a Residential College for teachers of the blind, accommodating thirty-one students of both sexes. There are twenty-one Day Training Colleges, of which *four* are for men, *three* for women, and the rest admit students of both sexes. The total number of students in the Day Colleges exceeds 2,000. In 1905 was opened the Goldsmith's College, at New Cross, London, "recognised" for 500 Day Students, men and women.

> At a RESIDENTIAL COLLEGE the usual cost of a two years' course for men is from £25 to £35, and for women from £20 to £30. At the Ladies' College, Cheltenham, however, the cost is £50. In Roman Catholic Colleges the fees are considerably lower. In some cases the whole fee for the two years is paid on entrance. Books cost about £5 or £6, and there are usually small charges made for sports, papers, magazines, etc.
>
> At a DAY COLLEGE the usual tuition fee is £10 a year; and students must make their own arrangements for residence. At those attached to the Universities of Oxford, Cambridge and London no fees are charged to students who have matriculated in the University to which the College is attached. In some cases *Hostels* are attached to the Day Colleges, in which students are boarded at very moderate fees. Government grants for maintenance also afford some help.

The course in a training College usually extends over two years, but to those of exceptional merit a third year's training may be granted. At those Day Colleges which are closely attached to a university, the course lasts three years, and is so arranged that, at the end of it, students may become graduates of the university. But scant encouragement is now given by the Education Department to the preparation of students in Training Colleges in university courses of study, as the following regulations plainly show:—

> "No student admitted to a Training College in 1907 or afterwards, will be allowed to be prepared for an examination forming a recognised stage towards a university degree as part of his course, unless he has either (*a*) passed the Preliminary Examination for the Certificate and obtained in that examination distinction in English, History and Geography and also in four optional subjects, one of which must be either Greek, Latin, French or German; or (*b*) passed some other examination which may have been accepted by the Board for the purpose." Again, no student in a Training College may study for a degree unless: "He has passed the corresponding Matriculation Examination before entering the Training College, or has secured exemption from it. . . . Nor may the student enter for any examination in Latin unless he has passed, on or before admission to the Training College, some examination in that language satisfactory to the Board."

CERTIFICATED TEACHERS. At the end of the period of training every student must pass an examination approved by the Board, in order to be recognised as a Certificated Teacher. The rules relating to this examination will be found in the "Regulations for the Training of Teachers, and for the Examination of Students in Training Colleges." For candidates for a certificate who are not students the Board hold an annual examination called the "Certificate Examination." The conditions under which an admission to this examination are granted, may be obtained on application to "The Secretary, Board of Education, Whitehall." A graduate in Arts or Science of any university in the British Empire may be recognised as a Certificated Teacher provided he or she holds a certificate of proficiency in the Theory and Practice of Teaching granted by one of the educational bodies named in Schedule I. of the "Code of Regulations for Public Elementary Schools."

Certificated Teachers who have been employed for eighteen months in a Public Elementary School, and have been favourably reported on by an Inspector, receive from the Board of Education their *Parchment Certificate*, on which are recorded particulars of their course of training, including the names of any subjects in which they distinguished themselves as students. Those who took a three years' course get their Parchment after twelve, instead of eighteen months' service.

PROSPECTS OF ELEMENTARY SCHOOL TEACHERS. Salaries vary considerably with the locality. One of the highest scales of salary in the country is as follows:—

	£ £		£ £
Head Masters .	150 to 350	Head Mistresses.	120 to 265
Trained Assistant Masters . . .	95 „ 200	Trained Assistant Mistresses . .	85 „ 125
Untrained but Certificated .	85 „ 200	Untrained but Certificated .	75 „ 125

Head Assistants get from £10 to £15 more than ordinary Assistants. The Head Teacher's salary depends on length of service and size of school.

In large towns the salaries approximate more or less to the salaries given above, but in smaller ones they are often at present considerably less. For untrained teachers the salary is generally £10 less than for trained teachers under similar circumstances.

ENGINEERING.

The term *engineer* is applied to men occupied in widely different kinds of work. The man who makes a water-tap is an engineer, and so is he who constructs such stupendous works as the Nile Dam or the Forth Bridge. The term was at first a military one, and is still used as such to describe a member of that branch of the army whose business is connected with fortifications, earthworks, &c. But, when men began to devote themselves more and more to the construction of engines and works for the service, and not the destruction, of mankind, a new term was wanted; and as these were *civilians*, not soldiers, they were called *civil engineers*. Smeaton was probably the first to use this title to describe himself. In process of time civil engineers were differentiated into various classes, each devoting itself to a special branch of work; so that to-day we have mechanical, marine, railway, electrical, mining, gas, sanitary and civil engineers in the more restricted meaning now applied to the name; and this by no means completes the list. In most cases the title adopted explains the nature of the occupation; but that of *civil engineers* has still a very wide signification. He may be defined as "the man who practises the art of directing the great powers of nature into definite channels for the use and convenience of man."

It is obviously necessary for the Engineer to learn all he can of the nature of the forces he directs, and to be thoroughly acquainted with the mechanical means in use for directing them. His training should, therefore, be of a most comprehensive nature. A sound knowledge of mathematics, physics, chemistry, hydraulics, and mechanical engineering are primary necessities. He must, further, have a practical knowledge of geology, surveying, and architecture, and must be acquainted with the nature and strength of the materials which he may be called upon to use. These qualifications are all necessary to a man who is to be ready to prospect for or make railways and canals, dams, docks, bridges, lighthouses, windmills or any of the thousand and one things that may come in his way. But, whatever the branch he ultimately takes up, the engineer who means to be more than a "hand" must have a wide and accurate knowledge of physical and chemical science, and this he cannot get without an extended knowledge of mathematics; and he must be a skilled draughtsman. If he adds a knowledge of one or two modern languages, the better his chances of securing lucrative work in other countries than his own.

GENERAL EDUCATION REQUIRED. Well, your son has expressed a desire to be an engineer: what are you to do? That depends very much upon his age and capabilities, and the means at your disposal. If he is under twelve, and you can afford it, you might possibly send him to Osborne to be trained as a Naval Engineer (see under "Navy"). If he is about fourteen, of constructive tendency, and fond of his mathematical and scientific subjects, do nothing definite, beyond humouring his bent and pointing out to him the importance of working hard at *all* his school subjects, and of keeping himself physically fit. Engineers have to work hard with head and hands, and a sickly boy would have a poor chance.

Although there are many advantages in belonging to the Naval service—a pension, for instance, the chances of getting distinction and wealth are far greater in other engineering pursuits. If you determine that his work shall lie on land, there is no necessity for your boy to specialise before he is between 16 and 17 years of age. He will want all the knowledge he can get, not only of such subjects as bear directly on his chosen profession, but of those which will help to make him a man of broad culture, fit to associate on equal terms with men of good standing. *Mens sana in corpore sano* is best acquired by having a variety of interesting pursuits, with many things to think of.

French and German may prove of inestimable value, and so, too, may Spanish; but a working knowledge of Spanish can be acquired in a few months by any one who has had a good grounding in Latin and French. Drawing, especially geometrical, is of the utmost importance, and so is the use of graphical methods in mathematics. If there is a carpentry class in connection with your boy's school, as there ought to be, by all means let him join it. Meanwhile you yourselves might with advantage learn something of the engineering profession, its prospects and achievements, whilst your son should be encouraged to read the lives of famous engineers, the difficulties they surmounted, and the wonders they accomplished. For yourselves we should recommend as a very readable book, Haldane's "Engineering, Popularly and Socially Considered," published by Spon; and for the boy such well known books, by Dr. Smiles, as "George Stephenson," "Boulton," "Watt," and especially his "Memoirs of James Nasmyth," inventor of the steam-hammer, "Lives of the Engineers," &c.

If you cannot afford the cost of a long preliminary course, your boy could become a Dockyard Apprentice, at any time between the ages of 13½ and 16; but his wages would probably never exceed £250 unless he is distinctly clever, in which case he may win a commission as an Engineer Cadet. If you think of this course, send to the Secretary to the Admiralty for the Regulations for the entry of Dockyard Apprentices.

SPECIAL SCHOOL TRAINING. When your boy is approaching 16, it is time for you to make up your mind as to one of several courses for his technical training. If he is at a school with an engineering side, you will naturally arrange an interview with the Head Master. There are many such schools now—Cheltenham, Repton,

Clifton, Dulwich, Felsted, Malvern and many others (see Public Schools Year Book, 2s. 6d., Swan Sonnenschein & Co.) The advice will probably be to let your son finish his school training on the engineering side, and then, if you can afford it, to send him to Cambridge, where he can take the Mechanical Tripos before entering, as a pupil, the works of some great engineering firm or before competing for a government appointment, for which a knowledge of engineering is necessary. Failing Cambridge your son will do well to gain admission to one of the following universities in which there are Faculties of Engineering: London, Durham (Armstrong College, Newcastle), Manchester, Birmingham, Liverpool, Leeds, Sheffield; Wales; Edinburgh, St. Andrews, Glasgow; Dublin. Those who desire to take up mining engineering would find the Royal School of Mines, South Kensington, very suitable for their purpose.

In most of the institutions indicated above, the course of instruction in engineering lasts three years; but their fees differ widely.

In University College, London, the fees (after Matriculation) amount to £115 for the three years' course; in the City and Guilds Central Technical College (London), to £109. In the East London Technical College, Mile End, on the other hand, the fees are only £30, notwithstanding the excellence and general "go" of the instruction.

The fees just mentioned are about what may be expected in other institutions of their respective ranks. In most of them the fees are considerably reduced, or altogether excused, for scholarship winners. Generally speaking, the first year's course is the same for all engineering students. In the second year, they begin to specialise: the electrical course differing from that for civil and mechanical students. At the end of the course there is an examination, on the results of which will depend the class of Engineering Diploma granted. In most London Technical Colleges, students aim at the London B.Sc. Degree in Engineering; and those who have either this or the Cambridge Degree are pretty sure of admission into some good class of engineering works.

PRACTICAL TRAINING. The profession may be overstocked with men indifferently trained, but not with such as we are now considering. There is "always room at the top." But you must not think that your son, although trained and furnished with a degree, can immediately command good pay. If he gets 20s. a week, and has to pay no premium, he is fortunate, provided he gets into works where he can get good varied practice. It would be useless to offer advice as to the kind of works into which trained students should seek admission. The best hints are those picked up in the College from the Professors and others. Marine engineering, perhaps, offers the best opportunities for gaining wide experience; in railway works, the opportunities in this respect are not so good. To prevent loss of time, as well as to be more certain of good ultimate employment in some definite branch, it may be advisable to pay a premium to an engineer in good practice to take your son as a pupil. Many reduce the premium for trained men, and some, such as Yarrow and Co., ask for none at all. In London, premiums range from £100 to £500 or more; in the provinces they are usually less.

But, if your son is content with a small stipend, he will probably have little difficulty in getting work which will give him experience of actual workshop practice. Meanwhile he should keep his eye on a Whitworth Scholarship.

Thirty of these scholarships, of the value of £50 each, tenable for one year, are offered annually for competition amongst young mechanical engineers under 26; and there are four of £125 each, tenable for three years. Full particulars can be obtained of the Secretary, Board of Education, South Kensington. He should also seek admission as a student into the Institution of Civil Engineers, Great George Street, Westminster. If he has passed one of certain specified examinations, this can be done on payment of a fee of two guineas, otherwise there is an examination to be passed in addition. As a student of this Institution he will be eligible to compete for a Miller Scholarship of the value of £40 for three years.

To become an associate (A.M. Inst. C.E.) the candidate must be over 25, and must possess an Engineering Degree, or pass the very difficult examination held by the Institution. A member (M. Inst. C.E.) must be over 30. There are separate institutions for nearly every branch of engineering (see Whitaker under "Societies and Institutions"); but the Inst. C.E. includes men belonging to all. The subscriptions are generally small, and the advantages attached to membership are obvious. Men get to know one another and be known.

Now a word or two as to other methods—less good, we think—of entering the profession. There is first the very general one of paying a premium to a firm to take a boy of 16 or 17 as an apprentice or pupil. A very usual figure is 100 guineas a year for three or more years, part of which is returned as wages at the rate of 3s. or 4s. at first, rising to something less than a £1 at the end of the term. The Brush Electrical Engineering Company (Loughborough, Leicestershire) charges 100 guineas a year for three years, and gives wages of from 3s. to 18s. a week. Most of the great Railway Companies take apprentices in their shops for a five years' course. The Great Eastern Scheme for apprentices in the Mechanical Department may be taken as a sample. A premium of £50 is charged, and wages given, ranging from 5s. a week for the first year to 15s. for the 5th, and to 20s. in the 7th, if the apprentice stays on. In the Civil Engineering Department of the L.N.W. the premium is 100 guineas for the usual term of three years; but only College-trained men are likely to be received. In works run by Companies, the influence of a friend who is a large shareholder will often considerably reduce the premium usually asked.

Some firms take apprentices without premium; but care should be taken that the boy's prospects are not prejudiced by the fact that the class of work undertaken is of too restricted a nature. If he is kept too long turning bolts, making screws and doing mere repairing work, his position has been dearly bought. Apprentices, wherever they go, must be prepared for plenty of hard work and dirt. They will usually have to start in the shops at 6 a.m., and, if they desire to rise in their profession, they must spend many of their evenings at Technical Classes, or in private reading.

MARINE ENGINEERING. Marine engineering firms, as a rule, charge no premium. One of the best to be connected with is that of Messrs. Yarrow and Co., Poplar, (removing, in 1907, to Scotstoun, near Glasgow) who make all kinds of steam and electric launches, and torpedo boats and destroyers. Their Regulations for the Admission of Apprentices and Pupils are now famous in engineering circles, and are likely to be widely copied by other firms. These regulations are evidently the fruit of the study of the American system of training aspirants for the engineering profession, an account of which was contributed by Mr. Yarrow to the Technical Education Board of the London County Council in 1902. In America, premiums for engineering pupils are practically unknown; and the College-trained man is everywhere in request. The success of our engineering kinsmen over the water in their keen competition with us will probably lead to imitation of their methods here.

We append an outline of the Regulations for the Admission of Pupils and Apprentices to the Works of Messrs. Yarrow & Co.:—

1. PUPILS. No premium is required. All are required to start work at 6 a.m., and are liable to dismissal if at any time their conduct is not deemed satisfactory. They are expected to reside within a two-mile radius of the Works. There are three schemes in operation:—

SCHEME A. For those who have taken an Engineering degree or its equivalent. Time to be served 3 years. Pay 20s. weekly on entry with an annual increase of 5s. a week.

SCHEME B. For those who have not an engineering degree, but are able to pass an examination conducted by an examiner appointed by the Firm. Time to be

served 4 years. Pay 10s. weekly on entry with an annual increase of 5s. a week.

SCHEME C. Under this scheme the pupil spends the winter months at a university or Technical College and the summer months in practical work in the shops. Rate of pay, while in the shops, 10s. weekly for the 1st year, rising gradually to 30s. a week.

2. APPRENTICES. They begin at 16 years of age or under. Proof of fitness to be given from school career. Pay for the 1st year 6s. per week, advancing 2s. a week annually. Apprenticeship to end at the age of 21. Every facility given for attending evening classes.

MOTOR ENGINEERING. This has now become so important that it may be useful to offer a few hints on their training to those who think of engaging in it.

1. **While at School** you should make a special study of Mathematics and Higher Arithmetic, including the Metric System, which is so commonly used by Motor Makers in France and Germany. A knowledge of Chemistry will be found most useful—special tests having to be applied in judging of the particular qualities of iron and steel—and a knowledge of Electricity is indispensable. A knowledge of Steam, which for heavy transit has advantages over petrol, is desirable, and skill in drawing of course is essential. Ability to speak French or German might prove of great value.

2. **After leaving School** you may go at once into a Motor Works as an apprentice, or still better, in the first place, to a Technical College, there to study for two years. In the latter case you might leave school somewhat earlier, say about 15 years of age, so as to start your apprenticeship about the age of 17. Whilst an apprentice you should not fail to have some time in the Drawing Office, and also a while in each of the principal shops, particularly the Testing shops. You should also cultivate your taste in form and colour so as to produce artistic and pleasing designs applicable to the carriage building part of the industry.

N.B.—It is often possible to become a draughtsman in an engineer's office without going through the full apprenticeship; and good draughtsmen are well paid. For instance, Messrs. Samuel Cutler & Sons, Gas and Hydraulic Engineers, Millwall, take boys into their Drawing Office at about 15 or 16 years of age without premium; and, after two months' probation, give them a small salary of 2s. a week, rising to 5s. at the end of the five years' term.

EMPLOYMENT WHEN FULLY QUALIFIED. Those who have served their apprenticeship in marine engineering works may become engineers in the Mercantile Marine, if they get the necessary Board of Trade Certificates. The qualifications for the various grades may be seen in the "Regulations Relating to the Examination of Engineers in the Mercantile Marine," which may be obtained for 6d. through any bookseller, or from Eyre and Spottiswoode, East Harding Street, E.C. The wages range from about 30s. to £20 a month, according to the class of vessel. Mercantile Marine Engineers should qualify for admission into the Royal Naval Reserve, the regulations for which may be obtained from the Secretary, Naval Reserve Office, Admiralty, or can be seen in the Quarterly Navy List.

There are many good posts in large towns for Borough Engineers with salaries ranging from £300 to £1,000; and at University College, London, a special course in Municipal Engineering may, for an extra fee of six guineas, be taken in conjunction with that in the Civil and Mechanical branch.

Various government appointments are available for trained engineers. The best are those connected with the Public Works Department of India, and the Telegraph Service. Hitherto, all candidates for these Indian appointments were chosen from students of the Royal Engineering College, Cooper's Hill, Staines; but it has been decided to close this, and offer the appointments for competition amongst the practical engineers who have received their training in other Technical Colleges. In the Public Works Department, salaries range from 350 rupees a month to 2,500, and, in the Telegraph Service, from 300 to 1,000—*perhaps* more; and pensions are given which may amount to £475 a year at 55. (A rupee is 1s. 4d). For posts in the Home Civil Service a nomination is usually necessary. We have already mentioned some of these under "Civil Service"; and, for a fuller account, we must refer our readers to the Civil Service Year Book.

It is quite impossible to speak definitely of the financial prospects of engineers—they are without limit in both directions; but for the man of brain and energy there are few finer professions. Such a man, when fully qualified for his duties, will probably get little more than £100 a year at first, but the experience he is constantly acquiring is so much capital, which should within the next few years yield a handsome rate of interest; and, by the time he is 40, an able man well trained, with a varied experience, may expect to be earning £1,000 a year. It is a mechanical and scientific age in which we are living; and, as nature reveals more and more of her secrets to the man of science, the mechanician has increasing knowledge of those natural forces which it is his business to utilise. Consider, for instance, the possible development of wireless telegraphy, unknown but a few years ago; the increasing application of electric force to traction all over the world; the possibility of transmission to long distances of the enormous energy of running and falling water, and of the rising and falling tides; and, finally, the possibility of again profitably utilising the neglected energy of the wind, and you will see that there is plenty for the engineer to think of in his spare time. We have called our age a *mechanical* one, and the term is often contemptuously applied; but when we have reached such a pitch of civilisation that our general aim is happiness and not mere wealth, and that for its attainment a proper distribution of leisure is seen to be essential, the engineer, with his time-saving machinery, will be looked upon as one of the greatest benefactors of his race.

CHEMISTS.

The term "Chemist" applies to the expert in two very different branches of the science of Chemistry, namely, Pharmacy and Applied Chemistry.

1. PHARMACY.

SCHOOL EDUCATION. A boy who desires to become a Chemist and Druggist must have a fairly good secondary education, including as much instruction in Latin, a modern language, Algebra, and Euclid as is required for a pass in one of the University Junior Local Examinations or in the Second Class Examination of the College of Preceptors; and he should, while at school, make a good start in Chemistry and Botany. He should leave school between sixteen and seventeen, after passing one of the above examinations or an equivalent. A list of such equivalent examinations can be obtained of the Secretary, Pharmaceutical Society, 17 Bloomsbury Square, W.C., or may, with much other important matter, be seen in the Educational number of the *Chemist and Druggist*, published at 4d. at 42, Cannon Street, E.C. Whichever examination is taken, the Certificate must state that the holder has passed in all the subjects above mentioned, except Chemistry and Botany, and also in English Grammar and Composition. Chemistry and Botany, however, form so large a part of the young Chemist's special studies after leaving school, that he will find it to his ultimate advantage to include them in his examination if he can. Arithmetic is a very important subject; and every Chemist must be thoroughly acquainted with the Metric System.

PROFESSIONAL TRAINING. To be qualified to practise as a Chemist and Druggist, a man (or woman) must have passed the Minor Examination of the Pharmaceutical Society which cannot be taken before the age of twenty-one. For at least three years before the examination he must have been employed as a registered Apprentice or Student; and to be so registered he must send to the Pharmaceutical Society one of the Certificates we have mentioned, together with a registration fee of two guineas. Every student should be apprenticed to a qualified Chemist

and Druggist for three or four years, and the apprenticeship should terminate about the age of twenty. The premium for a four years' indoor apprenticeship hardly ever exceeds £100; and during the fourth year about a quarter of this is generally returned as wages. Outdoor apprentices are often taken without premiums, but are sometimes charged from £20 to £25. As a rule, the outdoor system is not recommended.

SCHOOL OF PHARMACY. Having finished his apprenticeship at the age of twenty, the young man's (or woman's) most important consideration is the passing, in a year's time, of the all-important *Minor Examination.* If he can afford to do so, he should by all means spend this intervening time in a School of Pharmacy. He will find a list of such schools in the *Chemist and Druggist* referred to above; but one of the best is the Pharmaceutical Society's own School in Bloomsbury Square, London. Applications for information about this school should be sent to the Dean. The total fees for tuition and practical work amount to £31.

SCHOLARSHIPS. Two scholarships, called the "Jacob Bell" Scholarships, are offered annually to registered students of the Pharmaceutical Society, and are tenable only at the School of the Society. Each is of the value of £30, together with free lectures, and laboratory instruction, and books to the value of £2 10s.; and each is tenable for one year only. The Scholar may, however, at the end of his year of tenure, apply for free admission to the next ensuing Advanced Course in the Society's School. He could in this way get through his Minor Examination at the end of his scholarship year, and through the Major Examination at the end of the next.

The "Manchester Pharmaceutical Association" Scholarship is also offered annually, is tenable for one year at the Society's, or some other approved School, and is of the value of about £26. Candidates must have been apprenticed in Lancashire, Cheshire, or part of Derbyshire. Further particulars of these scholarships may be obtained from the Registrar of the Pharmaceutical Society, 17 Bloomsbury Square.

EMPLOYMENT AND STUDY COMBINED. Although it would pay in the end for every candidate for the Minor Examination to spend the year preceding it entirely in professional studies, it is often impossible, for financial reasons, to do so. In that case he should seek a post as assistant to a Chemist and Druggist. If he is a "whole-time" assistant, he will probably get from £40 to £50 with residence, or from £80 to £90 without; if he gives only three or four hours a day, he will only receive free board and lodging in return for his services. Although for the purposes of the Minor Examination it matters not how the necessary knowledge has been obtained, it is better to get it from good teachers than from books; and the student should join any evening classes that would help him, and for which he has the necessary time.

QUALIFYING EXAMINATION. The Pharmaceutical Society hold two examinations, Minor and Major, for testing the qualifications of candidates who have passed through the course of training already described:—

(1) MINOR EXAMINATION. The fee is ten guineas, and the subjects of Examination are Botany, Chemistry, Physics, Materia Medica, Pharmacy and Dispensing and Prescriptions. The candidate who has passed it is qualified to practise as a Chemist and Druggist, and has the legal right to dispense and sell poisons.

(2) MAJOR EXAMINATION. The fee is three guineas, and the subjects the first four of those given for the Minor but of a more advanced order. Those who have passed it are styled *Pharmaceutical Chemists*, and have better chances than mere "Chemists and Druggists" of securing the better posts in Pharmacy. In England and Wales, too, Pharmaceutical Chemists are exempt from service on all juries and inquests.

PROSPECTS. Those who have distinguished themselves in their examinations are eligible for posts as demonstrators in the Society's or some other School of Pharmacy—the lecturers are usually distinguished men of science; or they may become dispensers in some of the larger hospitals at salaries ranging from £250 to £350 a year. The majority, however, of young qualified men will look out for assistantships to Chemists and Druggists; and those who succeed in getting into big houses will be fairly well paid. **The average salary for a qualified assistant would be about £60 or £70 a year with residence, or from £100 to £130 without.** Comparatively few men finish their Minor Examination before the age of twenty-three. Those with sufficient capital to start or purchase a business would hardly profit by any advice we could give, and we shall accordingly offer none.

2. APPLIED CHEMISTRY.

The application of chemistry to industrial processes gives employment to many chemists who have undergone a thorough training for their work. They are employed in gas works, breweries, chemical works, and other manufacturing concerns, whilst as analytical chemists they are chiefly employed in the examination of the qualities of food stuffs, drugs, etc. A boy who is fond of chemistry and general science, and whose parents can afford his special post-scholastic training, has a wide and profitable field of work open to him. He may of course elect to take up pure Science in the hope of getting a demonstratorship as a stepping-stone to a professorship. If so, he should do his utmost to get his training at one of the older Universities; although so far as mere scientific instruction is concerned he might get instruction equally good in one of the many provincial Universities and University Colleges; and the cost would be at least £50 a year less. We are, however, here chiefly concerned with those who elect to take up applied Chemistry; and it is for such that the following information is intended.

SCHOOL EDUCATION. The first necessity is a wide general education, including Latin, German, and French. French must be learnt; but it is less important than German. Science—particularly Chemistry and Physics—should be studied; but facts are of far less importance than the power of demonstrating them. The boy who can perform ordinary experiments neatly, and who has been trained to observe the ordinary and extraordinary phenomena connected with them is likely to make a more successful chemist than he who has a mere knowledge, however wide, of chemical facts and formulæ. Mathematics is a very important subject, and graphical methods of solving algebraical problems should be thoroughly understood. The pupil should acquire the power of expressing himself in clear, terse English. English composition commonly receives at school far less attention than its importance deserves.

The school period should be prolonged to the age of seventeen, or at least sixteen, and the pupil should by this time have passed the Oxford or Cambridge Local Junior or an equivalent or higher examination, and his certificate should state that he passed at one and the same time in (1) English, (2) Latin, (3) Arithmetic, (4) Algebra to Simple Equations, (5) the first three books of Euclid, (6) French or German or Greek or Logic (See below under *Institute of Chemistry*).

POST-SCHOLASTIC TRAINING. There are three ways in which a young man may train himself for work in applied chemistry. (1) He may spend about three years in a University or University College, and then seek a post as assistant chemist. (2) He may spend half his time in the works—dyeing, brewing, gas, paper-making, etc., and half in classes. (3) He may spend all day in the works and get his general training in private study and evening classes.

He who can afford it should by all means take the FIRST (*University*) COURSE and follow it up with a year—or even two years—in Germany. He will thus qualify himself for a far greater range of employments—technical or professorial; and such a training will fit him far better than others to be a leader of men and, possibly, to combine the duties of manager and chemist. If he cannot afford one of the older Universities, one of the newer ones or one of the many University Colleges will be a good second best; and the cost, away from home, would not be more than £100 a year. A year in Germany need not cost more than £100, including travelling expenses.

THE SECOND (*Half-time*) COURSE, as in Engineering, is growing in favour. In Edinburgh, for instance, pupils in

the City Gas Department, may spend half their time in the works and half at the Heriot Watt College. The system, however, is not yet sufficiently developed for us to give more than the advice to adopt it if possible.

THE THIRD COURSE is the one usually followed by those who cannot afford the first. Arrangements are made with the head Chemist or the Manager of some particular works to enter the chemical department as a pupil. The usual period of apprenticeship is three years, and the premium £150. A portion of this is, however, generally returned as wages—£20, £30, and £40 in the respective years. A really clever and hardworking man *may* do as well in the end after such a training as many who have spent far more on their general education; but he is more or less tied to one branch of applied chemistry, and cannot have the same grasp of scientific principles as the more highly educated man. He tends to become a "rule of thumb" man. If, however, he means business he can and should widen his general knowledge by private study and attendance at evening classes. In the works he must make up his mind to keep his eyes more active than his tongue.

He whose aim is to become a Public Analyst should apprentice himself to one for a period of three years. The usual premium is £100, and no wages are given. There is a Society of Public Analysts (4 New Court, Lincoln's Inn), but entrance is by election, not examination.

THE INSTITUTE OF CHEMISTRY (Offices: 30 Bloomsbury Square, W.C.). Although many well-known Consulting and Analytical Chemists do not belong to the Institute of Chemistry, it is advisable, in these days of keen competition, to qualify for entrance. The letters A.I.C., or, better, F.I.C., after a man's name are a guarantee that his application for a post is worthy of close attention. The Book of Regulations for the Admission of Students, Associates, and Fellows can be obtained for a shilling from Messrs. Blundell, Taylor and Co., 173 Upper Thames Street, E.C. There are three grades of members: Students, Associates, and Fellows.

First Grade candidates for the STUDENTSHIP must be over seventeen years of age, and must have passed a Preliminary Examination in subjects of general education approved by the Institute (see above under *School Education*; but to the subjects under (6), add "or a modern language approved by the Council.") He must also show that, at the time of making application for registration, he is working at an Institution recognised by the Council, or in the Laboratory of a Fellow of the Institute, with the object of qualifying for the profession of Analytical and Consulting Chemistry.

Second Grade. It is not obligatory on a candidate for the ASSOCIATESHIP to have been registered as a student, but such registration will be found advantageous. In addition to the Preliminary Examination mentioned above, he will have to pass two others—the Intermediate and the Final.

To be admitted to the *Intermediate Examination*, the candidate must prove that he has regularly attended systematic day courses, in an Institution recognised by the Council, for at least three academic years. As an alternative to this three years' training, a candidate may take one of two years, and work systematically for two other years in the laboratory of a Fellow of the Institute.

No questions as to time or manner of training are asked of a candidate with a Science Degree of a University recognised by the Council; but he must have taken both Organic and Inorganic Chemistry in his Final, and Mathematics either in that or in his Intermediate. Those who hold a Science Degree with distinction in both branches of Chemistry are, as a rule, excused the Intermediate altogether.

The *Final Examination* for the Associateship lasts four days; and the candidate is expected to possess, in addition to a general knowledge of all branches of Chemistry, a *thorough* knowledge of one branch selected by himself from the following:—(*a*) Mineral Chemistry, (*b*) Metallurgical Chemistry, (*c*) Physical Chemistry, (*d*) Organic Chemistry, (*e*) Analysis of Food and Drugs, and of Water, (*f*) Biological Chemistry. A candidate who wishes to qualify himself for appointment as Public Analyst, should take Branch (*e*); as, provided he has done so, the Certificate of Associateship of the Institute is accepted by the Local Government Boards of England, Scotland, and Ireland, as sufficient documentary evidence of his qualifications for the post.

Third Grade. For admission to the FELLOWSHIP (F.I.C.), an Associate (A.I.C.) is required to have been registered for three years, and to have been continuously engaged during that time in the study and practical work of Applied Chemistry in a manner satisfactory to the Council.

PROSPECTS. Having qualified himself in any of the ways described above, the young Chemist should seek a post as Assistant. The salary will probably not be more than £120 to begin with. When appointed Analytical Chemist to some manufacturing firm, he may expect to get £300; but if he is a good man and lucky, he may ultimately get as much as £1,000. Managers of works are not usually Chemists; but there is some prospect that the two posts may in the future be combined in the case of a man who, with a sufficient knowledge of Chemistry, combines the power of managing men.

ARCHITECTS AND SURVEYORS.

1. ARCHITECTS.

An Architect is an artist, whose materials are not pigments but wood, brick, stone, and iron. He must thoroughly understand the nature of these materials and how to dispose them so as to give, not only stability to, and the necessary accommodation in, the work he constructs, but the beauty of form suitable thereto. To know how to construct a building which will merely stand he must understand the principles of theoretical and applied mechanics; and he should be able to get stability with the least expenditure of material. To know how to link together the various parts of his structure in the most convenient way, the Architect needs the trained imagination which can conceive in outline the whole and its parts before he commits his ideas even to paper. And to be able to give to a building the beauty of form best suited to it, his mind must be stored with vivid pictures of the most beautiful buildings of various types, and he must understand how their effect has been produced. No boy, then, should be allowed to take up Architecture who has not a decided taste for drawing, and who does not show signs of ingenuity.

SCHOOL EDUCATION. The boy who wishes to be an Architect should receive a thoroughly good general education. While at school he should be encouraged in every way to practise drawing—but never from flat copies. Perspective and all kinds of geometrical and scale drawing are also most valuable. Mathematics, pure and applied, are now more than ever necessary in dealing with iron construction—unfortunately on the increase. Modern languages are desirable, if not necessary, for travel, so valuable in giving new ideas, and for making available the many excellent foreign architectural works. Every opportunity should be taken to interest the boy in old buildings: bicycling expeditions to visit old churches, castles and mansions might be arranged; and visits to foreign countries would be made doubly interesting by a little previous study of the types of Architecture to be found in the district visited. If the boy means, as he should, to enter the Royal Institute of British Architects (R.I.B.A.), he will find it to his advantage to have passed, whilst at school, one of the following examinations:—

(1) The London (or some other British University) Matriculation; (2) any University Senior Local (or Junior Honours); (3) College of Preceptors, First Class. He will also save time if he can get any of the following, provided they are of the First Class: the Board of Education Elementary Certificates for (1) Geometrical Drawing *and* Perspective; (2) Theoretical Mechanics of Solids *and* Fluids, and (3) the Advanced Certificate for Outline Drawing of Ornament from the Cast.

PROFESSIONAL TRAINING. The usual way of getting the necessary technical training is to be articled to an Architect for three or, in exceptional cases, four years. The premium varies with the standing of the Architect, and may exceed £1,000; but a very usual figure is £200. In the Architect's office the pupil will acquire a knowledge of business ways, and of the character and detail of architectural work. Beyond architectural drawing there is a good deal of general work to be done—keeping and checking accounts, writing reports, keeping the diary, inspections, and so on. Everything, of course, depends on how the pupil utilises the opportunities thus offered. But the work and experience of the office are not sufficient. Much outside study and work is absolutely essential, such as reading standard books on Architecture, examining and drawing buildings, old and new, and preparing for the examinations of the R.I.B.A. There are many Architects of good standing who do not belong to the Institute; but it is far better for young men who have to make their own way to enter it. The age at which office life begins varies. It is not unusual for men, even after leaving the University, to spend a year abroad, and take a course on Architecture in Germany or Switzerland. That at Zurich would seem to be one of the best. But the usual age for entering the office is eighteen or nineteen.

THE ROYAL INSTITUTE OF BRITISH ARCHITECTS. (R.I.B.A. Office: 9 Conduit Street, W.) There are three examinations to be passed by those who wish to qualify for the Associateship of the Institute: (1) the Preliminary, qualifying for registration as *Probationer;* (2) the Intermediate, qualifying for registration as *Student;* (3) the Final, qualifying for registration as *Associate*. Particulars of the examinations to be passed may be obtained from the office of the Institute. Those who have passed one of the General Examinations mentioned above under "School Education" are excused such parts of the PRELIMINARY EXAMINATION as are covered by their certificates. Indeed, it is possible, in this way, to get entire exemption from every thing but payment of the fee of two guineas for registration as a *Probationer*. During the two years following this registration, the probationer has to prepare certain drawings, and if these "testimonials of study" be approved, he is admitted to the INTERMEDIATE EXAMINATION, and on passing it is registered as a *Student* of the Institute. The FINAL EXAMINATION is to test the *Student's* further progress, and the preparation for this examination and of the "testimonials of study" admitting to it, occupies not less than three years. On passing the Final he becomes qualified for candidature as *Associate* of the Institute, and receives a notification to that effect.

PROSPECTS. The chances of success will, in most cases, depend on the individual and the use he has made of his opportunities both inside and outside the office. A competent man, who has completed his training, can always get employment as an Assistant; and his remuneration will vary, with his ability and experience, from £100 to £500. If a sufficient number of clients can be had and the young Architect feels he can do justice to them, the sooner he gets into practice for himself the better. The Architect's payment is, generally speaking, five per cent. on the outlay on the building. Many Architects make themselves known by entering for competitions for plans for various kinds of buildings: churches, schools, model dwellings, polytechnics, town-halls, etc.

2. GENERAL SURVEYORS.

(INCLUDING QUANTITY SURVEYORS, LAND AGENTS, AND VALUERS.)

A Surveyor, in the widest sense of the term, is one who is skilled in the art of measuring and delineating the surface of the earth, of managing and developing estates, of determining the value of all descriptions of landed and house property, and of measuring and estimating the work involved in any building operation. Few men, however, qualify in all branches of Surveying. Some specialise in Land Agency, which includes a fair knowledge of Agriculture, whilst others specialise in Valuation, or Quantity Surveying. As the work of the Quantity Surveyor is to most people quite unknown, it may be well to say that it consists in "taking out," that is, measuring and computing from the Architect's drawings and specifications, the exact quantities and contents of a building, so that the Builder may be able to furnish a definite price for his share of the work.

SCHOOL EDUCATION. It is to be regretted that the *Preliminary Examination* (see below) which all boys must pass to be registered as Students of the Surveyor's Institute, is not sufficiently wide to form a good guide as to the course of study which a boy destined for the Surveying profession should pursue while at school. Fortunately, the Institute indicate the standard of education, which should certainly be the aim of all who hope for a successful career, when they exempt from their Preliminary Examination only those who have passed one of the following:—

(1) The Matriculation Examination of any University in the United Kingdom; (2) Oxford or Cambridge Senior Local in Honours; (3) Higher Examination of the Oxford and Cambridge Schools Examination Board; (4) Central Welsh Board Examination in Honours.

Each of these examinations admits of a choice of subjects. It is important that the future Surveyor should be strong in Geometrical Drawing and Mathematics (including Mensuration and Trigonometry), and these subjects, therefore, should receive special attention during the school course.

PROFESSIONAL TRAINING. On leaving school, those who intend to learn the business of a Surveyor must make up their minds as to the Branch of Surveying in which they mean to specialise. It is not absolutely necessary to be articled in order to become a Surveyor, but it is highly desirable. The choice of the Firm in which to seek entrance as an articled student will, of course, depend on the branch of the profession in view. The usual age for entering on articles is seventeen or eighteen, and the period of training is usually three years; the premium required varies in amount with the standing of the Firm, but a portion of it is often returned as wages. Some men prepare for their future work and for the examinations of the Institute by attendance at one of the Agricultural Colleges, or of such University Colleges as provide special facilities for the study of Agriculture. This course is more expensive than the other, but may offer special advantages to those who intend to practise in the country.

THE SURVEYORS' INSTITUTE (Office: 12 Great George Street, Westminster), was instituted in 1868 to secure the advancement and facilitate the acquisition of that knowledge which constitutes the profession of a Surveyor. The Examinations are divided as follows:—(1) The PRELIMINARY, for the admission of *Students;* (2) The HIGHER, qualifying for the class of *Professional Associates;* (3) The HIGHEST, for the class of *Fellows*. There is also a special examination, qualifying non-members for the Fellowship. Particulars of all these examinations may be obtained by application to the Secretary of the Institute. Here it may suffice to state that the Preliminary Examination consists of papers in Algebra, Euclid, English History, Dictation, and Composition, and French, or German, or Latin, and that candidates are required to be about eighteen years of age. The subsequent examinations are arranged in three divisions corresponding to the three main branches of the profession: Land Agency, Valuation, Quantity Surveying. In each branch are two examinations, one for the Associateship and the other for the Fellowship. The latter deals with advanced stages of the subjects set for the former; and no one is admitted to the class of Fellows below the age of twenty-five.

PROSPECTS. The prospects of a Surveyor belonging to any one of these branches who succeeds in establishing a good connection, are enviable indeed; but it may take many years to do it. Many who are the agents of large estates reckon their incomes by thousands. A Quantity Surveyor, also, who can count on the support of a fair number of Architects in good practice, is in an enviable position. The charges he is entitled to make, usually ranging from

two per cent. on the value of the work for which quantities are taken out, are highly remunerative. A young man, however, who has just obtained his Associateship must not expect to get, as assistant to a Surveyor, much more than £100 a year. Eventually much will depend on his own energy and alertness. For those who prefer more certain, if more modest incomes, there are posts in the Civil Service as Junior Examiners in the Office of Works (£150 to £400), as Assistant Surveyors (£150 to £400), or Surveyors (£500 to £1,000.)

3. BOROUGH SURVEYORS.

In some works on Professions, the post of Surveyor to some London or Provincial Borough is included amongst those obtainable by men trained as described in our previous section (General Surveyors). This is, in the main, erroneous; and, as such posts are worth working for, we have thought it well to devote to them a special section.

SCHOOL EDUCATION. As the best institution to enter is not the Surveyors' Institute, but the Institute of Civil Engineers, it is for the examinations of the latter and not the former that the boy should be trained. He should take, before he leaves school, the London Matriculation or an equivalent examination, and should make much of Mathematics, Applied Mechanics, and Geometrical Drawing.

TECHNICAL TRAINING. On leaving school, the boy should be articled for three years to a corporate Member of the Institute of Civil Engineers, as he cannot himself become a member unless he has been articled to a member. The premium will range from £100 to £300, according to the town and Surveyor. During his articles the boy should take up Building Construction, and pass the various stages of the Board of Education Examinations in that subject, including the Honours Stage. He should also study Sanitary Engineering and take, as soon as he is twenty-one, the examinations for the Certificate of the Sanitary Inspectors' Examination Board (1 Adelaide Buildings, London Bridge, E.C.), or of the Sanitary Institute (Parkes Museum, Margaret Street, W.). He may never need this qualification, but he should have the knowledge to which it testifies. The next examination to pass is that of the Incorporated Association of Municipal and County Engineers (11 Victoria Street, S.W.), whose Certificate is extremely useful in obtaining an appointment as Assistant. At twenty-five should be taken the examination for the Associated Membership of the Institute of Civil Engineers (Great George Street, S.W.), which is extremely difficult. The best section to take is the Building Section. Almost any candidate for this examination could pass that for the Associateship of the Surveyors' Institute; and many take the latter as a sort of preliminary canter before the greater contest.

PROSPECTS. The salaries of Assistants to Borough Surveyors vary greatly. In Urban District Councils, they range from £80 to £150; in small towns, from £100 to £200; in large towns, from £200 to £500; in London, from £150 to £500. The man who means to get on must make up his mind to hard work for years. He must keep his object steadily before him, and try to make himself indispensable to his chief. The Provinces offer the best training ground; and small towns are best, as the work is not departmentalised as in London and other large towns. The salaries of Borough Surveyors are as follows:—In Urban District Councils, from £150 to £250; in small towns, from £200 to £350; in large towns, from £400 to £1,500; in London Boroughs, from £350 to £1,000.

ACTUARIES.

An Actuary is "An official in an insurance office, whose duty it is to compile statistical tables of mortality, and estimate therefrom the necessary rates of premium, etc.; or, one whose profession it is to solve for insurance companies or the public all monetary questions that involve a consideration of the separate or combined effect of interest and probability, in connection with the duration of human life" (*Oxford English Dictionary*). Actuaries, therefore, find their chief employment in life insurance offices. They are also experts in statistical matters and monetary values based on statistical tables. A really clever actuary who has had a good all-round education, and possesses grit and firmness combined with suavity and tact, has enviable financial prospects. When such a man has earned the title of Fellow of the Institute of Actuaries—which can only be done by passing a very difficult examination—he has only to work, watch and wait: a good appointment is bound to offer itself.

QUALIFICATIONS. Only boys who have distinctly good mathematical ability have any chance of becoming actuaries. But this is not sufficient; they must be doggedly persevering; for their preliminary training is a long and somewhat tedious one. Finally, they must have a good presence; and the better their social position the better their chances of being allowed to take the first definite step in their wished-for career.

EDUCATION AT SCHOOL. A good all-round secondary education is the first necessity, and special attention must be paid to mathematics. Familiarity with logarithms should be acquired as early as possible, as also an intimate acquaintance with graphical methods of calculation. Foreign languages may prove of great use to an actuary who can *speak* them, since he may secure employment in the foreign branch of some office, which is more lucrative than in the home offices. The student should do his best to obtain some such certificate as the Oxford or Cambridge Local, with distinction, if possible, in mathematics; the Junior Certificate might serve the purpose, but the Senior would be far better.

WORK IN AN INSURANCE OFFICE. On leaving school, at the age of sixteen or seventeen, the first thing to do is to obtain employment in a life insurance office, if possible in the Actuarial Department. To do this it is generally necessary to obtain a nomination from a director or from one of the chief officials. This secured, there will be some form of examination to be gone through and an interview with the manager, who will try to make sure that the applicant is well educated, and is smart and of good address. Youths who are judged satisfactory are sometimes apprenticed for four or five years. There is no premium, and small wages are paid—probably £15 a year at first, rising to £30 in four years. Junior clerks in insurance offices are often paid better than apprentices; but there is no undertaking on the part of the officials to teach the former the ins and outs of insurance business as there is in the case of the latter. A few actuaries, who are not attached to any particular office, take pupils and charge them a premium.

PREPARATION FOR ENTRANCE INTO THE INSTITUTE OF ACTUARIES. As soon as work in the office is well started, application should be made for permission to join the Probationers' Class of the Institute of Actuaries. The letter should be addressed to their Secretary, Staple Inn Hall, Holborn, W.C. A form of application will be sent which, when filled up, must be signed by two Members of the Institute, who must be either Associates or Fellows. If the application is successful, an entrance fee of 10s. 6d. has to be paid, as well as another 10s. 6d. as a first payment of the annual subscription. Probationers are not Members of the Institute; but they have some of the privileges of Members. They can attend the ordinary General Meeting as listeners and spectators, and they can borrow books from the Library to assist them in their studies. But the greatest privilege is the permission granted them to join the classes maintained by the Institute for the preparation of candidates for their difficult examinations. For this last privilege a fee of two guineas has to be paid, but it is well worth it. None would be admitted to these classes who had not a good knowledge of algebra up to and including quadratic equations.

EXAMINATIONS OF THE INSTITUTE OF ACTUARIES. Members of the Institute are divided into three classes: **Students, Associates** and **Fellows**; and entrance into each class is by examination. An outline of the various examinations is given below. Those who have graduated in Honours in any University of the United Kingdom are admitted into the class of Students without examination. All the examinations are held in April, and public notice is given of the exact date. Candidates must apply, at least a fortnight before this date, for permission to sit, and must send with their application the examination fee of a guinea. Having passed this examination, known as Part I., the probationer becomes a Student, and is now a Member of the Institute. Students can, for a fee of two guineas, join the classes maintained by the Institute for the preparation of candidates for the next examination —Part II., success in which will admit them to the class of Associates. To become a Fellow, an Associate must pass the examinations called Parts III. and IV. He may take them together if he likes; otherwise he must take Part III. first.

SYLLABUS OF THE EXAMINATIONS.

PART I.

(1) Arithmetic and Algebra.
(2) The Theory and use of Logarithms.
(3) The Elements of the Theory of Probabilities.
(4) The Elements of the Calculus of Finite Differences, including Interpolation and Summation.

PART II.

(1) Compound Interest and Annuities-Certain.
(2) The application of the Theory of Probabilities to Life Contingencies.
(3) The Theory of Annuities and Assurances on Lives and Survivorships.
(4) The principles of the construction of Mortality Tables (excluding graduation); and the construction of monetary and other Tables involving the Contingencies of Life.
(5) The elementary application of the Calculus of Finite Differences and of the Differential and Integral Calculus to Life Contingencies.

PART III.

(1) The methods of constructing and graduating Mortality, Sickness and other Tables.
(2) The history and distinctive features of existing Tables.
(3) The Valuation of the Liabilities and Assets of Life Assurance Companies.
(4) The Distribution of Surplus.
(5) The Calculation of Office Rates for Assurance, Annuity, Sickness and other Risks.
(6) The practical valuation of Life Interests and Reversions, and of Policies for surrender or purchase.

PART IV.

(1) The Elements of the Law of Real and Personal Property.
(2) The Law relating to Life Assurance Companies and Life Assurance Contracts.
(3) The Constitution and Valuation of Friendly Societies and Pension Funds, and the Laws relating to such Institutions.
(4) Life Assurance Book-keeping; preparation of Schedules, Statements and Reports.
(5) The Principles of Banking and Finance, including a knowledge of the Constitution and Operations of the Bank of England, and of the National and Local Debts of the United Kingdom.
(6) The Investments of Life Assurance Companies.

PROSPECTS. It must be remembered that the man who has qualified himself for actuarial work has next to get an appointment as actuary. Till he receives an appointment as such he is in all probability an assistant in the Actuarial Department of some Insurance office. As such, his salary may rise from about £70 to £250 or £500. When the wished-for post is secured, he may expect to get from £500 to £1,500 a year, although there are possibilities of getting a considerably higher salary. The best posts are those connected with Fire and Marine Insurance. The ultimate object, however, of most actuaries is the managership of some Office, for the duties of which their attainments and course of training peculiarly qualify them. The salaries of most such managers exceed £1,000 a year.

ACCOUNTANTS.

An Accountant is one skilled in the art of keeping and examining accounts. If a going concern is to be turned into a Limited Liability Company, Accountants are called in to thoroughly examine the books of the vendors and certify the profits and the probable percentage of interest that may be expected from the capital invested in the proposed Company. It is usual to appoint Chartered Accountants as auditors of a Company, and as such it is their duty to examine the books of the Company and to certify the profits and the amount available for dividend. In these days, when every successful tradesman or manufacturer, who has "made his pile" and desires to retire from the "storm and stress" of active commercial life, wants to sell his business to the investing public, for a consideration, the Accountant's profession is a fairly safe and lucrative one. Unfortunately many business men and many companies show losses instead of profits, and are perforce "wound up"; but "it is an ill wind that blows nobody good"; and such disasters bring "grist to the mill" of the Accountant. He is now called in to search for the cause of failure, and to say how much may be saved from the wreck and paid over to the creditors or shareholders; and bankruptcy cases are often amongst his most lucrative ones. Accounting is a profession demanding careful training, and one not to be undertaken except by such as have a good head for figures and a great capacity for taking pains. But Accountants must not only be able to understand figures, they must be able to understand men, and particularly business men, and must acquire such a knowledge of their practices as will enable them to read between the lines of accounts submitted to them. Should they certify as correct balance-sheets which are subsequently found to have been false, they will have to prove in a court of law that their error was not due to a want of reasonable care and diligence. It goes without saying that an Accountant must be a man of strict probity and great moral courage. He may need both should he happen to be employed by unscrupulous company promoters.

EARLY TRAINING. The best early training is one that will fit a boy before the age of sixteen for the Preliminary Examination of the Institute of Chartered Accountants (whose offices are in Moorgate Place, London, E.C.), or for one of the numerous public examinations, success in which would admit him to the further examinations for membership of the Institute without passing through the Preliminary. The following are the candidates who may claim certificates of exemption from the Preliminary:—

(1) Graduates of any University in the United Kingdom; (2) Those who have passed the following examinations:—(*a*) Responsions (Oxford), (*b*) Previous (Cambridge), (*c*) Second Year Arts (Durham), (*d*) Matriculation (Dublin, Birmingham or London), (*e*) Preliminary (Manchester), (*f*) Moderations (Lampeter), (*g*) First Class, (College of Preceptors), (*h*) Senior Local (Durham, Oxford or Cambridge), (*i*) Commercial Certificate (Manchester), (*k*) Higher Commercial Certificate (London Chamber of Commerce), (*l*) Senior and Honours (Central Welsh Board), (*m*) First Class Clerkships (Civil Service) and "Further" for Woolwich and Sandhurst.

Any one of these certificates is a valuable possession, since it may be useful for other callings should a boy decide against Accountancy in favour of something more suitable when the time has come to take a decisive step. When that time comes, those who remain faithful to Accountancy should become connected with the Institute of Chartered Accountants, and should write for the latest regulations to the Secretary, Moorgate Place, London, E.C.

If a candidate has none of the certificates mentioned above, he will have to pass the **Preliminary** of the Institute, which is held in June and December.

The compulsory subjects are, Dictation and Composition, Arithmetic, Algebra, to Quadratics, Euclid (I.–IV.), Geography, English History, Elementary Latin; and a choice of *two* may be made from the following, provided that at least *one* is a language:—Latin, Greek, French, German, Italian, Spanish, Higher Mathematics, Physics

(Mechanics, Hydrostatics, Pneumatics), Chemistry (no practical), Physiology, Zoology, Botany, Electricity and Magnetism (*or* Light and Heat), Geology, Shorthand. The fee for the Examination is two guineas.

SPECIAL TRAINING FOR A CHARTERED ACCOUNTANT. The boy who wishes to become a Chartered Accountant, if he is over sixteen and has passed or been exempted from the Preliminary, must now be articled for five years to a Member of the Institute who is in practice in England or Wales. If he is a graduate, however, the term of service under articles is only three years. He will have to pay a premium, the amount of which will vary with the standing of the firm, and may be anything from 100 to 300 guineas. During articles the future Accountant is engaged in learning the practical details of his profession as well as Commercial Law. When half the term has expired, he will be able to take the Intermediate Examination (fee two guineas), the subjects of which are: Book-keeping and Accounts, Auditing, and the Rights and Duties of Liquidators, Trustees and Receivers; and he *must* get through this Intermediate before the expiry of his articles. When he has completed his term of service he can take the Final Examination (fee two guineas), the subjects of which include those of the Intermediate with the addition of the principles of the Laws relating to Bankruptcy, Joint Stock Companies, Arbitrations and Awards, and Mercantile Law. There are a good many special books to be read which will probably cost from £5 to £6. There is, however, a Students' Library connected with the Institute of Chartered Accountants, where most of these books can be had.

Those who have passed the Final Examination and have paid their fee of ten guineas and been formally admitted become **Associates** of the Institute, and may use after their names the letters A.C.A.; and after five years' continuous practice they may become **Fellows** (F.C.A.).

THE SOCIETY OF ACCOUNTANTS AND AUDITORS. This society also holds examinations for those who wish to become Accountants. It is less exclusive than the Institute of Chartered Accountants, and service under articles is not at present a condition precedent to admission to the Society, or to any of its examinations. All necessary information may be obtained of the Secretary, 4 King's Street, Cheapside, E.C.

PRIVATE ACCOUNTANTS. Although most Accountants of good standing belong to one or other of the above societies, a good many do not. A young man who could not afford the training demanded by the Institute might take the examination in Book-keeping held by the Society of Accountants and Auditors, the Society of Arts or the London Chamber of Commerce, and then, after serving some time with an Accountant, apply for membership of the Society of Accountants and Auditors.

PROSPECTS. The young man who had taken the Final Examination of the Institute of Chartered Accountants would probably command £120 a year. His future income would depend on himself; there is no prospect for him of fixed annual increments, as there is for Civil Servants. If, however, he proves himself keen and trustworthy, he has far better prospects than most of these and might, when fairly started in business for himself, expect to earn from £500 to £800 a year.

CHIEF COMMERCIAL OPENINGS.

1. BANKING.

Of all commercial employments, that in a bank is looked upon as one of the most dignified. It is one, too, that offers fair scope to the ambitious, talented young man: the salary is good and progressive; sick pay is generous; holidays are regular, and liberal pension schemes are usually arranged on the basis of mutual contributions from the employees and the Bank. Except at the end of each quarter, and especially at the end of the year, when balances are struck, the hours are regular and not excessive. From all this it will be at once seen that the competition for Bank clerkships is very keen. Mere general ability, however, is not sufficient to secure them; influence is, in most cases, essential, as will appear hereafter.

GENERAL QUALIFICATIONS. The lad who desires employment in a Bank must have had a good general education, must be of good address and of good social position. He must have punctual habits, and a discreet tongue; and his record for trustworthiness must be unimpeachable.

SCHOOL EDUCATION. An all-round secondary education is of course essential; and the better the standing of the school attended, the better the boy's chances of securing a post in a leading London Bank. The subjects to which chief attention should be paid are Mathematics—especially Arithmetic—English Composition, Book-keeping, at least one foreign language—preferably French, and, most important of all, Handwriting. Provided, however, that these are well kept up, such other subjects as are held to form a necessary part of the mental equipment of an educated man must not be neglected. It would be useful, before the age of sixteen, to secure some such certificate as the Oxford or Cambridge Local Junior; and, if time permit, it should be followed up by the Senior Certificate. Other extremely useful ones, especially for London Banks, are the Junior and Senior Commercial Certificates granted by the London Chamber of Commerce. All information about these latter can be obtained from the Secretary, London Chamber of Commerce, Oxford Court, Cannon Street, E.C. In all cases, Book-keeping should form one of the subjects of examination.

NOMINATION AND EXAMINATION. Not later than the age of sixteen, except for the Bank of England, a nomination should be obtained from the Secretary of the Bank selected, and the support of a Director, chief official, or large customer of the Bank, should be secured. In the case of the Bank of England, candidates must be between the ages of eighteen and twenty-five; a nomination must be obtained from a Director; and only he who is personally known to a Director is likely to receive one. Those who are accepted as candidates for any Bank have to undergo an examination in the subjects mentioned above; and, if the results are satisfactory, their names are entered on the books as eligible for posts when vacancies occur. It is quite possible that such a vacancy may not arise for a year or more; and it is, therefore, not unusual for boys to have their names down at more than one Bank.

FIRST WORK AT THE BANK. The young Bank clerk will find his first work of an extremely easy nature—posting up pass-books, collecting various kinds of documents from other Banks, etc.; but he should at once set about qualifying himself for promotion when the opportunity arises. His best claim for promotion will rest on the character of his previous work; but his claims will be considerably strengthened if he can show certificates which testify to his knowledge of the theory and practice of banking and of general economic science. The way to obtain such certificates is explained below.

It would be out of place for us to give details of the various steps by which the young clerk gradually rises to the better paid positions at the Counter, in the Accountant's Department, in the Manager's Office, and finally to the post of Manager. Once in the Bank, he will, if he is in earnest, soon learn these in a more satisfactory way than reading about them. Those, however, who desire to understand more fully the work in which they mean to engage, should purchase, or borrow from a Library, one of the following: Gilbart's Principles and Practice of Banking (10s.), Macleod's Theory and Practice of Banking (26s.), Moxon's English Practical Banking (4s. 6d.), Macleod's Elements of Banking (3s. 6d.).

THE INSTITUTE OF BANKERS is an "Association of gentlemen connected with the various branches of Banking, whose objects are to facilitate the consideration and discussion of matters of interest to the profession, and, where advisable, to take measures to further the decisions arrived at; and to give opportunities for the acquisition

of a knowledge of the theory of Banking." During the winter months the Institute arranges a series of monthly lectures on some Banking subject in London and in a selected provincial town; and, for the benefit of country members, these lectures are published in the monthly Journal of the Institute. But one of the chief parts of the work of the Institute is the examination of candidates for its Certificate. The examinations are open to members only, and are held annually in London and such provincial centres as are convenient to candidates. Forms of application for election and all particulars can be obtained of the Secretary, 34 Clement's Lane, E.C.

EXAMINATIONS OF THE INSTITUTE. These are divided into two parts, extending over two years. The first part is of a preliminary nature; and the second—to be taken after the lapse of not less than one year from the first—is of a more advanced nature. The Certificate of the Institute is granted only to those who have passed the Final, and entitles the holder to be elected an Associate. The value of these Examinations is becoming yearly more appreciated, as is shown, not only by the increasing number of candidates, but by the fact that most of the leading Banks now give prizes to those of their officials who pass them. Boys, therefore, who aim at Bank appointments, would do well to look through the subjects of the Preliminary Examination, and, in their spare time, make a start in the study of the simpler of those which are new to them. We should recommend them to read some elementary book on Political Economy, such as Marshall's *Economics of Industry* (3s. 6d.).

As the syllabus of the examinations can be obtained by application to the Secretary of the Institute, we need only say here that the subjects of the Preliminary Examination cover a wide area and include (1) Arithmetic and Algebra, (2) Book-keeping, (3) Political Economy, (4) Practical Banking, (5) Commercial Law, (6) French *or* German, neither of which is compulsory. The subjects of the Final Examination are the same as for the Preliminary with Commercial Geography and History instead of Arithmetic and Algebra.

PROSPECTS. In London Banks clerks usually start at £40 or £50 a year, and their salaries rise by fixed annual increments to £250 or £300. Those, however, who have earned the confidence of their chiefs and have gained admission into the Institute of Bankers, have opportunities of far better appointments as Accountants, Clearing House Clerks, etc. Managers of provincial branches of London Banks have salaries ranging from £250 to £800; whilst a General Manager may receive from £2,000 to £3,000 a year with a prospect of a liberal pension after from ten to fifteen years' work. In most banks, clerks are not allowed to marry till they are in receipt of a salary of £130, or, in some cases, £150. In Country Banks, salaries are lower than in London.

2. INSURANCE OFFICES.

Insurance office clerkships have this great advantage over those in other commercial houses: they are more certain. Once in an Insurance Office, it is a man's own fault if he does not remain there. The ordinary salaries, too, are fair; whilst an energetic man has a good chance of getting £600 or £700 a year, even if he does not attain to a managership with a far larger salary. The work, as a rule is not exacting; although the official hours—usually from 10 to 4—are often exceeded.

SCHOOL EDUCATION. The best school training is one that will fit a boy before he is sixteen to pass one of the University Junior Local Examinations, or an equivalent examination, such as the Second Class College of Preceptors. In one London office with which we are acquainted, all members of the Junior Staff who have not passed some such Examination, are required to get the Junior Certificate of the London Chamber of Commerce. The subjects to which a boy should pay most attention are Writing, Arithmetic, English Composition, and Modern Languages. Many Insurance Offices do a good deal of foreign business; and those men who, on account of their knowledge of languages, are sent to a foreign Branch Office, are more highly paid than those of corresponding rank who remain at the Head Office. Though French and German are as a rule in greatest demand, a knowledge of Spanish may prove most useful, and is comparatively rare in those who seek Insurance appointments.

THE FIRST APPOINTMENT. To obtain an appointment in an office, a boy should get an introduction to a Director of the Office chosen, who can always give him a nomination. If this is not possible, he should try to obtain the interest of one of the Officers—the Manager, if possible, who will probably be able to obtain the necessary Nomination. If the Board of Directors decide to accept the nominee, his name is placed on the list of eligible clerks; but he may have to wait for a vacancy. In some Offices, clerks are selected by competitive examination; and in some, apprentices are taken for a period of four or more years (see above under *Actuaries*).

THE PERSONNEL OF AN INSURANCE OFFICE. The number of kinds of Insurance Office is considerable: Life, Fire, Marine, Burglary, Employers' Liability, Accident, Boiler, Mortgage, Plate Glass, and many others. As each Office is a self-contained, self-governing body, the personnel and the general organisation of one are not necessarily the same as those of any other. Here is the personnel of one large London Life Insurance Office which may serve as a general type:

(1) THE STAFF: Junior Staff, Second Class Staff, First Class Staff,
(2) THE OFFICERS: Assistant Secretary, Assistant Manager, Manager.
(3) THE ACTUARIAL STAFF: Assistants, Chief Assistant, Actuary.
(4) THE ACCOUNTANT'S DEPARTMENT: Assistants, Assistant Accountant, Chief Accountant.

In other Offices there would be, in addition, various kinds of Surveyors and Inspectors. The rules for promotion, again, do not admit of any general description, except that success depends mainly on the man. If he is punctual and diligent at the Office and works hard in his own time to fit himself for higher posts, he will probably get them.

PROSPECTS. In such an Office as the one we have described above, a young man will, on first appointment, probably get from £30 to £45 a year, and may expect to get a rise of £5 to £10 a year. The maximum to a member of the Staff may be £300, but it is more usually £250. The Officers are more highly paid. An Assistant Secretary may hope to get from £500 to £1,000 a year, whilst a Manager may receive anything from £1,000 to £4,000, and the Assistant Manager from £700 to £2,000. Those who combine the duties of Manager and Actuary are even more highly paid (see above, under *Actuaries*.)

3. THE STOCK EXCHANGE.

Stock Brokers and Jobbers are those who negotiate the purchase and sale of stocks and shares—the former for their clients, with a commission on all business transacted, and the latter for themselves. Success depends on shrewdness, a power of rapid calculation and decision, a due combination of caution and boldness with good fortune. The business has, in fact, many of the elements and much of the excitement of gambling. A series of fortunate deals—or even one—may bring wealth, just as unfortunate ones may bring financial ruin and the "hammer." Membership of the Stock Exchange is consequently eagerly sought by those who have the capital and think they have the mental qualities essential for success.

SCHOOL EDUCATION. For Stock Exchange work, examination certificates are of little value; although a good general education is naturally very important. French and German should receive much attention. Much of the Stock Exchange business is with the Continent; and a young man with a good working knowledge of both these languages would, as clerk, command a higher salary than without it.

CLERKS. It must be clearly understood that the *Office Clerks* have practically no chance of becoming members

of the "House," as the Stock Exchange is called. An office clerk may become a manager in the "office," but he rarely becomes a broker, whatever his ability and industry. The *House Clerk*, whether authorised or unauthorised, is of a different order. He is a man who has capital or a large connection, and merely becomes a House Clerk because the rules of the Stock Exchange make it easier for him than any other to become a member. An *Authorised Clerk* is allowed to deal in his principal's name; but an *Unauthorised Clerk* is not allowed to deal at all; his business consists in going round the House, getting the changes in quotations, checking bargains, etc.

Business on the Stock Exchange begins at 11 o'clock, and the House is closed at 3. A good deal of American business is, however, done "in the street" after the close of the House, as, owing to the difference in time (nearly five hours), New York's opening prices are not received here till about 3 o'clock. Clerks, however, must not expect to be "let off" quite so lightly as their Principals, and may often have to work pretty late—on the three "Settling Days," possibly till midnight. The House is closed on Bank Holidays, and also on May 1st and November 1st, and Clerks have the amount of summer holiday usual in commercial houses.

MEMBERSHIP OF THE STOCK EXCHANGE. The rules for the admission of members were radically changed in December, 1904. With the possible exception of perhaps twenty clerks a year, every candidate for membership must purchase a Nomination from some old Member, who is willing to retire in his favour, or from the executors of a deceased Member. Such Nominations have ranged in price from £500 to £900. Thus Membership is a kind of insurance that has not previously existed, and the rule is therefore very popular in the House. Next, every new Member must become the holder of Stock Exchange Shares, which cost about £230 each. If he has not been a House Clerk, he must purchase three such shares; if he has, he need only purchase one. Further, the Entrance Fee for all is 500 guineas, and the annual Subscription 40 guineas. Finally, an applicant who has not been a House Clerk for four years must find three sureties of £500 each, who will undertake to pay his debts to that amount should he fail to meet his engagements during the first four years of his membership. If he has been House Clerk for four years he will need only two such sureties of £300 each.

4. MERCANTILE PURSUITS.

It would not be possible, in our limited space, to give an account of the multitudinous careers open to boys who wish to engage in Commerce, but who do not know definitely in what branch; nor would it be possible to tell them what are their prospects therein. What we can say, however, is that the well-educated boy, endowed with energy, determination, and integrity, is morally bound to succeed. In this section we shall offer a few words of general advice to such boys, and shall then take one special branch of Commerce for somewhat fuller treatment.

SCHOOL TRAINING FOR MERCANTILE EMPLOYMENT. Boys at school often do not know definitely what is to be their future work; but they may be quite sure that, whatever it is, their success in it will depend on, or at any rate, be accelerated by, a good all-round education. Merchants say that, whilst the boy of limited, mechanical education, is more useful to them at first, it is the boy of broader culture who ultimately succeeds in rising to the better posts in their houses. Boys must not then neglect those subjects of their school curriculum which seem to them useless for commercial pursuits. Such subjects may be of the greatest value in giving to their minds that breadth and depth which is bound to tell on their future success in life. On the other hand, there are subjects which seem to be important for such pursuits, and over which boys often waste valuable time. Shorthand, for instance, may prove a dangerous accomplishment. By its means it is easy to get a first place; but "Once a Shorthand clerk, always a Shorthand clerk," may prove to be literally true. Type-writing again is of little general use to a boy. Most typists are women, whose wages are smaller than men's. The importance even of book-keeping as a subject of exhaustive school study is much exaggerated. Each firm has its own system which can be gradually learned as required. On the other hand, clear, rapid Writing, accurate Spelling and Arithmetic, and good English Composition too often receive far less attention in our Secondary Schools than they deserve. Much time should be given to Modern Languages; French, German, and (in a less degree) Spanish are likely to prove the most useful. Whichever are taken must be studied, to a very large extent, conversationally. Towards the end of school life it is well to learn the more usual forms of commercial letters in the languages that have been studied; but it is easy to waste valuable time in the vain attempt to become proficient in general foreign correspondence. Boys do not, as a rule, know in which branch of commerce they will engage; when they do, it will be easy for them to learn the technical terms used in that branch, provided they are well acquainted with the ordinary language. The remarks just made apply equally to English Commercial Correspondence, for which the best general school preparation is the writing of the usual exercises in Composition, followed by a little practice in the writing of business letters a few weeks before the close of school life.

CERTIFICATES OF STUDY. It would be well for all young people intended for mercantile life, to have one good Certificate of general proficiency. Any one of the University Matriculation Certificates would do, or any one of the University Local or School Certificates. If one of the Examinations of the College of Preceptors is taken, it should be either the First or Second Class. Perhaps, however, the most useful, especially in London, is the Full Junior (or Senior) Commercial Certificate of the London Chamber of Commerce, as a large number of firms give the preference to lads who hold it. The examinations for these last-named Junior Certificates, formerly much too technical, have improved within the last few years; and boys of fifteen or sixteen can now prepare for them at school without risk of educational injury.

PROSPECTS. On this question we can say but little. The prospects in the mercantile world are indefinitely great and indefinitely small, and depend mostly on the individual. Keep your body fit, your head clear, and your hands clean, and take as the guiding principle of your life: "Whatsoever thy hand findeth to do, do it with thy might," and you will be taking the right course to secure, if not wealth, certainly enjoyment in work. There is one branch of commercial work to which we would call the attention of boys who have the gift of acquiring languages, and that is travelling abroad to represent English firms. Such boys should, if their parents are not sufficiently well-off to send them abroad, look out for the chance of winning "Travelling Scholarships." Many schools have them in their gift, and the London Chamber of Commerce offers some every year to such of its Junior Candidates as do their Modern Language Papers specially well.

THE TEA TRADE.

We will take the tea trade as typical of a large number of mercantile pursuits. Here, as in most other pursuits, the lower grades are overcrowded; but there is plenty of room at the top for those with sufficient *nous* and determination to get there. The three classes of PRINCIPALS who have to do with the importation and distribution of tea are the Merchant, the Broker, and the Dealer; and the young man who means to get his living out of tea, will enter the office of one of these. There is money to be made in any one branch; but the Merchant's office naturally offers the best prospects. The Merchant imports tea, mainly through agents in Calcutta and Colombo. The Dealer, whose business it is to distribute to the Retailers, has no direct dealings with the Merchant: he does all his business with him through

the Broker, who receives from the Merchant 1 per cent. on the value of all sales he effects, and ½ per cent. from the Dealer. Even when, at auction sales, the Dealer himself bids, he does so in most cases, not in his own name, but in that of his Broker. The centre of the English tea trade is Mincing Lane, where are the great commercial Sale Rooms, which, on Sale days, give one some notion of what Pandemonium must be like.

No special preparation is necessary, except such as will secure smartness, accuracy, self-reliance, and good address; but the man with the best all-round education has the best chance, provided he possesses the other necessary qualities. If there could be a school course in "Human Nature and its Management," it would be a good subject to take up, as a knowledge of it is all-important for success. As, however, this is not practicable, the knowledge must be picked up in the world of men.

The Merchant's Office. The best age to enter is from sixteen to seventeen. There will be little or no pay to begin with—perhaps 5s. a week, and no dignified or highly responsible work. The beginner must be prepared to put his hand to anything—washing cups, tending kettles, tying up catalogues and letters, etc., etc.; but whatever he does must be well and cheerfully done. It is strangely enough found by experience that those who do these "menial" offices best and most cheerfully, are the product not of the Elementary but of the Public School. No one will give the learner lessons in his business: he must keep his eyes and ears open, and pick up his knowledge gradually for himself. After a time he will take part in weighing up teas for the Tasters, and later develop skill in tasting and valuing himself; he will attend auction sales, and take prices and be employed in converting them from other currencies—especially rupees, with the mysteries of which he must be thoroughly acquainted. Short of becoming a Manager or Principal, the young man's aim is to be the "curate" or necessary man to the London Manager; he may become the Merchant's Valuer; or, if he proves himself specially capable, he may be sent to the office in Calcutta or Colombo as Taster and Valuer. Then, too, he may have the offer of a post in the Merchant's tea-gardens in India or Ceylon.

The Broker's Office. What we have said about early employment in the Merchant's Office applies to the Broker's. But here energy and address are even more necessary than there. The Broker is the intermediary between the Merchant and the Dealer; and his success depends on acquiring and keeping the confidence of both. He must be skilful in the estimation of the character not only of tea but of his clients. After serving some time in the Office, a young man may become the Broker's Agent or "Runner," (as he is somewhat irreverently called by Dealers), and will receive as remuneration one-third of the profits he brings to his employer.

The Dealer's Office. The early stages are the same as in the Merchant's Office, and require the same determination to do all the work that comes in the way, no matter what it is. There are two goals to make for—either the post of Buyer or that of Seller. Comparatively few Buyers are wanted, but a good Salesman can always command a decent income; and it is to him that apply with special force the remarks we made above on "Knowledge and Management of Human Nature." It is said that a real Salesman is born, not made. This, however, is hardly an axiom; and a lad with tact and determination can work commercial miracles on a small scale. But you must do three things: First, learn your article; next, know human nature; and, finally, blend your knowledge and push it. A Salesman—or Traveller—usually receives as remuneration one-third of the profits he makes.

SOME EMPLOYMENTS FOR WOMEN.

In previous sections of this work we have given particulars of several occupations definitely open to women, such as Medicine, Teaching, and the Civil Service. We propose now to discuss some other occupations in which women may profitably engage. During the last few years the field of women's work has enormously increased, and to give anything like a complete account of it would be to write a large volume. Those interested in the general question should read the Report of the *International Congress of Women* (held in London, 1899), published in five small volumes by Fisher Unwin. Those whose interest is confined to England, will probably get all they want from the *Englishwoman's Year Book* (A. & C. Black, 2s. 6d. net). Educated women who want to work, but do not quite know in what direction to start, should seek the guidance of the *Central Bureau for the Employment of Women* (9 Southampton Street, Holborn, W.C.). There are some occupations in which exceptionally gifted women are engaged, but which it would be foolish for us to recommend our general readers to take up. There are, for instance, lady Stock-brokers, Accountants and Architects; and Miss Petzold, M.A., has lately been appointed Pastor of a Unitarian Chapel at Leicester. Of **Dentistry** we have already spoken (see under *Medicine*)—a lucrative profession, not yet sufficiently taken up by English women, but largely and successfully followed by their American *cousines*. Women's work in Science is steadily growing; and many earn good incomes by lecturing on scientific subjects—especially *Hygiene*. Ladies with a University Degree or its equivalent, who have special knowledge of such subjects as are dealt with in University Extension Lectures, may get remunerative and congenial work as Lecturers in connection with one of the University Extension Societies. But they must be specially qualified as lecturers; and it is not easy for women to obtain sufficient practice to prove their ability to undertake the work.

There are good openings for women as **Manageresses of Laundries**; but the work is hard and the hours long. Many earn £100, and some as much as £250. At least three months' training should be undertaken in a laundry, costing about 10 guineas, and a knowledge of book-keeping should be acquired. A list of suitable laundries may always be seen in the current number of *Women's Employment* (post free 1½d. from the Office, 9 Southampton Street, Holborn), or in the *Englishwoman's Year Book*. **Translating** is very poorly paid—not more than 9s. per 1,000 words—and it is difficult to get work. In consequence of the difficulty of obtaining good domestic servants, it is becoming increasingly usual for educated women to take posts as lady-helps, **Children's nurses**, and cooks. The best known training institution for children's nurses is the Norland Institute, 10 Pembridge Square, W., the Principal of which would supply all necessary information; but particulars of others will be always found in the current number of *Women's Employment*. Nurses trained at such institutions receive from £20 to £70 a year "all found." Miss Florence Poole, lately (1904) appointed Librarian of the Free Library, Boston, Lincs., has shown that ladies are eligible for such posts. The training, however, is difficult to get, and not much more than £100 a year can be looked for. **Indexing** is well paid; but the work is exacting and requires a good all-round education with a deeper knowledge of a few special subjects. The training costs from 20 to 30 guineas, and may be obtained of Miss N, Bailey, 12 College Street, Westminster, or of Miss Petherbridge, 52A Conduit Street, Bond Street, W.

In the following pages of this section we shall deal somewhat more fully with certain occupations very generally followed by educated women.

BOOK-KEEPING. It is very common now for tradesmen and business firms generally to employ women to keep their books; and a girl of seventeen or eighteen, who has certificates of ability to do the work can, without much difficulty, earn from 12s. to 15s. a week at starting. She must be quick at figures, must write well, and should have the Certificate for Book-keeping granted either by the *Society of Arts* (John Street, Adelphi), or by the *London Chamber of Commerce* (Oxford Court, Cannon Street, E.C.). If possible, it should be the Advanced or Senior Certificate.

HORTICULTURE seems to be increasingly taken up by women as a means of livelihood. The essentials for success are physical strength, determination and adequate training. The necessary training can be obtained at many institutions.

(1) At the **Horticultural College**, Swanley, Kent, all the students are women. The course extends over two years; and the fees amount to £80 a year inclusive of all but courses in poultry-keeping and dairy work (3 guineas each). Scholarships tenable at the College and giving, as a rule, free education, board and lodging are offered by the County Councils of London, Berks, Kent, Staffs and Norfolk. The conditions attached to these scholarships can be obtained of the Secretaries to the respective Technical Education Committees:—
London: Victoria Embankment.
Kent: Caxton House, Westminister.
Berks: 30 The Forbury, Reading.
Staffs: County Technical Buildings, Stafford.
Norfolk: Shirehall, Norwich.

(2) At the **Royal Botanic Society of London Practical Gardening School for Ladies** the course lasts three years and the tuition fees for the full course amount to £45. Applications should be addressed to Mrs. J. Bryant Sowerby, Botanic Gardens, Regent's Park. At the *Edinburgh School of Gardening for Women*, Corstorphine (address to the *Principal*), the course lasts two years and the fees amount to £70 a year, inclusive of board.

(3) The **Lady Warwick College**, Studley Castle, Warwickshire, was formerly situated at Reading. The course lasts one or two years, according to the department of agriculture taken up; and the fees for tuition, board, and residence amount to £80 a year. Communications should be addressed to the *Warden*.

It is impossible to say what salaries lady gardeners may in general expect to earn, the occupation being, for women, comparatively new; but present salaries range from £30 to £100 with residence, and the Colleges seem to have no difficulty in placing all their qualified students.

DRESSMAKING offers constant and well-paid employment to women of taste and education who are willing to give the necessary time for a thorough training; and those who have sufficient taste and capital to start a business of their own have every chance of success. The apprenticeship usually lasts two years; and the cost, with board and residence, in good houses, varies from £60 to £100 for the full course. Great caution is necessary in the choice of house. When her apprenticeship is completed, a girl may expect to earn from 10s. to 16s. a week; but a really first-class hand may ultimately earn from £150 to £200 a year. There are posts for skilled dressmakers as teachers of their craft in large girls' schools, with salaries of about £50 with residence, and as visiting teachers in various institutions with liberal pay. But for success they must have all the qualities of a good teacher and disciplinarian.

SICK-NURSING is a field of work peculiarly suited to educated women who have sufficient health to stand the strain, and offers to them very fair remuneration during their term of service, which does not usually extend much beyond the age of fifty. A three years' training must be undertaken in a hospital, which cannot, as a rule, be commenced before twenty-three or after thirty. In children's hospitals, probationers are taken at twenty. Probationers receive from £8 to £15 and uniform; but Sisters receive from £25 to £50, with partial board, and Matrons from £40 to £200 with board, lodging and laundry. After the completion of their training, most nurses take to private nursing, and usually join some Nurses' Institution or Nurses' Co-operation. A good many join the Queen Alexandra's Imperial Military Nursing Service, in which the pay ranges from £37 10s. to £300 a year, with a pension on voluntary retirement at fifty, or compulsory retirement at fifty-five. The Naval Service is not quite so good, and the appointments are comparatively few.

Qualified nurses are eligible for posts under the Home Office as Factory Inspectors, with a commencing salary of £200, and under the Borough and County Councils as Sanitary Inspectors (but see below under *Sanitary Inspecting*) and Health Lecturers. For a fuller account of the training and prospects of Sick Nurses we must refer our readers to the *Englishwoman's Year Book*.

MIDWIFERY. This is a profession not at present overstocked and one which should appeal to "many a woman anxious to take up a work of public usefulness." The rules and instructions for the training of midwives can be obtained from Spottiswoode and Co., 54 Gracechurch Street, E.C.; and full information to those who desire to take up this profession can be obtained from the *Midwives' Institute*, 12 Buckingham Street, Strand. A three months' course of training would cost from £25 to £27; but it is often advisable to extend the course to five or even six months.

BOOK-BINDING in its artistic form is mostly done by women, and the demand for their work is constantly increasing. A twelve-months' training could be obtained for £70. If the worker has originality and power of design she has a certainty of constant and remunerative employment in her own home. The necessary training can be obtained at the establishment of the Misses Marshall and Gedge, 5 Bloomsbury Square, W.C.

SANITARY INSPECTING. Women Sanitary Inspectors were first appointed in the Provinces twelve years ago; and since then their numbers have steadily increased. Now most of the Metropolitan Boroughs employ them; and there are over fifty working in the Provinces. As the pay is good (from £80 to £185 a year) the competition is becoming keener every year. The Inspector's duties include the inspection of work-rooms in which women and girls are employed and the writing of reports on their cleanliness, ventilation, sanitary accommodation, etc. Candidates for appointments must, in London, be between twenty-one and forty, and, in the Provinces, between twenty-one and thirty-five. It is very seldom, however, that an appointment is given to any woman under twenty-five. The necessary training for a London appointment can be obtained at the following institutions in London:—

King's College, Strand; National Health Society, 53 Berners Street, W.; Sanitary Institute, Margaret Street, W.; Bedford College, York Place, Baker Street, W.; and at the following in the Provinces:—Bradford, Technical College; Liverpool, University College; Cardiff, University College; Sheffield, University College; Edinburgh, Heriot Watt College; Newcastle-on-Tyne, Durham College of Science. The cost of training would be from 12 to 15 guineas.

Having obtained the *Certificate of Instruction* granted by one of these institutions, the next step is to win the Certificate of the Sanitary Inspectors' Examination Board. There are two examinations for this: the Preliminary and the Technical. They are both of them written and oral, and the latter is practical too. Candidates must be over twenty-one years of age. Further particulars can be obtained from the Hon. Secretary to the Board, 1 Adelaide Buildings, London Bridge, E.C.

In the Provinces, salaries are not so good as in London, and only occasionally exceed £100. The same certificate as for London is accepted; but most candidates present that of the Sanitary Institute (Margaret Street, W.). Particulars relating to the details of the work may be found in a pamphlet entitled *Women as Sanitary Inspectors*, post free 1d., from P. S. King & Son, 2 and 4 Great Smith Street, Westminster.

HEALTH VISITORS are, like Sanitary Inspectors, appointed by the Local Sanitary Authority, and their work is similar, though the educational side of it, such as trying to impress on poor women the conditions of good health, is more prominent in their case. Salaries range from £50 to £100.

SECRETARYSHIPS AND CLERKSHIPS. Lady secretaries and clerks are now very commonly employed by many business houses and limited companies, but much more frequently by educational and philanthropic institutions. A very usual salary for a lady secretary is from £80 to £150 a year, and it may, in exceptional cases, rise to as much as £250. The clerk may expect to start at 15s. a week, and rise to from £100 to £150 a year. Type-writing, shorthand and some knowledge of book-keeping are mostly essential; but good secretaryships are obtainable only by such as have received a good general education, and are of good social standing. The power to speak in public is sometimes a necessary qualification. The training in the technical branches of the work can be obtained for a pound or two in the Technical Institutes to be found in all our large towns, or for from £10 to £15 in private institutions; and practice in public speaking can be obtained in ladies' debating societies. Familiarity with the conduct of

committee meetings should be obtained by apprenticeship to a secretary, which may cost about £20, or by engagement as an assistant secretary; or a course may be taken at the Women's Institute, 92 Victoria Street, S.W.

JOURNALISM. There is an increasing demand for competent women on the staff of the various newspapers. Now every journal has articles on subjects of special feminine interest, such as weddings in high life, the coming fashions in dress, the sayings and doings of the upper ten thousand, and the like. The successful woman journalist must have a certain acquaintance with the manners and usages of good society, if not with people of good social standing, quickness of observation, a facile graphic pen, and considerable tact and aplomb in interviewing celebrities. Some successful journalists have begun as clerks in a newspaper office, others by writing articles on subjects of general interest, and others have been trained for the work. [There is a School of Journalism at 8 and 9 Johnson's Court, Fleet Street, E.C.]

TRACING DRAWINGS. Many young women have recently been taken on at the Elswick works of Armstrong, Whitworth & Co. At the Annual Meeting, 1906, one of the Directors said, in regard to the classes for lady tracers, he could not help remarking that, so long as women would remember that they were ladies, there was no possible harm in their going into the workshops. There were many things their delicate fingers could do, much better than the coarser fingers of men. In their drawing offices the tracers were of the greatest value to them. Their neatness was phenomenal and they got through their work splendidly. Tracing in the drawing offices offered a nice opening to many young ladies. They were now taking them into their shops at Elswick. Some of them were under his charge. And he tried to make it a point that they should always appear neatly and nicely dressed, for he was persuaded that so long as young ladies paid attention to their appearance they would always command respect from the other sex.

PHYSICAL TRAINING offers a wide and remunerative field of labour to educated women of good physique. The training should extend over at least two years, and costs for that time from £50 to £100, exclusive of the cost of living. The best ages for training are from seventeen to twenty-five. Salaries vary: the average for a residential post in a school is from £40 to £50; but a really clever teacher has little difficulty in making from £150 to £200 a year; whilst those with sufficient capital to set up a gymnasium, can earn from £250 to £350 a year. For a list of training institutions consult the Englishwoman's Year Book.

DISPENSING AND PHARMACY. Women are often employed as dispensers in hospitals and by medical men; and there is a growing tendency to employ them as assistants in chemists' shops. Properly qualified women earn from £60 to £100. Only those who hold the Certificate of the Pharmaceutical Society are eligible for the better posts; and the cost of training must be put down at about £200 in all. Candidates for registration as students or apprentices of the Society must have passed some such examination as the Oxford or Cambridge Senior or the London Matriculation, and must have taken Latin, French (or German), Arithmetic, Algebra, and Euclid. The period of apprenticeship in a hospital or to a properly qualified chemist or doctor lasts three years, and the premium varies from £15 to £40 a year. At the end of this time comes the Minor Examination of the Society, success in which qualifies the candidate to act as chemist or druggist. The Secretary to the Pharmaceutical Society (17 Bloomsbury Square, W.C.) would furnish the names of lady chemists who take pupils, as well as a list of examining bodies whose certificates are accepted for registration.

N.B.—Further particulars of most of the above openings for women, as of others, for a description of which we have not sufficient space, can be found in the works already mentioned and in *Open Doors for Women Workers*, post free 1s., from the office of *Women's Employment*. Journalism as an opening for women is discussed in *Press Work for Women*, 1s. net, Upcott Gill.

A SOCIAL GUIDE.

HINTS ON ETIQUETTE.

The word "etiquette" simply means "ticket," and is the "label" attached by an unwritten convention to the best observances in the social life of well-bred people. The principles upon which it rests are clear and few in number. They may be enumerated as follows:—

(1) Chivalry and delicate respect towards woman.

(2) Repugnance towards allowing or taking a liberty.

(3) Opposition to unwelcome obtrusion on the one hand, and to ungenial reception of friendly advances by equals in the social grade, on the other.

(4) Hatred of fussiness and promotion of easy and natural demeanour.

(5) Demand for reciprocity in favours and civilities conferred.

(6) Recognition of the difference between civility and servility, between kindness and condescension.

(7) (And this runs through the whole code of English etiquette) recognition of the fact that, at all events in this country, society is graduated.

From principles which never change, let us turn to the rules which guide most of the practical contacts of social life, but vary with the fleeting changes of fashion.

I. INTRODUCTIONS.

Be slow in giving "letters of introduction." By giving them you tax both the courtesy and hospitality of your friend. If the person to whom the introduction is addressed is in a superior station, it is only right to ask his permission before sending the letter. It sometimes happens that from early intimacy you yourself are willing to overlook many social short-comings in an old acquaintance, but that does not justify you in handing on to another one who has no right to expect indulgence from the friend of a friend. The letter of introduction should not be closed and should be left with a card without asking to see the hostess, who ought, if she is well disposed, to issue an invitation to dinner or an "At Home."

But apart from written introductions, the rule is good for general observance always to consult the wishes of both parties before the introduction is made. The following rules should be strictly observed:—

(1) The lower in rank is always introduced ("presented" is a more courteous word) to the higher.

(2) A gentleman is always "presented" to a lady, never the reverse, and this without regard to difference of rank. (Of course at a ball, it would be futile to introduce a gentleman to a lady unless he was able and willing to be her partner in a dance.)

(3) As regards introductions between gentlemen, it is difficult to lay down any rule beyond this that no one should undertake them unless he is sure that the introduction will be agreeable to both parties.

(4) An unmarried lady is always "presented" to a married lady unless the unmarried is superior in rank. The ladies so introduced simply bow and make some passing remark. There is no need to shake hands. A lady's hand-shake is an act of grace, not of obligation, to a gentleman; he therefore waits after introduction for her offered hand.

(5) The hostess shakes hands with all guests whether present by her own invitation, or brought by a personal friend.

(6) At a dinner-party it is customary for the hostess to present the gentleman to the lady whom he is to "take down."

(7) After dinner the hostess uses her own discretion as to what ladies she will introduce to each other in the drawing-room.

(8) Gentlemen continuing at the table over "the walnuts and the wine" talk to each other without introduction.

(9) In afternoon calls, the hostess uses her own judgment as to what introductions should be made, and such introductions do not necessarily involve more than a bowing acquaintance afterwards. (Recent authorities say that the hostess should introduce all her guests to each other).

(10) In ball-rooms the real responsibility for introductions rests much more with chaperons than with stewards. The latter can only interpret according to their judgment the advisability of introductions. If an introduction is sought by a gentleman he is bound either to dance or at all events to show the usual civilities of the tea-room or supper-room to the lady to whom he sought to be introduced.

II. LEAVING CARDS.

1. Ladies govern all rules respecting the leaving of cards, which is an index to their choice of acquaintances, or their avowal that civility has been shown and is expected in return. A lady's card should be always plain in type, thin, unglazed, and not more than 3½ inches in depth. The address should be down in the left hand corner and the name in the centre. Ladies junior by marriage in a family, print their husband's Christian name, but when they become the senior or sole survivors of the family, they change "Mrs. John Smith" into "Mrs. Smith." Young ladies print their names under their mother's name, if she is alive; if not under their father's upon a card shaped like a lady's card. The rules for leaving cards are these:—

(1) A wife leaves cards of her husband along with her own, and a daughter her father's, but a husband can never leave his wife's cards nor a father his daughter's.

(2) In large cities arrivers intimate their arrival by leaving cards upon friends who otherwise might not know of it.

(3) Ladies leave visiting cards *personally* when walking, not by servants or through the post office. But "At Home" cards, stating dates of reception, are now sent through the post.

(4) A married lady calling alone and not finding the mistress at home leaves three cards,—her own and two of her husband's. Her own is for the mistress, and her husband's for both master and mistress.

(5) "Is Mrs. —— at home?" is asked at the door. If she is, the lady caller does not require to use her own card, but at the end of the visit she silently leaves her husband's two cards on the hall table, if he is not calling with her. If he accompanies her and both the master and mistress are at home no cards are left at all. If one be "not at home." a card is left by the husband upon the absentee. At a first visit it would be convenient, in ordinary cases, for a card to be left with the address.

(6) Turning down the right hand corner of a card implies that the daughters of the house visited are included in the call.

(7) In leaving cards upon a friend who is the guest of one with whom you are quite unacquainted, there is no need to leave a card upon the hostess.

(8) Except when the persons called upon are living in hotels it is "bad form" for a visitor to write their names upon the card left.

2. A person not "to the manner born" is sometimes uncertain whether a call should be made or only a card be left. As a rule calls must be answered by calls and cards by cards within a period of not more than ten days. A

superior may return a call for a card, which is to be taken as a compliment, but if she repay a call with a card, the hint is obvious that she does not want to "improve" the acquaintance. The following rules, it is hoped, will be found useful:—

(1) After the following entertainments cards should be left by all invited (whether present or not), within a week of the entertainment: balls, receptions, private theatricals, amateur concerts, and dinners. Only after dinner-parties need you ask if the hostess is "at home." In the other cases leaving cards is sufficient.

(2) Residents in country districts call upon new-comers, not as in India where the new-comer calls upon the residents. The rule of "call for call," and "card for card" applies here as in (1), and its breach has the same significance.

(3) Cards to "inquire" after friends who are ill are left in person, (more recently after child-birth, by servants), and bear simply the words "To inquire after Mrs. Blank." In the stage of convalescence there comes in return an ordinary visiting card, with the words written above the name "With thanks for kind enquiries," which indicates that the hostess can now see company.

(4) "P. P. C." (*Pour prendre congé*—in order to take leave) cards should be left in person or by servants (not by post) within ten days of departure if the absence is to last two or three months. (This rule has been lately relaxed as regards postal delivery).

(5) A lady making a purely business call upon a lady or gentleman gives her card to the servant to be taken to his master or mistress, *but only on these occasions.*

3. Gentlemen have certain rules of their own to observe in regard to making calls and leaving cards. A gentleman's card should be thin, unglazed, the inscription in plain English copper-plate with no flourishes after the manner of the Continent and America. Titles of persons of rank and of ecclesiastical dignitaries are never preceded by the definite article nor by adjectives such as "Most Noble," "Right Honourable," "Right Reverend," "Venerable;" nor do men with degrees or scientific or legal distinctions attach them to their names on their visiting cards. Thus correct use gives simply "Duke of Newcastle," "Bishop of London," "Archdeacon of Cleveland;" "Mr. Arthur Balfour," "Reverend Dr. Cooper." An "Honourable" drops the word on his card and is plain "Mr. Gordon." An officer in the navy adds R.N., or R.I.M. (Royal Indian Marine), after his name but no King's Counsel, Member of Parliament or Doctors of whatever faculty add K.C., M.P., LL.D., D.D. to their card-name. Baronets and Knights until recently were simply "Sir Charles Forbes," "Sir William Mac Gregor," without Bart. or Kt., but since the Lord Chamberlain's instruction that Baronets attending Court should have their rank of Baronet on their cards, it is usual for them to indicate their rank on their printed visiting-cards. Officers in the army have the name of their club down in the left-hand corner and the name of their regiment down in the right-hand corner.

(1) In calling upon married people a gentleman leaves two cards, one for the mistress and the other for the master.

(2) A gentleman should not turn down the corner of his card (see Rule 6 in rules for Ladies Card-leaving.) His call is upon the host and hostess, and not upon the young ladies of the house.

(3) Calls are not made nor cards left by a gentleman upon new acquaintances, however pleasant they may have been to him at a dinner or ball in another person's house, without a clear intimation from the lady that a call at her house would be agreeable to her.

(4) The same rules apply to gentlemen as to ladies with regard to leaving cards after entertainments. See Rule (1) near top of page.

(5) Bachelors call upon bachelors after receiving hospitality, unless they are upon such intimate footing as to dispense with ceremony.

N.B.—Wedding Cards and Memorial Cards are no longer fashionable.

III. PAYING CALLS.

Certain calls are obligatory, e.g., A formal call by you and a return-call by the person called upon is an indispensable preliminary to your inviting him or her to your house. Calls are of different categories, principally these: calls of congratulation, calls of condolence, and calls of courtesy.

1. A call of *congratulation* is made upon a bride shortly after entering her new home. This is something more than a ceremonial civility and implies that you are prepared to continue her in, or admit her into, the circle of your friends. You have, of course, already called upon her parents when the engagement was announced and after the marriage has taken place. Then again, on the birth of a child you call to "enquire after mother and child," leaving cards with your sympathetic enquiries.

2. *Condolence* is first expressed by a letter of sympathy bearing a narrow black rim in case of a death. You do not need to make your personal call until a card has come from the mourners "returning thanks for kind sympathy."

3. We now come to calls of *courtesy* or general calls. These are paid between the hours of 3 and 6 p.m., to allow the luncheon to be well over and preparation for dinner to be easily arranged. A few hints may here be serviceable:

(1) Visitors should never prolong their call beyond a quarter of an hour or twenty minutes if they wish to avoid the charge of having inflicted "a visitation."

(2) The hostess rises to receive her visitors and advances a few paces, but the other ladies present remain seated. (Gentlemen rise at each new arrival.) The hostess places each new-comer as near as possible to her own chair, and introduces them to those in their immediate neighbourhood to promote conversation. When they rise as about to leave she rings the bell, and the host, if he be present, hands the departing lady down stairs to her carriage, and bids her "good bye," (not "good morning.") at her carriage door.

(3) Formerly a gentleman, when paying a formal call, took his hat and stick into the drawing-room, but now it is more usual to leave them in the hall. When gentlemen wear gloves, they can take them off or keep them on as they please.

(4) As regards refreshments nothing more at ordinary "At Homes" is required than tea, (which the hostess pours out herself), plain bread and butter, cakes, scones, and thinly cut sandwiches of paté de foie gras, &c., &c. On "big days" refreshments will be served in the dining-room, when claret cup, coffee, &c., may be given.

IV. VISITING.

1. In paying visits to a country house your task is now easier than of yore in deciding the length of your visit. Your hostess generally specifies the time for which the invitation is intended, and this is no proof of scant hospitality. Necessarily the number of bedrooms is limited, and if a succession of visitors is expected your room will be required for the next visitor. Make your arrangements, therefore, rigidly with this in view. Consult Bradshaw beforehand, as to the time of your train for departure and do not appear to be hanging on in hopes of an extended invitation. Young ladies, especially, are prone to jump at some such civil phrase as "Don't you think you could spare us a few days longer?" which often is a *façon de parler* and nothing more. Of course there may be cases when there is no pressure for accommodation, and where, perhaps, the solitude of your hostess would make an intimate lady-friend's extension of visit a real kindness. But this must be clear beyond dispute before you agree to go beyond the letter of your invitation. There is always a risk of outstaying your welcome. Sad indeed would it be if it happened to you as to the visitor of whom the old Scotch lady said to the cook in his hearing: "Jane, bile an extra egg for Mr. Brown's breakfast the morn, for he is gaun to traivel." Such a violent hint as this did he require before packing up to be off!

2. During your stay you will generally find the morning hours free. Breakfast and luncheon are "moveable feasts," and sometimes prolonged ones. It is, however, always well to ascertain casually from the hostess before saying "good night," whether she has any plans in which she wishes you to share next day. There may be a drive to a neighbouring ruin, or a pic-nic, &c., in which some or all the guests are wished to take part, and it would be unmannerly in you to absent yourself for some private pleasure. If there be no "plans" for the morning-hours, you can breakfast and take luncheon at any time during which the meals are running (9–10; 1.30–2.30) helping yourself from the sideboard and sitting down in any vacant

place. If you are a fisherman or sketcher, you can always get sandwiches from the kitchen to obviate the necessity of returning for luncheon.

3. On no account, however, must you fail to appear in the drawing-room in proper attire at the hour prescribed preparatory to going down to dinner. Some people are culpably lax in this elementary courtesy with the result of infuriating the cook, unnerving the hostess and angering all their hungry fellow-guests.

4. Try to make your host and hostess feel that you are enjoying yourself. "Nil admirari" is a wretched tone of mind to exhibit. Without violating truth in the slightest degree, you can always fix upon something in the house, grounds or neighbourhood which has given you pleasure. And to hear this moderately expressed gives pleasure to your entertainers.

5. Spare the servants unnecessary trouble by not ringing your bell upon every slight occasion, and reward them suitably upon your departure. But here comes a painful question: "What shall I give in the way of "tips" or gratuities ("vails" was the old word) to the servants in my host's house, and to which of them?" Well, we are not all millionaires nor the guests of Dukes. It would be a real convenience if there could be, as in Holland, a well recognised tariff by which this melancholy business could be regulated for ordinary mortals. Of course, something depends upon the quality of your host and the length of your visit, but to judge by the countenance of servants, a short visit does not imply a material reduction in the gratuity expected. A week or a "week-end" is pretty much the same. Only general rules can be laid down.

(1) From young girls little is expected.

(2) From sportsmen gold is *de rigeur*; any default will be visited next season by the gamekeeper's relegation of you to an impossible place in the *battue*.

(3) Fees to butlers range from five shillings to a sovereign. The servant who "valets" you always expects a special "tip." Half-a-crown is the usual gratuity given to a coachman, and even a young lady "remembers" the Jehu who drives her to and from the station. She is generally exempt however from giving tips to other men-servants.

(4) If no men servants are kept in the house, the parlour maid first and the housemaid second expect a gratuity. This may be five shillings in the first instance and half-a-crown in the second.

N.B.—Many men escape the difficulty of partition by giving a pound or two to the head servant and asking him to distribute it among the claimants. He is sure not to forget himself in dividing the spoil.

V. WEDDINGS.

There is great improvement within our own recollection as to the conduct of weddings, and this improvement is not limited to "society" weddings. The general raising of church tone since 1833 has affected the ceremonial of matrimony as of everything else.

1. The earliest to arrive is the bridegroom, anxious, we suppose, to prove that he is no "laggard in love." With him comes the "best man," and they stand together below the chancel steps, or in some churches kneel at a "prie Dieu," until shortly before the bride's arrival. The bridesmaids assemble in the church porch, or inside the church near the west door, in two rows facing each other, waiting for the bride's arrival and ready to "fall in" behind her. If the wedding is a choral one, the choir and clergy march in silence to the west end, and are ready at a signal agreed upon with the organist to strike up the processional hymn. The guests have meanwhile been shown to their seats by "gentlemen-ushers" who ascertain from each of them whether they are friends of the bride or bridegroom, and assign their place accordingly, so that they are sure to find themselves among acquaintances.

2. The bride enters the church leaning on the right arm of her father or guardian, and follows the choir to the chancel step, the bridesmaids, two and two, following her. The bridegroom takes his place at her right side with the "best man" standing behind him. He neither embraces nor shakes hands with the bride but simply bows to her. The father stands at the bride's left hand. Her mother sits in the front seat with the nearest relatives.

3. And now the service begins. At the question "Who giveth this woman, &c.," the father bows to the clergyman, and stepping in front of the couple, joins their right hands together, and then goes back to his place. Now is the time for the gloves of the bride to be handed with her bouquet to the care of the chief bridesmaid, who holds them to the end of the service. The bridegroom should unglove as soon as the service begins. It always creates an awkward pause if the bridegroom has to hunt in his pockets for the ring. He should have it ready when required by the priest to place it upon the book. After the first blessing, the bride and bridegroom alone follow the priest to the altar, the others remaining at their stations, not chatting together, but reverently joining in the service.

4. When all is finished, the bride, leaning on her husband's left arm, and the principal relations and friends, go to the vestry to sign the book and give congratulations. The fee to the clergyman should never be given uncovered by an envelope. The correct mode is silently to place it on the vestry table with an inscription on the envelope "Rev. Dr. Smith, with thanks and compliments." Its amount varies, but in fashionable weddings is always largely in excess of "legal fees." On slowly going down the church, the bride takes her husband's left arm, each recognising their friends with a smile or nod, the bridesmaids follow two and two, and then the bride's mother. The "best man" waits till the last to see everybody into their carriages. The Bishop of London has lately condemned the custom of throwing rice or confetti in the church porch or within the railings at the west end. Sensible people will approve the bishop's action and govern themselves accordingly.

VI. RECEPTION AFTER THE WEDDING.

The old-fashioned wedding-breakfast with its Dickens' reminiscences is now a thing of the past. The abolition of the compulsory ante-noon celebration of holy matrimony introduced a new era in marriage festivities.

1. Invitations are issued upon an "At Home" card or silver-edged note paper, about 15 days before the ceremony, in the following formula: "Mr. and Mrs. Jones request the pleasure of Mr. and Mrs. Smith's Company at the marriage of their daughter Ethel with Mr. Henry Brown, at 2 p.m., on June 10th, at St. Barnabas', Pimlico, and afterwards at No. 3 Eaton Square. R.S.V.P." Acceptants send a present to the bride accompanied by a visiting card upon which is written, "With Good Wishes," or some such kind words. These presents are all displayed with card attached in one room with plenty of circulating space.

2. The refreshments consist of tea and coffee, sandwiches of all kinds, rolled bread and butter, cakes, aspic jellies, chicken and game. Champagne is always provided, and is handed round by the waiters. The buffet is placed at the top of the room denuded of furniture, or along one side with servants behind to pour out. The wedding-cake stands in the centre of the buffet surrounded by white flowers upon a white satin or *crepe* table-spread embroidered with silver.

3. The guests are received with a handshake by the hostess, who stands close to the drawing-room door. They say their words of congratulation and then seek out the bride and bridegroom by the fire-place, utter kind words and go to inspect the presents. All then adjourn to the tea-room in the following order: Bride and bridegroom, bride's father with bridegroom's mother, bridegroom's father with bride's mother, best man with chief bridesmaid, the remainder of the bridal party. Then follow "all and sundry" without prescribed order of precedency.

4. With glass of champagne in hand, the officiating clergyman, or some old friend of the family, briefly proposes the health of the happy couple, the bridegroom replies and the bride cuts the cake, a small portion of which is handed by the butler to each guest, and no one must decline receiving it. The bride then retires to change her dress and leaves the house for her marriage tour amid showers of rice.

VII. INVITATION TO DINNER.

1. The mode of reply to an invitation to dinner is governed by the mode of invitation. To a formal invitation the reply will take this form: "Mr. and Mrs. Burton accept with pleasure the kind invitation of Mr. and Mrs. Andrews to dinner on——of——at 8 p.m." (The day and hour are repeated in the acceptance to prevent mistake). Whatever the style of invitation the answer should be prompt, and the subsequent discovery of inability to be present (never except for the gravest reasons, e.g., family affliction, illness, or a royal "command") should be intimated at once. If one of an invited couple is obliged to withdraw, it should be left to the hostess to say whether she desires the presence of the other. As the hostess never asks anyone but a friend to fill up a blank ("the young man from Whiteley's" excepted), it is best for the stop-gap good-naturedly to accept, but the hostess ought verbally to acknowledge the compliance as a favour.

2. The time of arrival should not be more than 5, or at the most 10 minutes, after the hour named. Husband and wife do not now enter the drawing-room arm-in-arm, but the lady goes a little in front, and both make their way at once to shake hands with the hostess and then with the host, without looking right or left to salute other friends. This imperative duty having been performed, the lady visitor takes a seat, but the gentleman remains standing and converses with any one he knows. The only introductions made are those between the lady and gentleman who will go down to dinner together. The gentleman bows to his partner, but does not shake hands, and makes small talk until the announcement of dinner. When the move to the dining-room is made, the gentlemen offer the ladies the right arm (because the lady will sit on their right side at table), the order of precedency being indicated by a nod from the hostess.

3. The following remarks refer to the usual observances at table:—(1) The guests unfold their serviettes and place them across the knee, not like foreigners who fix them inside their collar. The little nosegay inside the serviette makes a buttonhole. (2) The menu card is glanced at, not deeply studied, for conversation, however light, must flow on uninterruptedly. The gentleman's first duty is to talk to the lady he "took down," but if during dinner she is briefly conversing with the gentleman on her right, he may talk without introduction to the lady on his left. (3) Should the carving be done in the old English fashion at the table, an opportunity is presented for one of the gentlemen who flank the hostess to offer his services. This should never be done by an inefficient carver, nor should a carver ever stand up to perform his task, however difficult. Bad carving tortures the heart of the smiling hostess and leaves the dish unsightly. (4) Three or four wine glasses stand at the right hand of each guest with a square of bread (intended to be broken, not cut) on the left. The small tumbler or the wide-cupped glass is for champagne, the ruby-coloured glass is for hock, the smallest for sherry and the green one for claret. Sherry is offered with soup, champagne with the first entrée, and then throughout the dinner. Hock or chablis is offered with fish, but there is no need to partake of all or any of these. Some people limit themselves to claret or whiskey and soda, and others to plain water. Syphons of Apollinaris, soda water, lemonade, &c., stand on the side-board, and liqueurs (Chartreuse, brandy, Kümmel, benedictine, &c.) are offered after ice-pudding.

4. The following hints are offered to the very few who may need them:—

(1) Knives and forks are arranged in a fixed order. The table spoon is for soup, which must be eaten (need we say noiselessly?) from the side near the point. The fish knife and fork are placed outside the others ready for eating the fish which follows the soup.

(2) In helping yourself to dishes handed round, act quickly, and have regard to the wants of others, neither taking a miscroscopic portion nor a huge one. Never take two helpings of soup or fish even if asked, nor a large quantity of sauce. If you want a second supply of the joint, leave your knife and fork upon plate when sending it to the carver.

(3) Aim at noiselessness both as regards eating, drinking, breathing, and every other possible source of disagreeable sound. Do not speak or drink with food in your mouth. Keep the moustache free from traces of soup, and use only the serviette in wiping the mouth.

(4) Eat curry with spoon and fork; sweet breads and vegetable entrées with fork alone, holding it in the right hand; oysters served on the shell with a fish knife and fork; fish rissoles and fish hors-d'œuvres with fish fork only; salads with knife and fork.

(5) Never use knife or spoon if a fork will do. With ice pudding or ices use a small spoon.

VIII. FUNERALS AND MOURNING.

1. After a death write to all relations and intimate friends on a black-edged sheet of good note-paper a simple notice of the event. At the same time a communication should be sent to certain daily newspapers and to such weekly journals (e.g., "The Guardian" or "The Army and Navy Gazette") as circulate among friends of the deceased. In the case of a returned colonial the words are often added: "Australian, Canadian, or New Zealand papers please copy."

2. Invitations to the funeral follow in a day or two: "The family of the late . . . . request the honour of your presence at his funeral on——at 3 p.m.," &c. (signed by the male head of the house).

3. The dress of the chief mourners is, for ladies, woollen materials trimmed with crape; and, for gentlemen, black suits and ties, black gloves, and a plain black hat-band.

4. Friends send their cards after the funeral "with kind enquiries," and in due time a printed card in return comes "with thanks for kind enquiries."

5. Widows do not now universally wear "the widow's cap" which used to be obligatory for a twelvemonth, but for this period they wear their "weeds" generally as follows: crape dress, large black silk cloak, crape bonnet and veil, plain muslin collar and broad cuffs.

6. "Deep mourning" is considered to be woollen fabrics and crape, the crape covering the dress completely for the first year. Even diamonds may now be worn with deep mourning. "Second mourning" is dull black silk or cashmere, with or without crape. "Half mourning" is black and white. "Complimentary mourning" black without crape.

7. Time of wearing mourning is as follows:—

(1) For a *wife*, the widower should wear mourning for two years.

(2) For a *husband*, the widow should wear deep mourning for the first year, the crape being gradually reduced during the next nine months, and plain black for the remaining three.

(3) For a *parent*, twelve months, plain black being worn all the time.

(4) For a *child*, the same as for a parent.

(5) For a *brother*, or *sister*, six months—half mourning during the last month.

(6) For a *grand-parent* nine months.

(7) For an *uncle*, *aunt*, *nephew*, or *niece*, three months.

(8) For a first *cousin*, six weeks.

N.B. A wife "mourns" for her husband's relations as for her own, the same rule applying to the husband.

Mourning rings and memorial cards are out of fashion.

HINTS ON ENTERTAINING.

I. JUVENILE PARTIES.

1. The best time for these is winter, when the roaring fire inside and the Christmas evergreens still decking the apartments, with the mistletoe in its time-honoured central position, seem to usher the young band into a new world after tramping through the snow or having their blood sent pulsing through their veins by the sharp air outside. The hostess knows that not one *blasé* guest will be found to-night; no mock thanks for all her trouble and pains; but genuine enjoyment on the part of both seniors and juniors. The invitations on "At Home" cards should be

written by the children of the house, and the "play-name" ("Billy" and "Molly"), without surname, is sufficient among intimates. "Master," "Miss" are used for new or distant acquaintances. The receivers are the children themselves, the mother standing in the background.

2. When all are assembled and have taken off their "things," the impatient guests, led by the eldest boy of the house and the little girl whom he chooses for his partner, form a procession to the tea-room, where the table should be radiant with bright colours, preferably pink for the shades, candles and sweetmeats. Homely things (notwithstanding the doctor's warnings) must for this occasion be eschewed, and all that can tempt the eye as well as the appetite be exhibited in profusion. Care must be taken that there is enough for everybody, for children love "a good feed." The children's tea-table is presided over by the eldest daughter of the house, or the governess or some lady who acts as lieutenant for the mistress. The "up-growns" are simultaneously at tea in another room served by servants from behind the buffet, the gentlemen waiting on the ladies. The hostess meanwhile is "here, there, and everywhere," but her prime duty is to the children.

3. Games should be under the charge of a sprightly young lady, who knows a number of games, shows how they ought to be played, and peremptorily insists on the order in which they shall be played. A whimsical youth who interferes with her directions must be ignored. No time should be wasted between one game and another. "Musical Chairs," "Brother I'm Bobbed" (especially with boys), "General Post," "Blind Man's Buff," "Puss in the Corner," are always favourites. For a simple dance-game nothing beats "The Muffin Man." Movement is the grand secret of entertaining children. The "Christmas Tree" is a somewhat costly business if the children are above the ordinary class. Most children love dancing, especially a polka, an easy waltz, and "Sir Roger de Coverley." In Scotland there are few, however young, who cannot acquit themselves creditably in the "Highland Schottische" or a reel.

4. Before leaving, lemonade or claret cup, sandwiches and cakes are served.

II. GARDEN PARTIES.

1. Invitations are sent on a large square "At Home" card in the name of the hostess about three weeks before the appointed day. After the name of the guest, add "and party," and in one corner write "tennis," "archery," &c. The hours (3.30–7) should also be specified. No thought of difference of age need restrict your freedom of invitation; for old, middle-aged, and even children enjoy the bright afternoon on the lawn in August or September, which are the favourite months for garden parties. "Weather permitting" is not often written on the card, and the guests are expected to come notwithstanding a few showers, and unless there is a "regular down-pour" of rain. Of course the reception-rooms inside the house will in the latter case take the place of the lawn for the gathering.

2. The lawn should be closely mown and present the trim appearance which is never seen out of our own country. A few tents with bright coverings, or flag decorations are put up here and there on the grass, labelled with the purpose to which they are devoted: "Fortune telling," "palmistry," "refreshments," &c. If there is a band, a "stand" will be required, placed in the centre of the lawn; if pierrots, a stage with dressing-room attached. Garden chairs, settees, deck-chairs and the like are placed up and down in abundance, and rugs for the feet of those who are sensitive to damp. Shawls should always be easily available. A "Punch and Judy" show is sure to be popular with children.

3. The hostess stands on the upper part of the lawn or at any point where she can readily be seen, so that the guests may at once come and shake hands, and introduce the friends they have brought as "party" before they mingle with the crowd and seek out their acquaintances. The hostess does not at a garden-party introduce people, but leaves them to find their own friends.

4. As regards refreshments, tea and coffee are served on arrival either in the marquee or in the house, and are afterwards replaced by ices, champagne-cup, claret-cup, strawberries and cream, grapes, peaches, melons, &c. Effervescing drinks are sure to be in demand in hot weather. The hostess does not look after your bodily wants, but expects you to go to the buffet and ask from the servants whatever you require. Gentlemen wait upon ladies whom they know.

5. If a military band is to play, the host will take care to ask permission of the colonel before negotiating with the band-master, the charge for the performance, the method and cost of conveyance, the refreshments expected, &c. The host will also arrange for the conveyance of reporters if their presence is desired, and see that they are well regaled. "Gentlemen of the press" have much in their power, and can easily glorify your "function" or damn it with faint praise.

7. Costume will depend upon the nature of the amusements; but ladies should wear bright colours, and hats and frocks, in harmony with the season; gentlemen wear morning dress, but the silk hat is not *de rigueur*, now that straw hats are so tastefully and "dressily" made. Perhaps in town and the home district it is well to adhere to the silk hat. It is not necessary to say adieu if the hostess is not at hand, nor to call after the party, but some people leave a card as they pass out, both as a record of their presence and a courteous acknowledgment of the pleasure they have received.

III. DINNER PARTIES.

HINTS TO THE HOSTESS.

1. A dinner given to guests should be more marked by elegance than profusion. "Non ampliter sed munditer convivium; plus salis quam sumptus" (Corn. Nep.)="An entertainment should be refined and finished rather than a prodigious spread; there should be more of exquisite taste than vulgar display of expense." Beauty and comfort should enter into all the appointments of a high-class dinner; table decorations, lustrous, i.e., well-cleaned silver, brilliant crystal, fancy venetian glasses, spotless napery, variegated lamp-shades, well-regulated temperature according to the season, and every detail which pleases the eye and gives the sense of comfort as soon as the dining-room is entered. A country farmer thinks of what he will eat and drink, a lady and gentleman look upon a dinner as an æsthetic feast. The progress of civilisation is by nothing more marked than by the suppressing or subduing of mere animal gratification to a love of the fine arts, and of these, refined dinner-giving is surely one.

2. First comes the question of table decorations. A white cloth of the finest linen damask is spread with great exactitude on the table. Down each side and along each end of a carved oak table may be placed long and short slips, which are drawn off at the conclusion of dinner, and before dessert. A very handsome table decoration placed in the centre is an Indian or Japanese silver cloth. Some ladies affect a centre plateau of plate glass, placed with small water-fowl on its surface supporting bouquets of flowers, and round the edges are bright-coloured flowers or green ferns placed in long glass troughs. Less pretentious, though not so effective, is an oval board, covered with crimson plush, on which are grouped clusters of small glass or china vases with flowers. The abolition of the old *epergne* and its replacement by low floral decorations, permit of all the guests seeing each other and of the host and hostess surveying the whole proceedings. The flowers are not clubbed together in large groups but are scattered up and down the table in harmony with a preconcerted plan of decoration. They should always be of the choicest kind, and ferns and moss should be used to assist the general effect. To give the idea of naturalness, long branches of roses, roots and all, are sometimes laid along the table: the roses wired to the stem, the roots carefully cleaned and then partly veiled in asparagus fern. If a set design

is preferred, long sprays of orchids and ferns radiating from the centre of the table, flowers placed in straw gondolas, or as if growing on cork trees whose green wire boughs are covered with ferns, are used with beautiful effect. We have seen a whole table look very beautiful by being encompassed right round by a trellised arrangement of sweet-peas rising from water troughs placed at a convenient distance from the diners, the brass *chancellerie* not being too high.

3. What then is the general appearance of the table when the guests enter? No wine is seen on it, no solid food. Knives, forks and spoons and the silver nut-crackers are there and a few caraffes of clear spring water. The coloured candles in silver candlesticks, or jets of electric light in tiny globes, or lamps veiled with ruddy shades, pour their soft radiance over the scene. "Grapes in their own green leaves, strawberries and cherries piled high on their respective dishes, apricots and plums ensconced each in a separate leaf, so that they may not be robbed of their delicate bloom by too close contact with their fellows—pines and melons taking their stand as the chief personages. Mingled with all these fruits, sprays of fern and ice-plant give a cool and refreshing appearance to the dish. Crystallized fruits sparkle and glitter; the more sober walnut and filbert, disdaining decoration of any kind, as unbecoming to their respective characters, complete the list of after-dinner delicacies," (Lady Colin Campbell "Etiquette of Good Society").

4. Next, of what should a fairly representative guest-dinner consist? We are not encouraging extravagance nor parsimony if we say that after the appetizers (Hors d'œuvres) such as olives, anchovies, caviare, sardines, &c. (which after all are not essential), soup, fish, two entrées (hot and cold), a joint and fowl as pièces de résistance, game, ice-puddings, sweets, savouries, cheese in its multiform preparations, and dessert, make a dinner quite good enough for any but gourmands or gourmets. Of course we are thinking of entertainers with moderate means.

5. A few plain words on various matters connected with the giving of a dinner party, for which the hostess is more or less responsible, may here be given:

(1) Invitations are sent on "At Home" shaped cards about three weeks beforehand, in some such terms as these: "Mr. and Mrs. A. request the pleasure of Mr. and Mrs. B's company at dinner on — of — at 8 p.m." Of course on unceremonial occasions the notice is not so long, nor the style of invitation so formal.

(2) In many houses little cards lie on the hall table downstairs to inform the gentlemen who are their partners; but in others the arrangement is told in the drawing-room, and the necessary introductions made.

(3) In moving to the dining room, the host leads the way with the principal lady, and the hostess closes the procession with the principal gentleman, the order of precedency being indicated by a nod from the hostess.

(4) The host, with the principal lady on his right, remains standing until the guests have all found their places under his guidance, the hostess occupying the head of the table with the principal gentleman on her left.

(5) At the conclusion of dinner, the servants prepare the table for dessert. A dessert plate bearing a d'oyley, finger glass, and silver knife and fork is placed before each guest. (Great beauty is often seen in hand-painted d'oyleys.) The wine is put on the table in front of the host, and handed once round by the butler with the question, "port, sherry, or claret?" After handing the various kinds of dessert to each of the guests, the servants leave the room.

(6) In a short time the hostess "catches the eye" of the leading lady-guest, rises, and the ladies rise with her to make their way to the drawing-room.

(7) The host now passes to the chair at the head of the table. After a glass or two of wine the gentlemen drink coffee and liqueur, smoke a cigar or cigarette, and rejoin the ladies, who have already had coffee. Tea follows; music is sometimes introduced, and carriages are announced at 10.30 or 11.

IV. MYSTERIES OF A MENU CARD.

Have you ever watched the countenance of the untravelled Englishman who is brought face to face at *table d'hôte* or *dîner à la carte*, with a menu card written in French or German, and whose decision as to what he will select is somewhat impatiently awaited by the sarcastic garçon who can "be silent in six languages?" We know the puzzled look, the painful hesitation, and the final throb with which the only words the Englishman recognises on the card are gasped out: "rosbif," "biftek," "omelet." He will live upon these dishes for weeks rather than display his ignorance of the terminology or trust himself to the unknown contents of the enigmatic card. We shall endeavour to assist him in deciphering its mysteries.

1. Let him recognise at once the very small force that lies in the ever-recurring prepositions "au," "à la," and "en."

To begin with "au." Well, "au four"=something baked in an oven; "au gras"=meat dressed with rich gravy or sauce; "au gratin"=dishes prepared with sauce and bread crumbs; "au maigre"=Lenten dishes made without meat; "au naturel"=simple, plain ("pommes de terres au naturel," are potatoes cooked as any farmer's wife would do them); "au jus"=meat dishes with natural juice or gravy; "au beurre noir"=anything done in brown butter; "au lait"=in milk. The upshot is that all this mysterious language has no concern with you the consumer, but simply describes a culinary process.

Next, as to "à la." This is a contraction of "à la mode de," and is an inflated invention of French cooks to please some grandee after whom they name their soups or sauces, or else a kind of geographical dedication. Thus, "à la Russe"=in Russian style; "à l'Allemande"=in German style; "à la fermière"=in farm-house style; "à la Flamande"=in Flemish style; "à la gitana"=in gipsy fashion; but "à la Maintenon" and a thousand other similar dedicatory "*à la's*" mean no more than the complimentary dedication of a volume of poetry by Dryden and the old poets.

Lastly, as regards "en." This generally refers to the article in which a dish is served or dished up as, e.g., "en serviette"—served up in a napkin. You see then that all these terms need not prevent you from making a deliberate choice of what you actually want for your dinner. Look for the substantive and ignore the qualifying clauses.

We shall now give you a specimen of a very elaborate French Menu, and translate it so that you may see how by a little knowledge of the French names of fishes, birds and fruits, you can thread your way through what at first sight seems a labyrinthine maze.

Suppose we take the menu of the dinner given by the Corporation of London to the Emperor Napoleon III., April 19, 1855.

POTAGES.	SOUPS.
Potage de tortue clair.	Clear turtle soup.
Bisque d' écrevisses.	Shell-fish soup (cray-fish).
Potage de nids d' oiseaux chinois.	Chinese birds' nests soup.
Consommé de volaille.	Clear poultry soup.
ENTRÉES CHAUDES.	**HOT ENTRÉES.**
Cailles aux fines herbes.	Quails and sweet herbs.
Côtelettes d' agneau aux haricots verts.	Lamb cutlets with green beans.
Ruffs en caisse.	Small birds ("Ruffs") set in a paper fringe.
Petites bouchées à la Reine.	Small puff-paste patties (dedicated to the Queen).
ENTRÉES FROIDES.	**COLD ENTRÉES.**
Filets de truites à la Ravigote.	Fillets of Trout with a piquant sauce, ("Ravigote.")
Foies gras de Strasbourg.	Fat goose liver from Strasburg.
Gâteau de ptarmigan aux truffes.	A round flat cake of grouse with truffles.
Chaudfroid de bécassines.	Snipes dressed while hot and to be eaten cold.
Mayonnaise de turbot aux laitues.	Mayonnaise of turbot with lettuce.
Blanquettes des volailles à la gelée.	A stew made of fowl with jelly.

GROSSES PIÈCES.	LARGE DISHES.
Paõnneaux à L' Impératrice.	Peacocks (dedicated to the Empress).
Hure de sanglier à la Bohémienne.	Wild boar's head in Bohemian style.
Gros saumon à la Royale.	Large whole salmon (dedicated to Royalty).
Dinde en galantine à la Parisienne.	Galantine of turkey in Paris style.
Cochon de lait à la Napolitaine.	Sucking pig in Naples style.
Jambon de Salisbury au vin de Madère.	A Salisbury ham done in Madeira wine.
Baron of beef.	(A relic of old times weighing from 40 to 100 lbs.)
ENTREMETS.	BETWEEN DISHES.
Buisson de truffes de Périgord.	A bunch of truffles from Périgueux.
Buisson d' œufs des pluviers.	A cluster of plovers' eggs.
Petits pois au naturel.	Plain green peas.
Asperges en branches.	Asparagus.
Patisserie.	Pastry.
Crême à la vanille.	Vanilla-flavoured cream.
Suèdoise d' abricots.	Swedish apricots.
Compôte d' ananas.	Stewed pineapple.
Brioche à la Saxonese.	Butter cakes in Saxon style.
Baba à la Polonaise.	A Polish substitute for tipsy cake.

We have chosen this luxurious specimen from scores of menus that lie to our hand, not because there is much prospect of many of us being "commanded" to dine with an Emperor, but because we believe that if you master this you will not have much difficulty in understanding much simpler bills of fare. If you want a gastronomical dictionary you must go to Senn or Francatelli; we are merely your humble interpreter. Young housewives will find in any good cookery book suggestions for constructing a menu card with the appropriate technical terms written in French. As the Frenchman deifies sauces, and satirizes England as "a land with a hundred religions and one sauce," we may mention that the four great classical sauces used by *chefs* are: Espagnole, Velouté, Allemande, and Béchamel (named from its inventor, in the time of Louis XIV).

HINTS ON PUBLIC SPEAKING.

1. "Knowledge," says Lord Beaconsfield in *Endymion*, "is the foundation of eloquence." And this is a dictum of golden value. Before an orator can pour out streams of useful eloquence, no matter how richly he may be endowed "with the fatal fluency of speech," he must have mastered the subject on which he speaks. Let us first of all assume that you are familiar with your topic in all its available bearings, many of which perhaps you may not find it possible or desirable to introduce into the limited speech you are about to deliver. It is well, however, always to have a reserve fund, especially if you may have to reply in the course of debate to criticism more or less formidable. This will give you a sense of strength, and sometimes of joy, as you watch your opponent floundering in misapprehensions, misstatements, and general want of accurate preparation and firmness of grip of what you have wholly made your own. The late Lord Randolph Churchill would sit up two or three nights in succession in order that he might master a Blue Book which contained the matter upon which he was about to assail Mr. Gladstone's foreign policy. Let us then reiterate our first counsel to you—*Grudge no trouble in preparing your material.* Of course we are thinking now of serious oratory. We will deal with its lighter exercises by and by.

2. Considerable skill is required in the selection of suitable, serviceable, and telling matter. Never overcharge your speech with minor details and long rows of figures, running in money down to half-pence, and in weights and measures to three places of decimals. All this is well enough if you are proposing the adoption of the report of a Bank or Railway Company or any public body who prints in draft a financial statement, a copy of which your hearers hold in their hands while you are commenting upon it. But in ordinary cases deal with round numbers and broad facts, as all the great Chancellors of Exchequer from Peel and Gladstone downwards have done in submitting their Budgets to Parliament. Many a speech is "a weariness to the flesh," notwithstanding its substantial excellence. There is still force in the Biblical phrase "a word *in season.*"

3. After long and varied personal experience of addressing public assemblies, we have no hesitation in saying that the most effective element in compelling attention and enlisting sympathy, is the employment of simple and direct appeal to the audience. Elaborateness and turgidity alienate; simplicity and directness conciliate and persuade. The tyro in public speaking can do nothing better than study John Bright's speeches and Mr. Spurgeon's sermons. Whatever may be his political or religious predilections he will find in the works of these two "masters of assemblies" all the elements of successful and artistic appeal to a popular audience. We feel bound to urge again the prime virtue of *Simplicity.*

4. As regards *arrangement.* Necessarily there must be a few prefatory remarks by way of exordium, but the student of public speeches must have noticed that these can generally be picked up by following in a modest and grateful spirit the kind words uttered by the chairman of the meeting in introducing the speaker. It never does any harm, but rather the opposite, to express a diffident sense of fear lest the introduction in such flattering terms should end in disappointment. This personal note should, however be very brief and not overdone,—a lesson to be learnt from our most distinguished modern speakers from Mr. Chamberlain downwards. They all seem anxious to get "to business" as soon as possible. Plunge then at once *in medias res.* But remember that the human mind requires a beginning, a middle and an end in all its reasoning processes. Therefore state the elementary proposition which you intend to elucidate as soon as possible, and do this with confidence, as if you could not conceive that there could be any hesitation as to its acceptance in the mind of any reasonable human being. This was Bright's distinguishing characteristic. He never paltered with possible objections, or left on the mind of his hearers the feeling that he was not fully convinced in his own mind. It must be left to others to raise objections, you yourself must be "square-shouldered." After enunciating your main proposition slowly and sometimes with varied reiteration, you must proceed to support it with the best arguments you can command. But it is always well to give them a cumulative force. Put the weakest argument first, but do not treat it as weak. Do it full justice and then pass on to that which is stronger, drawing into it anything of worth from its predecessor. And so on to the end, building up a growing palatial structure until you arrive at the roof and the turrets. We dwell upon this with emphasis, because we have often watched the effect on the mind of an audience when the grand cumulative assault with its battering rams shatters the citadel of the enemy. Perorations are now out of date. At the same time, as you will notice in the rhetorical conclusions of our present great Parliamentary leaders, a few glowing sentences, if crowned with a line or two of telling poetry, make an effective *denouement* to an argumentative speech. Even a couplet from a well-known poet fires the feelings of your hearers better than half-a-dozen stanzas from some metaphysical or difficult author such as Browning, and a pat anecdote, if really good, never fails to win the applause of your audience.

5. As regards *diction.* The days of involved sentences and periodic structure are over. The last successful imitator of Burke was Mr. Gladstone. Perhaps the best representative of modern high-class oratory is Mr. John Morley. Every sentence tells, because it is not only simple in structure, but severely simple in diction. The words are the words not of Dr. Johnson, but of Dean Swift and Matthew Arnold. Julius Cæsar counselled young speakers

to avoid an "*insolens verbum*" (an out-of-the-way word), "as a mariner avoids a rock." Make then your language as simple as the words of the Authorized Version of the Bible, or of Wordsworth, Newman or Froude. You are permitted to be homely but never vulgar. "Slang" is not simplicity but the corruption of language. In a scientific or commercial address technical accuracy is the great aim of language, but in political and general speeches, you should travel by "the king's highway," using the well-established usage of our magnificent English tongue. Allusions to obscure authors savour of pedantry and are of no practical use in a popular address; but a reference to some of the well-known characters in Don Quixote, Scott, Dickens or Thackeray can often be turned to good account.

6. A few words on "externals," such as *Attitude* and *Gesture*, may not be amiss. The speaker should avoid any eccentricities in pose or gesture such as the caricaturist might reproduce, of course with exaggeration. An Englishman never knows how to dispose of his hands. Accordingly, one speaker plunges them into his trousers' pockets; another, Pickwick like, places one under his coat-tails while he saws the air with the other; a third folds them like Napoleon across his breast; a fourth like Lord Holland (whom Sydney Smith corrected) raises his arm from the elbow-joint, when he wishes to be emphatic, and moves it perpendicularly up and down like an automaton, or a chopping-machine; while a fifth, like the late Mr. Lecky, raises each arm in turn like a semaphore. We will venture to give you a few plain cautions and directions upon very elementary matters as regards posture, gesture and voice management:—

(1) Stand well to the front of the platform within easy reach of the desk upon which your notes are placed. (These notes, by the way, should not be too numerous, and should be either type-written or hand-written in bold character.)

(2) Do not turn in your toes but place one foot a little in front of the other and stand erect.

(3) While you are supposed always to address the chairman—a fact which you acknowledge by the frequent introduction of "Sir" in your remarks—never turn your back or side to your audience even if you have a large number of "backers" on the platform. Aim your words straight into the audience and remember that your voice must travel to the extreme end of the room.

(4) Do not push forward your head or lower your voice at the end of a sentence, and do not "duck" or "curtsey" as your warmth increases.

(5) Let your gesture be sparing, but when it comes germanely to your subject, extend the whole arm from the shoulder with the hand outstretched, not from the elbow with the fingers clenched or bent. In appeals, stretch both hands, palms upwards, to the audience. As the peroration approaches and you wish to convey the notion of certain victory to your contentions raise your right arm higher, and at the end, as if cheering the final triumph of the truths you have been fighting for, you may accompany your last few sentences with a swift rotary motion of your hand above your head. (Never was there a master of gesture to compare with Mr. Gladstone, who had an endless variety of attitudes and gestures for sarcasm, banter, exhortation, denunciation, pathos, defiance and victorious self-confidence.)

(6) The great secret in the management of the voice is to measure the capacity of the hall. You will remember how Canon Liddon, with anything but a strong voice, filled St. Paul's by his choosing the right register and the "carrying note" suited for the particular building. It is well to visit the hall beforehand with some two or three friends who will sit in various places and tell you how they hear. Of course you will make allowance for the difference between a crowded hall and an empty building.

7. We may add a few remarks on LIGHTER SPEECHES—speaking to toasts, proposing a bride's health, etc.

Here very little that we can suggest can be of general use, for everything depends upon the readiness, good taste and intelligence of the speaker. We may, however, give a few cautions as to what should be avoided:

(1) In proposing a toast, remember that the object is to please and do honour to the subject of it. Accordingly you will single out from his life and character such things as can honestly be placed to his credit, and with a little garnishing can be stated in the presence of his acquaintances without exciting the feeling that you are fulsome in your praise or extravagant in your estimate. No man has a right to undertake this task unless he is in sympathy with it. He must remember that he is not asked to give a critical review or even a biography of his subject, and therefore he may conscientiously pass over many faults and bring into relief virtues which the speaker knows he possesses.

(2) Avoid referring under the guise of praise to any past incident in his life of which he might not like to be reminded. We have heard of an orator proposing the health of a Mayor of an English city—a "self-made man" with the words, "By dint of his own efforts and abilities he has raised himself from the very dregs of society."

(3) The highest test of graceful oratory is the proposal of a bride's health at the wedding breakfast, or now more commonly the "reception." This is one of the few occasions upon which we would advise the speaker to write his speech and commit it to memory. The sentiments should be highly respectful, the language somewhat roseate, the hopes genial and affectionate, and the good wishes warm and tender. Brevity, good taste and kindness are the ingredients of a good bridal speech.

(4) In moving votes of thanks at a meeting, many speakers make the mistake of being too long. They really give an independent contribution to the subject and then tack on the vote of thanks in a sentence, forgetful that the audience has already most likely had enough, and that such a summary and perfunctory tribute to the chairman or speakers can hardly be considered complimentary by them. It is quite permissible to give a brief résumé of the main drift of what has been maintained, of course in a sympathetic spirit, but "the briefer the better."

DUTIES OF A CHAIRMAN.

A. PUBLIC MEETINGS: The Chairman of a Public Meeting may have statutory rights, or he may be elected to the office by the voices of those present, or he may enjoy a merely ornamental post accorded to him by the invitation of the organisers of the meeting who are influenced in offering him the chair by considerations of his social rank or his special knowledge of the subject to be treated at the meeting.

We may have a *statutory chairman*, e.g., the head of a Town Council, School Board or any Corporate body where the functions and privileges of the chair are defined by statute as well as the length of its tenancy, and the capacity of the meeting to transact business in the absence of the chairman. Here a chairman has great latitude of power, but is also controlled by the traditions of his office, the reasonable expectations of the public, and the sense of responsibility which a wise and capable man will never attempt to evade. Your first duty then as chairman is to acquaint yourself thoroughly with the business which lies before your board at any particular meeting. Nothing is more irritating to a body of business men than to sit under the presidency of a chairman who opens the proceedings in obvious ignorance of "the card," and who therefore is compelled to turn to the clerk for instruction in matters of which he should be the authoritative exponent. In opening the business, *avoid speech-making*. Take the items as they occur on the card, and say no more than is absolutely necessary for making the point to be discussed clear and definite. Be careful not to appear as if you were anxious to force your own view upon the meeting, and if possible do not make the first motion. A suspicion of partizanship is ruinous to your moral influence in the chair. As a rule a friend can easily be got to undertake a motion embodying your views, and you can sit silent until the moving and seconding have been done, and an amendment has to be called for. Of course you will allow no speech ever to intervene between any mover and his seconder, no matter at what stage of the proceedings. Allow no amendment which does not contradict some essential portion of the original proposition. For example, if the original motion were "To-morrow we

will dine at Greenwich upon whitebait," it is no amendment to say, and "after whitebait, mince-pies shall follow." This is a rider, not an amendment. But if "the day after to-morrow" be substituted for "to-morrow," or "Richmond" be substituted for "Greenwich," the amendment in either case is competent as such, because it contradicts (or "amends") the original motion in an essential particular. You will, therefore, never allow a rider to be put *against* the original motion. The rider must wait until the original motion is disposed of, and if the latter survives the rider may be tacked on to it and put to the meeting as an addendum.

You may sometimes have a difficulty in settling the order in which amendments should be put, and you will often find clamorous appeals for the amendments to be put in the order in which they were proposed. You are entitled to resist this, and to choose, in the absence of any standing rule to the contrary, what you consider the logical order best qualified to bring out the true sense of the meeting. You are not, however, at liberty to put them in such an order as to give an advantage to any particular faction. "Fair and square" is your only safe and right motto in doing your duty as chairman, and a few words may at times be useful to explain why you have chosen a particular order. The following rules indicate the right way of dealing with amendments:—

(1) No amendment must be proposed which would be tantamount to a direct negative of the entire motion.

(2) An amendment must be seconded in the same way as a motion, otherwise it must drop.

(3) When an amendment has been moved and seconded, it should be stated from the chair before the debate is allowed to proceed.

(4) There can be only one amendment to a motion before the meeting at one time.

(5) If this amendment is put and carried, it then becomes the substantive motion, to which another amendment can be moved before it is put and carried as a substantive motion.

(6) If the amendment is put and lost, the original motion is then open to the moving of another amendment, which, if carried, becomes the substantive motion.

(7) No person can move two amendments to the same motion, but a person can move an amendment to a motion, and if that be carried move another to the now substantive motion.

(8) No person should be permitted to move an amendment while an amendment is already under discussion. He should be caused to wait.

(9) Speakers should be rigidly kept to the subject of the motion or amendment under discussion, but a speaker may state, as a reason for opposing an amendment, that he prefers a method of dealing with the matter which he would embody in a subsequent amendment if the present one is defeated and got out of the way. He might be allowed to outline the amendment he has in mind, as part of his argument, against the existing one.

When you have sufficiently elicited the opinions of the meeting, you will put the amendment that has survived or, in the event of all amendments having failed, the original motion to the vote, first giving its mover the opportunity of reply. When he has made his reply, put the question at once, insisting on silence and that each member keeps his seat. Sometimes a motion called "the previous question" is proposed. It is so named because it is always put before the main question. It refers to the inopportuneness of discussion and is not necessarily hostile. We prefer a motion "to pass to the next business" which is plain in significance and unattended with technical complications. Such a motion—whether called "previous question" or not—takes precedence of all other amendments, and if carried the meeting must pass at once to the consideration of the next business.

As a statutory chairman you are supreme in all matters of order. You will be wise, however, to have a short code of "rules of order" drawn up by a competent man for your own guidance and the satisfaction of your board. These must have the sanction of the board before they become obligatory, but once adopted, they hold force until they have been amended after due notice given, and they do not die with the body that originally passed them. A newly elected board inherits them and is bound by them until they have been competently rescinded or amended. If your board has no code of its own you can only appeal for sanction to your judgments to the practice of the House of Commons, or of Town Councils in large cities, or (in Scotland) to the procedure of the General Assembly. "The Chairman's Hand Book" is a useful parliamentary guide book, but you are safer for ordinary work with a municipal code of "Rules of Order," a sketch of which you will find below. A statutory chairman should be first sure of his ground in settling a question of order, and then should be inflexible in adhering to his decision. If the meeting becomes mutinous he should leave the chair, after calmly giving warning of his intention so to do. He should never allow his decisions upon order to be put to the vote. Nothing passed after his leaving the room can have any validity. There is considerable doubt in many chairmen's minds as to the circumstances under which "dissents" may be accepted and entered. The rule is clear. No one is entitled to enter a dissent unless (1) he was present at the meeting which passed the resolution he objects to; (2) unless an amendment against the resolution was moved, seconded and a division thereon unavailingly taken, and (3) that the dissentient took part in such division.

SPECIMEN CODE OF STANDING ORDERS:—

(1) Ordinary meetings shall be held on the first and third Wednesday of every month.

(2) The Statutory Chairman, or in his absence, the Vice-Chairman, shall have power to summon special meetings for urgent business, either *proprio motu* or at the written requisition of five members; the special business to be placed on the card. No minutes of ordinary meetings will be read at the special meeting.

(3) Programme of business for ordinary meetings shall be circulated three days before the meeting.

(4) First business at all ordinary meetings shall be approval of past ordinary minutes, the only permissible discussion thereon being as to accuracy of record. Objections on this score must be moved, seconded, and voted upon.

(5) The Chairman shall preserve order and rule all "points of order" in accordance with this code; decide priority of speeches according to the order in which a member "catches his eye"; ask for the terms of a motion or amendment before a speech is delivered thereupon, if he thinks fit.

(6) In the case of disorder arising, the Chairman shall have power to adjourn the meeting to a time he shall fix, and his leaving the Chair terminates the business.

(7) In the case of equality of votes, the Chairman shall have a second or "casting vote."

(8) Notice must be given at an ordinary meeting of any motions to be proposed, other than those which arise directly from the subject under discussion.

(9) When a report is submitted by a Committee, the Convener, or Chairman of that Committee, shall have the right to move its adoption.

(10) Alterations or rescindments of *res gestæ* must be by notice of seven days, and motion proposed, seconded, and carried thereupon.

(11) Motions and amendments (always to be put in writing) shall not be withdrawn or essentially altered after they have been seconded, without leave of the meeting.

(12) "The previous question" or the motion "to pass to the next business" shall always have priority of all other amendments, and if this is carried, the meeting shall at once proceed to the consideration of the next business.

(13) The mover only of an original resolution shall have the right of reply, in which, however, he must introduce no new matter. Other members can only be heard (by permission of the meeting) to clear up misunderstandings with regard to an essential portion of what they have said.

(14) If a member rises to "a point of order," he must specify the rule in the code which he thinks is being violated, and the member who was in possession of the house shall sit down while the point of order is being discussed and settled. The Chairman only can rule, and while his rule is being given, the objector must sit down. The speaker shall then continue his speech, subject to the ruling given.

(15) Discussion shall cease if the motion that "the question be now put" is carried by a two-thirds majority, the mover of the original motion having been first heard in reply.

(16) At an adjourned debate, the mover of the adjournment shall be first heard.

(17) Questions, of which notice has been given, may be put (but without discussion upon either question or answer) to Conveners presenting a report, subject to the approval of the Chairman.

(18) Sub-committees must report to the Committees-in-chief before submitting their reports to the general body.

(19) These Standing Orders can only be suspended by a two-thirds majority.

B. COMMITTEE MEETINGS. The only differences we need here note between the procedure already described and procedure in committee are (1) that a seconder to a motion or an amendment is not absolutely necessary in committee, and (2) that whereas in a board or any public meeting no man can speak more than once upon the same motion, there is no limit to the number of times he may speak in committee. The method in committee is conversational, and the object to transact business as quietly and quickly as possible.

C. MEETINGS IN GENERAL. A few additional hints to Chairmen of meetings in general may be found useful:—

(1) Require all motions and amendments to be handed up to the chair in writing.

(2) Apply the rules of statutory meetings with patience, courtesy, and firmness.

(3) While keeping the general drift of discussion to the proposition in hand, be not for ever "tugging at the bridle." Allow a little liberty until it becomes evident that the speaker's prolixity or irrelevance is resented by the meeting.

(4) Save your own remarks, with the exception of a few opening expository sentences, until the close of the meeting, and then give a brief résumé of the lecture or speeches in a sort of judicial spirit without unnecessary strictures.

(5) The only occasions when you are allowed to give a lengthy and exhaustive speech as chairman, are such as the unveiling of a statue, or the annual meeting of a Railway Company or a Bank. Here you are expected to be the spokesman of your clients, and nobody else is likely to be disappointed if you say all that is relevant to the cause which has brought them together. The same considerations will guide you as to the character of your diction—florid, dryly scientific, or luminously expository.

DUTIES OF A SECRETARY.

It does not come within our province to give counsel to a professional Secretary. We venture to offer a few hints only to those who may not be fully conversant with the duties which such an office entails.

I. HINTS TO A PRIVATE SECRETARY.

A Private Secretary holds a confidential position with regard to his principal which can easily be defined. During the tenancy of his office and for long after—in fact the time of the cessation of his responsibility can hardly be prescribed—he is in a measure the *alter ego* of his chief. He reads all letters except those of a domestic and strictly personal character; and, if in the employment of a politician or high ecclesiastic, must naturally become acquainted with many things hidden from the public. In fact, he sees things in their initial and inchoate state, and may easily ruin many projects of his principal unless he observes the strictest secrecy and fidelity in what he may be tempted to disclose. We have known inducements placed before a subordinate official in the Foreign Office by a city merchant to reveal what would have affected the transactions of the Stock Exchange.

A very few general rules may be suggested for the guidance of a Private Secretary.

(1) Acquire a good style of hand-writing which may suggest as soon as seen that the letter you have written proceeds from a *gentleman*. Many styles of handwriting are either slovenly, commercial, or generally under-bred.

(2) Acquire a ready knowledge of short-hand and typewriting.

(3) Be very careful to use good English, free from provincialisms, Americanisms and "slang" in your memoranda for your chief, and replies to his correspondents.

(4) Throw in a good sprinkling of courteous phrases, however bald may be the substance of your secretarial communications. Many an aspirant for Parliament has lost votes through the dryness of his replies, or those of his secretary, to his correspondents in the constituency he is wooing.

(5) In the absence of your chief, when you are called on to receive deputations in his name, be courteous but reticent. Take careful notes of the topics brought before you, but avoid any semblance of committing your principal to any definite decision.

(6) Employ your leisure time in reading up widely any subject in which your principal is engaged. Your special knowledge is sure to be valued by a busy man, who is often debarred from acquiring it himself.

(7) Take care to have all the documents bearing upon a subject in hand well arranged, so that you can produce them readily when called for.

(8) To no one, however intimate, breathe one word of what is known to you through your position as "Private Secretary."

II. HINTS TO AN HONORARY SECRETARY.

An Honorary Secretary does a great deal of work for no pay, and if capable, conscientious and enthusiastic, is one of the most useful members of society. You are generally elected to the office on the ground of special fitness, owing either (1) to your known interest in the particular work of the Association, or (2) your social influence which can enlist subscribers and desirable members, or (3) your contagious enthusiasm and persuasive advocacy, a qualification which has much to do with the prosperity of a public cause. The combination of these three recommendations makes an ideal secretary, whether honorary or paid. We will now offer a few practical suggestions.

1. Get a minute book, well-bound, paged, and with an indented alphabet-index at the beginning or end. Your book had better be of quarto size and the title printed on the front cover. As the book is supposed to endure for some time, and may become a permanent document or archive, it is well that the paper should be good and the binding full leather or morocco.

2. One of your first duties will be the drafting and issuing of APPEALS. Now considerable skill is required in drawing a good appeal. Let us, e.g., suppose that you are the "hon. sec." of a Queen Victoria's Jubilee Nursing Association for the nursing of the sick in their own homes. In your appeal you will naturally touch upon the following points:—

(1) The claim the Association has upon the generous support of the public from its being the creation and personal memorial of the revered Sovereign who was in so many ways "the Mother of her people."

(2) From its beneficence towards the sick poor, who under its help, can from their beds in their own homes exercise some amount of direction and supervision of household affairs, which would be quite impossible were they to go to the hospital.

(3) The educative value of a trained nurse entering a house, where even the most rudimentary notions of sanitation, ventilation, the vigorous use of soap and water, and temporary separation of the invalid are utterly unknown.

(4) You will then give from the Head Sister's log-book, several striking and pathetic illustrations of the good done by the Association during the last year.

(5) You will conclude with an earnest appeal, not too importunate in its terms, for continued or increased support; i.e., you will assume that your advocacy is its own recommendation to an intelligent and philanthropic public.

3. Let us next consider your duties (A) at a Committee meeting; (B) at a Public Meeting with the necessary preliminary arrangements for each.

A. COMMITTEE MEETINGS.

1. You will put upon the card of business (which should always be printed in outline with date and place of meeting filled in in MS.) the various items which will come up for consideration, adding always at the end "other competent business, if any."

2. You will at the meeting intimate apologies for absence; vacancies that have occurred in the Committee since last meeting by death, resignation, removal from the neighbourhood, or disqualification by accepting from the Association a post of emolument, &c., &c.; and then at the call of the chairman proceed to the reading of the Minutes of the last meeting.

3. MINUTES. These have been written by yourself and are subject to the revision, acceptance, or rejection of the Committee.

Endeavour therefore to give an exact historical record, without comment of yours, of what was transacted at the last meeting of Committee, with notice of defeated motions, names of those present, and who in the chair, with place, date and hour. No arguments or speeches can be recorded. Your minute will read, e.g. "On the motion of the Chairman, (or of Mr. X.), it was agreed that the following accounts should be paid." "That during the summer months the meetings of Committee should be monthly instead of fortnightly." "That contracts should, by public advertisement, be invited for the repainting of the Home," &c., &c. The Chairman will then put the question: "Are these minutes approved?" by which he means (and no other question can be allowed) "Is this a true and full record of what took place?" If the Committee says "Agreed," you hand the Chairman your book for signature or initialling. It does not signify whether the occupant of the chair be or be not the same as presided at the last meeting, for he gives his signature by authority of the present meeting.

B. PUBLIC MEETINGS.

1. Generally a small sub-committee, of which you are sure to be a member, is appointed to consider who shall be invited to preside at the annual meeting of the Association, and to draft resolutions to be submitted to it. If the nobleman or gentleman selected be a "busy man," it will fall to you to wait upon him and express the committee's desire that he will fix the time most convenient to himself for holding the meeting so many weeks or days hence. You will take with you the draft report of the year's work which has been drawn up by you and has already been approved by the sub-committee, and explain to him the salient points upon which he is wished to expatiate.

2. At an Annual Meeting it is customary to submit resolutions more or less formal; e.g., Resolution I. "This meeting, having heard the report, hails with satisfaction the steady growth of the influence and financial prosperity of the Association, and commends its claims to the generous consideration and support of the public." Resolution II. "That this meeting pledges itself to spare no effort to widen the work and impress upon friends the urgent needs of a Society to whose excellent results such abundant testimony is forthcoming." Resolution III. "That the following ladies and gentlemen be elected as the General Committee for the ensuing year; that the following be the acting Committee; the Auditors be Messrs. Smith, C. A. and Jones, C. A.; the Hon. Sec., Miss Clara Douglas, and the Hon. Treasurer, Mr. Wm. Allworthy." Resolution IV. "That the thanks of this meeting be awarded to Lord Cheviot for his excellent conduct in the chair." Your sub-committee will help you to fix upon suitable men to propose and second each of these resolutions, to whom you will send (with a copy of the report) a few days before the meeting a slip of the resolution to which you wish them to speak.

3. You will always inform the local press of the place, day and hour of meeting, so that you may be sure to have the proceedings well reported. If the reporters come to you for information, be sure to shew them every courtesy and give them all the assistance they require.

4. Votes of condolence, congratulation, &c., in the Society's name, will naturally be communicated by you to the family of a person deceased or the recipient of a public honour, and must be expressed in suitable terms. It is well to shew such letters to the chairman after you have drafted them.

DUTIES OF AN HONORARY TREASURER.

The duties falling to be performed by the Hon. Treasurer of a Charitable Institution, while not exacting in the strict sense of the term, are at least sufficiently loaded with care and anxiety to require of him constant vigilance and resource. Although the formal keeping of the books in perfect order may be considered a comparatively easy task, it is still not an unimportant part of his work, and if he appreciates the value of lucidity in the handling of his figures and accounts, he will aim at a high degree of excellence in his book-keeping.

The method of sectionalising the Cash Book and setting forth under one head every detail pertaining to it has approved experience to recommend it, and it is obvious that as the analysis and distribution of items of expenditure proceeds day by day, as each entry is made, an exact statement of the nature and amount of the expenditure will be necessarily disclosed at once at the end of the year, without having to review and analyse the foregoing entries. After the final summations have been made the eye can see at a glance what the various items of expenditure have been incurred during the year, and whether the charges under the particular heads have been normal or the reverse. One of the advantages of this system is that it furnishes a standing comparative statement of the expenditure, and so enables a ready check to be applied to charges which are running out of proportion to the income.

But an Hon. Treasurer's cares are not simply confined to the spending of the income of the Institution: they only, as a matter of fact, begin in real earnest when he seeks to find the necessary funds to keep it going in a state of healthy vitality and efficiency. The secret of the success or failure of an Honorary Treasurer is to be found here. If he is going to succeed he must possess at least two indispensable qualities. He must have consummate tact on the one hand, and persistent perseverance and enterprise on the other. A third requisite, although not perhaps absolutely necessary, is yet exceedingly useful, and that is social influence. It is the duty of an Hon. Treasurer not only to regulate and control, as far as it is in his power to do so, the regular annual contributions, but to exert his wit and influence in angling for the "periodic lumps" that are frequently available for charitable purposes. It is in discharging this arduous duty that his tact and resource are taxed to the utmost limit. But success is rarely attained without perseverance.

As he gives his own services freely and without monetary reward, so he also infuses into those engaged in the work the true spirit in which the institution should be managed. High ideals and high aims should pervade every effort exerted on its behalf, and the Hon. Treasurer upon whom a great part of the burden of its management falls, is expected to lend an example of disinterestedness and public spirit which will command the approval and support of the generous public. The Hon. Treasurer also will find it to the advantage of the charity to attend all its meetings with commendable regularity, to explain the financial position, to encourage the other officials and to take common counsel as to the best method of promoting the interests of the institution.

As there may be some little uncertainty as to the respective functions of the Hon. Secretary and the Hon. Treasurer we may add—

(1) The Hon. Secretary makes general appeals to the public, the Hon. Treasurer private appeals to particular persons.

(2) The Hon. Treasurer alone handles money "receipts" it, and banks it.

(3) He alone operates upon the fund, signing cheques generally with the Chairman of the Committee and perhaps one or two members of the Committee empowered by the executive to discharge this office.

(4) At the annual meeting, the Hon. Treasurer reads the financial statement and comments upon its contents. As he is generally chosen for his business capacity, his words are listened to with more attention than is accorded to perhaps any other speaker.

We need hardly say that there is one special duty the Hon. Treasurer owes to himself, and that is so to manage the business he has undertaken as to preclude the possibility of the ill-natured suggestion that his accounts are so muddled as to be unreliable. We therefore venture to give these two pieces of practical advice:—

(1) Never mix up collected money with your own, but always bank it in the name of the Institution you are serving.

(2) At the end of each year produce a Balance Sheet, after getting a business man (preferably a Chartered Accountant) to audit and certify your accounts.

HUSBAND AND WIFE.

He undertakes no light task who ventures to give counsel in a relationship so ancient and so intimate as that of husband and wife. Many might think that the task was not only presumptuous but also superfluous, for who can hope to improve upon the counsel given in Holy Scripture, and summarized in the Marriage Service of the Book of Common Prayer and other manuals? There is, however, a field which lies outside this technically religious territory that experience and genial common-sense, free from cynicism, may help to cultivate. Let us begin with a dictum which none will dispute: "Celibacy, however gloomy and painful it may sometimes be, is better than a bad marriage."

SELECTION OF A PARTNER FOR LIFE. 1. "In the selection of a wife, *tenderness* and *purity* are prime requisites, and no gifts of speculative intellect or practical ability can compensate their absence." ("Practical Morals," J. K. Ingram). The wife should be in fact:

> "A creature not too bright or good
> For human nature's daily food;
> For transient sorrows, simple wiles,
> Praise, blame, love, kisses, tears and smiles."

So sings Wordsworth in his exquisite "Portrait." And Byron, albeit not himself a model husband, is scarcely less successful in his "Bride of Abydos," in depicting the qualities expected in a good wife:

> "To soothe thy sickness, watch thy health,
> Partake but never waste thy wealth,
> Or stand with smiles unmurmuring by,
> And lighten half thy poverty."

2. But what about the choice of a husband? We cannot think of anything better as an answer to this question than the remarks of Mrs. Fitzpatrick in Fielding's "Tom Jones": "It requires a most penetrating eye to discover a fool through the disguises of gaiety and good breeding. . . . Among my acquaintances, the silliest fellows are the worst husbands; and I will venture to assert as a fact, that a man of sense rarely behaves very ill to a wife who deserves very well." *Sound sense*, then, is the indispensable quality which a young lady should require in the man who is to be her life-long companion. We place this first in the category, because even the highest moral rectitude and brilliant mental gifts, without the balancing power and prudential guidance of sound sense, will not secure her against the shipwreck of domestic happiness. Few sensitive people can watch, without disgust and loss of love, daily exhibitions of brainless, ludicrous, and stupid conduct on the part of those whom they have sworn "to love, honour and obey."

3. There is one counsel that is applicable to both man and woman who are contemplating matrimony, and that is: Have regard to the approximate *equality* in birth and station, age and education, in the choice of a partner. Many centuries have rolled by since the great tragedian Æschylus put into the mouth of his chorus in *Prometheus Vinctus*, words which are just as true to-day as they were then: "He was indeed a wise man who first conceived in thought and then gave speech to his counsel, that to marry *suitably to oneself* is by far the wisest plan; and that one who is of low degree should neither seek after a partner lapped in luxury nor boasting of high-sounding pedigree." Gross inequality in any of the points named is sure to be visited with penalties more or less severe, but, in some form or other, sure to fall. Moderate disparity is of course less hazardous in consequences, e.g., an opulent merchant may find a hearty welcome in the family of straitened patricians, and a highly educated, untitled lady, well acquainted with the ways and manners of the "great world," may make an excellent wife for a nobleman, but nothing can compensate for a wide gap in years or education.

4. When we spoke just now of "approximate equality," we had in view only the particulars enumerated. Nothing can be farther from our meaning than to insist upon identity of tastes, predilections, favourite amusements, and the like. "Each sex has what the other has not; each completes the other, and is completed by the other; they are in nothing alike, and the happiness and perfection of both depends on each asking and receiving from the other what the other only can give." (Ruskin: "Sesame and Lilies.") It produces, for example, no jar in married life for the wife of a scientist to be devoted to art, or for one consort to be passionately fond of sport while the other is equally enamoured of music or the drama. In fact, life is enriched by this non-antagonistic variety. Echoes are not needed for connubial bliss. Antithesis is often its charm.

5. Viewing marriage as a contract that involves the life-long obligation to cherish each other "in sickness and in health," it is of the highest practical importance to pay due regard to the question of health.

CONDITIONS OF MARRIED HAPPINESS. 1. No view of marriage is satisfactory that does not regard it as a tender and respectful friendship, "embellished," as a brilliant Frenchman adds, "by an incomparable mutual possession." We feel inclined to emphasise this view as of the greatest practical importance in perpetuating married happiness. The want of tenderness, either by the adoption of an over-bearing manner, which never reaches cruelty even in intention, or by what is still more characteristic of northern nations, the silence or sparse expression of love, even when it is felt, has a wearing effect upon its objects. A sentiment so tender as married love ought to be manifested. Much can be said against "gushing" and untimely demonstrations of marital affection, but undemonstrative conduct is not without its dangers. We have a terrible warning in the case of a famous teacher of his age, who learned too late, when his beloved one was taken away, how deeply he had failed in sufficiently expressing by word and act the feeling with which he regarded her.

2. Not less to be combated is the tendency for all the courtesies of the sweet-heart period to diminish, and sometimes to disappear, from married life. There should not be allowed to enter into the homestead any—even good natured—disrespectfulness in language or manner towards any of its members. More depends upon the observance of this caution than many people realise. The only lady whom many a man habitually treats uncivilly, is his own wife; and the only gentleman for whom many a lady will take no pains to be pleasant and attractive, is her own husband.

3. Want of unity of aim is another prolific source of domestic failure. This has many sides, and enters into economics, child-training, the cultivation of good neighbourly relationships, the maintenance of a satisfactory footing with the relatives of both sides of the house, the relativity of work to relaxation, the quality and allotment of joint pleasures, and the formation of new friendships. Pitfalls in abundance attend every one of these illustrations

of the want of oneness in aim. Unless there is mutual confidence as regards personal and household expenditure; unless each parent supports the other in the exaction of discipline among their offspring during the period of childhood, and a few years beyond it; unless each is complaisant towards neighbours and family connexions; unless they "see eye to eye" upon the ratio to be maintained between the serious and recreative portions of existence, and can co-operate in united tours, visits, expeditions and the like, and unless new alliances are the subject of mutual assent, troubles will grow in unlimited profusion. "Union is strength" is an old adage; but in married life it is more: it is peace and comfort.

4. Hitherto we have spoken only of union in the practical concerns of wedded life, but no thoughtful person will undervalue the conviction "that any real and permanent union of human beings must rest on a sufficient harmony between them in respect to the three portions of our spiritual nature—feeling, intelligence, and what is properly called character; and this harmony should be more complete in proportion as the union is to be intimate and profound," (Ingram). Profession of the same religious faith becomes, therefore, an important item in family concord.

To sum up in a nutshell all that we have said: The secret of domestic happiness lies in the exercise of mutual forbearance, gentleness and courteous demeanour, the desire to please and be pleased, the willingness to express pleasure when felt, the opportune demonstration of affection, and the determination to be one in aim and action in all that pertains to a common and co-operative life.

THE TRAINING OF CHILDREN.

Nothing has impressed us more in general literature than the prayer of Schiller's father on the birth of his illustrious son. Therein we learn what a devout man feels as to the responsibility that comes to him from the trusteeship of a newly-given soul. How to train it, lead it to the highest ideal, guard it from evil, and walk before it in the right path, all enter into the supplications of the father of the darling poet of Germany.

EARLY CHILDHOOD. We have to consider the conditions under which a child will live during his first septennial phase, and the influences which will act upon his evolution. Some of these are social, others personal. The first are entirely independent of the child's own will, for no one is consulted as to the nation or family in which he shall be born. Environment (climate, &c.) are not for him to decide. The result is that submission and dependence upon others is the first ethical law of life.

1. The parental duty, during these very early years of organic instability and morbid affections, is to attend to nutrition, thereby laying the foundation for the child of a sound constitution. The mother, who is the only guardian at this period, must act under competent advice. The instruments of sensation and locomotion will next require attention. The child should be trained to see, to hear, and to touch, so as really to appreciate objects correctly; also to hold himself erect, to walk, to run, to leap, to swim, and do other movements which will afterwards become habitual. The heart (i.e., in metaphor, the organ of unselfishness and love for others) must very early be trained, to family affection. Pleasures must be shared with others, and labours and privations borne in common. Personal instincts must be carefully regulated, and the atmosphere of modesty made to pervade the whole child-life. This side of training will fall mostly upon the mother. The moral action of the father on his children consists mainly in the spectacle of his daily life—his industry, punctuality, kindness, and avoidance of self-indulgent habits.

2. The most important rules with respect to parental directions are that they should not be inconsistent with each other, not too numerous, and that when they have once been announced, obedience should be insisted on. Praise should be cheerfully given in proportion to merit, but not in such a way as to invite vanity. Never "show off" a child before strangers, nor quote his precocious remarks in his hearing. "Nagging," and dwelling unduly on the child's deficiencies, and more particularly the frequent presentation of the children of other families as models for his imitation, produce discouragement and irritation.

3. Punishments should be infrequent, selected with judgment, and inflexibly carried out. It is a doctrine of the jurists that the certainty of punishment is more effective as a deterrent than its severity. In inflicting it avoid alike the reality and the appearance of passion. To be really useful the punishment must be seen by the child to be just; if it is met in a spirit of protest and revolt, more harm than good is the result. Allowance must be made for personal idiosyncrasies, which in many cases may be turned to advantage. Even in the same family the children are often physically, morally and mentally very unlike each other, as if the strain of heredity were derived from different sources in the genealogical tree. The careful trainer will vary methods accordingly.

4. Up to seven, the education should be informal and of the *Kinder-garten* kind. Curiosity should be guided and stimulated to the observation of inorganic objects, and of animals and plants. No decided effort should be made to teach him to read at this time, though, as sometimes happens, he may spontaneously, or in the way of play, pick up an art. Foreign places, English cathedrals and castles, and the inhabitants of a zoological garden will be learnt from picture books and engravings, and comments invited as to what strikes, pleases or interests. In sacred things, read or spoken, attention to reverence of tone and mien on the part of the teacher is of the utmost value.

LATER CHILDHOOD. From seven to fourteen the evolution is continuous, and in some cases rapid and remarkable. Wise parents will take great pains in the selection of a tutor or governess, if the education is to be conducted at home. Nor will they neglect serious preliminary conference with their deputy after the appointment has been made. Much requires to be settled if satisfactory work is to be done. The special characteristics of each pupil, the methods and measures of discipline, the range of the syllabus, the length of school-hours, and the kinds of recreation to be pursued, all require to be thought out and precisely agreed upon between the acting parents and the instructor. Vague understandings end in misunderstandings.

1. While upon the subject of home-tuition, we may make a few observations of a practical kind as to the mutual relationship of parent and tutor. While the parent can never abandon to others the supreme control of his children, he must remember that until his delegate has given proof of neglect or incapacity he is entitled to the support of the head of the house. Sufficient allowance is not always made for the *youth* of tutor or governess; nor for the fact that it is unreasonable to expect from them the same kind and degree of interest as binds parent to child. Again, stubborn or trifling children will yield a much readier obedience to parents than they will to home-teachers, whose disciplinary difficulties are accordingly increased. Parents should be most careful never to take the child's part against the teacher in the child's presence; never to make a slighting remark as to the teaching and management of the class before the pupils; and always to support the teacher in the execution of punishments, unless they are absolutely cruel or grotesque. Rebuke or criticism of the teacher should be administered in private, and not for every trifling defect; and non-interference should be the normal attitude of the parent to the teacher, unless there is urgent cause to step in. We will only add that it is false economy to get cheap tuition. Spend a few more pounds and secure a gentleman if you want a tutor for your sons, and a lady as governess for your daughters.

Character, manners, style and accent are all involved here, and in the generality of cases, mental culture.

2. But it is time we returned to our "later child," who enters upon his second septennium. He is now on the verge of, if not actually trusted with, the washing and dressing of himself, and attending to the rudimentary laws of health. Perfect cleanliness and control of the table-appetite must be insisted upon, as well as punctuality at meals. He must eat and drink like a gentleman, handling his knife, fork, spoon and serviette with decorous ease and skill. He must be taught his duties to his equals as well as to his superiors, and encouraged in the formation of suitable friendships. Frankness and candour especially towards his mother cannot be too much encouraged. The social or altruistic sentiment should be assiduously cultivated.

3. Athletic games, as time goes on, will increase physical strength and address, exercise courage, and promote a genial spirit of comradeship; while pedestrian excursions with children of like age will enlarge his knowledge of his own neighbourhood in many directions.

4. The time has not yet come for encouraging a fully elaborated system of education. The Memory and the Imagination are the best fields in which the sower can now operate. A fair amount daily of the learning of paradigms will save much drudgery at a later period, and with this will of course be included arithmetical tables, weights and measures, and the like, with relative exercises. We place great faith in the cultivation of the Imagination. Fairy tales, ballad poetry, "cameos" of history, adventure stories, good books of travel, and such books as the "Arabian Nights," deal with the Wonderland in which the minds of the young love to live. By such tentative flights they are prepared for the enjoyment, at a subsequent stage, of the works of Shakspeare and Scott, Dante, Goethe, Spenser and Victor Hugo. Colloquial French and German; Music and Drawing; and easy Latin passages, with interesting subject matter, belong also to this period of education. We are, of course, considering only the case of the "average boy," not prodigies.

5. We have come to the end of what is generally considered the happiest period of life. Blessed are those parents whose children, as they advance in years, "look back on those stages as having been passed in an abode which, though perhaps humble and perhaps a scene of self-denial, was yet brightened by mutual affection, elevated by high ideals, and enlivened by cheerful preparation for future usefulness." *

* Ingram's "Practical Morals"—a book to which this paper owes many excellent suggestions. The student will find much interesting matter on the education of childhood in Quick's "Educational Reformers," where the views of Milton, Locke, Pestalozzi, etc., are all given and criticised.

THE ART OF CONVERSATION.

The great object of conversation is not to gain information or to display it, but to give mutual pleasure. Keeping this end clearly in view we may lay down a few principles and rules which minister to its attainment.

I. GENERAL CONVERSATION.

1. By its very nature, conversation implies reciprocity. It is not monologue. Even a Macaulay may become a bore by monopolizing the talk of the table. "Bobus" Smith's witty remark is worth recording, that after Macaulay's return from India, he was so far improved that "he occasionally favoured his friends with eloquent flashes of silence."

2. This reciprocal quality does not imply that conversation can be measured off into equal portions for each of the parties. "There are some silent people," says Lord Beaconsfield, "who are more interesting than the best talkers. And when they speak they will always say the right thing." We remember once dining with Jowett at the high table at Balliol. He spoke only about three times during the dinner, with long intervals of silence, but to this day we can quote every word he said.

3. But undue spaces of silence are apt to give those who are contributing to the conversation the feeling that the taciturnity is owing either to want of sympathy or interest, or to a sense of superior wisdom. A host has the right to expect that his guests will each do his fair share to make matters go well. If he is an expert host, he will endeavour to show all his guests at their best, and by a little skilful angling will generally succeed in eliciting some remark which will relieve even the most backward from the appearance of stupidity or listlessness.

4. Conversation should never be reduced to a catechism. "Inquirers who are always inquiring learn nothing." We have known very amiable people delude themselves with the idea that to ask a multitude of questions will be interpreted as interest on their part in the affairs of their friends. Ere long, however, the catechetical ordeal becomes an affliction, especially when it is seen that the "anxious enquirer," like jesting Pilate, "does not wait for an answer." "Sir," said Dr. Johnson to Boswell, "questioners like you would make a man hang himself."

5. Neither should conversation be disputatious. There is a great charm in the free interchange of opinion, however variant it may be in its composition. But this demands that the parties in the conversation are tolerant men who can bear to hear another opinion without warmth or loss of temper. Nothing is more disagreeable in a club or at a dinner-table than to find that the free expression of opinion has blazed into a wrangle.

6. It is always best to avoid religious and political subjects in general society. This would not be necessary if men were content to lay their own convictions by the side of opinions much opposed to them; but you must know your company well before you can feel sure that such tolerant wisdom awaits you on the part of an opponent, after you have fully and fearlessly expressed your views on the momentous subjects we have named. The very magnitude of these questions in which there is necessarily much speculation, and in one class much mystery, instead of impressing the mind with diffidence and awe, often inspires the disputants with angry passion and declamatory dogmatism. It is not every one who has learned like Endymion "to be prompt without being stubborn, to refute without argument, and to clothe grave matters in a motley garb."

7. Contradiction requires great management if it is not to be rude, brow-beating and insolent. "Putting people right" is often an odious liberty. He is a wise man who can occasionally allow errors of statement to pass without remark. It generally happens that you can work in your correction indirectly, later in the conversation, when your statement, dislocated from the connection of its origin, no longer sounds offensive. Irascible old gentlemen are entitled to some consideration even from the youngest and most self-confident striplings in the room.

8. The art of telling stories is not given to every man. First of all, the stories should be worth telling, i.e., they should be fresh, short, pointed, and likely to be generally interesting. It is too great a tax upon the patience of even a good-natured audience to martyr them with fusty, pointless and rambling anecdotes. Reminiscences, that delight so long as they are their own memories of elderly dons in the college common-room, are never in great demand, as "my Uncle Toby" discovered. Puns, again, ought generally to be eschewed unless they rise (which will not often be the case) to the level of Dean Mansel's or Tom Hood's. On the other hand, *bons mots* are always welcome. A story should be told *straight on* without windings and involutions, and should stop at *the point* without a word of appendix. A good climax is essential to a good story.

9. "Talking shop" is often too severely condemned. There is, of course, a form of it highly reprehensible, because it is merely the stale echo of the business hours, and should

not be heard when men come together for social intercourse. But as Mr. (now Lord) Goschen in his admirable Rectorial address ("Intellectual Interest") delivered to the students of Aberdeen University, pointed out, there are cases in which "shop" is in itself interesting, and the one subject upon which some of the guests can talk in the most interesting way. Who would feel that the experiences of a War Correspondent like Archibald Forbes, or the reminiscences of a great statesman would savour of the "shop"? And yet it was impossible to get a word out of Forbes in general company upon all that he had seen and done in the "sturm und drang" which he has so thrillingly described by his pen. It was professional "shop," and therefore "taboo." One can well understand why students fine a man who in hall spoils the joy of dinner with whiffs of his morning's studies, but it is not so obvious why all allusion to the varied work upon which college dons are severally engaged, apart from merely class curricula, should be absolutely excluded from the conversation of the common-rooms of Oxford and the combination-rooms of Cambridge.

10. Quotations in these degenerate days should be limited to English and French languages; but even the best poets weary if introduced too often and at too great a length. Literary allusions are often very charming.

11. Very often the best conversations are those of a mixed company of well-educated men and women. "Mrs. Neuchâtel's feelings were her facts, and her ingenious observations of art and nature were her news." Thus has a great master described in a nutshell the charm of a brilliantly gifted woman's contribution to social intercourse. Men cannot with courtesy lose their tempers when discussing with women subjects which generate heat in the combats of the stronger sex. Although the French *salon* has not been domiciled among us with its crowds "of dazzling people whose sayings and doings form the taste, and supply the conversation and leaven the existence of admiring or wondering millions," still in many a home, far below the rank of aristocracy, ladies and gentlemen meet whose talk is of literature, music, art or the drama. The free interchange of thought upon such topics is part of the education of our maturer years.

12. The quality of voice plays a great part in successful conversation. A loud, self-assertive tone betrays vulgarity and "love of pre-eminence." On the other hand, whispering and undertones are unsuited to the general flow of talk. Speak so that any one can hear you who wishes; let others finish their sentence before you break in, and do not try to help any one with suggested phrases to accelerate their speed, or to anticipate their conclusion. As a rule people prefer their own words, even if they come slowly, to being "helped over the stile" by an uninvited hand.

13. Never be contemptuous in reply, A timid but intelligent conversationist will always gratefully remember the kind and unobtrusive sympathy you extended to him when he was in difficulties as to the best way of putting his views creditably before his hearers. Dr. Johnson's handling of Goldsmith would not be tolerated in our day.

II. LADIES' SOCIAL CONVERSATION.

HINTS TO A HOSTESS.

Nothing in the shape of brilliant conversation can ever atone for the want in a hostess of a sunny manner, a frank and hearty reception, spotless cleanliness of person, and unimpeachable neatness of attire. We do not sympathise with Herrick's delight in

> "A sweet disorder in the dress,
> A happy kind of carelessness;
> * * * * *
> A careless shoe-string in whose tie
> I see a wild civility."

The magic of conversational power in ladies, whether at the tea-table, at (or after) dinner, or in "At Homes" is best demonstrated when the hostess has succeeded in making each of the guests talk at their ease, and show the best of what is in them. It is obvious that the cardinal virtue of this charming potency is Tact. Sitting in a retired corner, there may chance to be some shy and silent visitor, who if the spell were broken and the casket unlocked, could enter gladsomely into the genial interchange of conversation. How shall this be accomplished by the presiding genius of the company?

1. The hostess should have a great variety of topics, like the angler with a great assortment of flies, wherewith to beguile the coyness of some, and gently temper the over-ardour of others. Among these will naturally be found news of general interest, whether national, provincial, local, or parochial, and incidents in the family life of the people assembled under her common roof. In handling such diversified matters, the touch will be light, and the stay upon each brief, and quickly succeeded by flight to another flower. What has been gained from the morning papers is generally common property, and can only be handled without danger of staleness by way of comment. During the South African war who ever sat among silent or mere news-repeating fellow guests? When the feelings of every one were moved by bereavement, indignation, criticism or patriotic triumph, no tongue was dumb; every grandmother was a military critic, and every maiden of sixteen had her favourite general or her pet aversion. And even in country villages there is always something to discuss of general interest, be it the coming ball, yesterday's hunt, the parish tea-party, the curate's engagement, the squire's new motor-car, or the opening of the cottage hospital. "Pas de trop" (let nothing be overdone) is a good motto in handling such evanescent themes. Or, if you prefer English, "Touch and run" will do equally well.

2. It ought not to be forgotten that the vast improvement during the last quarter of a century or more, in the Higher Education of Women has widely increased the circle of intellectual topics of conversation. It is not likely that our "golden-haired graduates" will obtrude upon general society their academical attainments, and it is only just to them to avow that in our own experience the great majority of them have lost none of their womanly charm in their pursuit of knowledge. It is, however, only natural that, with trained intellects and advanced knowledge, they should desire something better in salons than "small talk" of the infinitely little which often passes muster for conversation. Without being bookish, there may surely be introduced by the hostess or others such topics as a new drama, a new novel, a new volume of poems, or the current exhibitions of pictures. A leading actress once remarked to us that she preferred a Parisian audience to an English one, because the French really loved a critical study of a play; they analysed it, followed with psychological sympathy or aversion the author's mind through all its windings, and from their historical knowledge were able to fix his place and that of the actors among dramatic authors and artistes. The same will be said by an English musical composer of the respective merits of German and British audiences.

3. Perhaps a caution is necessary here against over-dogmatism in such high matters as the Fine Arts include. Nothing is more irritating than the assured way in which girls in their teens who have begun to handle the brush or the chisel will deliver their preferences for "impressionism," "realism," "genre," &c., and their contempt for all who are not of their school of criticism. Great artists are generally generous in their appreciation of the work of their fellow-labourers. They know the difficulties to be overcome and the triumphs that have been won in a work in which the amateur or the tyro sees nothing to praise.

4. The hostess will often feel great discomfort from a few exasperating trifles,—one proceeding from a mistaken sense of courtesy, the other from a vulgar desire of display. The former consists in some under-bred guest's insisting on mentioning a lady's name every time she addresses her. Thus, "Yes, Mrs. Brown," "No, Mrs. Brown," "No thank you, Mrs. Brown," "I agree with you, Mrs.

Brown," "Fine picture, Mrs. Brown;" until poor Mrs. Brown hates her own name; or, if addressing a titled person, bespattering him or her with constant repetition of the title: "Thank you, my lord, your lordship is very kind. Hope her ladyship and her grace, her ladyship's aunt, are both well." The intention is courteous, but the effect extremely vulgar. One mention of the title is enough, and the iteration of plain Mrs. Brown's name (except, perhaps, once in a way for the sake of softening a contradiction) absolutely forbidden.

5. The second annoyance is the determination of some guest to display her extensive acquaintance with grand people before the envious eyes of her fellow-guests. Thus, "My dear and intimate friend, the Countess of Antrim, told me the other day that she was emphatically charged by our mutual friend, the Duchess of Salzburg, to tell me that the Princess of Modena particularly asked after me at a ball given by the Emperor of Austria on his Imperial Majesty's birthday." Our only counsel to the hostess is never to ask such people again to her entertainments. Married guests who speak of or to each other as "Papa," and "Mamma," or "Father" and "Mother," or the wife who addresses her husband by his surname, or as "Mr. P.," are not likely to be present at such "At Homes" as we have supposed you to preside over.

6. Two things in feminine conversation never fail to charm; the soft, well-modulated voice and the responsive air of interest in what is said by others. In *tête-à-tête* it is annoying and certainly uncomplimentary to find that while you are talking the other party to the conversation gives you one ear and keeps the other open for what is being said by somebody sitting near. A great prelate, who was "a darling of society," delighted every lady with whom he conversed by giving her the impression that at that moment there was no other woman in the world for him.

7. Even conversation sometimes palls, so it is good to vary your "At Home" by music, recitations and conjuring-tricks. As regards music and recitations we do not think that Christian charity requires you to ask any one to sing, play, or recite out of mere compliment to the performer. John Hullah used to say that he considered it "one of the most merciful dispensations of Providence that no man can judge the quality of his own voice." To ask your friends to listen to the flat, or timbreless voice of some amateur who is generally very forward in volunteering service, is not kind. Neither is it hospitable to doom your friends to silence while your daughter, who may be a very "sweet girl" otherwise, thrums away at the piano or screeches on the violin to the positive distress of an accomplished musician. "Music," says a bitter cynic, "is a wanton interruption of conversation." Recitations are too often artificially delivered, a weak copy of some well-known reciter, or are badly selected for the audience, who do not care for too much sentimentalism, rant or insipid comedy. Like Lord Rosebery, demand, above all things, "efficiency" in your "entertainers," although they cost you nothing for their services.

8. In conclusion, we will become a little didactic though not homiletic:

(1) Draw the conversation as much as you can away from ill-natured tattle and injurious gossip.

(2) Never exaggerate evil reports for the sake of creating an effect.

(3) Do not encourage scandal, even if you cannot altogether suppress it.

(4) Try to leave upon your guests the impression that they have enjoyed under your roof a really pleasant evening, in which rational discourse has been enlivened by amusement, pleasantries have abounded unmixed with innuendoes or envenomed jibes, and that the badinage of lively people has raised the spirits and left no acid or subacid feeling in the palates of the most sensitive.

THE ART OF LETTER WRITING.

Many of us recall the difficulty we had in childhood of composing a letter. How to begin? How to end? What to say? were all questions that embarrassed. We are not sure that even now, when autumnal tints diversify our hair, that the task has freed itself of all difficulties. Not to mention the really cardinal crux of letter-writing, such minor matters as how to address the various ranks of peers, both on the envelope and at the start of the letter; the proper form of subscription; the style to be adopted to tradesmen and servants; the grades of intimacy to be observed in writing to friends, are all questions demanding consideration, although none of them touches the central difficulty, viz., of what should a letter consist. *Form* may be easily prescribed, but it is *substance* that makes a letter worth receiving. Let us begin with externals:

(1) Never write upon shabby note paper, and never use diaphanous envelopes.

(2) If you are entitled to "bear arms," never blazon them on your note paper. The length to which you can go is to reproduce your *crest* on the sheet, or on the flap of the envelope. Universities and other corporations may quarter their arms on their note paper, but not private individuals.

(3) The letter paper which is considered to show the most taste is of medium thickness, is finely ribbed, slightly glazed, and delicately tinted, with envelopes to match.

(4) For ourselves, we like a thick cream laid paper, with the address printed on the top right hand in clear black English type, not German text. Obviously the first requisite in an address is legibility. White addresses in high relief are less showy but are not so easily read. Red and blue addresses savour of affectation. The envelopes should be square shaped.

(5) Post cards are a somewhat unceremonious method of communication, and should, as a rule, be reserved for business notes.

(6) "Letter cards" are our pet aversion. They are difficult to open, and save no trouble anywise, as compared with enveloped letters.

Let us now proceed to consider the essential qualities of good letter-writing. The institution of the daily post has certainly transformed the style of old-fashioned correspondence. Time was when Horace Walpole, the Misses Berry, and scores of other English, Scottish and Irish correspondents interchanged in the form of letters sentiments, news and criticisms, which have now become worthy of the name of literature. Why should all this be a thing of the past? Many of us have children in India and other parts of the great British Empire. Why should not our letters to them bear the same characteristics of interesting, familiar, gossipy, critical, and news-giving communication, as distinguished the domestic letters of those we have named?

1. *A letter is not a circular.* Its charm lies in its personal note. It must reveal the author, and the author as related to the recipient. The want of this personal note is the defect in Pope's letters: its presence is the delectation we all enjoy in the letters of Macaulay to his sister, and of Dickens to his sons.

2. *A letter must not be didactic.* The secret of good letter-writing is in its free flow of talking upon paper. What you want to convey is exactly that which you would say if your recipient were present with you. Hence the mother is generally the better correspondent with her children than the father. The latter hates detail, while the former believes (and she proves to be right in the issue) that everything going on in the life of the family is sure to interest an absent member.

3. A letter should always be such as can lead to no disagreeable after-consequences. It is never an easy matter to say how far personal remarks impinge upon the libellous. You are, therefore, wise to refrain from anything which may rise up against you in judgment. "Publication" is one of the mysteries of English Law, and your repetition in a letter of what you have every reason to believe to be true may land you in a very unpleasant plight.

4. A letter should be easy without being slovenly in composition. Every verb should have its nominative, Such a style as "Arrived here this morning—hotel comfortable—scenery lovely—very tired—going to bed—found Jane waiting," &c., is to be abhorred. No one

except Alfred Jingle, would speak in this fashion, and, as we have already said, letter-writing is a substitute for speech. Its style will, therefore, be neither bombastic, involved, grandiose nor pert; but grammatical, structurally correct, and the diction that of educated conversation.

5. Punctuality in reply is an essential element in the courtesies of correspondence. It is related of an English Bishop that he suggested two additions to the questions already standing in the ordinal: (1) "Will you suffer fools gladly?" and (2) "Will you answer letters by return of post?" A precise conformity to the latter rule would save an abundance of trouble both in social and business matters. As a rule, the busier a man is the more punctual he is in answering letters. Men like Mr. Gladstone and the late Bishop Wilberforce were unfailing in this respect. The latter averred that if he once let a post go by without the necessary budget of letters "in reply," he could never overtake the lost opportunity. Hostesses are naturally offended if their invitations are left unanswered for days.

We add a few minor hints by way of postscript:

(1.) A little latitude may be allowed in deciding whether in returning business documents, any accompanying missive is necessary. It is never an arduous task to write on a clean half-sheet of note paper, "With Mr. So-and-So's compliments," or if a letter has been received along with the bundle of papers, to write a little more fully in acknowledging receipt. Even to an offensive letter it is well to give a formal receipt.

(2.) The form of address to superiors will be found in the table appended. One only caution may be added, viz., that if you are in doubt, always err on the side of deference and respect. The snub which punishes over-familiarity has made many a man wince for many a day after its administration.

(3.) If you ever venture upon writing in the third person, be careful to use it uniformly, and do not make a hash like Dean Alford's famous character, who lost his hat, and reclaimed it in a mixture of all the three personal pronouns (*v.* "Queen's English.")

FORM OF ADDRESSES ON ENVELOPES.

1. Every one, however high in rank, addresses the Sovereign and members of the Royal Family as follows:—"His Majesty the King"; "His Royal Highness the Prince of Wales," "His Royal Highness the Duke of Connaught," &c.

2. Below the rank of royalty, distinction is to be observed between the style of addresses used by equals and superiors. Thus, intimates will address the Duke of Devonshire simply by that title: subordinates will write "To His Grace, the Duke of Devonshire"; equals, will write "The Marquis of Huntly," subordinates "To the Most Honourable the Marquis of Huntly"; equals, "the Earl of Aberdeen"; subordinates, "To the Right Honourable the Earl of Aberdeen," and so on with Viscounts, Lords, Ladies, &c.

3. Members of the Privy Council are addressed as "Right Honourable," without the addition of "Esq.": thus "the Right Honourable James Bryce, M.P." Ambassadors and their wives bear the title of "To His (Her) Excellency," as do also the Lord-Lieutenant of Ireland, the Governor-General of India, &c. Archbishops are addressed on the envelope "His Grace the Archbishop of York"; Bishops, "The Right Reverend (if London, add "Right Honourable") the Lord Bishop of Llandaff"; Deans "The Very Reverend the Dean of Argyll"; Archdeacons, "the Venerable the Archdeacon of Cleveland"; clergy, "the Reverend George Smith, D.D." (or LL.D., or D.C.L.) but never with M.A. or B.A. affixed.

FORM IN BEGINNING AND ENDING A LETTER.

1. The Queen is addressed "Madam," the King, "Sir" (in the 18th century, "Sire"). Above "Madam" or "Sir," write "Her (His) Majesty the Queen (King)" The signature is always "profoundly" respectful and devoted, but varies a little in style. A poet inscribing his works to the Sovereign would sign "I have the honour to submit myself, with profound respect, your Majesty's most devoted subject and servant," but this is heavily formal, and the copy of a past age. The leader in the House of Commons in his nightly budget of Parliamentary news begins, "Mr. —— offers his duty to your Majesty," and goes on to speak of himself always in the third person, while addressing the Sovereign in the second. Princes and Princesses expect the subscription "Your Royal Highness' dutiful and obedient servant," even from intimates.

2. An ordinary person writing to a duke begins, "My Lord Duke," to a Duchess, "Madam," to a Bishop, "My Lord Bishop." Care should be taken to distinguish Dowagers by putting their Christian name both on the envelope and in the superscription *before* the title, thus; "The Right Honourable Jane Countess of Wigan"; sons and daughters of all peers above the rank of barons include their Christian name in their courtesy titles, thus "Lord Randolph Churchill," never Lord Churchill, "Lady Marjory Gordon" (never Lady Gordon). If the latter were to marry a commoner, she would still retain her title with the Christian name, and simply change her surname, thus "Lady Marjory Sinclair." In beginning a letter, the correspondent, according to the measure of intimacy, would begin, "Dear Lady Marjory," or "Madam," with the title written at the left foot of the page. A lieutenant in the army is addressed as "Esquire," in the navy by his title.

3. We may add that ordinary persons addressing their equals should be guided by the degree of familiarity in their relations to each other, as indicated in the following ascending scale of friendship: Sir, dear sir, my dear sir, dear Mr. Smith, my dear Mr. Smith, dear Smith, my dear Smith, dear Tom, &c.

The third person is going out of use except in purely business communications and letters to servants, e.g., "To Mary Jones—Mrs. Lumsden will return by the six train on Friday night, and bring two friends with her." "Mrs. Fortescue will be obliged by Mr. Watson sending her a really young chicken."

4. Subscriptions are very much a matter of taste. Mr. Gladstone always used the form: "Your faithful W. E. Gladstone." It used to be a rule that your subscription must copy your address; so that if you began "My dear Smith," you must end, "I am, my dear Smith, ever yours." We fancy that few now feel bound by this trifling ceremony. "Yours obediently," "yours faithfully," "yours truly," "yours sincerely," "yours very sincerely," "ever yours," and "yours affectionately," are a sort of rough gamut of the varying degrees of friendship and intimacy.

THE ART OF READING ALOUD.

Reading aloud should not be identified with what is popularly called "Elocution." Your experience may possibly be our own, that some of the most distasteful clerical readers you have ever heard were men who had wasted their substance in paying for lessons from a professional "elocutionist." Of some of them we may say with Hamlet, "that neither having the accent of Christians, nor the gait of Christian, pagan nor man, they have so strutted and bellowed that I have thought some of nature's journeymen had made men, and not made them well, they imitated humanity so abominably." We know no better account of the qualities of good reading as distinguished from stage-declamation, than what is to be found in one of Julia Mannering's letters to Matilda Marchmont in "Guy Mannering." "In the evening, papa often reads, and I assure you that he is the best reader of poetry you ever heard—not like the actor, who made a kind of jumble between reading and acting; staring and bending his brow, and twisting his face, and gesticulating, as if he were on the stage and dressed out in all his costume. My father's manner is quite different—it is the reading of a gentleman, who produces effect by feeling, taste, and inflection of voice, not by action or mummery." It is quite possible that Sir Walter Scott here describes his own practice of

entertaining his guests on winter evenings with reading the works of some favourite author in verse or prose; just as John Bright enchained in the tea-room of the House of Commons a sympathetic group of M. P.'s while he read the poets of his love.

Good reading is an accomplishment quite as worthy of cultivation, and as capable of imparting pleasure to others, as vocal or instrumental music. It is also a high intellectual exercise. For as with the painter, so also with the reader, there must first be a subjective appreciation of the force and beauty contained in the object, and then the power to project externally what has been intellectually apprehended. Voice and Delivery are the two pillars upon which stands "The Art of Reading Aloud."

I. VOICE. This must be considered both as to its natural character and acquired habits. The former relates to tone and articulation; the latter to pronunciation and accent.

1. TONE. By nature the tone of some voices is good, of others bad. Your ear is the judge. If the tone be clear, sweet and sonorous, you declare the voice to be good in tone; if on the contrary the voice be dull, faint, husky, croaking or harsh, you condemn the tone as bad. Let us come a little closer still, for epithets without illustrations are of little practical value. You have had the misfortune to hear a speaker whose voice is absolutely without *resonance;* the defect is not weakness, but a dull, muffled, non-portability which suggests speaking through a blanket. Neither gas-globes nor an open piano will utter a responsive chord. If the hall in which he speaks is large, the reporters are the sole recipients of his confidences. That man's voice is incontrovertibly *dull;* or if, in addition to being muffled, it is poor and thin, you call it *faint.* We are bold to affirm from experience that these defects can be remedied by reading aloud in the open air. You need not, like Demosthenes, practise declamation by the sea-side with your mouth filled with pebbles, but you can have no objection to repair to "dingle, bushy dell, wild wood, or bosky bower," and there read aloud by yourself, and so gain *timbre* for a voice naturally dull or faint.

Another remedy is to practise recitation in monotone upon G or A, in counting from 1 to 100, or reading an ordinary passage from a book on one note.

We are not equally confident in prescribing for the cure of a husky, croaking or harsh voice, especially in the case of an adult. Much, however, can be done with children. It is often from servants that children learn the shrill, high-pitched, harsh vocalization which it requires years to correct. It is of the utmost consequence that the voice they hear most frequently should be sweet and pure. We do not forget that very often a harsh speaking voice may be very sweet in singing, and *vice versa.*

2. ARTICULATION. As regards the second natural character of voice, Articulation, the prime excellence is distinctness. This is secured, not by volume of sound, but by means of deliberate utterance, the use of a far carrying note, the firm control of the jaw and teeth, and the clear enunciation of every final consonant. Opposed to clearness of articulation, we have in varying degrees of abomination, nasal, guttural, stuttering, lisping, and thick articulation. As regards the nasal, the American people, male and female, are the most conspicuous offenders; as to the guttural, even Princes of the Blood are not beyond reproach; and the "Tyne-sider" with his *burr* is almost as bad as the naturalized German-Jew. When we come to stuttering, we trench upon the function of the specialist. We have, however, experience to guide us in saying that gentleness and encouragement are the only means of creating in the young stammerer that self-control and deliberation, the want of which is the cause of stuttering. Stammerers can always sing without difficulty, and at school can recite their paradigms with perfect ease if monotone is permitted. *Lisping* is often an affectation. If a man says "Tholomon's Thong" for the title of the Book of Canticles, he is either an affected simpleton, or one who requires practice in the use of the sibilant letters. *Lumpiness* or thickness of speech is best illustrated in Mrs. Gamp with her "Ankwers packidge" for "Antwerp packet," "brick-badge" for "brick-bat," and "suppoge" for "suppose." Once more we prescribe monotone in a spacious room as the most efficient cure for all these defects. We now come to the acquired habits of the voice—Pronunciation and Accent.

3. CORRECT PRONUNCIATION. Its opposites are: vulgar, provincial and pedantic pronunciation. In this country we have no Academy to fix beyond dispute the pronunciation of any particular word, but the general usage of well-educated people gives a working guide in every case of doubt. As regards provincial pronunciation, the cure is surely, and perhaps regrettably, being wrought out by the great leveller of all distinctions, the Railway. To the philologist it used to be a great pleasure to trace, by vocal peculiarities, what particular band of Norsemen had colonized some particular district in England. This delectation vanishes before our present methods of travel with their accompanying unification of speech. *Accentuation* is still disturbed by locality. Take the following words, and see how the stress is differently laid in England and Scotland: "Arithmetic," "Committee," "Interesting," "Organization," "Aristocracy," "Indisputable" and "Success." Like the French the Scots accent the "met" in the first word, "com" in the second, and "suc" in the last; while many of them, and not a few Englishmen, put the stress on "est" in "interesting," on "gan" in "organization," and on "pu" in "indisputable." *Pedantic* pronunciation is the vice of schoolmasters and junior curates. They are deluded with the idea that the words must be pronounced as they are spelt, and that every letter must be heard.

4. ACCENT. The twin-brother of Pronunciation is Accent. Described by its excellencies, accent must be pure and may be fine. It is bad if mean, affected, or strongly provincial. Pure accent has no shibboleth. One ought not to be able, on hearing a man speak, to say "he is from Lancashire, Devonshire, Wales or Ireland." As a rule the vowels betray the geographical secret. The German "u" of the Yorkshireman in "butter"; the conversion of "ou" into "ew" by second-rate Londoners in such words as "town council"; the Scotch short "o" for the long one in "holy," "road," &c., and the Irish "oi" for "i" in "like," are all tell-tales of a man's *patria.* With these may be classed the close sound of "o" in "glory," and of "ou" in "thought"; and the prolific mistakes that surround the letter "a". But consonants also have their troubles. Some men insist upon aspirating them, e.g., "true" is pronounced "thrue," "ministers" "ministhers"; others ring them out unduly, "war-r" for "war," and (specially in Cheshire) the final "g" is doubled so that "ringing" and "singing" become "ring-ging" and "sing-ging." We protest also against the vulgarism now prevailing in high society of dropping the final "g" in all present participles: "runnin," "givin," &c. It seems to us no less a defect than the misplacement of the aspirate. Accent is *mean* if precise vowel-sounds are slurred over with undignified haste; and is *affected* when efforts to drop the native and attain a better accent overshoot their mark. "Wainy weathah" (rainy weather), "expwess twain" (express train), "bwandy and sodah" (brandy and soda) are cases in point.

II. DELIVERY. This is affected by certain mechanical properties and intellectual qualities.

1. ACCURACY. It is surely a reasonable demand that what is written and nothing else should be reproduced by the reader; but perfect fidelity is rarer than you might imagine.

2. PAUSES. Printers' stops are often merely mechanical. Some writers (e.g., Sterne and Shelley), were notoriously negligent in punctuation, while others, such as Carlyle and Dickens, had their own peculiar views as to marks of pause. The best way in reading is to follow the grammatical structure of the sentence, and to refuse to be fettered by the printers' indications.

3. Emphasis and Cadence. Of both of these it may be safely said that it is better to be too sparing than too liberal. How distressing is the pounding of adjectives, pronouns and prepositions, except for the purpose of antithesis! Equally bad as over-emphasis is over-cadence, the too frequent raising and dropping of the voice, especially at commas. Even "sing-song" is preferable to this, especially in reading poetry. (S. T. Coleridge).

4. Fluency is the remaining mechanical property of Delivery, and implies that the delivery is neither faltering nor hurried, and that the voice is under command. Nothing is more trying to the nerves of the hearer than a gasping delivery, or one which is too *staccato*, or too syllabic; nothing more pleasing than the rolling *obligato*, when the words follow each other like the waves of the sea in regular and graceful undulations. Self-restraint is necessary to keep the utterance from being too rapid, and animation, to keep it from dragging. Moreover, the volume of voice should always be under strict discipline. The voice is at its proper intensity when the most distant person in the room hears with comfort, and the vocal organs of the reader are not strained.

5. Intelligence. Of Intellectual Qualities essential to good delivery, the first is intelligence, whereby the entire drift of the author is understood, and his meaning brought out by the reader. Argumentative composition should always be glanced over silently before being read aloud. Would that all clergymen would follow this counsel before reading in church St Paul's Epistles—a dialectic literature which taxes the intelligence of the reader to the utmost. In all such elaborate ratiocinative writing the reader must discriminate between the *main line* of the reasoning and the *sidings*. The former should be read in a high key with deliberate utterance and due pauses. But when the reasoner runs off the rails into some parenthetical statement or subsidiary issue, the key must fall and the pace hurry, so that the hearer can tell at what particular point the main argument has been resumed. When the last "therefore" introduces the grand conclusion, the voice must give *empressement* by a slow and didactic delivery of the words in which everything before is summed up.

6. Harmony is another "Intellectual Quality," and denotes a sense of rhythm in prose or verse. A good prose writer tries to avoid abrupt and jerky composition; and although he does not measure out his words into feet, or make his pauses and accents fall with the regularity of blank verse, he marches along to the step of an informal rhythm. The first paragraph of "Rasselas," the collects in the Prayer Book, Sir Thomas Browne's "Religio Medici" and De Quincey's "Essays" will all supply excellent examples of rhythmical prose.

7. Feeling and Expression are the last but not least of the Intellectual Qualities essential to good delivery. Without Feeling reading is little more than a mechanical exercise; without Expression there is no perceptible change of part or character. Feeling makes the voice responsive to the pathos and sense of the author; Expression is the power of dramatic imitation. It is modified as occasion may require, and suits its tone and manner to the subject—grave, playful, familiar, impassioned or solemn. *Poetry, dramatic literature and colloquies* are the best fields for the cultivation of Feeling and Expression. A good reader, while never losing command of his voice, and steadily preventing it from running into emotionalism, follows with truthful and expressive modulation the varying strains of his author. The thrill of heroic sentiment, the throb of restrained passion, the tremulous accents of pleading and compassion, the defiant tone of insult given or returned, the sneer of sarcasm, the lofty exhortation to duty, the fiery appeal to the golden deeds of the past, the withering denunciation of meanness or treachery, are all communicated to the hearer by play of voice, and yet nothing is pompous, sensational or suggestive of the stage. All this conception and execution are included in "the Art of Reading Aloud."

KEY TO SYMBOLISM,

ECCLESIASTICAL AND RELIGIOUS.

1. Symbolic Light. When the "halo of light and glory," which in art distinguishes Divine or holy persons, envelopes the body, it is called an *Aureola*; when it is limited to the head only, it is termed a *Nimbus*; the union of the Aureola and the Nimbus is called a *Glory*. The nimbus of the Eternal Father is usually a circular disc, having three bars or rays upon its field, reaching from centre to circumference. O Ω N by the Greeks and REX by the Latins, is often inscribed upon the nimbus, the former denoting the "Self-Existing One" and the latter "the King." If the hand be depicted it also is surrounded by a nimbus. In late Italian and Greek art the nimbus takes the form either of an equilateral triangle or of two triangles placed reverse behind each other. In each case the Trinity is symbolised. The nimbus of God the Son is also a three-rayed circular disc. The earliest form is rayless, but is accompanied by the Lamb, and A and Ω (alpha and omega) as a monogram. It is not now believed by experts that the three rays seen in Christ's nimbus have any connection with the cross, but refer to His membership of the Undivided Trinity. The symbol of the Holy Spirit is also generally invested with a circular tri-radiated nimbus, but sometimes with a plain triangular one. No angel ever wears the tri-radiated nimbus, nor does the Mother of Christ. The nimbi of the Apostles are in all cases circular, generally plain, or with a simple border, but, according to age and country, sometimes richly ornamented, and bear the name of the Saint. Saints, martyrs, confessors and virgins venerated in the Middle Ages bear the nimbus; and even living persons, but in the last case the nimbus is square in shape, and placed upright behind the head.

2. The Hand (issuing from a mass of clouds), as a Symbol of the Eternal Father, and indicating His power, was prevalent in the first eight centuries. Then began the practice of painting portraits of God the Father as an aged man, "the Ancient of Days," of august and venerable appearance, with a beard and long hair. The hand is sometimes open, sometimes closed, but benediction and the giving of grace are generally symbolised.

3. The Good Shepherd (St. John x. 14, 15, 16) appears in the catacombs as a popular representation of God the Son. Sometimes He simply stands amidst His flock, at others He carries a Pan's pipe in His right hand, while with His left He holds the feet of the sheep, one member of the flock standing on His shoulders.

4. Orpheus playing upon his lyre with such sweetness and power as to captivate all nature, animate and inanimate, is also found in the catacombs, as a symbol of Christ.

5. The Lamb, however, has been the constantly popular image of the Saviour. In the catacombs it appears standing, sometimes without nimbus, with a cross or the Greek monogram (X crossed by P) over its head; at other times it appears, with inscribed nimbus, standing upon a small hill, from which four streams (the four gospels) are flowing. As the "Agnus Dei" in art, the Lamb bears a cross and a cross-adorned banner.

6. The Lion also is used for Christ, who is styled in the Apocalypse "The Lion of the Tribe of Judah."

7. The Pelican, with its crimson stain on the tip of its beak, was supposed to feed its young with blood flowing from its own breast, and so became an emblem of the Redeemer.

8. The Fish has a curious history as a symbol of Christ. The Greek word "Ichthus," a fish, supplies the initials in Greek for "Jesus Christ (the) Son of God (the) Saviour." The pointed oval form, commonly used for the aureole, was probably derived from the shape of the fish, and is called *Vesica Piscis*.

9. The Grape Vine as a symbol for Christ is evidently connected with St. John xv. 1.

10. The Dove as the symbol of the Holy Ghost owes

its origin to St. Matthew iii. 16. It is represented in art pure white in colour, with red feet and beak, head downwards, with gold tri-radiated nimbus below its head, and three rays issuing from its mouth. Seven doves are sometimes depicted together in reference to Isa. xi. 1, 2; Rev. v. 6, 11, 12.

11. TRIANGLES in many arrangements stand for the Ever Blessed Trinity.

THE CROSS.

The Cross is the universal symbol of man's redemption, and appears in many varieties of form.

(1) The Old Testament Cross shaped like the capital letter T (called the Tau Cross).

(2) The Patriarchal Cross, with three transverse beams for the Pope, and two for Cardinals and Archbishops, the lowest beam being the longest.

(3) Of Crosses with four limbs, the Greek type includes those which have equal limbs and can be circumscribed with a circle; the Latin, unequal limbs.

(4) The Cross of Suffering is a Latin Cross with pointed members.

(5) The St. Andrew's Cross (Cross Saltire), is shaped like the letter X.

(6) The Maltese Cross has eight points.

(7) The Cross Patée must not be confounded as is often done with the Maltese; its radiating lines may be straight or curved.

MONOGRAMS OF THE NAMES OF OUR LORD.

1. ☧ = ChR, the first two Greek letters in Christos.

2. ☧ Α Ω = the above, plus Alpha and Omega.

3. ☧ = Ch.I. (Christ Jesus).

4. ✳ A monogram consisting of Cross, Chr. I. with the loop of the rho added to one of the arms.

5. ☧ N The N stands for "noster" = *our* (Lord Jesus Christ).

6. The above forms of the monogram are often enclosed in circles.

7. ĨC stands for the first and last Greek letters in the name of Jesus (C was the ancient S); similarly XC̃ = the initial and terminal letters of Christos.

8. IHC̃ (in Latin letters IHS) = Je—s (Jesus); XP̃C = Chr—s = Christos (Christ).

EMBLEMS OF THE PASSION, RESURRECTION, AND ASCENSION.

1. *Emblem of Suffering.* The Cup with a plain Cross issuing from it. (St. Matthew xxvi. 39, 42).

2. *Emblems of the Betrayal:* Sword, Club, Lantern, Torch, Ear, Rope, Thirty Pieces of Silver, and the Head of Judas.

3. *Emblems of the Condemnation and Sufferings in the Common Hall:* Basin and Ewer (used by Pilate), Rope, Pillar, Scourge, Purple Robe, Crown of Thorns, Reed, and Cock.

4. *Emblems of the Crucifixion:* Cross, Three Nails, Hammer, Pincers, Ladder, Sponge and Reed, Spear, Inscription (I. N. R. I.), Seamless Robe and Three Dice. Also the Pelican, feeding its young with drops of its own blood; the Brazen Serpent, the Sacrifice of Isaac, and the Paschal Lamb.

5. *Emblems of the Resurrection:* The Lion, Phœnix and Peacock (as renewing its plumage every year).

6. *Emblems of the Ascension:* The Eagle; Translation of Enoch and Elijah.

EMBLEMS OF THE SACRAMENTS.

1. HOLY BAPTISM: A Fish; three Fishes interlaced in a fret; the crossing of the Red Sea and Jordan.

2. HOLY EUCHARIST: A Cup with three small loaves, marked with crosses; Chalice and Wafer; a small Altar with Chalice and Bread.

EMBLEMS OF THE EVANGELISTS AND APOSTLES.

1. EVANGELISTS: Four Scrolls; four open Books; four Rivers; (the four open Books, each with an aureole, are often placed between the arms of a Greek cross); a winged man (St. Matthew); a winged Lion (St. Mark); a winged Ox (St. Luke); an Eagle (St. John).

2. APOSTLES. Twelve sheep; twelve men (with or without sheep) carrying scrolls; *St. Peter*, cross keys; *St. Paul*, a sword pointing upwards; *St. Andrew*, the cross which bears his name; *St. James the Great*, a pilgrim's staff, script and scallop-shell; *St. John* (as an Apostle), a serpent issuing from a cup; *St. Thomas*, a builder's rule or square; *St. James the Less*, a fuller's club; *St. Philip*, a Latin cross fixed into a long reed; *St. Bartholomew*, a scimitar; *St. Matthew*, a tax-collector's purse or bouget; *St. Simon*, a large saw; *St. Jude*, a halberd; *St. Matthias*, an axe (or spear).

Most of these emblems refer to the weapon by which the particular Apostle was martyred.

EMBLEMS OF SAINTS.

St. Agnes, V. and M., a lamb; a sword and palm-branch.
St. Alban, a sword, and a cross on a long staff, or else a palm branch.
St. Alphege, a battle axe.
St. Ambrose, a triple scourge; a bee-hive.
St. Augustine, a heart pierced with arrows.
St. Benedict, several emblems drawn from attempts to poison him (cup and serpent, a loaf and serpent, &c. &c.).
St. Blasius, an iron comb.
St. Boniface, a book pierced by a sword, (he was martyred in Friesland while trying to evangelize the inhabitants).
St. Britius, blazing coals carried in his hands or chasuble.
St. Catherine, a wheel.
St. Cecilia, an organ, organ-pipes, or harp.
St. Clement, an anchor.
St. Crispin, a shoemaker's awl and knife.
St. Cyprian, a sword.
St. Dunstan, a harp and a pair of furnace tongs.
St. Edmund, K. and *M.*, a bunch of arrows or short darts.
St. Edward, K. and *M.*, cup and dagger.
St. Fabian, sword and palm branch.
St. Faith, a grid-iron.
St. George, a dragon, a shield bearing a red cross, and a spear.
St. Giles, a hind seeking protection in his lap.
St. Gregory, book and dove.
St. Hilary, three books (he wrote three works against the Arians).
St. Hugh, a swan.
St. Jerome, a model of a church in his hands.
St. Lambert, a javelin.
St. Laurence, a grid-iron.
St. Lucy, a sword, a pair of eyes carried on a dish, and a burning lamp.
St. Margaret, a dragon spouting her out of its mouth.
St. Mary Magdalene, a box of ointment.
St. Nicholas, three purses, or three golden balls.
St. Nicomede, a club spiked with iron.
St. Prisca, a sword, and a lion at her feet.
St. Remigius, a dove with an oil cruse in its beak.
St. Richard, chalice at his feet, where the consecrated cup lay when he accidentally let it fall without spilling a drop.
St. Stephen, a stone or volley of stones.
St. Vincent, a grid-iron.

Here again symbol and mode of death go together for the most part.

EMBLEMATICAL USE OF COLOURS IN THE EARLY AND MIDDLE AGES.

WHITE (or Silver) is used for Christmas, Circumcision, Epiphany, Easter, Feasts of B. and of V. M. Saints who were not martyrs.

RED: For Exaltation and Invention of the Cross, Pentecost and Feasts of Martyrs.

BLUE: Symbolises Heaven, Knowledge, Contemplation.

YELLOW: Symbolizes the Goodness of God, faith, fruitfulness.

GREEN: Used on common Sundays; signifies youth and fertility.

VIOLET: Used for Advent, Lent and all penitential days except Good Friday (when Black is the colour). Violet signifies passion, suffering, humility, &c.

SYMBOLISM OF STONES.

The *Diamond* signifies light, innocence, life and joy.
The *Ruby*—divine power and love, dignity and royalty.
The *Carbuncle*—blood and suffering.
The *Sardius*—martyrdom.
The *Sapphire*—all heavenly virtues.
The *Topaz*—Divine goodness and human faithfulness.
The *Emerald*—hopes of immortality.
The *Amethyst*—earthly sufferings and truth unto death.
The *Pearl*—purity, innocence and humility.

MISCELLANEOUS SYMBOLS AND EMBLEMS.

An *Anchor* signifies hope, serene patience and tranquillity.
An *Ape*—sin, malice, cunning and lust.
An *Apple*—the fall of man.
Arrows—suffering, pain, martyrdom.
An *Asperge*—purity of life and holiness (an instrument used for sprinkling holy water).
A *Banner*—triumph over persecution and death; is often charged with the cross.
A *Book*—the gospel or (as in the case of St. Stephen), the Old Testament.
A *Circle*—eternity.
A *Crown*—triumph over all hindrances.
A *Dove*—when bearing the nimbus, the Holy Ghost; without it, love, innocence, &c.
A *Dragon*—the devil.
The *Dragon's Mouth*—the jaws of hell.
The *Escallop's Shell*—pilgrimage.
The *Heart*—when flaming, fervent zeal for Christ; when pierced with arrows, contrition and devotion in trial.
The *Lamp*—wisdom.
The *Lily*—virginity and purity.
The *Olive Branch*—reconciliation and peace.
The *Palm Branch*—final victory.
The *Pomegranate*—immortality.
The *Scourge* (Flagellum)—penance and self-mortification.
The *Square*—earthly existence.
The *Swan*—solitude and retirement.
The *Sword*—violent death or martyrdom.

A VISIT TO AN ART GALLERY.

It sounds but a truism to say that both pleasure and education are to be found in visiting the collection of sculpture, oil-paintings, water-colours, drawings and representations in black-and-white which form an Art Gallery. And yet in contrast to the delight with which the French, German, Dutch and Spanish crowds regularly frequent their own galleries, are to be noted the listlessness, aimless remarks, poverty of criticism and general want of intelligent interest characteristic of the average British visitor to the galleries of his own country. Is it possible to aid him in discovering a new and abiding pleasure? We can do no more than offer a few rudimentary suggestions with the most charitable intentions.

1. The path to enjoyment runs through the valley of humility. Applied to the subject in hand, this venerable truth means that you must take *on trust* at first the judgment of competent tradition and expert verdict as to what is truly good in the domain of the Fine Arts. No amateur can relay the foundations of æsthetic criticism. Go then, again and again, to the National Gallery, or any other great classical collection at home or abroad, and there "read, mark, learn and inwardly digest" the works of the immortal painters who represent the great National Schools (Italian, Dutch, English, Flemish and Spanish &c.). It is marvellous in how short a time the eye can learn to arbitrate between the claims of the superior and inferior in drawing, painting and sculpture, if only *established* excellence is admitted as the criterion of judgment.

2. Even if we succeed in winning but few disciples, we shall maintain that the first steps in artistic appreciation should begin with a study not of colour, but of form, i.e., of black-and-white in its various manifestations: etchings, pen-and-ink sketches, line-engravings, silver-point, pencil drawings and the like. All these varieties are often hung in the lower corridors of galleries, as if they were of small importance; or placed, as in the Dutch museums, in large portfolios on swing-desks; but nothing of this inferior placement should prejudice the intelligent student against giving them a thorough attention. Proportion, freedom of pose and motion both in men, women, wild and domestic animals, birds, fishes, &c., can all be seen in the free-hand and free-arm drawings of the great masters. As our suggestions are only addressed to the uninitiated, we may venture to caution them in this connection against the misuse of such terms as "etching," &c. We have frequently heard this word confounded with pen-and-ink sketches. Now "etching," which means *biting*, is "the operation by which a slight depression is made at pleasure on the surface of a body by means of a liquid solvent called etching-fluid." Clearly then, what you draw with your pen cannot, without the "biting" process, be called an "etching." In conning etchings, you will soon notice with pleasure the various treatment by great artists of shadows, skies, clouds, &c. Thus, e.g., you will see that while Rossini gives with great power the black sunless effect of the passage through an old Roman arch, he entirely neglects to represent clouds, but contents himself with straight horizontal lines in their place. Piranesi, on the other hand, is sparing in very black shadows, and lets plenty of sun-light fall upon his buildings, while his skies are filled with a greater variety of clouds than we are wont to associate with the climate of Italy.

3. When you are ambitious to go upstairs into the gallery, we would advise you to give beforehand a few evenings to the study of some manual which gives a summary of the characteristics of the Great Schools of painting, and their distinctive names. You are familiar, e.g., with the term, "Pre-Raphaelites"; but what does it mean? As applied to a school of modern artists it denotes those "who profess to follow the mode of study and expression adopted by the early painters, who flourished before the time of Raphael, and whose principal theory of action is a rigid adherence to natural forms and effects, in contradistinction to the style or rendering of any particular school of Art." Or, to take another example, that of "Genre-Painting." Many are the misapprehensions of this much used term. It is often limited to comic or work-a-day subjects; but it really includes all the incidents of every-day life, whether grave or gay. Hogarth is our best English representative. In Holland "genre" subjects abound in every gallery; a boat coming into harbour with a dead man on board, whose wife or sweetheart is waiting on the shore to welcome him, unconscious of his fate; a band of merry-makers dancing in front of a village inn; groups of village gossips discussing eagerly their rustic interests in the blacksmith's forge; or a little procession of mourners carrying to the grave-yard by the sea "all that remains" of a beloved relative,—all these are rigidly included under the term "genre" pictures. Of course, if you are going deeply into the subject of art, which we hardly assume, you will lay your foundations in a study of Greek art, which we cannot here touch upon even with the lightest hand.

4. Instead of labouring with your catalogue, and examining every single picture by its description, when you enter a particular gallery for the first time, go where your fancy leads you, and "skim" the collection. Perhaps a landscape is the first to appeal to you, with its quiet familiar scene of wood, water, village-spire, sedgy pool, woodsmen returning from their labours through the trees whose stems are reddened by the setting sun. Or perhaps you like a picture with a "story,"—lovers stealthily con-

versing on the little wooden bridge after the evening star has risen. Or you enjoy the spectacle of the fat herds of cattle grazing in rich pastures, or lying under the trees to shelter themselves from the noontide sun; or a gaudily painted garden with flowers of the old-fashioned sort, amid which stands the maiden in white under a scarlet sun-shade; or it may be a bee sipping eagerly from flower to flower, or a vigilant mother-bird guarding her callow offspring. Follow your fancy as your only guide.

5. But all the time you have mentally been taking stock of what other attractive objects the collection contains, with a view to subsequent visits, by which you hope to deepen the little specialized knowledge which possibly you may have acquired in one department of painting, and in any case to gratify your predilection for particular kinds of subjects. Go back to these as often as opportunity permits. Study each from the several points of view, say of colour—harmonious or otherwise—drawing and composition. If you are standing before a landscape, note how the effect of atmosphere or sunlight is rendered, the balancing of parts, the subtle gradations of tint in middle distance (trees, hills, pasture-land, &c.). Or if you are engaged in the study of a subject-picture, notice the drawing and grouping, the objective excellence and the subjective impression upon yourself, i.e., the effect impressed upon you, quite apart from the artistic merits in themselves, or from the details of the story. but the grand total of all these as realised in your own mind.

6. We may now say a few words about portraits. What is a really good portrait? There seems to be considerable difference of opinion between experts as to the way in which the human face and figure should be handled. Some critics find fault if drapery does not receive minute attention; others if more than one "eye's take-in," i.e., the measurement of a single glance without change of focus, is represented fully and clearly in the portrait. The third button of the waistcoat is by these taken as the boundary point between what is to be clearly painted and what is to be only suggested. Every wrinkle, every eye-lash, every graded hue in cheek and eye, is powerfully pourtrayed, but below the third button you must gradually sink into shadowy suggestion of abdomen, legs and feet! And yet some of the greatest portrait-painters have displayed with equal clearness the whole man from top to toe. Other portrait painters "idealize" their subject, attenuating corpulence, diminishing age, and reducing rubicundity, until the nearest friends hardly recognise the personality portrayed. Surely they have forgotten Cromwell's injunction about painting the wart! Now it seems to us that the first requirement in portraiture is to exhibit character. Behind the surface there lies a human being, whose look, stoop, gaze, pose, hand and fingers are all tell-tale of the man himself. Do not then look first of all at the velvet robe, the lace collar, the diamond ring, the buckled shoes, but at the general demonstration of what the man must have been as a rational moral being. You may then proceed to notice the merits of colour and drawing.

7. In pictures of still-life (fruit, flowers, groups of furniture or other inanimate objects, which generally form only adjuncts to a picture) you will notice composition, drawing, beauty of colour; and in floral pieces, likeness to nature without attempt at imitation. Just as Wordsworth never *catalogues* in verse the features of Nature, which he so beautifully describes, but nevertheless gives them an abode in the reader's mind, so the painter of still life does not take flower by flower and leaf by leaf in composing a group, but beguiles you by the general impression he conveys.

8. Lastly, learn to admire rather than to find fault. Read all that is relevant to your special subject written by really competent authorities. Be ready to abandon preconceived opinions if you feel that the masters have indicated "a more excellent way." If so disposed, make a few simple efforts on your own account to imitate what you admire, and you will soon learn how much easier it is to criticize than to do.

A VISIT TO AN ANTIQUARIAN MUSEUM.

The history of the world has been written in "divers manners." The great scribes of history—Herodotus, Thucydides, Livy, Gibbon, Macaulay, Carlyle, tell their wondrous tale, often without human sympathy and seldom without prejudice. "History," says Gibbon, "is indeed little more than the register of the crimes, follies and misfortunes of mankind." In place of this cynical verdict by one of the greatest historians, we prefer the kindlier judgment of Don Quixote: "History is a kind of sacred writing, because truth is essential to it, and where truth is, there is God Himself." Happily the history of the world has not been left entirely to literary historians to record. Geology is the great historiographer of its physical frame, and Archæology of its social advancement; and Don Quixote's commendation applies to both. In the present paper we deal with the latter, and are anxious to fire with our own enthusiasm those visitors to an Antiquarian Museum who hitherto have wandered listlessly through its dreary collection of old stones, barbaric implements of bronze and iron, and a miscellaneous assortment of meaningless objects, conveying to them no message of human interest, any more than would a Dutch auction.

Notice first, in such an Antiquarian Museum as that (say) of Edinburgh, from what a wide area of the world's surface the stone collection alone has been gathered. Besides what Scotland has herself contributed from Shetland to Wigtonshire, from the Hebrides to Berwickshire, you find these stone relics coming from England, Ireland, France, Belgium, Denmark, Scandinavia, Japan, various parts of Asia and Africa, New Zealand, Australia, Oceanic Islands, Greenland and Eskimo, Canada, United States of America, Mexico, South America, and the West Indian Islands.

Notice also in what sundry places many of the objects have been discovered: in sands by the sea-shore, in cinerary urns, in peat-mosses, chambered cairns, pit-bottoms, stone circles, cists, barrows, graves of every description, the bottoms of lakes, and the beds of rivers, &c., &c.

Now the value of this width of area and variety of *situs* lies in the broad basis thus supplied for the erection of a platform of generalizations. Behold how slowly, but surely, civilization advances from the primitive savage relation to even the simplest arts and expedients, up to what we see when the curtain rises at the dawn of authentic history, as witnessed by literary historians! But beware of making an essentially false chronological deduction. Do not imagine that the use or final disuse of a particular weapon or other article in one region of the world implies that such use or disuse was universal and contemporaneous everywhere. The stone quern for grinding corn, e.g., is still used in Skye, although its use has for centuries been dropped in all other parts of the civilized world.

PERIODS. We now pass on to state the accepted divisions of pre-historic Archæology. There are three of such divisions: the Stone Age, the Bronze Age, and the Iron Age.

1. The Stone Age, of which it is impossible to fix the dates of beginning or end, includes (1) the Palæolithic or Drift Period, (2) the Neolithic or Surface-stone Period ("Palæolithic" = old stone; "Neolithic" = new stone). The characteristic implements of the *Drift Period* are of chipped flint, belonging to an epoch in which men occupied Central Europe contemporaneously with the mammoth, the cave-bear, and other long-extinct mammals. The *Surface-stone Period* is characterized by weapons of polished flint and stone.

2. The Bronze Age recognized copper as a malleable metal, and then as a material capable of being melted and moulded into form by the application of heat. Crude ores then began to be smelted so as to extract the metal, and metals were mixed in diverse proportions so as to prepare an alloy of requisite ductility or hardness, according to the special aims of the artificer.

3. The Iron Age supplanted Bronze by Iron for the

manufacture of arms, sword-blades, spear-heads, axes, daggers, knives, &c.

This outline of "Periods" will guide you in following with intelligent interest the classification of objects in the Museum, some of which we may now indicate with more or less detail. We will begin with—

RELICS OF THE STONE AGE. (1) *The Stone Knife.* One can hardly realize how cutting operations could be performed by such an instrument, and yet as late as the time of Moses, a very delicate operation was performed with a stone knife upon his son by his Midianitish wife (Ex. iv. 25). In what abundant variety the museum exhibits these knives: leaf-shaped, thoroughly chipped on each face; semi-oval knives, ground smooth from each face to a sharp cutting edge on three sides, and probably used in the skinning of animals; oblong knives with rounded angles, polished over both faces, and with the sides worked to a sharp edge all round; square shaped knives with rounded angles, ground on each face to a sharp cutting edge on three sides; "flakes" plano-convex in section, curved longitudinally, finely worked over the convex side, and along the edges; "fabricators," i.e., elongated implements used as punches in the secondary working of other flint implements; triangular knives, each pointed at one end. Some knives are made of thin micaceous sand-stone.

(2) *Scrapers, cores, flakes, &c. of Flint.* The scraper is formed from a flake with a flat under surface, by trimming one end to a rounded edge like that of a round-nosed chisel.

(3) Roughly chipped stone implements *not made of Flint.* These abound in Orkney and Shetland, are large in size, and are very rudely chipped out of sand-stones, clay-stones, steatite, granite, &c. The common forms are club shaped or handled, and very formidable weapons they seem.

(4) *Flint Arrow and Spear Heads.* Flint arrow-heads are of three varieties of form—leaf-shaped, lozenge shaped, or triangular, with barbs and basal stem for attachment to the shaft. The largest arrow-head is almost of the same size as the smallest spear-head.

(5) *Stone Axe-Heads* in two forms, (1) with both ends nearly alike in width; (2) tapering from the width of the cutting edge to a bluntly pointed conical butt. The material is various: greenstone, felstone, granite, gneiss, chlorite-schist, porphyry, serpentine, sandstone, micaceous schist, jasper, grey flint, diorite, &c., &c.

(6) *Perforated Stone Axes, Hammers, &c.* In whatever form, they present one feature in common, the perforation for the handle drilled from both sides, probably with a piece of soft wood aided by sand and water.

(7) *Pounders or Hammer Stones and Anvil Stones.* Chiefly oblong or rounded water-worn pebbles or boulders of such a size as may be conveniently grasped in the hand.

(8) We must "lump" the other interesting memorials of the Stone Age: whetstones, polishers, stone-cups (often of great beauty), wrist guards, discs, socket and pivot stones, sink stones, smoothing and ironing stones; grain rubbers, knocking stones, querns, whorls, &c., &c.

The stone age represents the early condition of mankind in general, and has remained in savage districts up to modern times. The use of bronze indicates a marvellous advance in the progress of civilisation. The bronze age had its most important place among the nations of Europe and Asia. Let us now inspect some

RELICS OF THE BRONZE AGE. (1) *Moulds.* These were generally made of stone, sometimes of loam or clay. In making some articles, moulding was completed by hammering.

(2) *Bronze Flat Axes,* which are flat, flanged, or socketed.

(3) *Bronze Spear Heads.* The blade varies from a short to a very elongated leaf-shape. The socket always extends along the middle of the blade as a midrib, cored almost to the point. Two rivet holes for fastening to the shaft, or a pair of loops are often displayed.

(4) *Bronze Dagger Blades.* These have sides more or less curved, and a tapering midrib, and are attached to the handle by two or more rivets in the base of the blade.

(5) *Bronze Shields.* Some of these are beautiful specimens of hammered work. They are circular in shape, with a central boss, and a series of concentric rings with rows of smaller bosses or studs between them extending to the circumference. (Trumpets, bracelets, sickles, anvils, rings, gouges, and especially beautiful and capacious caldrons are objects of this age worthy of your attention.)

Iron, notwithstanding its abundance, came into use many centuries after bronze, on account of its admixture in a natural state with sulphur and other ingredients, from which it can only be set free by a process of smelting which long remained hidden. But when the art of smelting iron ores had at length been mastered, iron became the material for the manufacture of arms, sword-blades, spear-heads, axes, daggers, knives, &c. The Iron Age leads us on to the period of authentic history, and therefore relieves us of detailed specialization of the iron examples contained in an Antiquarian Museum.

There are, however, a few more objects of importance which solicit your attention as you wander round this seemingly lifeless gallery, and these we may roughly summarize as monuments connected with Death and Life; in other words, with Sepulture and the requirements of Social Life.

RELICS CONNECTED WITH DEATH: (1) *Cinerary Urns of Clay.* These are early witnesses to the practice of cremating the dead. The burnt bones were carefully gathered up from the funeral pile, and were then placed in a large clay urn, with plain conical under part and ornamented upper part. The urn was then deposited in an upright position, within a cist of stones, or buried in the ground, and the mouth was covered over with a thin flat stone. These vessels belong to the Bronze Age of the British Isles. You will notice many varieties of these urns, and not the least beautiful, the small cup-shaped urns, and those of the drinking-cup type, some of which belong to the Stone Age; others, though of stone, are ringed with bronze. (2) *Altars inscribed to the Dead;* always of historical and sometimes of pathetic interest. (3) *Sculptured Monuments, Crosses, &c.* These are of the highest interest, but require time to master their elaborate pictorial designs, which we can only present in the most summary fashion.

In a sermon preached at the consecration of the Bishop of Brechin, January 6th, 1904, the Bishop of Bristol made the following interesting allusion to these Sculptured Crosses and Memorial Stones:

> "At Restennet . . . Palladius and Ninian taught the naked Pict that a Christian must be clothed as well as in his right mind. The Pictish king and chieftains would naturally ask, what was to become of that wondrous art which they possessed of delineating on their bodies the figures of animals and complicated ornaments of other character. . . . The Christian priest would make reply that all this decoration should be transferred to memorial stones, the complicated patterns worked into a great cross on the face of the slab of stone, and the perfect outlines of real and imaginary creatures sculptured on the other side."

Never has the Cross been so elaborately treated as by these Picts of by-gone ages. You may, e.g., find a stone incised with a plain cross; or with an equal-armed cross surrounded by a circle; or a cross nine feet high, bearing on the obverse figures of the Virgin and Child, David and the lion, &c., with ornamented Celtic panels; and on the reverse, four lions and four bosses of interlaced serpents surrounding a central boss of similar work in high relief.

RELICS CONNECTED WITH LIFE. (1) *Personal Ornaments.* Including bronze mirrors with ornamented handles and gorgets, bronze belts, studs, armlets, silver brooches, pennanular brooches, pins, chains of double rings of silver, bow-shaped fibulæ, lunettes, twisted rings, spirally twisted torcs, bracelets, beads, buttons.

(2) *Life in its utilitarian and military aspects:* Here you are in a homely land, as you wander among saucepans, cooking-pots of brass and iron, ewers, flagons, measures of brass, kitchen and table utensils, lamps, candle-sticks, tinder-boxes, locks, keys, door-knockers, gratings, spurs, bridles, horse trappings and shoes, distaffs, spindles, spinning-wheels, looms, and various kinds of rude tools. Among the more attractive objects are those connected with the military profession:—swords, daggers, dirks, long-shafted weapons, banners, and flags, bows and cross-bows, armour and (of a later period) powder-horns and old guns. You will doubtless be much interested in the prehistoric canoes and masses of bog-oak, as well as in the coinage of early historic days.

(3) *Life in its Religious Aspects:* In addition to the

marvellous crosses already described, the following relics of early Christian times may be glanced at: bells of iron and bronze, pastoral staves, crucifixes, reliquaries, sacred sculptures, carvings in stone, wood carvings, and MSS. of sacred books. Very curious are the old quadrangular bells, sometimes of bronze, sometimes of iron, found in Scotland and Ireland *passim*. The famous "Bell of St. Fillan," with its double-headed dragonesque handle, was held in such reverence that the people resorted to it for the cure of insanity and other diseases! You will find tiny bronze bells (3 by 3½ in.) with figures in relief and representations of such scenes as the Temptation and the Crucifixion. Seldom will you see in your search for the beautiful, anything more exquisite than the Quigrich or Crosier of St. Fillan of Glendochart. "Books of Hours," missals, early MSS. of the Gospels, have an interest sometimes derived from their great age, sometimes from their rich ornamentation.

We will conclude with expressing the hope that a Lectureship may be founded in connection with every Antiquarian Museum in this country, so that the people may enjoy, from the living voice at convenient times, expositions of the instructive and interesting contents of such institutions.

A VISIT TO A CATHEDRAL.

There is much truth in the striking dictum of Thomas Carlyle, that "he who would understand the history of England, must first understand the history of England's Church." Perhaps no better schoolmaster could be found for the teaching of the latter than the ancient and majestic cathedrals of our land. Hoary with experience of all the vicissitudes of our national life, both political and religious; beauteous in themselves as works of consummate art; eloquent in their appeal to the religious instincts of every thoughtful man—they stand at once the glory and sublime teachers of our race.

But is it not somewhat remarkable that the warmest and truest testimonies to their unique beauty should have come from foreigners? We do not ungratefully forget Winkle's "British Cathedrals,"—who could? with his charming illustrations of what our Cathedrals were like before the rage for "restoration" set in; nor what Pugin, Rickman, Bloxham, Ruskin and Parker have done for the scientific and æsthetic appreciation of both Cathedral and Parish Church; but who has equalled in delicacy and fidelity of description Mlle. de Varreux, whose contributions in 1884 (excellently translated by "G. S. M.") were the gems of the short-lived but very able *Scottish Church Review*? Next we may name two American writers, the successors of Washington Irving, of almost classical renown: Nathaniel Hawthorne, author of the *Scarlet Letter* and of many other delightful books, and Bishop Cleveland Coxe, whose *Sacred Ballads* and *Impressions of England* are dear to the hearts of all Anglicans on both sides of the Atlantic. Each of these has glorified our Cathedrals by the devotion of his own genius to their honour. But, as with all kinds of education, so also here, the pupil must bring to the desk a certain mental outfit before he can profit by the prelections of even the most illustrious masters. What mental equipment, then, shall the Cathedral tourist take with him if he would reap the rich harvest of all that Cathedrals can teach him?

I. He must have the *sense of beauty*, without which he is even as the blind. No fair landscape, sunset or sea-view can give pleasure to the blind man, and the glories of Lincoln, Salisbury, and York will be equally powerless to charm the observer who is blind to beauty. We remember with what delight Lord Leighton once spoke to us of his "week-end" visits to the English Cathedrals. But then he took his eyes with him, and such eyes! You, the tourist, must have first of all a loving eye for symmetrical beauty and proportion, and a catholic appreciation of very various styles of beauty.

And, first, let us mark the imposing grandeur of the NORMAN STYLE. It is not enough, however, to be deeply impressed, e.g., at Durham or at the White Tower Chapel of London, with the massive Norman channelled pillar, which always makes us think of a Titan; and the rounded or horse-shoe arch, which seems an image of eternity; nor with its zigzag border, which seems connected with "the changes and chances of our mortal life"; but you must, like ourselves, love almost to tearfulness the heavenly charm of

The EARLY ENGLISH, as seen in the "Angel Choir" at Lincoln, at Westminster Abbey, and the south transept of York Minster, with its clustered columns, its mouldings of alternate rounds and deeply cut hollows, producing a strong effect of light and shadow; its lancet-shaped trefoil or cinquefoil arches; its deeply recessed doorways, divided into two by a single shaft or small pier; its windows in combinations of two, three, five and seven, occasionally surmounted by an all-embracing arch with circles pierced between it and the tops of the windows; its groined ceilings bossed with foliage at the intersections; its flying buttresses and high-pitched roofs; its love of the rose as an ornament, almost as common as the tooth and the trefoil, and its deep under-cutting of foliage suspended from the mouldings only by the stalks and edges of the leaves. Surely the poetry of Architecture is here! But, as a Cathedral tourist, you must not be exclusive in your admiration, and you cannot gainsay the beauty of

The DECORATED STYLE, which succeeded the Early English. Its charms have been well described by Mr. Whewell in his "Notes on German Churches" (third edition, p. 330). "It is characterized with us by its window-tracery, geometrical in the early instances, flowing in the later; but also, and perhaps better, by its triangular canopies, crocketed and finialed, its niched buttresses, with triangular heads, its peculiar mouldings, no longer a collection of equal rounds, with hollows, like the Early English, but an assemblage of various members, some broad and some narrow, beautifully grouped and proportioned. Among these mouldings one is often found consisting of a roll, with an edge which separates it into two parts, the roll on one side of the edge being part of a thinner cylinder, and withdrawn a little within the other. A capital with crumpled leaves, a peculiar base and pedestal, also belongs to this style." We hope we are not making too great demands upon the affections of the ordinary tourist, if we say a word in favour of the last great style of pre-Reformation English Architecture—

The PERPENDICULAR; (a name first used by Mr. Rickman in reference to the perpendicular lines of the tracery which run unbroken upwards). We quite admit the one common defect in its later development is the lavish and confused introduction of ornament and the paucity of the mouldings; but still, in its earlier stages the general effect is bold and good. The depressed arch, the square arrangement of the mouldings over the heads of doorways, creating a spandrel on each side above the arch, which is usually ornamented with tracery, foliage or a shield; the constant use of transoms crossing the mullions at right angles, even repeatedly, in large windows, e.g., the west windows of Westminster and Gloucester; the crossing of vertical lines by bands of quatrefoils, &c., causing a right-line arrangement; all this, we admit, gives a Quaker-like stiffness to the style, but it has also the neatness and decorum of the Quaker costume, making us regret all the more the meretricious and Jezebel-like extravagance of its declining years. But perhaps our taste is too severe for you, and you may love panelling on every inch of walls and vaults, and may prefer Henry the Seventh's Chapel at Westminster to any other part of the Abbey. If so, we make you welcome to the fairy-like fan-tracery both there and at King's College Chapel, Cambridge. For us the charm of the Perpendicular Style lies rather in its ogee doorways; its ornamental roofs with the whole framing exposed to view; its pendants, between the timbers filled with tracery, and the beams arched, moulded and ornamented in various ways. Look, e.g., at the roof of West-

minster Hall erected in the reign of Richard II, and you will see the finest specimen of the Perpendicular roof the country can produce; others, however, are to be found in Christ Church Hall, Oxford, and the Church at Cirencester in Gloucestershire.

II. You must have a *chronological knowledge* of the great foundations, and the classification of styles.

The ENGLISH CLASSIFICATION may be briefly stated as follows:—

1066–1154, Norman; or Romanesque.
1154–1189, Transitional from Norman to Pointed.
1189–1272, Transitional from Early Pointed to Complete or Geometrical Pointed.
1307–1327, Geometrical Pointed } Middle
1327–1377, Flowing or Curvilinear Style } Pointed.
1377–1399, Transition from flowing to hard lines.
1399–1546, Third Pointed, variously called "Rectilinear" (Sharpe), or "Perpendicular" (Rickman).

III. You must also acquaint yourself with a *Knowledge of the Arts of Masonry*, in Foundations, Pillars, Pedestals, Capitals, Mouldings, Ceilings, Lanterns, Buttresses, Roofs, Cloisters, Crypts, Burial-places, Fonts, Altars, and Rood-screens. Then with Stained Glass, Heraldic Brasses and Blazonry in general; with Belfries and the casting of Bells, and old contractions of Latin inscriptions. "A large order," you will exclaim, but not nearly, to a man of moderate liberal education, as difficult as you might think. Trustworthy Handbooks, with their glossaries, abound, and some of them are of permanent value.

IV. But further, you must know the purposes to which the various portions of the Cathedral were originally destined, e.g., the Lich or Corpse Gate, the Galilee (Durham and Ely); the Nave and Aisles; the Fald Stool; the Lectern; the Sanctuary; the Aumbrey; the Tabernacle; the Lady and Side Chapels; the Crypt; the Clerestory and Triforium; the Muniment Room, Chapter House, Vestry, Choir School, Presbytery, and the like. A good glossary will enable you to steer a clear course through this array of unfamiliar terms. (Refer to "Glossary" in *Index*.)

We append a few chronological notes that may be of use in making you see the "time-connection," as regards the history of the English Cathedrals, both in foundation and extension.

430 A.D., the Romans left our shores, and in 450 the Saxons arrived.
565, *Candida Casa* ("White Cottage"), the oldest British Church was built at Whitehorn, in Wigtownshire N.B.
597, Augustine arrived in Kent, and six years later founded the Cathedral of Canterbury, afterwards often destroyed by fire.
604, St. Paul's and Rochester originally founded.
627, York Minster, and 643 Winchester founded.
665, Peterboro' founded.
983, Worcester completed.
988, Durham begun.

Before we pass to the year 1000, we may remark upon the paucity of Anglo-Saxon remains to be found outside a few places, such as Oxford, and some parishes in East Anglia. The reason is interesting. The prevailing belief that the Messiah would return in A.D. 1000, made the keepers of "tumble down" churches disinclined to repair or maintain them, and when, in 1066, the Normans came, they had to restore almost all the churches of the country.

The 11th CENTURY bestowed upon us Hereford, Gloucester, Selby, St. Alban's, the Tower Chapel, Lincoln, Salisbury, and the most of Norwich.

The 12th CENTURY saw Tewkesbury completed; Salisbury and Peterboro' rebuilt; and on May 4th, 1130, King Henry I. and David, King of Scotland, and all the English Bishops "assisted" (surely an unique event in ecclesiastical history of England) at the dedication of Canterbury Cathedral; in 1180, Christ Church Cathedral, Oxford, was consecrated; in 1185, the Temple Church, London, was built, and in 1195, Glasgow Cathedral.

And now we come to the 13th CENTURY, the most generous and prolific of all ecclesiastical mothers, in which the prophecy was indeed fulfilled as to the nursing care of the Church by Kings and Queens. In 1221 King Henry III. laid the foundation stone of the Lady Chapel at Westminster; in 1224 Exeter Chapter House was built. A coincidence worth remembering is that in 1248 Cologne Cathedral and the Alhambra at Granada were begun; in 1278 King Edward I. and many of his nobles attended the reconsecration of Norwich Cathedral, and in 1294, Queen Eleanor's nine monumental crosses were erected. Before the close of the century, the nave of York, the choir of Exeter, St. Stephen's Chapel, Westminster, the Chapter House of Wells, and the cloisters of Norwich had been added to our list of great foundations.

The register of the 14th CENTURY is highly distinguished. Lady Chapels were founded at Lichfield, St. Alban's and Ely; Bristol Cathedral was built and Windsor Castle re-built, and the lovely lantern of Ely; the nave of Exeter; the west windows of York and Durham; the choir of York and the spire of Norwich; the cloisters of Gloucester: the nave and aisles of Winchester, and New College, Oxford, all belong to this century.

We have still a hundred and odd years to run before we arrive at Reformation times, and in that interval the east window of York; the College of Eton; Redcliffe Church, Bristol; Rosslyn Chapel in Scotland; the central tower of Gloucester; Magdalen College, Oxford; Great St. Mary's, Cambridge; St. George's, Windsor; Canterbury "Angel Steeple"; Bath Abbey; Henry the Seventh's Chapel, Westminster; the vaults of Windsor and of King's College Chapel, Cambridge; and Bangor Cathedral, were all either built, re-built or enlarged.

Two reflections spring from these historical notes: (1) the bounty of kings, bishops, and even priors, in building churches "exceeding magnifical" without the aid of bazaars or other popular appeals for money; (2) the connection between architecture and theology in the history of religious thought in this country, e.g., the growth of Lady-chapels keeps time with the growth of the cultus of the Blessed Virgin. We could give other illustrations, but this is hardly the place for them.

AN INTRODUCTION TO HERALDRY.

1. WHAT IS HERALDRY? Heraldry or Armory is a pictorial or delineated system whereby families declare the continuity of their line, and the ramification of its branches in due degrees of subordination, and the honours that its members may have from time to time received from the sovereign. It is an authenticated register passed on from generation to generation; and therein lies its essential difference from the array of badges and devices pertaining to a solitary individual. Old writers on Heraldry ignored this capital distinction, and found in the Bible, Homer, Æschylus, and Tacitus evidences of an heraldic system existing in the ancient world. More modern writers have endeavoured to root it in Totemism with but little more success; for here again it was optional for the son to continue or abandon the totem of his father (Fraser's *Totemism*, p. 56). Let us repeat that fixity and the capability of hereditary transmission are the two grand essentials of Heraldry or Armory properly so called.

2. WHAT IS ITS ORIGIN? "Heraldry," says Mr. Planché, in his book *The Pursuivant of Arms*, "appears as a science at the commencement of the 13th century; and although armorial bearings had then been in existence undoubtedly for some time previous, no precise date has yet been discovered for their first assumption. The object of this assumption . . . .was simply to distinguish the persons and properties of the assumers, to display their pretentions to certain honours or estates, attest their alliances, or acknowledge their feudal tenures." Dr. Woodward is of opinion that Germany is the birth-place of the science of Heraldry (Heraldry British and Foreign I. 32). There can be no doubt that the Third Crusade (1189–1192), when the hosts of England, France and Germany were combined, paved the way for the fixed use of armorial bearings; for it was now necessary, especially after the adoption of the improved helmet, which completely covered the face, with the exception of narrow eye-slits and breathing slits, that some distinctive insignia should mark the personality of the national and sectional leaders; while the descendants of heroes would be only too anxious

to preserve and adopt for family use the blazonings on banner or shield which recalled their ancestor's prowess. Tournaments (which had their origin in Germany, and afterwards crossed to England from France) also aided the development of armory, for the visored combatants could only be recognized by some bold representation on crest and shield, which was theirs and theirs alone. The evidence of both seals and tomb-stones supports Planché's theory of an early thirteenth century origin for the general introduction of scientific coat-armour.

3. HERALDIC TERMS. Before proceeding further, we beg our readers to understand that we assume that they know nothing, or very little, about one of the most complicated subjects which can be offered to their attention; and that we shall attempt in these notes no more than to smooth their path towards a more thorough study of Heraldry in one or other of the many excellent existing manuals which deal with it scientifically. Let us begin, then, with a few salutary cautions against misconceptions and misuse of heraldic terms.

(*a*) A young lady asks you, for example, "What is your *crest?*" You reply that it is a lion rampant, an elephant, or a ship in full sail. Her rejoinder shows that what she wanted to know was, "what is your *coat of arms?*" an expression due to the old practice of embroidering arms upon the surcoat or camise worn over the armour. Now a visit to St. George's Chapel, Windsor, would have shown her in a very picturesque form the difference between "coat" and "crest." In that glorious chapel you see suspended the crests, helmets, and shields of the Knights of the Garter. Above the helmet, and attached to it by a long wire, are to be seen every variety of objects, animate and inanimate, and these are called CRESTS. We need not here specify them any more precisely than to say that nothing seems to be excluded as crests; birds, beasts, negroes' heads, bows and arrows, etc., etc., But come down now to the SHIELD, and there you see in some cases a very simple, and in others a very elaborate display of figures coloured red, blue, black, green or purple, and furs variously marked upon metallic back-grounds of yellow or white (i.e., gold or silver). This shield-decoration is the "coat of arms," with the motto inscribed underneath. Now in speaking of this shield, you are always to think of it as hanging on *your own* breast, not as if you were looking at it on the breast of another, and therefore "right and left" (i.e., dexter and sinister) are reversed as compared with popular usage.

(*b*) Never use the expression "bar sinister," for notwithstanding the high precedent of Sir Walter Scott, and the current language of fiction and newspapers, there is in reality no such thing. The proper term is "bend sinister," which is formed of two diagonal lines drawn from the sinister chief to the dexter base, or from left to right. Its significance as a mark of illegitimacy is more than doubtful (v. Woodward, Vol. I. cap. v.).

(*c*) On the supposition that you wish to understand some of the terms which baffle you in the terminology of the "Noble Science," we give you some very simple illustrations of their use:

> Let us begin with the SHIELD. You may have the SHIELD coloured; or simply delineated with dots and lines, according to the scheme of Petra Sancta in the latter part of the 17th century, who supplied the whole of Europe with a system as universal as the language of music. In this system, which we shall presently illustrate by the reverse of half-a-crown, you have gold (Or) represented by dots; silver (Argent) is left plain; blue (Azure) is denoted by horizontal lines; red (Gules) by perpendicular lines; black (Sable) by the crossing of both; green (Vert) by diagonal lines from the dexter to the sinister; and purple (Purpure) by diagonal lines from the sinister to the dexter. Furs are of three kinds: ermine, black spots on a white field; ermines, white spots on a black field; erminois, black spots on a gold field.

It is obvious how useful such a system of marking is to the colourists of shields. Our next section is of great use to the beginner in the study of Heraldry, and should be read carefully if you wish to make any progress in understanding Armory as a science.

4. RULES OF BLAZONING. To blazon is either to paint or orally describe in proper terms all that belongs to a coat of arms. The following are the rules to be observed:—

(1) In blazoning always begin with the field, which you name simply as *or*, *argent* (for metals), or *gules*, etc. (for colours), noticing the lines with which it is divided, *per pale*, *per fess*, *per bend*, etc., saying also whether these lines are *indented*, *engrailed*, etc. Then proceed to describe the charge (i.e., the figures in the field of a coat of arms) nearest the centre, and then charges more remote; e.g., "Azure, a crescent between three stars argent," means that the field is blue, and that the crescent is at the centre of the shield, and that three stars, arranged two above and one below the crescent, are also charges in the field.

(2) In blazoning, a repetition of words must be avoided, a rule which may appear to you pedantic, but it is so ordained by "the Noble Science." Thus e.g., suppose the field is *azure* (blue) and the charge is a saltire *or* (gold) bearing six mullets azure, and six crescents gules, you are bound to say in blazon: "azure, on a saltire or six mullets of the first, and as many crescents gules." "Of the first" refers to the tincture first named, i.e., azure. Again, you cannot repeat the word "six," but must render it "as many."

(3) Metal can never be placed upon metal, nor colour upon colour. This is a fundamental rule, and forbids e.g., painting a red cross upon a blue field. The field must be either gold or silver before it can receive a coloured charge, and conversely must be red, blue, black, green, or purple, before it can be charged with a gold or silver cross. &c.

5. THE HERALDRY OF HALF-A-CROWN. We are precluded by the limits of space from going further into the technical details of Heraldry, but we feel that a concrete illustration of some of its terms might be usefully supplied by the blazon on the reverse of Half-a-Crown. Look at the back of this coin, and what do you see? An Imperial Crown surmounts a shield, divided into four quarters, which has passed through many changes during the various periods of English history. In the first quarter (dexter) you notice three lions ranged parallel to each other, an arrangement technically called "in pale." You see also perpendicular lines all over the field, which is an indication to the colourist that he must paint the field red (gules). You will notice also that the lions bear little resemblance to the lions of "the Zoo," but this is owing to the fact that it was long a matter of dispute whether they were leopards or lions, and that heralds claim an almost unlimited licence in the way of idealizing anything. *The three lions in pale stand for England.* Now look at the second quarter, which contains a red lion within a double frame upon a dotted field. The dots denote that the field is to be painted yellow or gold. The lion is standing upon its hind-legs, and is therefore called *rampant.* If it were looking at you it would be described as "*gardant;*" if it were looking backwards it would be called "*regardant.*" This double frame, called a Tressure, is a mark of the highest distinction in heraldry, and is described as "flory counter-flory," which simply means that the head and stalk of the fleur-de-lis are alternated. *The second quarter is dedicated to Scotland.* Now look at the third quarter, dedicated to Ireland, and you will see a harp upon a blue field (azure) marked by horizontal lines, but the blazon does not on the coin declare to you that the harp is of gold and its strings of silver. The fourth quarter is simply "England" (three lions) repeated. In the "coats" borne in Scotland by "Royal Tradesmen," the first quarter very properly bears the lion of Scotland, and is repeated in the fourth.

ORDERS OF KNIGHTHOOD.

The orders here described are limited to those conferred by our own Sovereign, without whose gracious permission no British subject is allowed to wear the insignia of any foreign order.

1. THE MOST NOBLE ORDER OF THE GARTER (K.G.). Instituted by Edward III. about the year 1348. The old story of the origin, still found in children's histories,

is now discredited. Mr. Beltz, in his "Memorials of the Order of the Garter," thinks "the Garter may have been adopted as an emblem of the tie, or union, of warlike qualities to be employed in the assertion of the founder's claim to the French crown; and the motto as a retort of shame and defiance upon him who should think ill of the enterprise." (*Honi soit qui mal y pense*—"Dishonoured be he who thinks ill of it"). The order consists of the Sovereign, the Prince of Wales, twenty-five knights-companions, together with such lineal descendants of George I. as may be elected. Foreign princes and extra-knights have been elected under special statutes, the latter, however, waiting for vacancies before they can be numbered with the twenty-five constituent knights.

The INSIGNIA consist of the Garter; the Collar and St. George; the Star; and the Ribbon and Badge, or lesser George. The GARTER is of dark blue velvet, edged and buckled with gold, and bears in letters of gold (sometimes diamonds) the well-known motto. It is worn below the left knee, but female Sovereigns wear it upon the left arm above the elbow. The COLLAR consists of twenty-six pieces, composed alternately of golden love-knots, and of buckled garters azure enamelled with the motto, and enclosing roses. From the central link depends the BADGE or GEORGE; a golden figure enamelled, or set with jewels, representing St. George, the patron-saint of the realm, transfixing with his lance an over-thrown dragon. (Woodward's "Heraldry" II. 344, 345). The STAR (worn on the left breast) was added by Charles I. in 1629, and consists of eight silver or diamond rays with the buckled garter and motto in the centre, enclosing on a field of white enamel the red cross of St. George. When the Collar and George are not used, the BADGE, or lesser George, is worn from the broad blue ribbon of the order *en écharpe* (i.e., slant-wise) at the right side, the ribbon passing over the left shoulder.

The HABIT of the Order consists of a crimson velvet Surcoat; a Mantle of deep blue velvet lined with white taffeta, fastened by cordons of blue and gold, on the left breast the star embroidered; a Hood of crimson velvet; and a Hat of black velvet, lined with white taffeta, plumed with white ostrich feathers with a tuft of heron's feathers in the centre, all fastened to the hat by a band of diamonds.

The OFFICERS of the Order are the Prelate (Bishop of Winchester); the Chancellor (Bishop of Oxford; formerly the Bishop of Salisbury when St. George's Chapel formed part of the latter diocese); the Registrar (usually the Dean of Windsor); Garter Principal King of Arms: and the Usher of the Black Rod (each with a special badge hung from the ribbon.) Ribbon of the Order—GARTER BLUE.

2. THE MOST ANCIENT AND MOST NOBLE ORDER OF THE THISTLE (K.T.). (Origin disputed by historical students—revived [according to Woodward "founded"] by James II., 1687, and, after a period of desuetude, re-established by Queen Anne, 31st December, 1703).

The Order now consists of the Sovereign, Princes of the Blood and sixteen knights, almost always peers. Its MOTTO is: "Nemo me impune lacessit" (No one provokes me with impunity: "Wha daur meddle wi' me?" an allusion to the prickly defensiveness of the thistle).

INSIGNIA: Star, Badge and Collar. The STAR, lozenge shaped, worn on the left breast, is a silver St. Andrew's Cross with rays between its arms; centre of gold, charged with a thistle enamelled proper, and surrounded by a motto-band of green enamel. The BADGE: a figure of St. Andrew in a purple surcoat and green mantle, standing behind and supporting his Cross, the whole irradiated with golden rays. This is worn pendent from the collar, or from a dark green ribbon over the left shoulder and tied under the arm. The COLLAR is of gold, and consists of sixteen enamelled thistles which alternate with saltires, each formed of four interlaced sprigs of rue. Officials: A Dean of the Chapels Royal in Scotland; Secretary; Lyon King of Arms; Gentleman Usher of the Black Rod. Ribbon of the Order—GREEN.

3. THE MOST ILLUSTRIOUS ORDER OF ST. PATRICK (K.P.). (Instituted by George III., February 5th, 1783.) consists of Sovereign, a Grand Master (Lord Lieutenant of Ireland), and 22 Knights (originally 15).

INSIGNIA: Star, Collar and Badge. The STAR, worn on the left side, is of eight silver rays, and consists of the red Cross of St. Patrick on a silver field charged with a trefoil, surrounded by a sky-blue enamelled circle with motto and date of foundation. The motto: "Quis separabit?" (who shall separate?) is now the watch-cry of the Irish Unionist party. The COLLAR consists of golden harps, joined by love-knots to circular plates of gold, which are enamelled with wreaths of shamrocks surrounding the "Union Rose," and are of alternate colours. A large golden harp, surmounted by the Imperial Crown, forms the central link, from which hangs the BADGE. This is of gold, surmounted with a green wreath of shamrock and the motto in gold. On each leaf of the shamrock is an Imperial Crown.

Officials: Chancellor (Chief Secretary for Ireland); Secretary; Genealogist; Usher of the Black Rod; Ulster King of Arms; Athlone Pursuivant. Ribbon of the Order—SKY-BLUE.

4. THE MOST HONOURABLE ORDER OF THE BATH. (Motto: "Tria juncta in uno" (three joined in one) referring to the union of the crowns of England, Scotland and Ireland). (Founded 1399; revived 1725; enlarged 1815 and 1847). The title "Bath" refers to the ancient symbolical act of bathing, which was one of the ceremonies at the admission to Knightly dignity. In 1725 George I. created a new Order of the Bath, to consist of the Sovereign, a Grand Master, thirty-six Knights and sundry officers. In 1815 the Order assumed a practical character, inasmuch as it was connected with the "termination of the long and arduous contest in which this empire has been engaged," and there was then adopted the present division into Grand-Crosses, Knights-Commanders and Companions. In 1847 a further extension was made, and the members were divided into the classes of Military and Civil, still existing. In 1859 the Order assumed its present state. Besides the Sovereign, Princes of the Blood, Foreign Princes and Foreign Honorary Members, the Order consists of fifty Grand Crosses (G.C.B.), nominated for military or naval services, and twenty-five for diplomatic or civil services; of 123 Knights-Commanders (K.C.B.) for military or naval services, and sixty for civil services, and of 690 Companions (C.B.) for military and naval services, and 200 for civil. The "Bath," therefore, is the grand popular order instituted for the recognition of actual merit.

INSIGNIA: Badge. Ribbon, Collar and Star. The BADGE for the Military classes of the Order is a gold Maltese Cross, enamelled white, each of its eight points ending in a little golden ball. The centre circle bears the rose, thistle and shamrock issuing from a golden sceptre in pale, between three Imperial Crowns, arranged one above and two in the flanks. This centre-piece is surrounded first by a motto-band of red enamel with the motto, "Tria &c.," in gold, and next by a laurel wreath of two laurel branches connected in base by a small blue scroll with the words "Ich dien" (I serve) in gold. Between the arms of the cross are four golden lions of England. Except on "Collar-days," the Badge is worn by G.C.B.'s pendent from a red ribbon across the right shoulder *en écharpe*; by K.C.B.'s from the neck, and by C.B.'s from the button-hole. The width of the RIBBON decreases with diminishing rank. The COLLAR is of gold (30 oz. Troy weight), and consists of nine Imperial Crowns and eight roses, thistle and shamrock (issuing from a sceptre), all naturally coloured and linked together with seventeen gold knots, enamelled white. The Badge is suspended from the Collar, which is only worn by G.C.B.'s. The STAR for military G.C.B.'s is formed of silver wavy rays, upon which is a Maltese Cross with a circular centre-piece containing three golden crowns and surrounded by laurel branches and motto. Civil G.C.B.'s omit the laurel leaves in the Star, and in their place have a red circle with motto in bold letters. Their Badge also is simpler than that of their military brethren. It has no *cross-patée*, but is oval-shaped and is charged with sceptre, three crowns, rose, thistle and shamrock. Civil G.C.B.'s and C.B.'s also wear the same Badge, only of a smaller and still smaller size, while all the military divisions, whether G.C.B., K.C.B. or C.B. wear the Badge (in sizes reduced according to the grade) which we first described (— the Maltese Cross, &c.).

5. THE MOST EXALTED ORDER OF THE STAR OF INDIA. Founded by Queen Victoria, February 23rd, 1861, and enlarged in 1866 and 1876, it has served a most useful purpose in recognising the loyalty and worth of illustrious native Indians, as well as the conspicuous services, both military and civil, of those of our own people who have occupied with distinction the highest posts of the great Dependency. The Order now consists of the Sovereign, the Grand Master (the Governor-General), thirty Knights,

Grand-Commanders (G.C.S.I.), i.e., eighteen native princes and twelve Europeans, seventy-two Knights-Commanders (K.C.S.I.), 144 Companions (C.S.I.), and an indeterminate number of extra and Hon. Knights-Grand Commanders.

INSIGNIA: Star, Collar, Badge and Mantle. The STAR consists of 52 wavy rays of gold, alternately longer and shorter, arranged in a circle. In the centre is a five-pointed star in diamonds, surrounded by a motto-band, enamelled light blue and tied at the ends, inscribed with the motto of the Order:—' Heaven's Light our Guide." The COLLAR is composed of five united red and white roses and six flowers of the Indian lotus, separated by ten links, each of two palm branches in saltire tied together by the ends. The central link is the Imperial Crown, and from it the Badge depends. The BADGE consists of an oval medallion of onyx, cameo-cut with a crowned bust of the Sovereign in profile, and the motto surrounding. Above is a mullet in diamonds with the ring at the top from which the Badge depends. The MANTLE is of light blue satin, lined with white silk (on the left the Star of the Order), and fastened at the neck with cordons and tassels of light blue silk and silver bullion. Ribbon of the Order—SKY-BLUE with a white stripe near either edge.

6. THE MOST DISTINGUISHED ORDER OF ST. MICHAEL AND ST. GEORGE. Founded in 1818 for natives of the Ionian Islands, Malta, and others holding high office in the Mediterranean. In 1868 it was extended so as to be an Order of Merit for the British Colonies in general. After subsequent enlargements its numbers now consist of (exclusive of Royal personages) 65 Grand Crosses, 200 Knights-Commanders and 342 Companions.

INSIGNIA: Badge, Collar, Ribbon, Star, Mantle. The BADGE is a gold cross of fourteen points (in seven rays) with a circular centre of blue enamel, with a blue motto band bearing the motto, "*Auspicium melioris Ævi*" (Omen of a better age). On the obverse, the Archangel Michael tramples the devil underfoot; on the reverse, St. George mounted transfixes the Dragon. The Cross is surrounded by an Imperial Crown. The COLLAR consists of six golden crowned lions of England; of eight Maltese Crosses enamelled white; and of eight golden cyphers, four of the letters SM and four SG; the central link back and fore shows two winged lions of St. Mark, facing each other, each with a gospel and a sheaf of seven arrows. The RIBBON is of three equal stripes, two of Saxon blue, the centre one of scarlet; it is worn *en écharpe* ((i.e., slant-wise) with the attached Badge, from the right shoulder to the left hip. The STAR of Grand Crosses consists of seven rays, between which are small rays of gold. On this ground is placed the Cross of St. George in red enamel, and this is surmounted by St. Michael enclosed in the blue motto-band. The MANTLE of the G.C.M.G.'s is of Saxon blue satin, lined with crimson silk, on the left side the Star, and fastened by cordons of blue and scarlet silk with gold bullion. Officials: Grand Master; Prelate (a Colonial Bishop); Chancellor; Secretary; King of Arms; Registrar and Officer of Arms.

7. THE MOST EMINENT ORDER OF THE INDIAN EMPIRE. Founded 1st January, 1878, to commemorate the assumption by the Queen of the title "Empress of India," and to recognise distinguished Indian services to the Empire. It consists of Sovereign, Grand Master (the Viceroy), Knights Grand Commanders, Knights Commanders and Companions (G.C.I.E.; K.C.I.E. and C.I.E.).

INSIGNIA: Star, Collar, Badge, Mantle. The STAR is of five silver rays separated from each other by a smaller ray of gold, all issuing from the centre-piece, viz., the Sovereign's head in profile within a purple circle inscribed with the original motto of the Order: "Imperatricis Auspiciis" (under the auspices of the Empress), the circle surmounted by the gold Imperial Crown. The COLLAR is composed of elephants, lotus-flowers, peacocks displayed or "in their pride," and Indian roses all enamelled on gold in their natural colours, with the Imperial Crown in the centre. The BADGE is a golden rose, enamelled red with green barbs between the five petals. The golden centre has a likeness of the Sovereign with (now) the words "Edwardus Imperator" in a circular purple band. The MANTLE is of imperial purple satin, lined with and fastened by a cordon of white silk with purple silk and gold tassels attached; a star on the left side for the first-class of the Order. Ribbon: PURPLE. Officers: Registrar and Secretary.

8. ROYAL VICTORIAN ORDER. Founded by Queen Victoria, April 21st, 1896, and consists of the Sovereign and five classes: (1) Knights Grand Cross (G.C.V.O.), (2) Knights Commanders (K.C.V.O.); (3) Commanders (C.V.O.); (4) Members of the Fourth Class (M.V.O.); and (5) Members of the Fifth Class (M.V.O.). The officers of the Order are the Lord Chamberlain and the Keeper of His Majesty's Privy Purse. Its object is to confer honour upon such as have "rendered extraordinary, or important, or personal services" to the Sovereign.

INSIGNIA: Badge, Star. The BADGE of G.C.V.O.'s consists of a white enamelled Maltese Cross of eight points, with an oval crimson centre, bearing the Imperial and Royal cypher in gold. "VICTORIA," the motto of the Order, is inscribed in a blue enamelled circle in letters of gold, and is surmounted by an Imperial Crown. The Badge is worn over the right shoulder, suspended from a dark blue ribbon with a narrow edge on either side of three stripes, red, white and red. The STAR consists of a silver chipped star of eight points.

9. THE DISTINGUISHED SERVICE ORDER. Founded by Royal Warrant, September 6th, 1886, "for rewarding the distinguished services of officers in our Naval and Military Services who have been honourably mentioned in Despatches." Its membership is limited to those who at the time of nomination are actually commission-holders in one of the services, and have been specially named by the chiefs of the Naval or Military forces for "meritorious or distinguished service in the field, or before the enemy."

The BADGE consists of "a gold cross, enamelled white, edged gold, having on one side thereof in the centre, within a wreath of laurel enamelled green, the Imperial Crown in gold, upon a red enamelled ground; and on the reverse . . Our Imperial and Royal cypher—shall be suspended from the left breast by a red riband edged blue, of one inch in width."

10. ROYAL ORDER OF VICTORIA AND ALBERT. Ranges in directions, enlargements, &c., from 1860 to 1882, and is entirely an Order of Ladies, arranged in four classes. The Badge is an oval medallion bearing in profile the heads of Victoria and Albert. It is enclosed by a double border of brilliants, surmounted by an Imperial Crown, and is worn at or near the left shoulder.

11. THE IMPERIAL ORDER OF THE CROWN OF INDIA (1st January, 1878). Exclusively an Order of Ladies who by birth or marriage connection (e.g., wives of Viceroys, Governors General of Bombay, Madras, or of the Chief Secretary of State for India), have special claims upon the Crown. The Badge is the Imperial cypher, set in diamonds, pearls and turquoises, encircled in pearls, and surmounted by the Imperial Crown.

VARIOUS DECORATIONS.

Besides the Orders of Knighthood already described, are various Decorations not less valued, it may be, by their recipients, though conferring no special rank or precedence.

1. THE VICTORIA CROSS. V.C. Instituted January 29th, 1856. The motto explains the motive for the institution: "FOR VALOUR,"—i.e., for valorous deeds, on the part of Naval and Military officers, and of any member of either Service who has done a brilliant deed in face of the enemy. Admirals, generals, colonels, captains, sergeants, corporals and privates have their names enrolled side by side in this golden chronicle of fame, although the original intention was to distinguish only non-commissioned and petty officers. The honour in a few cases has been retrospective, including earlier heroes of the Crimean war.

The BADGE is a plain *cross-patée* in bronze with straight bounding lines, and is attached by the letter V to a bronze bar laureated. The centre-piece is a lion "standing looking at you," upon an Imperial Crown, with "For Valour" escrolled below. The bar bears on the reverse the name and rank of the recipient, and the cross the name and date of the distinguished action or campaign. The cross is suspended from the left breast by a garter-blue ribbon for the navy and a red one for the army.

Non-commissioned officers and men receive a pension of £10 per annum in virtue of the Cross, and an extra £5 per annum for each additional bar that marks an extra deed of valour.

2. VOLUNTEER OFFICERS' DECORATION (V.D.). 29th July, 1892. For Volunteer Officers of twenty years' service, either spent in the ranks or under commission.

The BADGE, called "The Volunteer Officers' Decoration," consists of "an oak wreath in silver, tied with gold, having in the centre the royal cypher and crown in gold," and "is suspended from the left breast by a green riband one inch and a half in width from a silver oak bar-brooch."

3. THE ALBERT MEDAL: First Class and Second Class, April 12th, 1867; extended April, 1877, to cases of gallantry in mines, on railways, and at fires, &c., in addition to the original heroic saving of lives from perishing at sea.

1. SEA. The BADGE of the First Class for saving lives at sea is a gold oval-shaped decoration, enamelled in dark blue, with a monogram V and A, interlaced with an anchor, erect in gold, surmounted with a garter in bronze, inscribed in raised letters of gold, "FOR GALLANTRY IN SAVING LIFE AT SEA," and surmounted by the crown of the late Prince Consort.

2. LAND. The BADGE (for First Class), oval shaped in gold, enamelled in crimson; monogram V and A, crest in gold, surrounded by a bronze garter inscribed in raised letters of gold, "FOR GALLANTRY IN SAVING LIVES ON LAND," and surmounted by the crown of the late Prince Consort, and suspended from a *crimson* ribbon of 1⅜ inches in width, with four white longitudinal stripes.

4. THE ROYAL RED CROSS (April 23rd, 1883). To reward nurses of any nationality who have tended our sick and wounded soldiers or sailors with conspicuous devotion, and are recommended by the Secretary of State for this distinction.

The BADGE is a gold cross enamelled red, worn on or near the left shoulder, attached to a dark blue ribbon edged red, one inch in width. "Faith, Hope, Charity," and "1883" are charged upon the arms of the cross in the centre of which is Queen Victoria's profile.

5. THE GRAND PRIORY OF THE ORDER OF THE HOSPITAL OF ST. JOHN OF JERUSALEM IN ENGLAND. (Revived by Queen Victoria, 1888). For an elaborately learned account of this ancient Order we must refer the reader to Dr. Woodward's "Heraldry, British and Foreign," vol. ii, p. 361. It is enough to say here that the origin of the order dates from the Norman era, under the title "Knights of Malta," and that its object was the relief of pilgrims going to Jerusalem. The "St. John's Ambulance Association," and "The British Ophthalmic Hospital at Jerusalem" are practical offshoots of the ancient *motif* of the order.

Its BADGE (gold or silver, according to the grade), is a true Maltese Cross with alternately a lion and unicorn between the branches, and is worn suspended from the throat upon a black watered silk ribbon. H.M. the King is always shown when depicted in full dress with the Badge at his throat.

6. ORDER OF MERCY. Instituted by Queen Victoria in 1897 as a reward for distinguished personal services in the relief of suffering, poverty, or distress.

The BADGE is a gold cross enamelled red, surmounted by a crown and Prince of Wales' feathers, having in the centre a group of figures representing Charity.

7. ORDER OF MERIT (O.M.). Created by King Edward VII., June 26th, 1902. It consists of members illustrious for service in Navy, Army, Science, Art or Literature. Its number is limited to 24. Its portal is sure always to be strictly guarded, so that none but the very best in each great field can be admitted.

BADGE: a cross of red and blue enamel of eight points; blue enamel centre inscribed with "For Merit" in gold letters within a laurel wreath. On the reverse, "R. et I." in gold. The whole is surmounted by the Imperial Crown enamelled in colour, and suspended by a ribbon, garter-blue and crimson.

8. IMPERIAL SERVICE ORDER (I.S.O.). Instituted by King Edward VII., June, 1902, to distinguish the civil servants of the Empire for long and meritorious services. Besides the Sovereign and Prince of Wales, it consists of 425 Companions, of whom 250 belong to the Home Civil Service and 175 to the Civil Service of the Colonies and Protectorates.

The BADGE is a gold and enamel medallion, worn on the left breast, bearing "R. et I" on one side, and on the reverse, "For Faithful Service," both executed in dark blue enamel on a plaque of gold within a wreath of laurel, and the whole surmounted by the Imperial Crown.

DEGREES OF NOBILITY.

The sovereign is the fountain of honour, and can confer the rank of nobility on whom he pleases. But there are certain persons who are born to the peerage, that is, have the right by inheritance of sitting as lords of parliament, or in Scotland and Ireland of being elected to that dignity. Of peers there are five degrees of honour, corresponding to the titles of duke, marquis, earl, viscount, baron. All persons below the rank of baron are classed as commoners. This distinction is a little confused by the custom of conferring certain courtesy titles on the eldest sons of those in high rank. Thus, the Marquis of Hartington was legally a commoner, and sat in the House of Commons, until the death of the Duke of Devonshire made him his successor to the dukedom.

THE ROYAL FAMILY has a dignity all its own. Royalty, down as far as the sovereign's nephews, must always take precedence of all others. Precedence amongst the princes and princesses themselves depends on their relationship to the reigning sovereign, and not on their relationship to any deceased sovereign. The coronets to which they are entitled are also determined by their relationship to the reigning monarch.

DUKE. The first duke that we meet with in England, properly so called, was Edward, surnamed the Black Prince, whom his father, Edward III., created Duke of Cornwall, 1337. By this creation the eldest son of the King of England is Duke of Cornwall from his birth, but only Prince of Wales when so created. A duke's coronet is a circle of gold, with eight strawberry or parsley-leaves of equal height above the rim. A duke's eldest son bears by courtesy his father's second title, and the younger sons are addressed as lord, with the addition of their Christian name, as Lord Randolph Churchill.

MARQUIS. The title of marquis corresponds with the Anglo-Saxon title of *marken-reve*, which signified the ruler of a "march" or frontier province. The first English marquis in the modern sense was Robert Vere, who was created by Richard II., in 1387, Marquis of Dublin. A marquis's coronet is a circle of gold set round with four strawberry leaves and as many pearls placed alternately on points of the same height as the leaves. For the courtesy title of his sons see above under *Duke*. [The pearls, so called, on the coronets are commonly made of silver].

EARL. This title comes from the Anglo-Saxons, and was borne by the governors of counties. The first Earl in England to be invested with the title, without reference to the office he held, was Hugh de Pusaz, bishop of Durham, who was created by Richard I. Earl of Northumberland. An earl's coronet is similar to that of a marquis, only the pearls are raised above the leaves instead of being on the same level. By courtesy an earl's eldest son is supposed to be born a viscount, and all his daughters are styled "lady," but his younger sons have no title of peerage.

VISCOUNT. When the earl was governor of a county, he required a deputy to act for him in his absence; the deputy was in Latin called *vicecomes*. But about 1440, in the reign of Henry VI., it became a title of honour in the somewhat different form of "viscount." His coronet, which is a circle of gold, is adorned with twelve silver balls. His eldest son has no title of peerage, nor are his daughters "ladies." But the eldest son and daughter of the first viscount in Great Britain and Ireland are said to be the first gentleman and gentlewoman without a title in the kingdom.

BARONS. Of this degree there are two sorts in England—a baron by writ and a baron by patent. The greater barons in ancient times were summoned to Parliament by writ personally. All such barons were hereditary peers. The first created by patent, or royal letter, was John Beauchamp, made Baron of Kidderminster by Richard II., 1388. A baron had no coronet till the reign of Charles II., when he was adorned with a circle of gold and six silver balls set close to the rim.

BISHOPS of the Established Church of England are of the rank of barons, but only a certain number are entitled

to seats in the House of Lords. They precede all under the degree of viscount. Precedence among the bishops themselves goes as a rule by seniority of consecration, but the bishops of London, Durham, and Winchester, always come first. The two archbishops stand much higher. The Archbishop of Canterbury is "the primate of *all* England," and to him it properly belongs to crown the King. He takes his place next to the royal family in the order of precedence. The Archbishop of York is "the primate of England," and to him belongs the privilege of crowning the Queen. He comes next to the Lord Chancellor. Bishops' wives, as is well-known, derive no title, either in law or by courtesy, from the rank of their husbands.

MODE OF ADDRESSING PERSONS OF RANK.

In conversing with persons of rank, avoid the constant repetition of their title. The following table refers to the forms to be observed in *formal* communications:

(*a*) = How to address the envelope.
(*b*) = How to begin the letter.
(*c*) = How to refer to a person's rank when conversing with him.

N.B.—For the right way to end letters, refer to the "Art of Letter Writing" (p. 792).

ROYALTY.

The King: (*a*) To His Majesty the King; (*b*) Sir, under His Majesty the King; (*c*) Your Majesty.

The Queen: (*a*) To Her Majesty the Queen; (*b*) Madam, under Her Majesty the Queen; (*c*) Your Majesty.

The Prince and *Princess of Wales:* (*a*) To His (Her) Royal Highness the Prince (Princess) of Wales; (*b*) Sir (Madam); (*c*) Your Royal Highness. Similarly in regard to other members of the Royal Family.

NOBILITY AND GENTRY.

Duke and *Duchess:* (*a*) To His (Her) Grace the Duke (Duchess) of ———; (*b*) My Lord Duke (Madam); (*c*) Your Grace.

Duke's *eldest son* has a courtesy title and is addressed as if it was his by creation. Duke's *younger sons:* (*a*) To the Right Honble. Lord James——; (*b*) and (*c*) Sir. Duke's *daughters:* (*a*) To the Right Honble. Lady Jane G—— (*b*) Madam; (*c*) Your Ladyship.

Marquis and *Marchioness:* (*a*) To the Most Honble. the Marquis (Marchioness) of ———; (*b*) My Lord Marquis (Madam); (*c*) Your Lordship (Ladyship). Marquis's children same as for those of a Duke.

Earl and *Countess:* (*a*) To the Right Honble. the Earl (Countess) of ———; (*b*) My Lord (Lady); (*c*) Your Lordship (Ladyship).

Earl's *eldest son* takes courtesy title and is addressed accordingly. Earl's *younger sons:* (*a*) To the Honble. Charles R———; (*b*) and (*c*) Sir. Earl's *daughters* same as for those of a Duke.

Viscount and *Viscountess* similar to Earl and Countess. *All* their sons and daughters are styled Honourable. (*a*) To the Honble. John (Mary) S——; (*b*) and (*c*) Sir (Madam).

Baron and *Baroness* and their children similar to Viscount and Viscountess and their children.

Baronet: (*a*) To Sir Edward D—— Baronet or Bt. (not Bart.); (*b*) Sir; (*c*) Sir Edward. His wife: (*a*) To Lady D——; (*b*) Madam; (*c*) Your Ladyship.

Knight: (*a*) To Sir John F——; (*b*) Sir; (*c*) Sir John. His wife, same as Baronet's wife.

Omit Kt. after the name on the envelope and avoid in speaking the use of the surname.

THE CLERGY.

Archbishop: (*a*) To His Grace the Lord Archbishop of—; (*b*) My Lord Archbishop, or Your Grace; (*c*) Your Grace.

Bishop: (*a*) To the Right Reverend; (*b*) My Lord Bishop; (*c*) Your Lordship.

N.B.—As a matter of courtesy the same form is usually adopted in addressing bishops, whether they are English Suffragan, or Colonial or Scotch, or Irish bishops.

Dean: (*a*) To the Very Reverend The Dean of ———; (*b*) Very Rev. Sir; (*c*) Mr. Dean.

Archdeacon: (*a*) To the Venerable the Archdeacon of —; (*b*) Venerable Sir; (*c*) Mr. Archdeacon.

Clergymen: (*a*) To the Rev. C. D———; (*b*) Rev. Sir; (*c*) Sir.

If the Christian name is not known, leave blank: Rev. ——— D. ——— not Rev. Mr. D——— If a clergyman possesses the right to be styled Honourable or Right Honourable, this should precede his address as a cleric; e.g. The Right Honble. and Right Reverend ———

A *Canon* or *Prebendary* is addressed like ordinary clergymen except that Canon or Prebendary takes the place of the Christian name or initial.

The wives of bishops and other clergymen derive no title from the official rank of their husbands.

THE JUDGES, MAYORS, ETC.

The Lord Chancellor: (*a*) To the Right Honble. the Lord High Chancellor; or to the Right Honble. Earl Russell, Lord High Chancellor; (*b*) My Lord; (*c*) Your Lordship.

This style is also adopted in addressing the Lord Chief Justice, the Master of the Rolls and the Lords of Appeal.

Vice-Chancellor: (*a*) To the Honble. ——— Vice-Chancellor; (*b*) and (*c*) Sir.

Puisne Judges: (*a*) To the Honble. Mr. Justice ———; (*b*) and (*c*) Sir, but "My Lord" when on the Bench.

Judges are usually Knights; but the above mode of address is more complimentary than that used in the case of Knights. Their wives are addressed as the wives of Knights.

Judges of the County Court: (*a*) To His Honour Judge—; (*b*) and (*c*) Sir, but "Your Honour" when on the Bench.

Justices of the Peace: (*a*) W. Smith, Esq., J.P.; (*b*) and (*c*) Sir, but "Your Worship" when on the Bench.

Lord Mayor: (*a*) The Right Honble. the Lord Mayor of ——; (*b*) My Lord; (*c*) Your Lordship. His wife: (*a*) The Right Honble. the Lady Mayoress of ——; (*b*) Madam; (*c*) Your Ladyship.

In Scotland Lord Provost takes the place of Lord Mayor. His wife does not share in his title.

[The chief magistrates of London, Dublin, York, Liverpool, Manchester, Birmingham, Bristol, Leeds, Sheffield Newcastle, Cardiff, Belfast and Cork are Lord Mayors; and those of Edinburgh, Glasgow, Aberdeen, Perth and Dundee are Lord Provosts.]

Mayors: (*a*) The Mayor of ———, or in a memorial or other formal address, To his Worship the Mayor of ———; (*b*) and (*c*) Sir, but "Your Worship" when in Court.

Aldermen: (*a*) To Alderman Sir James ———, or To Mr. Alderman Jones; (*b*) and (*c*) Sir.

OFFICERS OF THE ARMY AND NAVY.

(*a*) The professional rank must always precede any other title; e.g. Admiral Sir William Eyton; Captain James Martin, R.N.; Lieut. Nairn, R.N. A lieutenant in the army is addressed simply as Esquire, but above that grade the rank is expressed; e.g. General Sir Edward King, Colonel The Honble. Arthur Bayne; Major Thompson; (*b*) If the officer is untitled begin the letter by writing "Sir" under the name and office. [Friends of course would write Dear Admiral, Dear General, etc., as the case may be.] The wives of officers, like the wives of clergymen, do not derive any title from the official rank of their husbands.

SPECIAL CASES.

Ambassadors take the title, as do also their wives, of "Excellency"; (*a*) To His Excellency the Earl of——, Ambassador to ———; (*b*) according to rank; (*c*) Your Excellency.

Privy Councillors are addressed as "Right Honourable," but their wives not so.

Governors of Colonies: (*a*) To His Excellency———, Governor of ———; (*b*) According to rank; (*c*) Your Excellency.

Cardinals: (*a*) To His Eminence ———; (*b*) and (*c*) Your Eminence.

Dowagers: Care should be taken to distinguish Dowagers by putting their Christian name before the title, thus: The Right Honble. Jane, Countess of Wigan.

Maid of Honour: (*a*) The Honble. Miss ————; (*b*) and (*c*) Madam.

OBS. It is courteous to add to the ordinary address:—

(1) The letters indicating the order of knighthood that the addressee possesses, such as, K.G., K.C.B., etc.
(2) The letters M.P. in the case of a Member of Parliament.
(3) The letters K.C. in the case of a King's Counsel.
(4) The letters indicating a Doctor's degree—D.D., D.C.L., LL.D., M.D., etc.

N.B.—In the above table: (*a*) = How to address the envelope; (*b*) How to begin the letter; (*c*) How to refer to a person's rank when conversing with him.

RULES OF PRECEDENCE.

(1) The precedence of the members of the royal family depends on their relationship to the reigning sovereign and not on their relationship to any of his predecessors.

(2) Ambassadors take precedence immediately after the blood-royal; envoys and ministers accredited to the sovereign after dukes and before marquises.

(3) The five degrees of honour among peers correspond with the titles—duke, marquis, earl, viscount, baron. Of those belonging to the same rank, seniority of creation settles the place in the scale of honour.

(4) Peers have precedence according as they are of England, Scotland, Great Britain, Ireland, or the United Kingdom.

(5) Precedence depends partly on rank and partly on place or office; thus, the Lord Steward and the Lord Chamberlain of H.M. Household are above all peers of their own degree.

(6) Younger sons of rank A precede even the eldest son of rank B; thus the younger sons of a Duke precede the elder sons of a Marquis or Earl, and so on.

(7) All sons of Viscounts and Barons precede Baronets, but the eldest sons and daughters of Baronets walk before the eldest sons and daughters of Knights of any degree whatsoever, Knighthood not being an hereditary honour. On the other hand, the eldest sons of Knights precede the younger sons of Baronets.

(8) The official precedence of a husband or father confers no personal precedence on his wife or children; e.g. the Lord Chancellor or the Speaker of the House of Commons does not transmit any rank or place to his wife or children from his official position but only from his personal rank.

(9) Anyone who is entitled to both personal and official precedence is to be placed according to that which implies the higher rank.

(10) Unmarried women take precedency from their father, "share and share alike," which is not the case with sons.

(11) Married women share their husbands' dignities, but can confer none of their own upon their husbands. Nor can the daughter of a peer, unless a peeress in her own right, transmit any rank or place to her children.

(12) Distinctions of birth, creation, or descent are a woman's own, and remain if she marry a commoner; but if she marry a nobleman she must take her husband's place in the order of precedency.

(13) The wife of the eldest son of any degree precedes the daughters of the same degree, and both of them precede the younger sons of the next higher degree. Thus the wife of the eldest son of an Earl walks before an Earl's daughter, and both of them before the wife of the younger son of a Marquis; and the wife of a Marquis precedes the wife of the eldest son of a Duke.

TABLE OF PRECEDENCE AMONG MEN.

THE KING.
The Prince of Wales.
King's other Sons.
King's Grandsons.
King's Brothers.
King's Uncles.
King's Nephews.
King's Sons-in-Law.

Daughters of Baronets.
Wives of the Eldest Sons of Knights of the Garter.
Wives of the Eldest Sons of Knights Bannerets.
Wives of the Eldest Sons of Knights.
Daughters of Knights.
Wives of the Younger Sons of Baronets.
Wives of the Younger Sons of Knights.
Wives of Esquires and Gentlemen.

EPISCOPAL SIGNATURES.

A bishop's signature is composed of his Christian name or initials followed by the name of the cathedral city of the diocese in the place of his surname. In the following instances an ancient form of the city's name is usually adopted.

Aberdon	= Aberdeen	Norvic	= Norwich
Alban	= St. Albans	Oxon	= Oxford
Cantuar	= Canterbury	Petriburg	= Peterborough
Cestr	= Chester	Roffen	= Rochester
Cicestr	= Chichester	Sarum	= Salisbury
Dunelm	= Durham	Truron	= Truro
Ebor	= York	Vigorn	= Worcester
Edenburg	= Edinburgh	Winton	= Winchester
Exon	= Exeter		

The Irish and Colonial Bishops sign with the English title of their See.

MOTTOES.

ORDERS OF KNIGHTHOOD.

The Garter: Honi soit qui mal y pense—"Shame be to him who thinks shame of it."
The Thistle: Nemo me impune lacessit—"No one provokes me with impunity."
St. Patrick: Quis separabit?—"Who shall separate?"
The Bath: Tria juncta in uno—"Three joined in one."
The Star of India: Heaven's light our guide.
St. Michael and St. George: Auspicium melioris Ævi—"Earnest of a better Age."
The Indian Empire: Imperatricis Auspiciis—"Under the auspices of the Empress."
Royal Victorian Order: VICTORIA.

UNIVERSITIES.

[*Some of the Universities have no Motto.*]

University of Aberdeen: Initium sapientiæ timor Domini—"The fear of the Lord is the beginning of wisdom."
University of Birmingham: Per ardua ad alta—"Through difficulties to the heights."
University of Cambridge: Hinc lucem et pocula sacra—"Hence light and draughts of inspiration."
University of Durham: Fundamenta ejus super montibus sanctis—"Her foundations are upon the holy hills."
University of Glasgow: Via Veritas Vita—"The Way, the Truth, the Life."
University of Liverpool: Hæc otia studia fovent—"Such leisure nurtures learning."
University of Manchester: Arduus ad solem—"Steep the ascent to the sun."
University of Oxford: Dominus illuminatio mea—"The Lord my light."
University of St. Andrews: Αἰὲν ἀριστεύειν "Ever to excel."
University of Sheffield: Rerum cognoscere causas—"To ascertain the causes of things."
University of Wales: Orietur in tenebris lux et ædificabuntur deserta seculorum. Edita doctrina sapientum templa serena—"Light will arise in darkness, and the wild places of the world shall be built. Peaceful shrines will spring up from the teaching of sages."

CITY OF LONDON.

(1) THE GREAT COMPANIES.

Clothworkers: My trust is in God alone.
Drapers: Unto God only be honour and glory.
Fishmongers: All worship be to God only.
Goldsmiths: Justitia virtutum regina—"Justice the Queen of Virtues."
Grocers: God grant grace.
Haberdashers: Serve and obey.
Ironmongers: God is our strength.
Mercers: Honor Deo—"Glory to God."
Merchant Taylors: Concordia parvæ res crescunt—"Small means through harmony become great."
Salters: Sal sapit omnia—"Salt gives a savour to everything"; or "Wit imparts a flavour to anything."

Skinners: To God only be all the glory.
Vintners: Vinum exhilarat animum—"Wine gladdens the heart."

(2) The Minor Companies.

[*Some of the Companies have no Motto.*]

Apothecaries: Opiferque per orbem dicor—"I am called a helper throughout the world."
Bakers: Praise God for all.
Barbers: De præscientia Dei—"Of God's fore-knowledge."
Basket Makers: Let us love one another.
Blacksmiths: By hammer and hand all arts do stand.
Brewers: In God is all our trust.
Butchers: Omnia subjecisti sub pedibus oves et boves—"Thou hast put all things (both sheep and oxen) under his feet."
Carpenters: Honour God.
Clockmakers: Tempus rerum imperator—"Time, the tyrant of all." "Time, the chief ruler of things."
Coach and Coach-harness Makers: Surgit post nubila Phœbus—"After clouds comes sunshine."
Coopers: Love as brethren.
Curriers: Spes nostra Deus—"God our Hope."
Cutlers: Pour parvenir bonne foy—"To succeed fidelity (is needed)."
Distillers: Drop as raine, distill as dewe.
Dyers: Da gloriam Deo—"Give glory to God."
Fanmakers: Arts and trade united.
Farriers: Vi et virtute—"By might and manliness."
Feltmakers: Decus et tutamen—"My glory and defence."
Fletchers: True and sure.
Founders or Coppersmiths: God the only founder.
Framework Knitters or Stocking Weavers: Speed, strength, and truth united.
Fruiterers: Deus dat incrementum—"God giveth the increase."
Girdlers: Give thanks to God.
Glass Sellers: Discordia frangimur—"Through discord we get broken."
Glaziers: Lucem tuam da nobis O Deus—"Grant us Thy light, O God."
Gold and Silver Wyre Drawers: Amicitiam trahit amor—"Love draws friendship."
Innholders: Hinc spes affulget—"Hence beams forth our Hope."
Leather Sellers: Soli Deo honor et gloria—"Honour and glory to God alone."
Masons: In the Lord is all our trust.
Painters or Painter Stainers: Amor et obedientia—"Love and Obedience."
Patten Makers: Recipiunt fœminæ sustentacula nobis—"The women get their support from us."
Pewterers: Tota mea fiducia est in Deo—"All my trust is in God."
Plaisterers or Pargettors: Let brotherly love continue.
Playing Card Makers: Corde recto elati omnes—"All are delighted when the heart is right."
Plumbers: In God is all our hope.
Poulters: Remember your oath.
Saddlers: Our trust is in God.
Scriveners: Scribite scientes litera scripta manet—"Write wisely, the written word remains."
Shipwrights: Within the ark safe for ever.
Spectacle Makers: A blessing to the aged.
Stationers: Verbum Domine manet in æternum—"Thy Word, O Lord, endureth for ever."
Tallow Chandlers: Ecce agnus Dei qui tollit peccata mundi—"Behold the Lamb of God which taketh away the sin of the world."
Tin Plate Workers: Amore sitis uniti—"May you be united in love."
Turners: By faith I obteigne.
Tylers and Bricklayers: In God is all our trust.
Wax Chandlers: Truth is the light.
Weavers: Weave truth with trust.
Wheelwrights: God grant unity.

UNITED KINGDOM: Dieu et mon Droit—"God and my Right."
SCOTLAND: Nemo me impune lacessit—"No one provokes me with impunity."

TOWNS.

[*Many towns, especially the more ancient ones, have no Motto.*]

Aberdeen: Bon-accord—"Good-will."
Accrington: Industry and prudence conquer.
Anglesey: Mon mam Cymru—"Mon (i.e. Anglesey) the mother of Wales."
Appleby: Nec ferro nec igni—"Neither by sword nor fire."
Ashton-under-Lyne: Labor omnia vincit—"Labour conquers all things."
Athlone: Urbes stant legibus—"Cities stand by laws."
Bacup: Honor et industria—"Honour and Industry."
Banbury: Dominus nobis sol and scutum—"The Lord is to us a sun and shield."
Barnsley: Spectemur agendo—"Let us be judged by our actions."
Barrow-in-Furness: Semper sursum—"Always upward."
Batley: Floreat industria—"May industry flourish."
Belfast: Pro tanto quid retribuamus—"What can we render in return for so much?"
Berwick-upon-Tweed: Victoria gloria merces—"Victory, glory, commerce."
Birkenhead: Ubi fides ibi lux et robur—"Where there is fidelity, there are light and strength."
Birmingham: Forward.
Blackburn: Arte et labore—"By skill and hard work."
Bolton: Supera moras—"Overcome delays."
Bombay: Urbs prima in Indis—"The first city in India."
Bootle: Respice aspice prospice—"Look, look behind, look before."
Bournemouth: Pulchritudo et salubritas—"Beauty and healthfulness."
Bradford: Labor omnia vincit—"Labour conquers all things."
Bridgnorth: Fidelitas urbis salus Regis—"The loyalty of the city is the safety of the king."
Brighton: In Deo fidemus—"In God will we trust."
Bristol: Virtute et industria—"By virtue and industry."
Burnley: Pretium et causa laboris—"The reward and cause of labour."
Burslem: Ready.
Bury: Vincit omnia industria—"Industry conquers all things."
Bury St. Edmunds: Sacrarium regis cunabula legis—"The king's closet is the law's cradle."
Chatham: Loyal and true.
Chelmsford: Many minds, one heart.
Cheltenham: Salubritas et eruditio—"Healthfulness and learning."
Chester: Antiqui colant antiquum dierum—"Let the ancients worship the Ancient of Days."
Chorley: Beware.
Congleton: Sit tibi sancta cohors comitum—"Mayest thou have a sacred band of comrades."
Cork: Statio bene fida carinis—"A right trusty roadstead for vessels."
(Cornwall): One and all.
Coventry: Camera principis—"The prince's chamber."
Crewe: Never behind.
Croydon: Sanitate crescamus—"Let us grow in health."
Darlington: Floreat industria—"May industry flourish."
Darwen, Over: Absque labore nihil—"Nothing without labour."
Devonport: Prorsum semper honeste—"Straight on and always honourably."
Dewsbury: Deus noster refugium et virtus—"God our refuge and strength."
Doncaster: Confort et liesse—"Comfort and joy."
Dornoch: Sans peur—"Without fear."
Drogheda: Deus præsidium mercatura decus—"God is our protection, our merchandise, and our glory."

Dublin : Obedientia civium urbis felicitas—"Obedience of the citizens is the prosperity of the city."
Dumbarton : Fortitudo et fidelitas—"Fortitude and fidelity."
Dundee : Dei Donum—"The gift of God."
Dunstable : Justitia omnibus fiet—"Justice will be done to all."
Eastbourne : Meliora sequimur—"We pursue the better path"; or, "We aim at higher things."
Edinburgh : Nisi Dominus frustra—"In vain except the Lord."
Elgin : Sic itur ad astra—"Such is the path to the skies."
Exeter : Semper fidelis—"Always faithful."
Eye : Oculus in coelum—"An eye on the sky."
Falkirk : Better middle wi' the de'il than the bairns o' Fa'kirk.
Fenton : Onward and upward.
Forfar : Ut quocunque paratus—"As everywhere prepared."
Glasgow : Let Glasgow flourish.
Gloucester : Fides invicta triumphat—"Unconquered loyalty triumphs."
Godalming : Libera deinde fidelis—"Free, then faithful."
Govan : Nihil sine labore—"Nothing without labour."
Gravesend : Decus et tutamen—"My glory and defence."
Halifax : Nisi Dominus custodierit civitatem—"Except the Lord keep the city."
Hamilton : Sola nobilitat virtus—"Virtue alone ennobles."
Harrogate : Arx celebris fontibus—"A city famous for its springs."
Harrow : Stet fortuna domus—"Let the fortune of the house abide."
Hereford : Invictae fidelitatis praemium—"The reward of invincible fidelity."
Heywood : Alte volo—"I fly on high."
Huddersfield : Juvat impigros Deus—"God aids the diligent."
Hyde : Onward.
Inverness : Concordia et fidelitas—"Harmony and fidelity."
Isle of Man : Stabit quocunque jeceris—"It will stand whichever way 'tis thrown."
Jedburgh : Strenue et prospere—"Vigorously and prosperously."
Keighley : By worth.
Kendal : Pannus mihi panis—"Cloth gives me my bread."
Kidderminster : Deo juvante arte et industria floret—"With God's help it flourishes by art and industry."
Kilmarnock : Virtute et industria—"By virtue and industry."
Kirkcaldy : Vigilando munio—"I fortify it by keeping watch."
Kirkwall : Si Deus nobiscum—"If God be with us."
Lanark : Vigilantia—"Vigilance."
Leamington : Sola bona quae honesta—"These things alone are good which are honourable."
Leeds : Pro Rege et Lege—"For King and Law."
Leicester : Semper eadem—"Always the same."
Leith : Persevere.
Lerwick (Shetland) : Dispecta est Thule—"Thule has been descried."
Limerick : Urbs antiqua fuit studiisque asperrima belli—"There was an ancient city, in war's pursuits most fierce."
Linlithgow : Collocet in coelis non omnes vis Michaelis.
Liverpool : Deus nobis haec otia fecit—"God has given us this leisure."
London (City of) : Domine dirige nos—"O Lord direct us."
Londonderry : Vita, veritas, victoria—"Life, truth, victory."
Loughborough : In veritate victoria—"In truth is triumph."
Luton : Scientiae et labori detur—"Let it be given to knowledge and toil."
Manchester : Concilio et labore—"With prudence and effort."
Mansfield : Sicut quercus virescit industria—"Industry flourishes like the oak."
Margate : Porta maris portus salutis—"The sea's gate (i.e. Margate) is health's harbour."
Middlesborough : Erimus—"We shall be."
Middleton : Fortis in arduis—"Brave in difficulties."
Montrose : Mare ditat rosa decorat—"The sea enriches, the rose adorns."
Morley : Industria omnia vincit—"Industry conquers all things."
Morpeth : Inter sylvas et flumina habitans—"Dwelling amid woods and streams."
Musselburgh : Honesty.
Nelson : By industry and integrity.
Newcastle : Fortiter defendit triumphans—"Valiantly and victoriously it wards off attacks."
Northampton : Castello fortior concordia—"Concord is stronger than a castle."
Nottingham : Vivit post funera virtus—"Virtue lives after death."
Oldham : Sapere aude—"Dare to be wise."
Oxford (City of) : Fortis est veritas—"Mighty is truth."
Patrick : Industria ditat—"Industry makes rich."
Peterhead : Veritas vincit—"Truth conquers."
Plymouth : Turris fortissima est nomen Jehova—"The name of Jehovah is an exceeding strong tower."
Poole : Ad morem villæ de Poole—"After the custom of the town of Poole."
Portobello : Ope et consilio—"By might and counsel."
Queenstown : Nomine reginae statio fidissima classi—"Named after the Queen, a most trusty roadstead for the fleet."
Ramsgate : Salus naufragis salus aegris—"The salvation alike of the ship-wrecked and of the sick."
Rawtenstall : Floret qui laborat—"He prospers who works hard."
Reigate : Never wonne ne never shall.
Renfrew : Deus gubernat navem—"God guides the ship."
Richmond (Surrey) : A Deo et rege—"From God and the King."
Rochdale : Credo signo—"Believe the sign."
Rotherham : Sic virescit industria—"Thus industry flourishes."
Rutherglen : Ex fumo fama—"Fame from fumes."
Ryde : Amœnitas salubritas urbanitas—"Picturesque, healthful, and polite."
St. Helens : Ex terra lucem—"Light from the land."
St. Ives (Hunts.) : Sudore non sopore—"By effort, not by sloth."
Salford : Integrity and industry.
Sheffield : Deo adjuvante labor proficit—"With God's assistance our toil is profitable."
Shrewsbury : Floreat Salopia—"Let Salop flourish."
Southend-on-Sea : Forti nihil difficile—"To the brave man nothing is difficult."
Southport : Salus populi—"The health of the people."
Stalybridge : Absque labore nihil—"Nothing apart from labour."
Stranraer : Tutissima statio—"A most safe anchorage."
Sunderland : Nil desperandum auspice Deo—"With God's blessing, never despair."
Taunton : Defendamus—"Let us defend.'
Thornaby-on-Tees : Always advancing.
Torquay : Salus et felicitas—"Health and happiness."
Truro : Exultatum cornu in Deo—"My horn is exalted in God."
Tunbridge Wells : Do well, doubt not.
Tynemouth : Messis ab altis—"Our harvest is from the deep."
Waterford : Urbs intacta manet—"The city abides unassailed."
Wednesbury : Arte, Marte, Vigore—"By skill, valour, and strength."
Wells : Hoc fonte derivata copia in patriam populumque fluit—"From this well rises a stream of plenty that flows over the land and its people."
West Ham : Deo confidimus—"In God do we trust."
Wexford : Per aquam et ignem—"Through flood and fire."

Whitehaven : Vincit omnia perseverantia—"Perseverance conquers all."
Widnes : Industria ditat—"Industry enriches."
Wolverhampton : E tenebris oritur lux—"Light is arisen out of darkness."
Woodstock : Ramosa cornua cervi—"A stag's branching horns."
Worcester : Semper fidelis, mutare sperno—"Loyal ever, I spurn to change."
Wrexham : Fear God, Honour the King.
Yarmouth : Rex et nostra jura—"The King and our liberties."

MOTTOES ADOPTED BY VARIOUS REGIMENTS.

Arma pacis fulcra—"Arms the support of peace."
Cede nullis—"Yield to none."
Celer et audax—"Swift and bold."
Ich dien—"I serve."
In hoc signo vinces—"In this sign shalt thou conquer."
Ne obliviscaris—"Lest thou forget."
Nec aspera terrent—"Nor do hardships terrify."
Nisi Dominus frustra—"In vain without the Lord."
Omnia audax—"Bold in all things."
Per mare, per terram (Royal Marines)—"By sea and land."
Pristinæ virtutis memores—"Mindful of ancient valour."
Pro rege, pro lege, pro patria conamur—"We strive for king, law, and fatherland."
Quis separabit ?—"Who shall separate ?"
Quo fas et gloria ducunt—"Where duty and glory lead."
Semper fidelis—"Always faithful."
Spectemur agendo—"Let us be judged by our actions."
Te duce vincimus—"With thee as our leader we conquer."
Treu und fest—"True and steadfast."
Ubique—"Everywhere."
Vestigia nulla retrorsum—"No footsteps (of ours) backwards," i.e. we never retreat.
Viret in æternum—"It flourishes for ever."

MOTTOES RELATING TO VARIOUS VIRTUES.

1. Fidelity and Constancy.

Ad finem fidelis—"Faithful to the end."
Aequo adeste animo—"Be ready with constancy."
Basis virtutum constantia—"Constancy is the foundation of all virtues."
Candide et constanter—"Sincerely and steadfastly."
Cœlum non animum—"Sky not mind (we change)."
Constans fidei—"True to my trust."
Constantia et virtute—"By constancy and virtue."
Fidelis ad urnam—"Faithful to the Tomb."
Fidelitas vincit—"Fidelity prevails."
Fortiter et fideliter—"Boldly and faithfully."
Honor fidelitatis præmium—"Honour is the reward of fidelity."
In fide, justitia, et fortitudine—"In fidelity, justice, and fortitude."
Justitiæ soror fides—"Fidelity the sister of justice."
Semper fidelis—"Always faithful."
Sic fidem teneo—"Thus I keep my faith."
Tenax et fidelis—"Steadfast and faithful."
Tenax in fide—"Steadfast in faith."
Toujours fidèle—"Always faithful."
Ubi amor, ibi fides—"Where love, there faith."

2. Firmness and Tenacity.

Aut nunquam tentes, aut perfice—"Either never make the attempt, or else carry it through."
Cor nobile, cor immobile—"A spirit alike bold and steadfast."
Flecti, non frangi—"To be bent, not to be broken."
Frangas, non flectas—"You may break me but not bend me."
Suaviter et fortiter—"Gently and resolutely."
Suaviter in modo, fortiter in re—"The iron hand in the velvet glove."
Tenax propositi, vinco—"Holding to my purpose, I win."
Tenebo—"I shall hold fast."
Tenez le droit—"Maintain the right."
Tiens ferme—"Stand firm."

3. Honour.

Honor fidelitatis præmium—"Honour is the reward of fidelity."
Honor virtutis præmium—"Honour, the reward of virtue."
Honore et amore—"With honour and love."
Hostis honori invidia—"Envy is an enemy to honour."
Intaminatis honoribus—"With honours undefiled."
Invitum sequitur honor—"Honour follows him who seeks it not."
Per angusta ad augusta—"Through hardships to honours."
Probitas verus honos—"Uprightness is true honour."
Virtute acquiritur honos—"Honour is acquired by virtue."

4. Hope.

At spes non fracta—"But my hope is not broken."
Dum spiro spero—"While I breathe I hope."
Fac et spera—"Act and hope."
Lucem spero—"I hope for light."
Nil desperandum—"Never despair."
Spe et labore—"By hope and labour."
Spe melioris alor—"I live on the hope of a better day."
Sperat infestis—"In adversity he hopes."
Spero infestis, metuo secundis—"I hope in adversity and fear in prosperity."
Spes alit—"Hope nourishes."
Spes dabit auxilium—"Hope will lend help."
Spes infracta—"My hope is unbroken."
Spes labor levis—"Hope is a light task."
Spes mea Christus—"Christ is my hope."
Spes non confundit—"Hope does not confound."
Spes tutissima cœlis—"The surest hope is in heaven."
Surgit post nubila Phœbus—"After clouds comes sunshine."

5. Love and Friendship.

Amat victoria curam—"Victory loves watchful care."
Amicitiam trahit amor—"Love draws friendship."
Amicitia præsidium firmissimum—"Friendship the surest protection."
Amor distantia jungit—"Though far apart, yet joined by love."
Amor dulcis patriæ—"Sweet is the love of fatherland."
Amore sitis uniti—"May you be united in love."
Nihil amanti durum—"Nothing is hard to a lover."
Ubi amor, ibi fides—"Where love, there fidelity,"

6. Patriotism.

Ducit amor patriæ—"The love of my country leads me."
Nec rege nec populo, sed utroque—"Neither by the king nor the people, but by both."
Non mihi, sed patriæ—"Not for myself, but my country."
Non tua te moveant, sed publica vota—"Let not thy wishes, but those of the State, actuate thee."
Pro aris et focis—"For altars and hearths."
Pro rege et patria—"For my king and country."
Pro patriæ amore—"For the love of my country."
Pro rege, lege, et grege—"For king, law, and people."

7. Truth.

Candor dat viribus alas—"Sincerity gives wings to strength."
Et vitam impendere vero—"To devote even life to truth."
Fortis est veritas—"Truth is strong."
In veritate victoria—"Victory is in truth."
Quærere verum—"To seek out the truth."
Tiens à la vérité—"Adhere to the truth."
Verâ nihil verius—"Nothing is truer than the truth."
Veritas magna est—"Truth is great."
Veritas premitur non opprimitur—"Truth is oppressed but not crushed."
Veritas superabit—"Truth will overcome."
Veritatis cultores, fraudis inimici—"Worshippers of truth, foes of deceit."
Vérité sans peur—"Truth without fear."
Vincit veritas—"Truth prevails."

8. Valour.

Audacter et sincerè—"Boldly and sincerely."
Audacter et strenuè—"Boldly and strenuously."
Audentes fortuna juvat—"Fortune favours the bold."

Consilio et animo—" By prudence and courage."
Fortes fortuna juvat—" Fortune favours the brave."
Fortis esto, non ferox—" Be brave, not fierce."
Fortitudine vincit—" By fortitude he conquers."
Honestè audax—" Honourably bold."
Malo mori quàm fœdari—" Death rather than dishonour."
Palma virtuti—" The palm for valour."
Sans peur—" Fearless."
Sapere aude et tace—" Dare to be wise and keep silent."
Vi et armis—" By force and arms."
Vincere vel mori—" Death or victory."
Virtute non astutia—" By courage, not by cunning."

9. VIRTUE.

Sua præmia virtus—" Virtue is its own rewards."
Unica virtus necessaria—" Virtue is the one thing necessary."
Vim vincit virtus—" Virtue vanquishes violence."
Vincit pericula virtus—" Virtue overcomes dangers."
Virtus basis vitæ—" Virtue is the basis of life."
Virtus in actione consistit—" Virtue consists in action."
Virtus incumbet honori—" Virtue will rest upon honour."
Virtus incendit vires—" Virtue kindles strength."
Virtus invicta gloriosa—" Unconquered virtue is glorious."
Virtus mille scuta—" Virtue is a thousand shields."
Virtus nobilitat—" Virtue ennobles."
Virtus probata florebit—" Tried virtue will flourish."
Virtus propter se—" Virtue for its own sake."
Virtus semper viridis—" Virtue is ever green."
Virtus sola nobilitas—" Virtue is the only nobility."
Virtute acquiritur honos—" Honour is acquired by virtue."
Virtute duce—" Under the guidance of virtue."
Virtute, non verbis—" By virtue, not by words."

MEANING OF CERTAIN CHRISTIAN NAMES.

H=Hebrew. G=Greek. L=Latin.
K=Keltic. T=Teutonic.

Abraham (H.), great father.
Absalom (H.), father of peace.
Abigail (H.), father's delight.
Ada or **Adah** (H.), ornament.
Agatha (G.), good.
Agnes (L.), a lamb.
Alice (T.), noble.
Albert (Alberta) (T.), illustrious.
Alethea (G.), open, true.
Alexander (Alexandra) (G.), a helper of men.
Alfred (T.), all peace.
Alma (L.), kindly, benignant.
Amabel (L.), loveable.
Amanda (L.), worthy to be loved.
Ambrose (G.), immortal.
Amelia (T.), industrious.
Amos (H.), one who bears a burden.
Amy, short for *Amelia*.
Andrew (G.), a man.
Angelina (G.), angelic.
Anna, Anne, Annie (H.), grace.
Augustus (Augusta) (L), majestic.
Aurora (L.), dawn.
Baldwin (T.), bold in battle.
Barbara (G.), foreign, strange.
Basil (G.), kingly.
Beatrice (L.), making happy.
Bede (T.), a prayer.
Bella (L.), beautiful.
Belinda (L.), charming.
Benedict (L.), blessed.
Benjamin (H.), son of the right hand.
Bertha (T.), bright.
Bertram (T.), fair, illustrious.
Blanche (F.), white, fair.
Bessie, from "beth" in *Elizabeth*.
Bona (L.), good.
Boniface (L.), a well-doer.
Caroline, Carlotta, Charlotte, fem. of *Carolus* (L.), for Charles.
Catherine (G.), pure.
Celestine (L.), heavenly.
Charity (G.), love.
Charles (T.), a man.
Christine, Christiana, fem. of *Christian*.
Christopher (G.), bearing Christ.
Clara (L.), clear, bright.
Clarissa (L.), most bright.
Claude (Claudia) (L.), lame.
Clement (L.), mild, gentle.
Constance, fem. of *Constantine*.
Constantine (L.), firm, steady.
Cora (G.), a maiden.
Cordelia (K.), a sea-jewel.
Cornelia (L.), horn.
Cyril (G.), lordly.
Daniel (H.), God is judge.
David (H.), beloved.
Deborah (H.), a bee.
Diana (L.), a goddess; the moon.
Dinah (H.), judged.
Dora (G.), a gift.
Dorcas (G.), a gazelle.
Dorothea, Dorothy (G.), the gift of God.
Egbert (T.), bright eye.
Elizabeth, oath (solemn promise) of God.
Ellen, a form of *Helen*.
Emily, a form of *Amelia*.
Eric (T.), kingly.
Esther (H.), a star.
Ethel (T.), noble.
Eugene (G.), well-born.
Euphemia (G.), well spoken of.
Eva, Eve (H.), life.
Evan, Welsh for *John*.
Evangeline, a bearer of good news.
Eveline, short form of *Evangeline*.
Felicia, fem. of *Felix*.
Felix (L.), happy.
Flora (L.), flower.
Florence (L.), flourishing, blooming.
Francis, Frank (T.), free.
Frederick (Frederica) (T.), peaceful ruler.
Gabriel (H.), hero of God.
George (Georgina) (G.), a farmer, a rustic.
Gerald (T.), skilful with the spear.
Geraldine, fem. of *Gerald*.
Gladys (K.), a fair maiden.
Godfrey (T.), God's peace.
Godwin (T.), good in battle.
Grace (L.), favour.
Hannah (H.), grace.
Harry (T.), ruler of the home.
Harriet, fem. of *Harry*.
Helen, Helena (G.), torch, firebrand.
Henry (Henrietta) see *Harry (Harriet)*.
Herbert (T.), a bright warrior.
Honor, Honora (L.), honour.
Hortensia (L.), fond of gardening.
Irene (G.), peace.
Isabella=fair *Eliza*.
Isaac (H.), he laughs.
Ivan, Russian for *John*.
Jacob (H.), a supplanter.
James, Jaques, see *Jacob*.
Jane, from *Genoa*.
Janet, Janette, little *Jane*.
Jemima (H.), a dove.
Joan, Joanna, Johanna, fem. of *John*.
John (H.), the Lord graciously gave.
Jonathan (H.), the Lord hath given.
Joseph (H.), may He add.
Josephine, fem. of *Joseph*.
Joshua (H.), a Saviour.
Judith (H.), praising.
Kate, Katharine, Kathleen (G.), pure.
Kenneth (K.), leader of men.
Keturah (H.), incense.
Lætitia (L.), joy, gladness.
Lawrence (Laura) (L.), bay, laurel.
Lilian (L.), a lily.
Lionel (L.), a little lion.
Llewellyn (K.), lightning.
Lucius, Luke (L.), bright, shining.
Lucy, fem. of *Lucius*.
Madeline, form of *Magdalen*.
Magdalen (H.), of Magdala.
Margaret, Margery (G.), a pearl.
Martha (H.), a lady.
Mary, Maria, Marian (H.), a form of **Miriam,** that is, bitterness.
Martin (L.), martial.
Matthew (H.), gift of the Lord.
Melissa (G.), a bee.
Michael (H.), who is like God?
Mildred (T.), mild in counsel.
Miranda (L.), one to be admired.
Nancy, form of *Annie*.
Naomi (H.), pleasant.
Nathan (H.), He hath given.
Nathaniel (H.), God hath given.
Nora, form of *Honora*.
Nicolas (Nicola) (G.), victorious.
Octavius (Octavia) (L.), eighth.
Oliver (L.), olive, peace.
Olive, Olivia, fem. of *Oliver*.
Paul (L.), little.
Paulina, Pauline, fem. of *Paul*.
Patrick (L.), a nobleman.
Peter (G.), a rock.
Philip (Philippa) (G.), a lover of horses.
Phœbe (G.), light.
Phyllis (G.), foliage, a dish of herbs.
Priscilla (L.), ancient.
Psyche (G.), the soul.
Rachel (H.), a ewe-lamb.
Reuben (H.), behold a son!
Rhoda (G.), a rose.
Rosa, Rosalie (L.), a rose.
Rosabella (L.), a lovely rose.
Ruth (H.), a friend.
Samson (H.), sunny.
Samuel (H.), asked of God.
Sara, Sarah (H.), a princess.
Saul (H.), asked for.
Sebastian (G.), to be reverenced.
Selina (G.), the moon.
Septimus (Septima) (L.), seventh.
Sibylla (G.), a prophetess.
Silas, short for *Silvanus* (L.), sylvan.
Simon, Simeon (H.), famous.
Solomon (H.), peaceful.
Sophia (G.), wisdom.
Stella (L.), a star.
Stephen (G.), a crown.
Susan, Susannah (H.), a lily.
Theodore (G.), gift of God.
Theodora, fem. of *Theodore*.
Theophilus (G.), a lover of God.
Thomas (H.), a twin.
Tristram (L.), grave, sad.
Una (L.), one.
Uriah (H.), the Lord is light.
Ursula (L.), a little bear.
Valentine (L.), strong, healthy.
Valeria (L.), a sort of eagle.
Vera (L.), true.
Victor (L.), a conqueror.
Victoria (L.), victory, success.
Vincent (L.), conquering.
Viola, Violet (L.), a violet.
Virginia (L.), maidenly, chaste.
William (T.), a defender.
Wilhelmina, fem. of *Wilhelm*= William.
Winifred (T.), winning, peace.
Zoe (G.), life.

PRONUNCIATION OF CERTAIN SURNAMES.

1. Names of Foreign Origin.

NAME.	PRONUNCIATION.
Bache	Baytch.
Bartelot	Bart'lett.
Beauchamp	Beech'em.
Beauclerc	Bo'clair.
Beaufort	Bo'fort.
Beaulieu	Bew'ly.
Beaumont	Bo'mont.
Belvoir	Beaver.
Boisragon	Bar'ragon.
Boleyn	Bul'len.
Bolitho	Bolee'tho.
Bosanquet	Boo'sanket.
Boucher, Bourchier	Bow'cher.
Bruhl	Brool.
Busch	Bush.
Capel	Ca'pel.
Cavalier	Cavaleer'.
Chandos	Shandos.
Chevasse.	Sheva'sse.
Cheyne	Tchee'-ne (English). Tchain (Scotch).
Clarina	Clary'na.
Cohen	Co'hen.
Curtois, Curteis	Cur'tis.
Daimpré	Dem'prey.
Daguilar	Daggilar'.
D'Angibou	Dan'jibou.
D'Auvergne	Dauver'ne (2 syllabs.).
D'Eresby	Dee'rsby.
Desart	Des'sert.
Devereux	x silent or sounded.
De Lessert	Delessair'.
De Moleyns	Demmolee'ns.
De Ros	Deroo's.
De Salis	Desa'lice.
De Saumarez	De So'marezz.
De Vesci	De Ves'si.
Disraeli	Disray'ly.
Duchesne	Dukahn', Dushayn'.
Dumaresq	Doomer'rick.
Dynevor	Din'nevor.
Du Boulay	Dew Boo'lay.
Du Buisson	Dew'bison.
Du Plat	Dew Plah'.
Engström	Eng'strum.
Fiennes	Fynes (1 syllable).
Foljambe	Fool'jum.
Fortescue	For'teskew.
Furneaux	Fur'no.
Gantillon	Gantil'lon.
Geoffrey	Jefrey.
Gobat	Go'bah.
Gorges	Gor'jes.
Grosvenor	Gro'venor.
Guillbaud	Gilbo (g hard).
Harenc	Harron.
Hullah	Hul'lah.
Im Thurn	Im'thurn.
Labalmondiere	Labal'mondeer.
Lefevre	Lefee'ver.
Lutz	Loots.
Le Bas	Le Bah'.
Le Bert	Le Bert'.
Le Brun	Le Broon.
Le Couteur	Lecoo'ter.
Le Lièvre	As in French.
Le Mesurier	Lemeas'urer.
Levi	Lev'vy.
Meux	Mews. (x sounded).
Molyneux	Mul'lineux.
Moilliett	Mo'liet.
Montefiore	Monte-fi-o'-re.
Muschamp	Mus'cham.
Nagel	Nah'gle.
Papillon	Pap'pilon.
Petre	Pe'ter.
Prideaux	Pree'do or Prid'du.
Pultoney	Polt'ny.
Quibell	Quibell'.
Romanes	Roma'nes
Rosenthal	Ro'sental.
Sadleir	Sad'leer or Sadler.
Sartorius	Sartoris.
St. Leger	Sil'linjer.
St. Maur	Seymour.
Tabuteau	Ta'bito.
Tadema	Tad'dimma.
Tollemache	Tol'mash.
Vaillant	Vallant.
Vaux	Vox.
Villiers	Vil'lers.
Vavasour	Vav'vasur.
Zouche	Zowche (1 syllable).

II. Scotch, Irish, and Welsh names.

Abergavenny	Aberge'nny.
Achonry	Achon'ry.
Arbuthnott	Arbuth'nott.
Ballater	Bal'later.
Banchory	Ban'kory.
Bethune	Bee'ton.
Bourke	Burk.
Breadalbane	Bredal'bane.
Burnett	Bur'nett.
Carnegie	Carneg'ie.
Carruthers	Carruth'ers.
Carwardine	Car'den.
Charteris	Char'ters.
Chisholm	Chizum.
Chives, Chivas, Shives	Shee'vus.
Clanricarde	Clanrik'ard.
Claverhouse	Clav'ers.
Cockburn	Co'burn.
Cochran	Cock'ran.
Coghlan	Co'lon.
Connell	Con'nell.
Colquhoun	Cohoon'.
Conynham	Cun'ningham.
Cromarty	Crum'arty.
Dalgairns	Dalgairns'.
Dalziel	Dee-ell'.
Dundas	Dundas'.
Dillwyn	Dil'lon.
Donoghue	Dun nohew.
Drogheda	Dro heda.
Dymoke	Dim muk.
Dysart	Dy sart.
Elgin	El gin (g hard).
Enraght	En rowt.
Eyre	Air.
Falconer	Fawkner.
Farquhar	Fark'war (*quh* guttural in Scotch).
Fildes	Fildes (1 syll.) rhyming with wilds.
Foulis	Fowls.
Gallagher	Gal laher.
Geoghegan-Gahagan	Gay'gan.
Gerard	Ger'ard (g soft).
Gifford, Gifford	G soft in England. G hard in Scotland.
Glamis	Glahms.
Gowan	'ow' as in cow.
Gower	Gore.
Graeme	Grame.
Greig	Greg.
Grierson	Greerson.
Halkett	Hak'kett.
Hawarden	Har'den.
Hepburn	Heb'burn.
Hoey	Hoy.
Home	Hume.
Innes	2 syllables.
Iveagh	Ivah. tural).
Iverach	Eeverach ('ch' gut-
Ives	1 syllable (yves).
Keilor	Keelor.
Kennaird	Kennaird'.
Ker	Carr.
Kirkby	Kir'by.
Kilmory	Kilmur'ry.
Leveson-Gower	Looson-Gore.
Lismore	Lismore'.
Macrae	Macray'.
Maclachlan	Maclach'lan. ('ch' guttural).
Maclean	generally Maclaine.
Macleay	Maclay'.
Macleod & McLeod	Macloud'.
Macmahon	MacMa'hn.
Macnamara	Macnama'ra.
Magee	Magee' (g hard).
Magill	Magill' (g hard).
Maguinness	Magin'ness (g hard).
Mahony	Maho'nie.
Malet	Malet'.
Marjoribanks	Marsh'banks or March'banks.
Maturin	Match'urin.
Maugham (n)	Mawm or Mawn.
Mearns	Merns or Mairns.
Meiklejohn	Mic'klejohn.
Melhuish	Mel'wish.
Menzies	Meng'ez.
Methuen	Meth'uen.
Meyrick	Mer'rick.
Mowat	Moat (2 syllables).
Ogilvie (y)	g hard.
O'Meara	O'Ma'ra.
O'Morchoe	O'Mur'roo.
Onions	Ony'ons.
O'Shaughnessy	O'Shawn'issy.
Osbaldiston	Osbaldis'ton.
Powell	Po'el.
Powys	Po'-is.
Pugh	Pew.
Rees (Rhys)	Reece.
Ruthven	Ruf'fen.
Scrimgeour	Scrim'jur. Scotch).
Strachan	Strawn (guttural in
Suter	Sooter.
Suther	Soother.
Tredegar	Tredee'gar.
Urquhart	Erkwart (*quh* guttural in Scotch).
Wauchope	Waukop.
Wemyss	Weems.
Wolseley	Wool'sly.

III. Change E into A in the first syllable :—

Berkeley, Berkshire, Bernard, Bertie-Cherwell, Clerke, Derby, Feversham, Hertford, Hervey, Ker, Yerburgh.

IV. Change O or OU into U :—

Blount, Bompas, Bromby, Brompton, Cadogan, Compton, Courthope, Cozens, Donoghue, Donoughmore, Monck, Monckton, Monro, Monson, Montagu, Montgomery, Moray, Ponsonby, Stourton, Yonge (Young).

V. Miscellaneous.

Ayscough	As'kew.
Bagehot	Bag'got.
Barraclough, Clough	Cluff.
Beaconsfield	Beak or Beck.
Beresford	3 syllables.
Bellingham	Bellinjam.
Bicester	Bis'ter.
Blyth	Bly.
Calderon	Caldron.
Cholmondeley	Chum'ley.
Cirencester	Sis'ister.
Cowper	Cooper.
Dynevor	Din'nevor.
Kekewich	Kekwitch.
Knollys	Noles.
Foljambe	Fool'jum.
Gillett, Gillott	g hard.
Gough	Goff.
Lygon	Liggon.
Myerscough	Maskew.
Ouless	Oo'less.
Pole-Carew	Pool-Cary.
Pytchley	Pite-chley.
Reay	Ray.
Rowton	'ow' as in rowdy.
Skrine	Skreen.
St. John	Sin'jun.
Thesiger	Thes'siger
Thynne	Thin.
Tyrwhitt	Territ.
Wriothesley	Roxly.

CHIEF EVENTS

IN

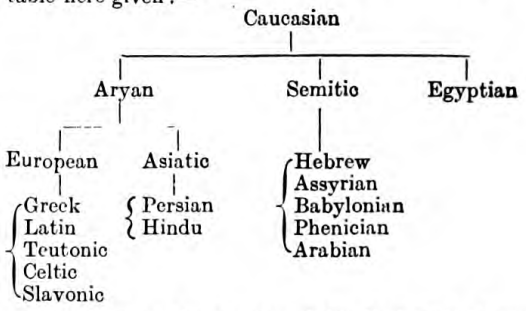
THE HISTORY OF THE WORLD.

INTRODUCTION.

Relatively to the huge periods of time with which geology deals, man's appearance on the earth may be said to be recent; but relatively to the ages measured by history it is of high antiquity, and must be dated earlier by countless centuries than the epoch at which the first records were composed. The geologist is accustomed "to draw a cheque on the bank of time" for something between sixty and three hundred millions of years as being an adequate allowance of time in which the earth's crust might assume its present condition; while from the age when rudimentary forms of life first appeared, he is wont to distinguish twelve great "geological periods," during which life, both animal and vegetable, has been steadily advancing in complexity. The last of these periods is the Post-Tertiary, or Quaternary, and in its course man first appears; the earlier portion of this period is known as the Pleistocene, and during it were deposited beds of drift-gravel (as for instance in the valley of the Ouse), in which are embedded rude hatchets and other implements of flint which have evidently been fashioned by human skill. Hence primitive man is called palæolithic, and the time of his existence is often spoken of as the Old Stone Age, during which the greater part of the continent of Europe was subject to at least two distinct glacial epochs, or ice-ages; but some authorities on the matter hold that primitive man must have lived even earlier than palæolithic man, but have perished without leaving any traces of his existence. At first he seems to have maintained himself by hunting, and to have followed the river valleys in his search for new haunts; later he began to dwell in caves, such as those near Bordeaux, where are to be found his earliest efforts towards the "higher culture"—a rude drawing of a mammoth elephant on a piece of its own ivory.

Gradually the "Cave Man" improved his flint weapons (many of which are to be seen in the British Museum), and became more skilled in the art of drawing; so we pass to neolithic man—man of the New Stone Age, in which his tools are polished and more skilfully wrought. He learns to cultivate the soil, various species of animals are domesticated, and working in clay and wood is commenced. Then follows the Bronze Age, when flint is abandoned for the newly-discovered metal, while gold (only used for ornaments) begins to exercise its fascination over him; this was the pitch of civilization reached by the Aztecs, or natives of Peru, when they were discovered by Europeans early in the 16th century. Last comes the Iron Age, and man is launched on the voyage of discovery and invention which eventually is to lead him to the supremacy over nature such as we enjoy; he awakes to a fuller self-consciousness, the rudiments of law are to be found in tribal custom, the nation, instead of the clan, becomes the unit, society grows more organised and more complex, records of man's progress become both possible and worth making, and the Age of History has at last dawned—an age which must have been preceded by a considerable civilization such as that manifested in the earliest monuments of Egypt and Babylonia.

Other considerations help us to estimate how modern all history, even the earliest, is, when compared with the immense antiquity of man. Ethnologists find in the human race five distinct families—the Caucasian (or white) man, the Mongolian (or Tartar), the Negro, the Malay, and the North-American Indian. Many, but not all, experts would ultimately trace these five families to a common original stock; even if this conjecture be unwarranted, the facts of the case demand thousands upon thousands of years in which the Caucasian family alone might develop its present variations. It has three great sub-divisions, which may easily be understood from the table here given:—



Now philology shows indisputably that all the languages of the Aryan family are derived from one source—an original tongue to which Sanscrit has the closest resemblance, and which was spoken in the cradle of the Aryan race, the highlands of the Oxus, east of the Caspian Sea. A little reflection will convince us how many centuries must elapse for the successive waves of immigration of the Aryans into India and Europe to spend their force, and to develop into such different nationalities with such clearly-marked differences of language.

The table given above may also serve to remind us that the field of history is not co-extensive with the area occupied by man. Of the five great families already enumerated, three may be said not to enter into history at all—the Negro, the Malay, and the North-American Indian; for their self-consciousness, their feeling of the unity of their race, has not developed sufficiently to render history possible. The fourth family, the Mongolians, only touches the skirts of history; for with it society is static, not dynamic, there is no idea of, or capacity for, progress or any sort of development; it is only when the Mongol is brought into touch with Europe and the West (as, for instance, the Magyars of Hungary, the Turks, or the Japanese during the last half-century), that he can occupy a page of history. Even among the Caucasians history finds its scope a very unequal one; the Egyptian is as unprogressive as the Mongol Chinaman—as he was at the opening of history, so has he remained ever since; the Semite—except for the one incalculable factor, the Jew—has disappeared from the march of civilization, though

not without a surpassing influence on man's religious development; the Hindu has proved no more than a dreamer of dreams; and so, in the main, history is occupied with the European branch of the Aryan family; for there alone is freedom loved for its own sake, and therefore there alone is progress—moral, social, and intellectual—possible.

Thus, in barest outline, we commence this article with a peep at the early civilizations of Egypt and Western Asia, when first the curtain of history is raised; then enters the Greek race with its marvellous endowment of intellect and taste; then follows the inevitable attack of the East upon the West—Persia standing for the might of numbers and material resources, Greece for the triumph of thought and freedom; next comes the counter-attack of West upon East, when Alexander's short-lived empire brings nations together by the bond of a common civilization and language; meanwhile Rome is rising in the West, and preparing to imprint the stamp of law and order on all the families of men. Irresistibly and surely her empire grows, until at the commencement of the Christian era it is coterminous with the civilized world—in history, all roads lead to (or from) Rome; but in her power are the seeds of a decay, which Christianity cannot prevent but only retard; her supremacy is seen to be hostile to the best development of the individual, and her degenerate might breaks under the onslaught of the young and vigorous races from the north. There follow three centuries of confusion, when Rome, through its Church, asserts an empire over men's minds such as it had formerly wielded through its State; then arises Charlemagne (800 A.D.), standing at the turning-point in Europe's history between the so-called Dark Ages (6th to 8th centuries) and the Middle Ages (9th to 15th centuries), though often the Middle Ages denote the millennium from the fall of the Western Empire to that of the Eastern (476-1453 A.D.), and often the Dark Ages are taken to cover the first six of these centuries instead of only the first three. Then follows the great upheaval of the Reformation or Renaissance; and thus at last, after the struggles of all the ages, there emerges to our view the Modern Europe, whose existence and whose permanence we often so lightly take for granted.

I.—THE EARLY EMPIRES IN EGYPT AND WESTERN ASIA. (TO 776 B.C.)

EGYPT.

The Old Empire. To the year 3000 B.C.

Consisting of dynasties 1–10, according to the arrangement of the Egyptian priest, Manetho (who lived about 290 B.C.).

B.C.

4450. Menes, the builder of the early capital, Memphis (near modern Cairo), in Lower or Northern Egypt.

3800. The Fourth Dynasty commenced. The Pyramids built by successive kings, Cheops (Khufu), Chephren, and Menkaures (Mycerinus).

The Middle Empire. From 3000 to 2200 B.C.

Consisting of Dynasties 11–13, when Thebes (No, or No-Ammon, Jer. xlvi. 25) in Upper or Southern Egypt became capital.

The Hyksos or Shepherd Kings. From 2200 to 1600 B.C.

Consisting of Dynasties 14–17. Probably Mongolian invaders, Tartar nomads, Chatti (Old Testament Hittites). Their capital was Zoan, which contained monuments by Apepi (c. 1750), Joseph's Pharaoh, who welcomed the Israelites to Goshen.

The New Empire. From 1600 to 525 B.C.

Consisting of Dynasties 18–26. The Hyksos were expelled, probably by the aid of the Ethiopians, and Thebes again became the capital.

B.C.

1533. Thothmes III., who, after the battle of Megiddo, subdued Syria and Mesopotamia. He erected an obelisk at On (Heliopolis), erroneously called Cleopatra's Needle, which was brought to England and set up on the Thames Embankment in 1878.

1324. Ramses II., or Sesostris, "the Great," beautifies Thebes, builds Pithon, and oppresses the Hebrews.

1258. Meneptah, or Merenptah, usually identified as the Pharaoh of the Exodus; but some would suggest Ramses III. (1230–1204).

940. Shishak I., of the 22nd Dynasty, the friend of Israel and foe to Judah (1 Kings xiv.).

From this point the Old Testament records are accepted as being historical, even by the most advanced critics. On Solomon's death (933), the Disruption of his kingdom occurred, Jeroboam ruling over Israel (of which Samaria soon became the capital), and Rehoboam, Solomon's son, ruling over Judah in Jerusalem.

860. Shishak II., in whose reign the Phœnician colony of Carthage was founded.

ASIA.

The Accadian-Summerian Kingdoms. To the year 2239 B.C.

B.C.

6000. Temple of Bel founded at Nippur.

3800. Sargon I. His capital was at Sippar (Sepharvaim, 2 Kings xvii. 24), where was a library of inscribed tablets and cylinders. Accad (Highland) was a Mongolian kingdom, Shumar (Shinar, Gen. x. 10) was probably Semitic.

The Early Babylonian Empire. From 2239 to 1786 B.C.

B.C.

2239. Khammurabi or Hammurabi (Amraphel, Gen. xiv. 1), founds a Semitic Babylonian dynasty in the Euphrates valley. His Code of Laws has recently been discovered and translated, and presents remarkable parallels to much of the legislation in the Pentateuch.

The Kasshite Dynasty. From 1786 to 1210 B.C.

This was probably a warlike dynasty dwelling in the Zagros Mountains (descended from the Cush of Gen. x. 8). During the latter part of this period, Semitic Assyrians began to settle in North Mesopotamia.

B.C.

1392. Burnaburiash II., contemporary with Amenhotep IV. of Egypt—the period of the Tel-el-Amarna correspondence and tablets.

1353. Nazimaruttash, identified by some with Nimrod (Gen. x. 8).

The Hittite sovereignty in North Syria, which prevailed from 1600 to 700 B.C., was now at its height; its capitals were Kadesh on the Orontes, and Carchemish on the Euphrates.

1324. Shalmaneser I., one of the early kings of Assyria.

The Assyrian Empire. From 1210 to 625 B.C.

The warlike and cruel Assyrians gradually subdued the Babylonians in the south, and the Hittites in the north-west. Their capital was first at Assur, and later at Nineveh.

B.C.

1023. Tiglath-Pileser I. consolidates the kingdom and extends it to the Caspian Sea.

[Saul becomes king of Israel.]

[1000. David succeeds Saul as king of Israel, and dies in 980.]

883. Assurnatsirpal III. revives Assyria's greatness, which had suffered from the growth of Syria.

860. Shalmaneser II., whose "Black Obelisk" is in the British Museum.

[845. Successful rebellion of Mesha, king of Moab, against Israel; recorded on the "Moabite Stone."]

INTRODUCTION TO THE HISTORY OF GREECE.

The Greeks knew themselves as Hellenes, and their land as Hellas; but the discoveries of Dr. Schliemann have revealed a pre-Hellenic civilisation which centred round Mycenae and Tiryns and flourished some thirteen or more centuries B.C., and whose elements were derived from Egypt, Phenicia, and Crete. The legend of the Argonauts tells of Greek exploration of the Euxine, under the guise of Jason's expedition to Colchis to gain the Golden Fleece. The traditional date of the siege of Troy is 1184 B.C.—an anticipation, not altogether unhistorical, of the struggle to take place between Europe and Asia some seven centuries later. In 1104 B.C. is dated the "Return of theHeraclidae" or descendants of Hercules to the Peloponnesus (Morea)—a poetical clothing for the fact that Dorian invaders from Thessaly came southwards, and dispossessed the native Achaeans, who in turn drove out many Ionian tribes.

These changes led to the Age of Colonisation, during which the west coast of Asia Minor was fringed with Greek settlements—Æolian, Ionian, Dorian. Still later, Greek colonies grew up along the west of the Mediterranean, especially in Sicily and the south of Italy (called Magna Graecia), and including Massilia (Marseilles) and Cyrene (in North Africa), both of which were founded towards the end of the 7th century B.C. Thus the Greeks became the rivals of the Phenicians, who ten or eleven centuries B.C. had planted colonies at Tartessus (Old Testament Tarshish) on the Guadalquiver, at Gades (Cadiz), and at Utica, while later they had numerous colonies along the Mediterranean coasts, and especially in Sicily. Thus in historic times Hellas or Greece denotes all the lands where the Greeks were predominant—the southern part of the Balkan peninsula (Macedonia, except colonies along its coast, was only recognised as Greek in later days), the west coast of Asia Minor, south Italy, and Sicily.

II.—APPROACH OF THE STRUGGLE BETWEEN EAST AND WEST.
(776 B.C.—510 B.C.)

GREECE.

The Age of Greek Colonization.

B.C.

776. Lycurgus, the legislator of Sparta, institutes the Olympic Games, which were held every four years and were open to all Greeks. This year of the first Olympiad is the era for Greek chronology.

[**753.** Traditional date for the foundation of Rome—the year A.U.C. 1.]

743. The First Messenian War, in which Sparta asserts her supremacy in the Peloponnesus against her neighbours of Messene.

685. Second Messenian War, when Spartans are spurred on to victory by the lays of Tyrtaeus, the lame schoolmaster from Athens.

664. Sea-fight between Corinth and her colony Corcyra (Corfu), the earliest naval engagement recorded in history.

The Age of the Tyrants.

The Greek tyrants were despotic rulers, who seized the power during the course of the struggles between the rival factions of aristocracy and democracy; otherwise the unfavourable implication of the term tyranny is modern. Mostly the Greek tyrants consolidated the power of their States, and extended a beneficent patronage to art and letters.

B.C.

624. Severe legislation of Draco at Athens—an attempt to crush the growing democratic tendencies of the Athenians.

612. Cylon aims at the tyranny at Athens, and is sacrilegiously slain by Megacles, of the house of the Alcmaeonidae.

594. Solon's legislative reforms at Athens.

585. Death of Periander, who for 40 years had been tyrant of Corinth.

560. Pisistratus becomes tyrant at Athens, and makes an authoritative collection of the poems of Homer.

527. Hippias and Hipparchus, sons of Pisistratus, succeed to the tyranny at Athens.

522. Polycrates, tyrant of Samos, and patron of the poet Anacreon, is killed by Oroetes, the Persian satrap of Sardis.

514. Conspiracy of Harmodius and Aristogiton, who assassinate the tyrant Hipparchus at Athens.

510. The tyrant Hippias expelled from Athens. He takes refuge at the Court of Darius, whom he assists in the expedition of 490.
Democracy is restored at Athens. Clisthenes, one of the Alcmaeonidae, introduces his constitutional reforms.

ASIA.

The Assyrian Empire (cont.).

B.C.

747. Tiglath-Pileser III. (2 Kings xv. 19).

727. Shalmaneser IV. (2 Kings xvii. 3).

722. Sargon II., Tartan or commander-in-chief, usurps the throne, conquers Syria and Arabia, defeats Egypt and the Hittites, and ends the kingdom of Israel, whose inhabitants are deported (2 Kings xvii. 6). He also reduces to submission his vassal, Merodach Baladan, king of Babylon (Isa. xxxix).

705. Sennacherib conquers Phenicia and Egypt (2 Kings xviii., xix.), and rases Babylon to the ground.

681. Esarhaddon rebuilds Babylon and takes it for his capital.

668. Assurbanipal (Byron's Sardanapalus) founds library at Nineveh, takes Tyre, conquers Egypt, and takes Thebes.

626. Saracus, the last Assyrian king.

The Later Babylonian Empire. From 625 to 538 B.C.

B.C.

625. Nabopolassar, king of Babylon, and vassal to Assyria, renounces his allegiance, and with the aid of Cyaxares, the Mede, takes Nineveh, rases it to the ground (see the book of Nahum in Old Testament), and ends the Assyrian Empire.

604. Nebuchadrezzar II. (2 Kings xxiv.), son of Nabopolassar ascends the throne.

597. First captivity of the Jews with their king, Jehoiachin.

586. After a three years' siege, Nebuchadrezzar takes Jerusalem, and deports the rest of its inhabitants to Babylon. End of the kingdom of Judah.

561. Evil-merodach succeeds Nebuchadrezzar, and befriends Jehoiachin.

555. Nabonidus, last king of Babylon, of which city probably his son, Belshazzar (Dan. v.), was governor.

538. Nabonidus is defeated by Cyrus the Persian at Borsippa, and Babylonia becomes part of the Persian Empire.

The Persian Empire. From 538 to 331 B.C.

538. Cyrus enters Babylon, and issues an edict permitting the Jews to return to their own land.

529. Cambyses succeeds Cyrus, and conquers Egypt, whither he is accompanied by Crœsus of Lydia.

521. Darius becomes king, restores Zoroastrianism, and organises the empire under 20 satraps or viceroys.

516. Temple at Jerusalem rebuilt (Ezra v., vi.).
Siege of Babylon, which had rebelled, is ended by the stratagem of Zopyrus.

SUPPLEMENTARY.

1. Rise of the Median Power (709-558 B.C.). According to Herodotus, the Medes from the east of the Caspian settled in Persia under Deioces in 709, made Ecbatana their capital, and soon became formidable rivals to the Assyrians. Cyaxares, who helped Nabonidus to take Nineveh, came to the throne in 633. The last Median monarch was Astyages (594-558 B.C.).

2. Rise of the Persian Power (700-538 B.C.). The dynasty of the Achaemenidae began to rule about 700. In 558 Cyrus the Elder (or the Great) overthrew Astyages the Mede; in 546 he took Sardis with its king Croesus, and so ended the Lydian kingdom, which had been predominant in Asia Minor from the time of Gyges (716-678). When Cyrus became master of the Babylonian Empire in 538, his dominions extended from India to the Ægean, and so for the first time East and West were brought face to face with one another.

3. Summary of the subsequent History of Egypt. During the period from 776 to 510 B.C., few important events occurred in Egyptian history. In 625 Necho II., of the 26th dynasty, defeated Josiah at Megiddo (2 Kings xxiii.), but in 612 he was defeated by the Babylonians at Carchemish; he greatly developed the naval power and commerce of Egypt, and during his reign the Phenicians circumnavigated Africa. He was succeeded in 596 by Apries, the Pharaoh-Hophra of Jeremiah xliv. 30, and ally of Zedekiah, the last king of Judah, against Babylon. The last king of the 26th dynasty, Amasis by name, came to the throne in 570, and after a long reign, in which he greatly developed intercourse with the Greeks, was utterly overthrown by Cambyses at Pelusium in 525. Thus Egypt became a **Persian Satrapy** (525-332), but threw off the Persian yoke in 414, and remained independent till it was again subdued by the Persians about the year 350. In 332 Alexander the Great turned aside from completing the conquest of Persia in order to leave no foes in his rear; he easily subdued Egypt, which thus was part of **Alexander's Empire** from 332 to 323. The great conqueror at this time founded the city of Alexandria, but on his death his empire fell to pieces; there were numerous quarrels among those

who claimed to be his Diadochi or successors, of whom the most important were Seleucus who gained Syria, and Ptolemy who took Egypt. **Under the Ptolemies** (323-30 B.C.) Egypt flourished greatly. In the reign of Ptolemy I., Soter, the mathematician Euclid lived; Ptolemy II., Philadelphus, (283-247) enriched the library of Alexandria, and under him the Septuagint (LXX.) or Greek translation of the Hebrew Old Testament is said to have been commenced, especially for the use of the large Jewish colony in Alexandria. In the reign of Ptolemy V., Epiphanes, (205-181) the power of Egypt declined, and Palestine passed under the dominion of the Seleucidae of Syria; the famous "Rosetta Stone," which was discovered by an officer of Napoleon's in 1799, contains the coronation decree of this monarch; its inscription is threefold—in hieroglyphics, demotic (or popular) characters, and Greek—and thus it has furnished us with a key wherewith to decipher Egypt's monumental records; the stone itself is in the British Museum. The last of the Ptolemies was Cleopatra, who ruled jointly with her brothers Ptolemy XII. (51-47) and Ptolemy XIII. (47-43), and then, by the favour of Antony, solely until the battle of Actium (31 B.C.). Egypt then became a **Roman Province**, specially under the emperor's supervision because it was the granary of Rome. Finally, about 640 A.D., it became a prey to the **Muhammadans**, with whose fortunes it has ever since been associated.

III.—THE TWO GREAT CONFLICTS BETWEEN EAST AND WEST.
(510 B.C.—323 B.C.)

GREECE.

The Persian Invasions of Greece.

B.C.

[509. Traditional date of the expulsion of the kings, and foundation of the Republic at Rome].

492. The First Persian Expedition, under Mardonius, comes to grief off Mount Athos, in Thrace.

490. The Second Persian Expedition, which crosses the Ægean, under Datis and Artaphernes, is utterly overthrown at Marathon, near Athens, thanks to Miltiades.

480. The Third Persian Expedition, under Xerxes in person, at the head of from one to two and a half million men; heroic but vain resistance of Leonidas and his 300 Spartans at Thermopylae; Athens evacuated, and taken by the Persians; utter defeat of the Persians at Salamis, due to Themistocles; Xerxes returns to Asia.

479. Mardonius, who had been left behind in command of the Persians, is routed at Platea by the Greeks under Pausanias and Aristides; on the same day the Persian fleet is destroyed at Mycale, near Ephesus.

The Rise of the Athenian Supremacy.

B.C.

478. The Confederacy of Delos, a naval league of the Greek states to repel Persian aggressions, formed under Aristides. Its resources were soon applied by Athens to enable her to gain an empire over her allies.

467. Death of Hiero I., tyrant of Syracuse.

466. Cimon the Athenian routs the Persians by land and sea at the Eurymedon, in Pamphylia.

461. The treasury of the Confederacy of Delos transferred to Athens.

456. Athenian victory at Œnophyta, and conquest of Bœotia.

447. Athenian defeat at Chaeronea. Bœotia throws off the Athenian yoke.

431. Athens espouses the cause of Corcyra in her quarrel with Corinth. This is the pretext for the outbreak of the Peloponnesian War. Pericles is now supreme at Athens, where has set in the Golden Age of art and literature.

The Peloponnesian War.

This war lasted from 431 to 404. Athens with her allies, or rather subjects, in the Ægean was pitted against most of the Greek states on the mainland, including all the Peloponnesus (except Argos and Achaia) with Bœotia, Megara, etc., under the leadership of Sparta.

Athens' ultimate downfall was caused by (1) the death of her leading statesman, Pericles, in 429, and the ravages of the plague; (2) the treachery of Alcibiades; (3) the disastrous expedition to Syracuse, 415–413; (4) internal dissensions between democratical and oligarchical factions; (5) intrigues with Persia, notably with Cyrus the Younger, chiefly by Sparta and the disappointed Athenian Alcibiades; and (6) Athenian refusals down to the last to make peace on advantageous terms.

B.C.

404. After the capture of the whole Athenian fleet at Ægospotami, near the Hellespont, by the Spartan admiral Lysander, Athens is taken and has to submit to a humiliating peace which closes the war, but utterly ruins her power.

The Spartan Supremacy.

This is soon found intolerable, and Athens, Corinth, Argos, and Thebes ally against Sparta under Agesilaus.

B.C.

394. The allies lose the battles of Corinth and Coronea on land, but the greater part of the Spartan fleet is destroyed off Cnidus.

ASIA.

The Persian Empire (cont.).

B.C.

510. Darius invades Scythia (south Russia) with small success. The retreat of his army would have been utterly cut off, if the Ionian Greeks left to guard his bridge over the Danube had not listened to the advice of Histiaeus, tyrant of Miletus, rather than to the Athenian Miltiades.

508. Thrace and Macedonia are subdued by the Persians.

501. The Ionian Revolt (of the Greeks in Asia Minor) commences a war between Persia and Greece which lasted intermittently till 449.

500. The Ionians, helped by the Athenians, burn Sardis.

495. Defeat of the Ionian fleet at Lade.

494. Miletus is taken by the Persians. End of the Ionian Revolt.

485. Xerxes (Ahasuerus of the book of Esther) succeeds Darius and puts down a revolt in Egypt.

465. Artaxerxes I., Longimanus, succeeds Xerxes.

458. Second return of the Jews under Ezra the Priest (Ezra vii., viii.).

455. Destruction of the Athenian fleet, which was helping the rebellion of Inarus in Egypt against Persia.

449. Peace finally concluded between Persia and Greece.

445. Nehemiah's visit to Jerusalem (Neh. ii.).

[CAUSES OF THE PELOPONNESIAN WAR. (1) Excessive jealousy of Greek states towards each other. (2) Misuse by Athens of her position as leader of the Greek Confederacy. (3) Internal dissensions among Greek states, and specially intrigues of democracy and oligarchy—Athens being the champion of the former, Sparta of the latter. (4) Exaggerated love of freedom among the Greeks, which forbade their ever founding an Empire, or presenting a united front against a foreign foe.]

B.C.

405. Artaxerxes II., Mnemon, comes to the Persian throne—the fourth king after Artaxerxes I.

401. His younger brother, Cyrus, satrap of Asia, rebels, and gets together a force of 10,000 Greeks, the Peloponnesian War having left the Greeks so disunited that they were ready to take service as mercenaries under any general who could pay them. He sets out from Sardis, crosses the Euphrates, and wins the battle of Cunaxa, near Babylon, but is slain in the fight. The subsequent retreat of the Greek mercenaries to the Black Sea is told by its leader, Xenophon, in his Anabasis.

[COMPARISON OF EAST AND WEST. The Persian empire was an example of absolute autocracy; its king was an irresponsible despot, who developed neither the resources nor the races of his empire, but demanded from his subjects unquestioning submission; it was conscious of no idea of freedom, and so contained no possibility of development; its unity was merely mechanical, not organic; its subjects were not bettered, even in a single point, by belonging to such an empire. But the Greeks were free, alike in thought and government; indeed their love of freedom, unbalanced by other considerations, eventually proved their undoing. With the utmost freedom they interrogated the phenomena of nature and the conventions of human society; thus they laid the foundation for the world's philosophy, and were pre-eminent in ethics, politics, logic, history, poetry, sculpture, and painting; they stood for "life's best against its bulk," for quality against quantity; "but they realised too late, as in the Federal Unions of the Achaean and Ætolian Leagues, that "unity is strength."

GREECE (*continued.*)

B.C.
387. The war ends with the disgraceful Peace of Antalcidas, which recognizes Persia as the arbiter of Greek fortunes, and hands over the Greeks of Asia Minor to her suzerainty.

The Theban Supremacy.

B.C.
371. Thebes now replaces Sparta, whose selfishness and narrow spirit had alienated the other Greeks. The leading Thebans are Epaminondas and Pelopidas, the former inflicting a crushing defeat on Sparta at Leuctra.
369. Messenia throws off her subjection to Sparta, which had lasted since 723. Megalopolis founded as a rival to Sparta.
367. Death of Dionysius the Elder, tyrant of Syracuse.
362. Epaminondas invades the Peloponnesus a second time, and utterly defeats Sparta at Mantinea, but is killed in the battle.

The Macedonian Supremacy.

359. Philip, who had studied the art of war under Epaminondas, ascends the throne of Macedonia. To vindicate his claim to Greek citizenship he avenges the oracle at Delphi against the Phocians.
Demosthenes, the Athenian orator, repeatedly but in vain warns his countrymen against Philip's ambitious schemes.
343. Timoleon of Corinth expels Dionysius the Younger from Syracuse.
338. The utter defeat of Thebes and Athens at Chaeronea by Philip ends all hopes of the Greeks maintaining their independence.
336. Assassination of Philip. The Greeks make a virtue of necessity and appoint his son Alexander, the pupil of Aristotle, to be commander-in-chief against the Persians.

ASIA (*continued*).

B.C.
336. Darius III., Codomannus, the third monarch after Artaxerxes II., becomes king. Probably is the "Darius the Persian" of Neh. xii. 22.
334. Alexander invades Asia, and wins his first great battle at the Granicus in the north-west of Asia Minor.
333. Darius is utterly defeated by Alexander at Issus, in the south-east of Asia Minor.
332. Alexander turns from the pursuit of Darius, and takes Tyre after a seven months' siege; then Gaza falls; Egypt is subdued and Alexandria founded.
331. Alexander resumes his war with Persia, and crushes Darius at the battle of Gaugamela or Arbela. The Persian empire now forms part of Alexander's dominions.
330. Darius is murdered by his satrap, Bessus.
After entering Babylon, Alexander crosses the Oxus and campaigns in India; then he returns down the Indus and along the shores of the Persian Gulf, and so back to Babylon.
323. Death of Alexander at Babylon while planning a campaign in Arabia.

Alexander's empire caused Greek language and civilization to penetrate the East, and so paved the way for the more permanent dominion of the Roman Empire. (The Saracen conquests in the Middle Ages caused the tide of influence to flow in the reverse direction—from East to West). Alexander specially encouraged commerce, and the intermarriage of Greeks and Orientals, while he respected local religions and customs.

SUPPLEMENTARY.

1. Early History of Rome. The traditional dates for the foundation of Rome (753) and the constitution of the Republic (509) have been named. The narrative of Livy for the next century and a half cannot be accepted as historical; but it seems clear that the city-state of Rome was several times on the brink of extinction at the hands of her neighbours in Italy, and specially of the Gauls, who won a signal victory at the Allia in 390. Roman history commences with her struggles with the neighbouring Samnites, in which she laid the foundation for her conquest of Italy. The First Samnite War began in 343; the Latin War of 340 was successfully terminated by the self-sacrifice of Decius. The Second Samnite War opened with a crushing defeat for Rome at the Caudine Forks (321), but the tide of fortune was turned by the brilliant exploits of Q. Fabius Maximus.

2. Summary of the subsequent History of Persia. On the death of Alexander in 323, Persia passed under the sway of the Seleucidae of Syria. In 250, Arsaces, a Parthian prince, rebelled against the Seleucid king Antiochus II.; gradually this Parthian (Mongol) dynasty acquired the power over Persia, and the **Arsacidae** ruled from 164 B.C. to 226 A.D. In the former year the Seleucid sovereignty was entirely thrown off, and subsequently the Parthians became the dreaded foes of the Roman empire on its eastern border. Their capital was at Ctesiphon, near Baghdad. In 53 B.C. the Parthians destroyed the forces of Crassus at Carrhae (the Old Testament Haran), but they suffered severe defeats at the hands of Antony's legate, Ventidius, in 39. In 117A.D. the emperor Hadrian definitely relinquished Mesopotamia to them. The old Persian dynasty of the Achaemenidae was restored by the **Sassanidae**, who ruled from 226 to 651 A.D. In 226 the Sassanid Babegan revolted from the last Arsacid monarch Artabanus, and restored the Zoroastrian religion. Sapor I. (240-273) kept the Roman emperor Valerian in prison from 258 till his death in 265, but his further progress was checked by Odenathus, who maintained an independent kingdom at Palmyra (the Old Testament Tadmor), near Damascus. Sapor II. (310-381) persecuted the Christians severely, and withstood the emperors Julian and Jovian. In 530 Chosroës I. successfully resisted the emperor Justinian and his general Belisarius. In 580 Chosroës II. subdued Egypt and Asia Minor, and even threatened Constantinople, but was driven back by the emperor Heraclius. Finally, in 651, the **Muhammadans** conquered Persia, when Kaleb, general of the Caliph Abu-Bekr, slew the last Sassanid monarch Isdigerd or Yesdigerd III.; the few Zoroastrians left in the land were the forefathers of the modern Parsees.

IV.—TO THE ABSORPTION OF GREECE BY ROME.
(323 B.C.—146 B.C.)

GREECE.

The death of Alexander left no one capable of keeping his empire together. After years of bloodshed among his generals, ending with the battle of Ipsus in Phrygia (301), the Ptolemies took Egypt, and Syria with Western Asia passed to the Seleucidae. Seleucus was the son of Antiochus, which was the name of most of the kings of the line, as well as of the new capital, Antioch, on the Orontes.

Antigonus Gonatas, grandson of one of Alexander's generals, becomes king of Macedonia in 283. In 280 the Gauls invade Greece, and some settle in Asia Minor (whence the name Galatia). In spite of the attacks of Pyrrhus of Epirus (274–272), Antigonus retains the power in Macedonia till his death in 239, and subdues the Peloponnesus, where he establishes tyrants in all the large cities. Demetrius II. succeeded in 239, Antigonus Doson in 229, and Philip in 220.

ROME.

Rome subjugates the Peninsula of Italy.

B.C.
295. The Third Samnite War witnesses a great Roman victory at Sentinum, and the disgraceful execution of the captive Samnite general Pontius.
281. Pyrrhus, king of Epirus, crosses over to Italy to help Tarentum against Rome. He wins great victories at Heraclea and Asculum; after two years' stay in Sicily he is defeated at Beneventum, and returning to Greece is slain in an attack on Argos.
273. Ptolemy Philadelphus, king of Egypt, concludes a treaty with Rome.

Rome obtains the supremacy of the Mediterranean.

B.C.
264. The First Punic War breaks out. Aryan Rome on the north of the Mediterranean challenges Semitic Carthage

GREECE (*continued*).

Meanwhile, chiefly through the efforts of Aratus of Sicyon, the Achaean League of the Peloponnesian states (except Sparta) was preserving some vestiges of Greek freedom. A similar confederacy was the Ætolian League of the Greek states north of the Peloponnesus and south of Macedonia proper.

The Macedonian Philip V. concluded a treaty hostile to Rome with the Carthaginian Hannibal in 216; but Philopœmen, "the last of the Greeks," was engaged in stimulating the enthusiasm of the Achaean League, which supported the Roman Consul Flamininus against Philip. The latter was overthrown at Cynoscephalae in 197 (the end of Rome's Second Macedonian War), and next year Rome declared Greece free (i.e. from Macedonian supremacy).

The Ætolian League then procured the help of Antiochus III., "the Great," of Syria, who was defeated by the Romans at Thermopylae (191), and the League was subjected to Rome.

Perseus succeeded Philip V. in 179; soon the Third Macedonian War broke out with Rome, which ended in the defeat and capture of Perseus by the consul L. Æmilius Paullus, at Pydna (168). Macedonia was formed into a Roman province in 147.

[Antiochus IV., Epiphanes, of Syria, desecrated the Temple at Jerusalem in 168; then followed the Maccabean revolt and kingdom, which lasted in Palestine till 63 B.C.]

The traditional jealousies among Greek states caused Sparta to appeal to Rome against Corinth and the members of the Achaean League; the latter, in spite of the advice of Polybius the historian, gave Rome a pretext for attacking the Peloponnesus. The consul L. Mummius sacked Corinth (146), and all Greece south of Epirus and Macedonia was formed into the Roman province of Achaia.

ROME (*continued*).

B.C.

on the south (a Phenician or Punic colony, founded in 814). The battle-ground was naturally Sicily, where were many Greek and Phenician colonies; the war was carried on chiefly by sea, and taught Rome the necessity of having a navy. Her fleet was destroyed three times but thanks to the achievements of Duilius, Regulus and Catulus she emerged victorious.

241. At the end of the war Sicily became a Roman province, thus forming the first instalment of Rome's provincial empire.

218. The Second Punic War commences. Hannibal, the great Carthaginian, sets out from Spain, crosses the Rhone and the Alps, and inflicts crushing defeats on Rome at the Trebia, Lake Trasimenus (217), and Cannae (216).

215. South Italy revolts to Hannibal, while the defeats of the Roman arms in Spain leave nothing for him to fear in that quarter. The policy of Fabius Cunctator, and the attacks of Marcellus, gradually wear down the resources of Hannibal, who is ill-supported from Carthage; Capua, Tarentum, and the rest of South Italy are recovered by Rome.

[211. The Great Wall of China is completed.]

207. Hasdrubal, while attempting to join his forces to those of his brother Hannibal, is completely defeated and slain at the Metaurus, in North Italy.

205. The elder Scipio (Africanus) subdues Spain, and carries the war into Africa, whither Hannibal is recalled.

202. The battle of Zama ends the war, and deprives Carthage of her last hope of forming an empire on the Mediterranean.

149. The Third Punic War breaks out, through the urgency of the elder Cato.

146. The younger Scipio, son of Æmilius Paullus, and adopted son of Scipio Africanus, rases Carthage to the ground (which was rebuilt under Augustus); its dominions are formed into the Roman province of Africa.

GREEK LITERATURE AND ART. The Homeric poems, the Iliad and the Odyssey, were produced about the 9th century B.C. Hesiod was born in Bœotia about 735. In lyric poetry Sappho and Alcaeus came at the end of the 7th century, while Pindar was a century later. Then follow the dramatists, Æschylus (525–456), Sophocles (495–406), Euripides (480–406), and Aristophanes (444–380), while Menander, the poet of the "New Comedy," lived from 342 to 291. In History, which the Greeks were the first to treat scientifically, the chief names are Herodotus (born 484), whose history goes down to 478; Thucydides (born 471), who treats of the Peloponnesian War; and Xenophon (born 444), the pupil of Socrates. Among the philosophers, the Sophists flourished during the 6th and 5th centuries, and Socrates lived from 469 to 399. (It may be useful to mention that Zoroaster lived from 589 to 539 probably, the Buddha Gotama from 564 to 484, and the Chinese Confucius from 551 to 478). Plato, the founder of the Academics, lived from 429 to 347; Aristotle, the founder of the Peripatetics, from 384 to 322; Epicurus from 342 to 270; and Zeno, the head of the Stoics, died about 260. Oratory culminates in Demosthenes (385–322), while Antiphon, Lysias, Isocrates, and Æschines, were in the front rank. In Art the Greeks were supreme, but there is only space to mention the names of the sculptor Phidias (490–432), and the painter Apelles, whom alone Alexander the Great would allow to paint his portrait.

V.—DECLINE AND FALL OF THE ROMAN REPUBLIC.
(146 B.C.— 27 B.C.)

Rome's supremacy in the ancient world (the Mediterranean basin), is now assured; but her form of government is that of a city-state, the senate being as incapable of governing an empire as a court of aldermen would be. The system of land-tenure in Italy was a failure; the replacement of the old citizen army by legions of professional soldiers constituted a menace to the State; conquest had enriched the few at Rome, while the contrast of the poverty of the many became the more glaring, and the government of the provinces was often rapacious, and fatal to the development even of material well-being. Thus as the area of the empire became consolidated, its government had to become centralized and responsible—the necessities of the case compelled the republican constitution to make way for the imperial.

B.C.

133. Scipio the younger takes Numantia in Spain.
Attalus, king of Pergamus, bequeaths his kingdom and treasures to the Roman people; the province of Asia (i.e. the western half of Asia Minor) is formed.
The poverty of the masses of the Roman citizens drives Tiberius Gracchus to attempt a policy of land-reform.

123. Caius Gracchus revives the policy of his brother, and like him is murdered by the nobles.

118. Transalpine Gaul, between the Alps and the Pyrenees, is added as a province (the modern Provence).

106. Marius brings to a successful close the six years' campaigns against Jugurtha, who had usurped the throne of Numidia in north-west Africa.

102. The Teutones and Cimbri (Germanic and Celtic tribes from central and eastern Europe), after ravaging Gaul and Spain and defeating many Roman armies, are utterly routed by Marius at Aquae Sextiae (Aix) and Vercellae.

89. The Social or Marsic War ends in the granting the Roman citizenship to the citizens of all the allied States (socii) in Italy. Thus Rome begins to lose her character as a City-state: but the franchise could only be exercised in Rome itself.

B.C.

88. Mithridates VI., king of Pontus (south of the Euxine or Black Sea), orders a massacre of the Romans in Asia, in which 80,000 are said to have perished. Athens and other Greek States support Mithridates, but are defeated by Sulla at Chaeronea and Orchomenus.

87. Cinna restores the democrat Marius (who had been expelled the previous year by the aristocrat Sulla), and massacres Sulla's partisans. Marius dies in the following year.

82. In the battle of the Colline Gate outside Rome, Sulla and Crassus crush the Samnites under Pontius, who were supporting the younger Marius. Sulla becomes Dictator (sole magistrate), proscribes his foes, and passes a series of laws to restore the ancient constitution and the power of the Senate.

78. Death of Sulla, who had previously resigned his dictatorship.

71. Crassus and Pompey end the rising of the gladiators under Spartacus, and as consuls repeal most of Sulla's legislation.

67. The Gabinian Law gives Pompey unlimited powers for putting down piracy in the Mediterranean, while the

B.C.

Manilian Law transfers the command of the war against Mithridates from Lucullus to Pompey. Thus the latter has absolute power in the East, where he forms Pontus, Bithynia, and Syria into provinces, and makes the Euphrates the eastern frontier of the Roman dominions.

63. Pompey enters Jerusalem, profanes the Holy of Holies, and makes Judea subject to the legate (governor) of Syria.
The conspiracy of Catiline at Rome is unmasked and punished by the consul Cicero, who now delivers his famous Catilinarian Orations.

60. The first Triumvirate, or informal partition of power amongst three men, is formed between Pompey, Cæsar, and Crassus. Pompey marries Cæsar's daughter Julia; Cæsar becomes consul, and has the province of Gaul for five years, during which period he twice visits Britain.

58. Cicero is driven into exile, for the illegal punishment of the Catilinarian conspirators—chiefly through the personal enmity of Clodius.

56. The Triumvirs meet at Luca, and arrange that Cæsar's command in Gaul is to be renewed for five years, and that Pompey and Crassus are to become consuls and to receive respectively the provinces of Spain and Syria. Cæsar has described his campaigns in Gaul (58–50) in his "Gallic War."

53. Crassus is defeated and slain at Carrhæ by the Parthians under Surenas, the general of king Orodes.

52. Riots at Rome between the partizans of Clodius and Milo.

51. Mutual jealousy estranges Pompey and Cæsar, and the former definitely joins the aristocratical party.

49. Cæsar crosses the Rubicon, and thus formally invades Italy; civil war breaks out. Pompey retires to Greece, and is utterly defeated by Cæsar at Pharsalia in Thessaly (48); he flees to Egypt and is there murdered. Cæsar, after crossing to Egypt, defeats his foes at Thapsus (46) in Africa—after which battle the younger Cato commits suicide—and at Munda (45) in Spain, but is assassinated at Rome by Brutus and Cassius (44).

43. Octavian (Cæsar's great-nephew, the future Augustus), Mark Antony (who is bitterly attacked by Cicero in the Second Philippic), and Lepidus, form the second Triumvirate. Murder of Cicero.
Brutus and Cassius are utterly defeated at Philippi (42).
Antony's legate, Ventidius, defeats the Parthians under Pacorus (38).

40. Herod the Great is appointed vassal king of Judea by Octavian and Antony.

37. The second Triumvirate is renewed for a further five years; but Antony deserts his wife Octavia (Octavian's sister), having fallen a victim to the fascinations of Cleopatra, queen of Egypt, and last of the Ptolemies; his campaign against the Parthians is disastrous, and he comes to open enmity with Octavian.

31. Octavian, as sole consul, makes war against Cleopatra, who had been declared an enemy of the State. At the battle of Actium, off the west coast of Greece, Antony and Cleopatra are overthrown; they flee to Alexandria and commit suicide. Egypt becomes a Roman province.

27. Octavian is styled Augustus by the Senate, and the transition from republic to empire is quietly effected.

ROMAN LITERATURE. As the age of Pericles is the Golden Age of Athens, so that of Augustus is the Golden Age of Rome. Grouping the chief Latin writers together, we have to enumerate the poets Lucretius (95–51), Catullus (87–47), Virgil (70–19), Horace (65–8), Tibullus (55–20), Propertius (born in 50), and Ovid (43 B.C.–18 A.D.); the standard of prose-writing is set by the orator Cicero (106–43 B.C.), Cæsar (100–44), Sallust (86–34), Cornelius Nepos (1st century B.C.), and the historian Livy (59 B.C.–17 A.D.).

VI.—THE ROMAN EMPIRE TO THE ACCESSION OF CONSTANTINE.
(27 B.C.—313 A.D.)

By a series of legal fictions, Augustus held the sole power over the Empire without unduly offending republican susceptibilities. The old magistracies and titles were retained, while the universal peace which prevailed helped to prevent Roman citizens from realising that they were gaining it at the price of freedom. Communication between the various parts of the empire became safe and speedy, commerce flourished, and the provinces were able at length to share in the prosperity to which they contributed so much; indeed, none but an antiquarian could be found to regret the Republic. For a century the empire grew stronger, for the next century it maintained its ground, but in the third century signs of its decay were unmistakable.

B.C.

4. Year of the Birth of our Lord (probably in December). Death of Herod the Great, king of Judea.

A.D.

6. Archelaus, son of Herod, is banished, and Judea is placed under Roman procurators, of whom the sixth, Pontius Pilate, was appointed in 25.

9. The German prince, Arminius, destroys the legions of Varus near the source of the River Ems, thus preventing Germany from ever becoming a Roman province, and indeed rendering possible the rise of the Teutonic race.

The Claudian Emperors.

A.D.

14. Tiberius succeeds Augustus. From this time the popular assembly (comitia) at Rome ceases either to make laws or to elect magistrates; the Senate enjoys considerable power, but only on the emperor's sufferance.

29. The Crucifixion of our Lord.

37. Caligulus becomes emperor—his acts show him to be a madman.

41. Claudius, emperor—the first to be chosen by the soldiers, not by the Senate.

50. Britain is made a Roman province, after the defeat of the chieftain Caractacus.

54. Nero, last emperor of the Claudian line (the family of Julius Cæsar). The Stoic philosopher Seneca was his tutor and minister, but was driven to commit suicide (65). Nero murders his mother Agrippina and wife Octavia.

61. The rising of Boadicea, queen of the Iceni in East Anglia, is ended by her defeat at Camulodunum (Colchester), by Suetonius Paullinus.

64. Great fire at Rome. Nero initiates the persecution of the Christians, in which SS. Peter and Paul suffered martyrdom.

67. Vespasian, as Nero's legate, subdues Galilee, whose governor was the Jewish historian Josephus.

68. Death of Nero. Galba, Otho, and Vitellius are chosen as emperors by the legions in various parts of the empire; civil war follows, whence the party of Vespasian (who is in Palestine) emerges triumphant.

The Flavian Emperors.

A.D.

70. Vespasian is recognized as emperor. His son Titus brings to an end the siege of Jerusalem, in commemoration of which his triumphal arch was erected at Rome.
[Buddhism is introduced into China as "the Religion of Fo."]

79. Titus succeeds his father.
First eruption of Mount Vesuvius, in which Pliny the Elder lost his life, and the cities Herculaneum and Pompeii were buried.
The Colosseum or Flavian Amphitheatre at Rome is completed.

81. Domitian becomes emperor. Persecution of the Christians is renewed.
Agricola, the father-in-law of Tacitus, subdues finally the south of Britain.

ROMAN LITERATURE. Here conveniently may be enumerated the remaining Latin writers. Their names are:—the poets Persius (34–62), Lucan (39–65), Martial (43–105), and Juvenal (who died about 105); and the prose-writers Pliny the Elder, Seneca, and Tacitus, who have been mentioned above, with Quintilian (40–118), and Suetonius (who was born about 70).

The Empire at its best.

A.D.

98. Trajan, a Spaniard, succeeds Nerva (emperor, 96–98). Dacia, Arabia Petræa, Armenia, and Mesopotamia, are made provinces, and the empire has attained its widest limits. Trajan's Column at Rome commemorates his military successes in Dacia.

107. Martyrdom of Ignatius.

112. Correspondence between Trajan and Pliny the younger, legate of Bithynia, as to the proper procedure against the Christians.

117. Hadrian emperor. He traverses his whole empire, visiting Britain (122), and rebuilding Athens. Jerusalem is refounded as a military colony, under the name of Ælia Capitolina; the revolt in Judea under Barcochab is

A.D.

suppressed, and the Jews are finally dispersed from Palestine. Hadrian gives up all conquests in Armenia and east of the Euphrates, and aims at a policy of peace and internal progress.
Roman Law is codified by Salvius Julianus.

138. Antoninus Pius, first of the Antonine emperors.
The jurist Gaius compiles his Institutes of Roman Law.

161. Marcus Aurelius, the Stoic philosopher and author of the "Meditations," becomes emperor. Persecution of the Christians is again severe, Justin Martyr (166) and Polycarp (167) being among the victims.
The Goths and Franks begin to harass the northern borders of the empire.
Lucian writes his sceptical Dialogues, holding up to ridicule the current religious myths.

180. Commodus, son of Aurelius, succeeds. Henceforth the emperors are mostly the nominees of the practorian guards or of the legions; only the more noteworthy are mentioned in this list.

The Empire begins to decline.

A.D.

211. Caracalla succeeds his father Severus (who had died at Eboracum or York), and confers the Roman citizenship on all free inhabitants of the empire.

226. The Persians rise against the Parthians, and their dynasty of the Sassanidae replaces that of the Arsacidae.

249. Decius becomes emperor, and attempts the entire extirpation of Christianity by means of persecution. Cyprian, bishop of Carthage, was beheaded (258), and Origen also suffered.

A.D.

268. Odenathus and his wife Zenobia found an independent kingdom at Palmyra, near Damascus.

273. The emperor Aurelian overcomes Zenobia, who had murdered Odenathus, and whose chief adviser was the Athenian philosopher Longinus.
The Neo-Platonic school of Alexandria is now flourishing—its chief names being Plotinus (3rd century), Porphyry (4th century), and Proclus (5th century). It came to an end under Justinian.

284. Diocletian divides the empire with Maximian, the capital of the Eastern Empire being Nicomedia (on the east of the Propontis or Sea of Marmora), and of the Western Empire, Milan. These two emperors are each styled Augustus, while, in 292, Diocletian adds two more—Constantius and Galerius—who are styled Cæsars, and whose task it is specially to defend the border-line of the empire, West and East respectively.
Diocletian initiates the last imperial persecution of the Christians, in which the British proto-martyr Alban suffered.

305. Diocletian resigns, leaving the northern part of the empire permeated by German tribes (who often became its protectors against barbarian attacks).
The Roman Senate had now deteriorated to the rank of a mere town council, and the Empire itself was copying the worst features of an oriental despotism.

313. Constantine, son of the emperor Constantius (who died at York in 306), having defeated and slain his rival Maxentius, becomes sole emperor of the West.

VII.—THE ROMAN EMPIRE (*continued*).—TO THE FALL OF THE WESTERN EMPIRE. (313 A.D.—476 A.D.)

The Roman Empire was now being proved unequal to its self-imposed task of ruling the world. "It could feed and amuse but not educate its citizens," for its avowed ideal of government was limited to *panem et circenses*, to providing bread and the circus-games; the portentous decline in the birth-rate, the enfeeblement of the old Roman type of character under the influence of wealth, the taint of oriental immorality, and the custom of slavery (degrading to masters and slaves alike), had produced deep evils in society which Christianity was too late to cure. But as the Empire grew weaker, the Church grew stronger; the partition of the civil power and the removal of the seat of government from Rome left the Church in the latter city unfettered, and threw on it the responsibility of protecting civilisation as well as Christianity under the attacks of barbarians. Thus the glamour of the name of Rome now enshrined its Church, and on its Pope was almost thrust a great measure of temporal power.

To the Final Partition of the Empire.

A.D.

313. Constantine becomes sole emperor of the West, and issues an edict of toleration to Christianity.

323. Licinius, the Eastern emperor, having been defeated at Hadrianople and Chalcedon, and then treacherously put to death, Constantine becomes sole emperor.
Christianity is recognised as the state religion.

325. First General Council of the Church, at Nicea in north-west Asia Minor. The Arian heresy infests the Church for the next half century, its great opponent being Athanasius, bishop of Alexandria (died 373).

330. Constantine fixes his capital at Byzantium (a Greek colony founded from Megara in 658 B.C.), and calls it Constantinople or "New Rome." Constantine died in 337.

348. Ulfilas, the "Moses of the Goths," commences his missionary labours among that race, who are now constantly threatening the Empire, their eastern tribes being the Ostrogoths, and the western the Visigoths.

361. Julian, "the Apostate," and nephew of Constantine the Great, becomes emperor, and attempts to restore paganism. Julian dies in a campaign in Persia (363).
The Saxon or Low Dutch incursions into Britain begin.

364. Division of the Empire into Eastern and Western empires under Valentinian and Valens respectively.

378. Valens slain in battle at Hadrianople against the Goths, who were seeking a refuge within the empire under the pressure of the Huns (Tartars).

379. Theodosius unites the empire again. The worship of the heathen gods is proscribed by law.

381. Second General Council of the Church, at Constantinople. The Nicene Creed is completed.

390. At the bidding of Ambrose, bishop of Milan (who baptized St. Augustine), the emperor Theodosius does penance for his massacre of the Thessalonians.

To the Fall of the Western Empire.

395. The sons of Theodosius divide the empire, Arcadius taking the East, and Honorius the West. The chief supporter of Honorius is the Vandal general Stilicho,

A.D.

who defeated Alaric at Pollentia (403), and the barbarian Radagaisus (405).

398. St. Chrysostom becomes bishop of Constantinople.

408. Stilicho is put to death at Ravenna on a charge of treason.

410. The Goths under Alaric sack Rome. The Roman garrisons are withdrawn from Britain, which is left a prey to its Saxon invaders.

414. The Goth Athaulf, Roman legate in Spain, founds a virtually independent kingdom there.

422. Death of St. Jerome. St. Augustine of Hippo died in 430.

428. Count Boniface of Africa is enticed to rebel by his rival Ætius, the general of Valentinian III., and invites Genseric and his vandals into Africa, where soon a Vandal kingdom is established.

431. Third General Council of the Church, at Ephesus, condemns Nestorianism.

440. Leo the Great becomes Pope. St. Patrick from Scotland converts the Irish.

449. The first Low-Dutch kingdom formed in Britain by the Jutes in Kent.

451. Great defeat of Attila, king of the Huns, at Châlons, by the combined forces of the Romans and Goths under Ætius and Theodoric; thus central Europe was preserved to the Teutonic race, and freed from the inroads of Turanian hordes.
Fourth General Council of the Church at Chalcedon; the authority of the first four councils has been generally accepted throughout the Church.

455. Genseric the Vandal sacks Rome.

475. The Saxons commence their settlements on the south coasts of Britain.

476. Zeno emperor of the East.
The line of Western emperors comes to an end with the youthful Romulus Augustulus, who is defeated by the German Odoacer, the latter assuming the government of Italy.
Rome now stands out as the centre of Western Christianity and the mother of the Churches founded among the younger races of Europe.

VIII.—THE DARK AGES
(476 A.D.—800 A.D.)

The next three centuries are a preliminary to the Middle Ages proper, and are often called the **Dark Ages.** During this period the Teutonic races are absorbing Christianity, and grafting on to their native institutions customs of Roman law and government along with such Greek culture as the Roman Empire had preserved. In the West there are growing up out of Latin the French, Spanish, and Italian languages; but the East had always been, and still remained, Greek-speaking. This difference in the matter of language is but a reflection of the fact that in the West new nations were being brought to the birth, while yet in the East the Empire at Constantinople had nearly a thousand years' existence before it.

The Merovingian Dynasty in Gaul.

A.D.

480. Birth of St. Benedict, who at his monastery near Naples introduced the threefold rule of poverty, chastity, and obedience (529).
481. Clovis, Ludwig, or Louis, founds the Merovingian dynasty, which rules the Frank or Teuton kingdom of Germany and Gaul until 687 (nominally till 753).
493. Theodoric forms a Gothic kingdom in Italy, which lasts till 526. Boëthius, while imprisoned by Theodoric, wrote his "De Consolatione Philosophiae."
527. Justinian becomes emperor of the East. He codifies Roman Law, and thus lays the basis of all European Law. He also builds the Church of St. Sophia at Constantinople. His famous general Belisarius overthrows the Vandal kingdom in North Africa, and Theodoric's Gothic kingdom in Italy and South Spain.
Thus, till Justinian's death in 565, the Eastern empire possesses the whole Mediterranean basin. The seat of government in Italy is at Ravenna.
553. Fifth General Church Council at Constantinople.
563. St. Columba, an Irishman, founds a monastery at Iona, and preaches in Scotland.
568. The Lombards (Teutons from Pannonia) found a kingdom in the north of Italy, and overrun much of the south (while the centre remains Roman, with the islands of Sicily, Sardinia, and Corsica). Fugitives from the Lombard incursions take refuge in Venice.
570. Birth of Muhammad. He died in 632.
597. Augustine is sent by Pope Gregory the Great to convert England; he converts Ethelbert king of Kent, and becomes the first archbishop of Canterbury.
622. The Eastern Emperor Heraclius saves Constantinople from the attacks of the Persian monarch Chosroës II., who had subdued Egypt and Asia Minor.
Muhammad flees from Mecca to Medina, and thus the year 622 marks the commencement of the Muhammadan Era (the Hejira, or Flight).
639. Egypt and Syria (with Jerusalem) pass into Muhammadan occupation.
651. The Sassanid dynasty in Persia overthrown by the Saracens.
669. Theodore of Tarsus becomes archbishop of Canterbury.
673. First siege of Constantinople by the Saracens.
The Council of Hertford unites the Churches of the English Heptarchy under the see of Canterbury. Birth of the Venerable Bede, who was the author of a History of the English Church, and died in 735. In the 7th century there flourished the English saints Aidan, Cuthbert, Chad, and Benedict Biscop.
680. Sixth General Church Council, at Constantinople, at which the Monothelites and Pope Honorius are condemned.

The Carlovingian Dynasty in France.

687. Pepin, hereditary Mayor of the Palace (i.e. commander-in-chief of the Frankish forces), founds the Carlovingian dynasty over north France and central Germany.
692. Seventh (and last) General Church Council, at Trullo, which embodies the decisions of the 5th and 6th Councils in decrees. These last three councils have not been considered so representative as the first four.
709. North Africa subdued by the Saracens.
713. Tarik and Musa, the Muhammadan leaders, defeat Roderick, "the last of the Goths," and wrest Spain from the Visigsths and Vandals, taking the Gothic capital Toledo, Cordova, etc.
716. Second siege of Constantinople by the Saracens; frustrated chiefly by the efforts of Leo the Isaurian, who afterwards became Eastern emperor, and published two edicts forbidding the adoration of images.
732. In a seven days' battle fought at a place between Tours and Poictiers, the Saracen forces are utterly defeated by Charles Martel (the Hammer, Maccabaeus), the son of Pepin and grandfather of Charlemagne. The Caliph Abderahman is slain, and Europe is saved from becoming Muhammadan.
The Iconoclastic controversies in the Greek Church commence.
753. At the invitation of Pope Stephen III., Pepin, the son of Charles Martel, drives the Lombards out of Italy. Childeric III., the last nominal king (roi fainéant) of the Merovingian line, is deposed and Pepin is crowned king of the Franks by the Pope.
Now definitely there arise the temporal dominions of the Pope beginning with the Exarchate of Ravenna, which was granted him by Pepin—"the Donation of Pepin."
756. The Ommiad Caliphs of Damascus are expelled by the Abbassides (descendants of the Prophet's uncle Abbas), who establish their caliphate at Baghdad. The Ommiad prince Abderahman escapes to Spain, and there establishes an independent caliphate at Cordova. One of the most famous of the Baghdad caliphs was Haroun-al-Raschid (786–808), of the "Arabian Nights."
Thus as there had been Eastern and Western divisions of the Roman Empire (and were to be again, at least in name), and as Christendom was divided into Eastern (or Greek) and Western (or Latin) Churches, so the Muhammadan world was split into an Eastern caliphate of Baghdad and a Western caliphate of Cordova.
771. Charles the Great (whose name is better known under its misleading French form Charlemagne), son of Pepin and grandson of Charles Martel, becomes king of the Franks.
773. Charlemagne protects Pope Adrian I. from the Lombards, and is crowned king of Lombardy.
778. Charlemagne conquers Spain as far as the Ebro, and drives back the Avars (Tartars) of Hungary.
800. Charlemagne crowned "Emperor of the West" at Rome.

IX.—THE MIDDLE AGES.
(800 A.D.—1453 A.D.)

The term "Middle Ages" strictly covers the ten centuries from the fall of the Western Empire (476) to the commencement of the Reformation; but the first three of these have a distinct character of their own, and are often, as has been seen, called the Dark Ages; while a new stage in European history was inaugurated on the Christmas Day of 800 A.D., when Charles the Great was crowned "Emperor of the West" at Rome.

The Holy Roman Empire. This resuscitated Western Empire, known as the Holy Roman Empire, endured through many vicissitudes till 1806; but almost throughout its history the term denotes no specific area, but only confers the honorary title of Emperor on the leading prince of Western Europe.

The Feudal System. Under Charlemagne the Feudal System may be said to have begun. It was due to a blending of Latin and Teutonic ideas, the land being held by vassals who were protected by, and had to render service to, their suzerain or supreme lord; the labourers on the land were serfs, who changed masters as the land to which they were attached changed owners; but the great vassals or barons were often so powerful that their lord had little real control over them. The downfall of this system was brought about by such causes as (1) the growing importance of commerce and manufactures, the creation of wealth other than in land, and the consequent rise of the Middle Classes, of chartered municipalities, of commercial republics such as those in Italy, and of free

towns such as those in North Germany; (2) the spread of learning, and development of the claim for individual freedom; (3) inventions such as gunpowder, which revolutionised methods of warfare and rendered the feudal castles useless; (4) the decrease in the number of barons, due to mutual quarrels, the Crusades, and wars like our Wars of the Roses; and (5) the influence of the Church, which tended to foster the monarchy at the expense of the barons.

Age of Chivalry. The best side of the Feudal System is presented in the Age of Chivalry, which was marked by a love for warlike adventures, a Teutonic reverence for women, a loyalty to one's friends, and a keen sense of honour. The harshness of feudal institutions was also greatly mitigated by the Church, which brought all classes together within the monasteries (where was afforded a sanctuary from the violence of the times), and opened to all men alike a career in which their talents could find full exercise. The founding of universities, beginning with Paris (1104), developed the work begun by Charlemagne's cloister schools; and the Crusades promoted communication between the East and West, bringing the younger European nations into touch with the older learning which was still cherished among the Arabs.

Islam (the Muhammadan world). The power of Islam was making a bold bid throughout the Middle Ages for supremacy in Europe, but in vain; in the 15th century it was manifest that it had begun to decline, and though its capture of Constantinople gave it a firm footing in south-eastern Europe, its gain here was more than compensated by the utter extinction of its empire in Spain.

Great Scholars. In literature, art, and science, as in all else, the Middle Ages were the seed-time, whence was in due course to emerge the luxuriance of the Renaissance (or Reformation Period). During these six and a half centuries, learning and thought were dominated by the "Schoolmen," whose great names (besides those mentioned below) include John Scotus Erigena (died 886); Thomas Aquinas, the author of the "Summa Theologica" (died 1274); and Duns Scotus (died 1308). These scholastic philosophers were sharply divided into two schools—the followers of Aquinas, known as Thomists, who were Aristotelians and Nominalists; and the followers of Duns Scotus, known as Scotists (and nicknamed Dunces), who were Platonists and Realists. The **Thomists** were mostly Dominicans (founded by S. Dominic at Toulouse in 1215), among whom Albertus Magnus was specially illustrious, but who gained such ill repute for their connexion with the Inquisition, although their services to learning were great. The **Scotists** were chiefly Franciscans or Grey Friars (founded by S. Francis of Assisi in Italy in 1210), who emphasised the value of preaching and the need of poverty, and among whose great names were Roger Bacon and Bonaventura. Mention also must be made of Averroes and Maimonides among the numerous Saracen and Jewish scholars (chiefly in Spain) who carried on so bravely the study of mathematics and of physical science. In architecture the Norman type gave way, about the middle of the 12th century, to the Gothic, with its three stages (amongst ourselves) of Early English, Decorated, and Perpendicular.

In the following list of events no attempt is made at any sort of completeness in the column of our own history; well-known matters are often not mentioned, but significant occurrences that are sometimes overlooked are inserted, as are those events which specially bring our own islands into touch with the rest of the world.

BRITISH ISLES.

The Saxon Kingdom of England.

A.D.

802. Egbert recalled from exile at the court of Charlemagne, and elected king of Wessex.
827. Egbert becomes Overlord of all England.
851. The Danes sack London and Canterbury.
871. Alfred the Great becomes king.
878. Alfred defeats the Danes at Ethandune, and assigns them the eastern part of England by the Treaty of Wedmore.
901. Edward the Elder succeeds Alfred. He calls himself "King of the English," and succeeds in making himself the real ruler of all England south of the Humber.
937. Battle of Brunanburg, which left Athelstan the king of all England.
959. Dunstan becomes Archbishop of Canterbury.
979. Ethelred the Unready becomes king. In his reign "no shire would help another," and England again became a prey to Danish invaders.
991. Ethelred the Unready tries to buy off the Danes, and imposes the tax called Danegeld, in order to find the money.
1002. Massacre of the Danes on St. Brice's Day. Sweyn invades England for vengeance.
1017. Canute, son of Sweyn, becomes king of England. He held the balance of justice evenly between Englishman and Dane. He was also a good friend of the Church.
1035. Canute's prosperous reign ends. Earl Godwin now becomes the greatest man in England.
1042. Edward the Confessor restores the Saxon line, succeeding Hardicanute, the last Danish king. Norman influence is predominant at his court. Westminster Abbey founded.

The Norman Kings.

1066. Harold Godwinson, Earl of Wessex,

THE CONTINENT.

The Carlovingian Dynasty.

A.D.

800. Pope Leo III. and the Romans make Charlemagne "Emperor of the Romans" in addition to his being king of the Franks and of Lombardy.
From the opening of the cloister schools under Charlemagne there arose the "Schoolmen," who dominated learning and thought until the Reformation.
814. Louis the Pious succeeds Charlemagne.
843. Treaty of Verdun, by which Western Europe was partitioned among Louis' three sons—Lothar (from whom Lorraine or Lothringen takes its name), Louis, and Charles.
847. Rurik, a Scandinavian chief, founds the kingdom of Russia with its capital at Novgorod, which shortly receives Christianity from the Greek Church.
865. The Russians try to take Constantinople.
885. The Northmen from Scandinavia and Jutland lay siege to Paris, which is saved by its Count Odo.
887. The Frankish kingdom finally divides into Eastern (Germany) and Western (France), Odo ruling the latter.
900. The age of the Forged Decretals, under Pope Nicholas I.
913. Settlement of Rolf or Rollo the Northman at the mouth of the Seine, whence arises the Duchy of Normandy.

The Saxon Emperors.

918. Henry, Duke of the Saxons, is elected king of Germany, and wards off the attacks of the Magyars (Tartars) of Hungary.
936. Henry is succeeded by his son Otto or Otho the Great, whose wife was Edith, the daughter of Edward the Elder of England.
954. Otto inflicts a severe defeat upon the Magyars.
962. Otto, having driven out Berengar, becomes king of Italy as well as of Germany, and is crowned emperor at Rome by Pope John.
From this time, whoever is elected by the German Princes (or Electors) as their king, is considered entitled to be the Western Emperor.
973. John Tzimiskes, the eastern emperor, drives off the Russians (Slavs) who had attacked Constantinople by sea. Slavonic tribes settle in Servia, Dalmatia, and Bulgaria, and gradually receive Christianity and civilization, as does Russia under its king Vladimir.
987. Hugh Capet is elected king of France, thus ending the Carlovingian dynasty of Charlemagne, and constituting France into a separate kingdom entirely independent of Germany and the Western Emperor, with Paris for its capital.
1000. The conversion to Christianity of Europe (except Prussia and Lithuania) is now complete, all the churches being in communion with Rome, except that of Russia, which is in communion with Constantinople.

The Franconian Emperors.

1024. Conrad II., king of Franconia (or Eastern Francia), becomes Emperor.
1026. Birth of Don Rodrigo (Ruy) Diaz, "the Cid" (a Moorish word for lord), the Spanish hero, who was regarded as the flower of chivalry, and rendered invaluable help to Castile against the Moors.
1031. The Moors are invited to help the Saracens in Spain against the growing power of the newly-founded Christian kingdoms of Castile, Aragon, etc. They replace the Western Caliphate of Cordova by a Moorish kingdom in south Spain.

BRITISH ISLES (*continued*).

A.D.

is chosen king by the Witan. He defeats his brother Tostig and the king of Norway at Stamford Bridge, but is defeated and slain by William of Normandy at Senlac, near Hastings.

William the Conqueror ascends the throne of England as William I.

1071. Hereward the Wake's resistance at Ely fails, and the Norman Conquest is complete.

William introduces the Feudal System into England.

1085. Compilation of the Domesday Book.

1093. Anselm, an Italian, Abbot of Bec in Normandy, is made Archbishop of Canterbury. He is often regarded as the father of the scholastic philosophy, his great work being on the Incarnation (Cur Deus Homo).

1100. Henry I. becomes king, and marries Matilda, niece of Edgar Atheling. Their grandson, Henry II., unites the Norman and Saxon lines.

1106. Battle of Tenchebrai, in which Robert of Normandy was defeated and made prisoner for life.

1120. Wreck of the *White Ship*, in which Prince William perished.

1135. Death of Henry I., who had earned for himself the title of *Lion of Justice*.

The Monarchy and the Barons.

1135. Stephen, nephew of Henry I., usurps the throne, and is involved in war with the barons, who support the "Empress Maud," Henry's daughter.

1138. David of Scotland is defeated at the battle of the **Standard** at Northallerton, while maintaining his niece Matilda's claims to the English crown.

[The reign of Stephen was disastrous to the nation. Every baron had his castle, which too often became the haunt of lawless men, who plundered and killed unchecked. It was a hopeless task to plough and sow, when no man's rights were respected; consequently famine and disease became rampant.]

1153. The Treaty of Wallingford acknowledges Stephen as king, and fixes the succession on Matilda's son Henry.

1154. Henry II., the first Angevin (his father being Geoffrey, Count of Anjou) or Plantagenet king, possesses more land in France than his feudal lord, the king of France.

Normans and Saxons now blend into one race.

1158. Pope Adrian IV. (Nicholas Breakspear, the only Englishman who ever was Pope), issues a bull to Henry for the conquest of Ireland.

1162. Thomas à Becket becomes Archbishop of Canterbury (murdered.1170).

1171. Henry II. receives the submission of many Irish chieftains.

1189. Richard I. becomes king, and proceeds on the Third Crusade, in which he takes Acre and Jaffa.

1204. John loses all the English possessions in France, except the Channel Isles and part of the land between the Garonne and the Pyrenees.

1206. John's quarrel with the Pope begins over the nomination by the latter of Stephen Langton to be Archbishop of Canterbury.

1213. John does homage for his crown to Pandulf, Legate of Pope Innocent III.

1214. Birth of Roger Bacon, the philosopher (died 1294).

1215. The barons, under Langton and the Earl of Pembroke, extort Magna Charta from John.

1216. Henry III. becomes king.

THE CONTINENT (*continued*).

A.D.

1039. Henry III. succeeds his father Conrad as Western Emperor, and gives great encouragement to the monastery schools.

1054. Pope Leo IX. finally excommunicates Michael Cerularius, the Patriarch of Constantinople, and the schism between the Greek and Roman Churches is complete.

1056. Death of Henry III., who was king of Germany, Italy, and Burgundy, as well as Western Emperor.

1071. The Turks defeat the Eastern Emperor Romanus at Manzikert, and establish their power throughout Western Asia.

1077. The Western Emperor, Henry IV., is excommunicated by Pope Gregory VII. (Hildebrand), who confines the title of Pope or Papa, which had been held by all bishops, to the bishops of Rome. The period of the disputes between the Popes and the Western Emperors now sets in, the temporal power of the Papacy grows rapidly, and is specially augmented by the insistence of Rome on the celibacy of the clergy (thus making the clergy a separate caste, whose ambitions are confined to the privileges of their order). Hildebrand acquired the right to invest all bishops and abbots with their temporal possessions.

1085. Toledo is retaken by the Christians, and the Moslem power in Spain decays until only Granada is left.

1095. Peter the Hermit, a monk of Amiens, stirs up Christendom against the Turks, and, at the Council of Clermont, Pope Urban II. decrees the First Crusade or Holy War for the recovery of Palestine. Nicea is taken, the Moslem Soliman is overthrown at Dorylaeum in Phrygia, Antioch and Jerusalem (1099) are taken, and Godfrey of Boulogne is made king of Jerusalem. The chief defenders of this tiny kingdom, which lasted till 1187, are the two orders of military monks—the Knights Templars and the Knights Hospitallers or Knights of St. John; a settlement of the former in London, near Fleet Street, is still marked by "the Temple"; the latter, after 1187, had their head-quarters at Cyprus, Rhodes (till 1522), and Malta (till 1789).

1104. Abelard, the lover of Heloise, and teacher of St. Bernard and Peter Lombard, begins to teach at Paris, whence the University of Paris may be said to originate. Oxford and Cambridge soon followed suit, then came Salamanca in Spain, and the German universities of Prague (1350) and Leipzig (1409).

1122. The Emperor Henry V. concedes to the Pope the right of investing bishops and abbots with their spiritual authority, but retains that of investing them as his vassals with their temporalities.

1130. Sicily is wrested from the Saracens by the Normans, and with south Italy (taken from the Eastern Empire) is constituted into a kingdom; later the mainland of Naples gets separated from the island, and so comes the title of "the two Sicilies."

1137. Alphonso I. throws off the supremacy of Castile, and founds the modern kingdom of Portugal (the ancient Lusitania).

The Swabian Emperors.

1138. With the accession of Conrad III. to the crown of Germany, the Swabian line replaces the Franconian.

In the quarrels between Popes and Emperors, the supporters of the latter are dubbed Ghibelins, and of the former, Guelphs (originally a name for the supporters of the Italian Free Cities against the emperor Frederick Barbarossa). So the Ghibelins stand for imperial control, and the Guelphs for local freedom.

1147. St. Bernard of Clairvaux preaches the Second Crusade, which is led by the emperor Conrad III. and Louis VII. of France, but meets with no success.

Gothic architecture now begins to succeed Norman. In Germany is composed the epic poem of the "Nibelungen Lied," which gives the adventures of Siegfried and Brunhild, and embodies early Scandinavian and Teutonic myths.

1152. Frederick Barbarossa (Red-Beard) succeeds Conrad III. He is involved in struggles with the Popes, with Sicily, with Henry, Duke of Saxony, and with the cities of Northern Italy which had formed themselves into the Lombard League. After defeating Frederick at Legnano (1176), the League secured its internal independence by the Treaty of Constance (1183).

1160. The Waldenses, an heretical sect which repudiated papal authority, begins to spread in France and Germany.

1187. Jerusalem taken by Saladin, who had recovered Egypt for the Caliphate of Baghdad.

1190. Henry VI. succeeds Frederick (who was drowned on the way to the Third Crusade), and conquers the kingdom of Sicily.

1204. In the so-called Fourth Crusade, which was chiefly maintained by Henry Dandolo, Doge or Duke of Venice, but which never reached Palestine, Baldwin, Count of Flanders was set up as Latin Emperor of Constantinople; the old Eastern or Greek empire was not restored till 1261, when Michael Palaeologos re-took Constantinople. The possessions of the Venetians in the south-east of Europe date from this Crusade.

[Jenghis Khan spreads the Mongol power into China, over central Asia, and through south-eastern Russia].

1208. Persecution of the Albigenses, an heretical sect in the south of France near Toulouse. Under Pope Innocent III., Dominic preaches a "crusade" against these heretics, in which Simon de Montfort, father of the English Earl of Leicester, took part, and which soon extirpated the sect. This is the origin of the Inquisition.

1214. Philip Augustus of France consolidates his kingdom (the northern part of modern France) by defeating Otto of Germany and John of England at Bouvines.

1220. Frederick II. is crowned Western Emperor. In 1228 he went to Jerusalem and was crowned its king, but in 1244 the Muhammadans retook that city. He was excommunicated by Pope Innocent IV. at Lyons in 1245, but reigned till his death in 1250.

BRITISH ISLES (*continued*).

A.D.

1217. The battles of Lincoln and Dover end the attempt of the French prince Louis to take the English crown.

1258. Simon de Montfort, Earl of Leicester, draws up the Provisions of Oxford, to reform the Government.

1264. The Mise of Lewes, leaving Earl Simon real ruler.

1265. Simon summons to a Parliament two knights from each county and two burgesses from each borough—the beginning of the *House of Commons*. The Civil War is ended by the victory of Prince Edward at Evesham.

1270. Prince Edward accompanies Louis IX. of France on the last Crusade.

1272. End of Henry III.'s reign, during which many of the oldest colleges of Oxford and Cambridge were founded, and many splendid churches built. Edward I. becomes king. His motto was *pactum serva*, "Keep your word." He was the first real English king since Harold, a wise statesman and a great warrior.

1283. On the refusal of Llewellyn to obey Edward I. as his feudal lord, the English king overruns Wales. Next year his son Edward is born at Carnarvon—the first "Prince of Wales."

1291. Edward I. awards the Scotch crown to John Baliol, thus passing over Robert Bruce and John Hastings.

1296. Edward invades Scotland, and brings the Coronation Stone from Scone to Westminster Abbey.
Rebellion of Sir William Wallace.

1314. In the battle of Bannockburn, Robert Bruce the younger frees Scotland from English suzerainty. Scotch independence is formally acknowledged in the Treaty of Northampton (1328).

1328. Birth of Geoffrey Chaucer (died 1399).

England freed from Continental Politics.

1337. Commencement of the Hundred Years' War between England and France.

1341. The House of Commons first meets separately from the Lords.

1346. Victory of Edward III. at Crecy.

1348. The Black Death visited England.

1356. Victory of Black Prince at Poictiers.

1362. English became the language of the law-courts.

1381. Wat Tyler's rebellion.

1384. Death of John Wycliffe, the "Morning Star of the Reformation." His great opponent had been William of Wykeham, Bishop of Winchester.
William Langland wrote "Piers Plowman" about this time.

1388. Border raid of Otterbourne or Chevy Chase.

1399. Deposition of Richard II., and accession of Henry IV.

1401. The Statute of Heresy passed, providing that heretics were to be burned at the stake; this was directed against the Lollards, or followers of Wycliffe.

1415. Henry V.'s victory at Agincourt over the French.

1420. The Treaty of Troyes, providing for Henry's marriage with Catharine, the heiress and daughter of the French king, is rendered void by Henry's death (1422).

1445. Henry marries Margaret of Anjou.

1450. A year notable for its riots and disorders throughout the kingdom. Peasantry of Kent and Sussex rise under Jack Cade.

1453. End of the Hundred Years' War, England having lost all her French possessions except Calais and the Channel Isles.

THE CONTINENT (*continued*).

A.D.

1230. Ferdinand III. unites the kingdoms of Castile and Leon, the rest of the Spanish peninsula being occupied by the Christian kingdoms of Aragon (in the south-east) and Portugal, and the dwindling Muhammadan power in Granada and Cordova.

1241. Great Mongol incursion into Central Europe.

1254. Death of Conrad, son of Frederick II., and end of the Swabian line.

The Rise of France.

Germany is now growing weaker, as Italy tends more to permanent separation from it. Venice rises in power—an oligarchic republic (cf. Sparta), while Florence in the next century is democratic (cf. Athens). France gains as Germany loses; her king, Louis IX., or St. Louis, who succeeded Philip Augustus in 1226, gained the territory of Toulouse, and thus gave France a sea-board on the Mediterranean.

1258. Holaghon, grandson of Jenghis Khan, takes Baghdad and ends the caliphate of the Abbassides.

1265. Birth of Dante at Florence. He died in banishment in 1321.

1271. Travels of Marco Polo, the Asiatic explorer, and first European to visit China.

1273. Rudolf, Count of Hapsburg, is chosen king of Germany, thus ending the "Great Interregnum," which had lasted since 1254. His son Albert becomes Duke of Austria, and so is the ancestor of the present royal family in Austria.

1276. Birth of the Florentine Giotto, the father of modern painting.

[1279. Kublai Khan completes the work of his grandfather Jenghis Khan, founds the Mongol dynasty in China, and makes Pekin his capital.]

1291. The Muhammadans retake Acre, the last Christian stronghold in Palestine.
The cantons of Schwyz (whence Switzerland), Uri, and Unterwalden, form a League of defence against the house of Hapsburg.

1298. Albert, Duke of Austria, succeeds his father Rudolf on the German throne. In this reign William Tell makes his stand for Swiss freedom.

1304. Pope Clement V., the puppet of the French king Philip, resides at Avignon. Suppression of the Knights Templars.
Petrarch, the Italian lyric poet, born. He died in 1374.

1315. The Swiss League defeats Duke Leopold of Austria at Morgarten, near Lake Zurich; thus is laid the foundation of the confederacy which was in a century to develop into the Swiss Republic.

1326. Death of Othman, the founder of the Empire of the Ottoman Turks.

The French House of Valois.

1328. Philip of Valois becomes French king, and founds the dynasty which ruled till 1589.

1361. Amurath or Morad, leader of the Ottoman Turks, takes Hadrianople and makes it his capital. The Muhammadan power spreads over Servia and Bulgaria.

1376. Pope Gregory XI. brings back the papal seat from Avignon to Rome.

1378. The rival popes, Urban VI. at Rome and Clement VII. at Avignon. Thomas à Kempis flourishes.

1386. Ladislaw II., of the Jagellons or Grand Dukes of Lithuania (which stretched across Russia from the Baltic to the Sea of Azov), becomes a Christian and marries the Queen of Poland.
The Swiss cantons inflict severe defeats on Austria at Sempach and at Näfels in 1388.

1389. Amurath defeats the Slavs at Kossova in Servia. Bajazet succeeds him as Sultan, and leaves only Constantinople and a little of Greece to the Eastern Empire.

1397. The Union of Calmar places Margaret of Norway on the thrones of Denmark and Sweden.
Now Poland and Lithuania form a large kingdom in south central Europe, which is often united with Hungary, and acts as the protector of Europe from Muhammadan incursions. Italy is occupied by such city states as Venice, Milan, Genoa, Pisa, and Florence (whose power culminated in the 15th century under the Medici); meanwhile the Popes were temporal sovereigns over the centre of Italy, but thereby lost much of their predominance in the councils of Western Europe; south Italy (Naples) and Sicily constituted the two Sicilies.
Froissart of Flanders, the author of the Chronicles, flourishes.

1102. General Council of the Western Church at Pisa deposes both the rival Popes.
Timour or Tamerlane the Tartar defeats and captures the Sultan Bajazet at Angora. He had previously (1398) invaded India and taken Delhi.

1415. The Council of Constance deposes all three Popes, and elects Martin V. The reformer John Huss of Bohemia is burned at the stake, in spite of the pledge of safety given him by the emperor Sigismund.

1429. After successes at Verneuil (1424), and in the battle of the Herrings (1429), the English have to abandon the siege of Orleans, through the efforts of Joan of Arc, the "Maid of Orleans." The dauphin is now crowned King of France at Rheims, with the title of Charles VII.

1439. Council of Florence under Pope Eugenius IV.—a reply to the anti-papal Council of Basle (1431–1439).

1448. Christian I., the founder of the house of Oldenburg, the present royal family of Denmark, begins to reign.

1450. The Mazarin Bible is issued—probably the first printed book.

1452. Frederick, Duke of Styria, is the last Western Emperor to be crowned at Rome.
Henceforward the title is nearly always claimed by the head of the house of Hapsburg, who not receiving coronation is strictly styled Emperor-elect.

1453. The Eastern empire ends with the fall of Constantinople and death of Constantine Palaeologus. Cannon were first effectively used in this siege. The victor, Muhammad II., makes Constantinople the capital of the Ottoman Empire, which soon covers nearly all the Balkan peninsula.

X.—THE REFORMATION PERIOD.
(1453 A.D.—1600 A.D.)

The Renaissance. This is a period of transition, bridging the gulf between the Middle Ages and modern times. It was occupied with the revolt—political, intellectual, artistic, as well as religious—against any authority which could not justify its existence; society was feeling its way "from status to contract"; and the ideal of individual freedom, of liberty for self-realization, and of responsibility to the authority of conscience as supreme, first arose distinctly in men's minds. The immediate causes of this revolt, which had long been secretly preparing, were (1) the spread of Greek learning consequent on the fall of Constantinople, producing that great revival of learning and awakening of thought which is called the **Renaissance**. The limitations and defects of Scholasticism became apparent, and the Church and human institutions, equally with nature itself, were summoned to the tribunal of reason, and severely interrogated. The process was eminently successful in at least one direction, viz., the marvellous progress of natural science and mechanical inventions; (2) the break-up of the Feudal System, the causes of which have been already traced; (3) the discovery of America, which widened the mental as much as the physical horizon, and developed a love of adventure and a spirit of self-reliance and originality in some at least of the European nations; and (4) increased facilities for inter-communication of ideas and experience, both by the invention of printing and by readier means of travel and exploration.

Political Changes. Feudalism and imperialism, with the ideals of Rome's Empire and of Rome's Church, are now challenged, and reluctantly they have to yield before the growth of constitutional government. By the end of the period nearly all the nationalities of modern Europe are represented on the map; but the balance of power, the centre of gravity, is steadily shifting westwards, from the Mediterranean basin to the Atlantic sea-board; first, Venice gives way to Spain and Portugal, and later, these in turn fade before Holland and England. After a struggle the Latin races are passed in the race by the Teutonic, and at the beginning of the 17th century France stands out as the champion of the former, England of the latter; while in the south-east of Europe, the Muhammadan power still maintains its menace to Christendom.

Literature, Art, and Science. In these domains there is a mighty stirring in both Latin and Teuton races. Now comes the era of the "Great Florentines"—Petrarch, Dante, Boccaccio; the painters Leonardo da Vinci, Andrea del Sarto, Raphael (born 1483), and the mighty Michael Angelo (born 1475), with the Venetian Titian, the Lombard Correggio, and Galileo the great astronomer (born 1564). The German Copernicus (born 1473), the Swede Tycho Brahe, and the German Kepler, form a noble trio whose work is to be continued by Newton in the 17th century. Palestrina (died 1594) the Italian is the father of modern music; and mention must be made, too, of the scholar Cardinal Bellarmine, the Italian poets Ariosto and Tasso, and the French writers Rabelais and Montaigne. Among our own writers we can enumerate besides Shakespeare (1564-1616), the great Elizabethan dramatists Beaumont and Fletcher, Ben Jonson, and Christopher Marlowe; Edmund Spenser, the poet of the "Faerie Queene"; the theologian Richard Hooker; and Francis Bacon (1561-1626), whose "Novum Organum" prepared the way for modern inductive science.

BRITISH ISLES.

A.D.

1455. The Wars of the Roses between the rival houses of York and Lancaster for the crown begin. The war was confined to the great feudal barons, and greatly contributed to the decay of the Feudal System and rise of the Middle Class.

1461. Edward, son of the Duke of York, is proclaimed king as Edward IV.

1471. After victories at Barnet and Tewkesbury, the Lancastrian party is hopelessly weakened, and Henry VI. is put to death.

Absolute Monarchy in England.

1485. The battle of Bosworth Field ends the Wars of the Roses. Richard III., the Yorkist king, was killed, and Henry of Richmond comes to the throne as Henry VII., uniting the rival houses of York and Lancaster by his marriage with the Yorkist heiress, Elizabeth. Henry VII. is the first monarch of the Tudor line.

1495. Poyning's Law, or the Statute of Drogheda, subjects Ireland to English law.

1497. Discovery of the mainland of America by Sebastian Cabot, a Venetian in service of Henry VII. America was named after Amerigo Vespucci, a friend of Columbus).

1503. James IV. of Scotland marries Margaret, the daughter of Henry VII., from whom was descended the Stuart kings of Scotland and England.

1509. Henry VIII. succeeds to the throne. England now begins to take a front place as a naval power. Dockyards are established at Deptford and Woolwich. The *Great Harry* is built.

1513. Battle of Flodden, in which James IV. of Scotland is defeated and slain.

1520. **Meeting of Henry and Francis I. of France at the Field of the Cloth of Gold (near Calais).**

THE CONTINENT.

A.D.

1458. Æneas Silvius becomes Pope as Pius II.

1469. Florence is at the height of her political, literary, and artistic greatness under Lorenzo de Medici, who ruled till 1492.

The Ascendency of Spain.

1471. The marriage of Ferdinand of Aragon and Isabella of Castile, followed by the surrender of Abu-Abdallah and the end of the Moorish kingdom of Granada (1492), unites the whole of the Spanish peninsula except Portugal and Navarre into one kingdom, and thus lays the foundation of the Spanish empire in the 16th century.

1476. The Swiss Confederates successfully resist Charles, Duke of Burgundy, in the battles of Granson, Morat (or Murten), and Nancy.
The Duchy of Burgundy is added to the French crown under Louis XI. (1461-1483).
Ivan Vasilovitz overthrows the Mogul kingdom of Kazan, and frees Russia from Mogul tyranny.

1481. The Inquisition is established in Spain under the Dominican monk Torquemada.

1487. Bartholomew Diaz, a Portuguese, sails round the Cape of Good Hope. Portugal commences its trade with India; Vasco da Gama reaches the Malabar coast in 1498.

1492. The West Indies discovered by Christopher Columbus, a Genoese in the service of Ferdinand and Isabella. Spanish settlements are made at Hayti.

1494. Charles VIII. of France subdues the kingdom of Naples.

1499. The independence of Switzerland formally recognized.

1504. Ferdinand of Spain obtains the kingdom of the Two Sicilies, thanks to the efforts of Gonsalvo de Cordova, "the Great Captain." Death of Isabella.

1508. League of Cambray between Ferdinand, Louis XII. of France, Pope Julius II., and Maximilian of Germany, the "Emperor-elect," for the partition of Venice.

1512. The allies quarrel, Louis defeating Ferdinand at Ravenna, but Pope Julius expels the French by the aid of the Swiss, who are ready to act as mercenaries for any cause.

1515. Francis I. succeeds Louis XII. of France, and defeats the Swiss at Marignano.

1516. Charles I. comes to the throne of Spain, and from 1519 is known as the Emperor Charles V. He was the son of Philip of Austria and Joanna the daughter of Isabella of Castile. Thus he is the first of the "Austrian kings" of Spain, and his dominions included Spain, the Netherlands, the Two Sicilies, and Sardinia.

1517. Martin Luther's declaration against the sale of Indulgences by Tetzel, the agent of Pope Leo X.

1519. Zwingle, the reformer, begins to teach at Zurich.
The Portuguese circumnavigate the world under Fernando de Magellan (1519-1522).
Spain's empire in the New World is now growing rapidly: Jamaica was occupied in 1509, Colombia (South America) in 1510, Cuba in 1511, Florida in 1512, while from 1519-1521 Fernando Cortez was occupied in the conquest

BRITISH ISLES (*continued*).

A.D.

[Henry's chief adviser in the first half of his reign was Cardinal Wolsey, a man of humble birth but extraordinary talents. For seventeen years he enjoyed the royal favour and lived in regal splendour. Then came his fall, caused by his failure to procure from the Pope the divorce of Henry's wife, Katharine of Aragon.]

1530. Death of Cardinal Wolsey.
1532. Cranmer becomes Archbishop of Canterbury.
1534. Henry declared Supreme Head of the Church.
1535. The union of England and Wales completed.
1536. Rising in the North, known as the Pilgrimage of Grace, consequent on the suppression of the monasteries.
1538. Execution of Henry's minister, Thomas Cromwell.
1539. Act of Six Articles passed.
1547. Accession of Edward VI., whose first Prayer Book is issued in 1549.
1549. First Act of Uniformity.
1553. Accession of Mary, and execution of Lady Jane Grey.
1555. England submits to the Pope, and Cardinal Pole is made Archbishop of Canterbury.
Persecution breaks out, in which Cranmer is burned.
1558. Calais, the last English possession in France, is retaken by the French.
Elizabeth succeeds her sister Mary.
1563. The Thirty-nine Articles of the Church of England compiled.
1567. Murder of Darnley, husband of Mary Queen of Scots, by Bothwell, whom she afterwards marries. In a few months she has to abdicate, and flies to England.
1570. Elizabeth is excommunicated by the Pope, who deposes her and transfers the Crown to Mary of Scotland. Hence arise many plots to bring about Mary's release and Elizabeth's death.
1571. The Royal Exchange in London opened (founded by Sir Thomas Gresham).
1577. Sir Francis Drake starts on his three years' voyage round the world.
1580. Episcopacy abolished in Scotland.
England becomes a land of refuge to all the Continental Protestants, and being kept at peace by Elizabeth's astute policy, greatly extends her maritime commerce, and rapidly grows in wealth and power.
1585. Sir Walter Raleigh attempts to colonize Virginia.
1587. Execution of Mary Queen of Scots at Fotheringay Castle.
1588. Defeat of the Spanish Armada. England's great seamen now include Drake, Hawkins, and Frobisher.
1591. Trinity College, Dublin, founded by Royal Charter.
1594. Great rising in Ireland under Hugh O'Neill, Earl of Tyrone, against the Reformation.
1596. Cadiz, the great naval port of Spain, taken by the Earl of Essex, and all the vessels anchored there destroyed.

THE CONTINENT (*continued*).

A.D.

of Mexico (which had been under the Aztec monarch Montezuma), and in 1535 Francisco Pizarro completed the conquest of Peru and founded Lima.
[The Mogul Empire in India founded by the Sultan Baber].
1521. The Diet of Worms condemns Luther, who had burned Leo's bull of excommunication (1520).
1525. Francis I. of France taken prisoner at the battle of Pavia by the Emperor Charles V.
1526. Soliman II. defeated and killed Louis II. of Hungary at Mohacs on the Danube, and the greater part of Hungary became a province of the Ottoman Empire.
1527. Rome, under Clement VII., sacked by Charles V.
1528. Gustavus Vasa throws off the Danish yoke and ascends the throne of Sweden as Gustavus I. (reigning till 1560).
1529. The Diet of Spires condemns all changes in doctrine, and the Lutheran minority who object to this decision are called Protestants.
The Sultan Soliman is utterly overthrown at the battle of Vienna, and again Europe is saved from becoming Muhammadan.
The Peace of Cambrai ends the war between Charles V. and the Holy League (of England, France, etc., with the Pope); Charles is crowned King of Italy.
1530. The Lutheran Confession of Augsburg is drawn up, chiefly by Melanchthon.
1531. The Portuguese commence their settlements in Brazil.
1539. Ignatius Loyola, a Spaniard, founds the Society of Jesus (S.J.), or Jesuits, one of its first members being S. Francis Xavier. Now sets in the Counter-Reformation, the attempt to purify abuses in the Church from within.
First French settlements in Canada, under the explorer Jacques Cartier.
1545. Meeting of the Council of Trent, which continues intermittently till 1563, when its decrees (known as Tridentine) are embodied in the Creed of Pius IV., who was Pope from 1559-1566.
1546. Death of Martin Luther.
1547. Henry II. succeeds Francis I. as King of France.
1556. Philip II., grandson of Charles V., and husband of Mary, Queen of England, becomes King of Spain and the Netherlands.
1559. The peace of Câteau-Cambresis made between France and Spain after French defeats at St. Quentin (1557) and Gravelines.
Francis II., husband of Mary Queen of Scots, and son of Catharine of Medici, becomes king of France.
1560. Charles IX. succeeds his brother Francis II.
1562. Civil War in France, nominally on religious grounds—Catharine of Medici, the Duke of Guise, and De Montmorency, the Constable of France, being opposed to the Huguenots (French Calvinists) under the Prince de Condé and Admiral Coligny. The chief battles are Dreux (1562), S. Denis (1567), and Jarnac (1569).
1564. Death of John Calvin at Geneva.
1565. St. Augustine, the oldest town in the U.S.A., founded by Spain.
1568. The cruelties of the Duke of Alva, regent for Philip II. of Spain, and especially the attempt to introduce the Inquisition, drive the Netherlands to revolt under William of Orange, "the Silent."
1571. Battle of Lepanto, in which the fleets of Spain and Venice destroy that of the Turks, and at which was present Cervantes, the author of Don Quixote; but the Venetians lose Cyprus to the Turks.
1572. The Massacre of the Huguenots on St. Bartholomew's Day.
1574. Henry III. succeeds his brother Charles IX. of France.
Leyden successfully withstands a long siege by Spain.
1576. The Catholic League formed in France to prevent any concessions to the Huguenots.
1579. William of Orange forms the northern provinces of the Netherlands into a League by the Union of Utrecht.
1580. Philip II. of Spain conquers Portugal.
1581. The Federal Commonwealth of the Seven United Provinces of the Netherlands is formed.
1584. Murder of William of Orange.
Death of Ivan the Terrible, the first Czar of Russia, who had reigned since 1533, and spread his dominions to the Caspian (the Turks still occupying the coasts of the Black Sea, and the Poles those of the Baltic).
1585. Antwerp taken by the Duke of Parma.
1586. Death of Sir Philip Sidney at Zutphen, while aiding the Dutch.
1589. Henry of Navarre succeeds Henry III. as King of France, the house of Bourbon thus replacing that of Valois. Henry defeats the Catholic League at Arques, and next year at Ivry.
Death of Catharine of Medici, widow of Henry II. of France.
1598. Philip II. of Spain forms the southern provinces of the Netherlands into a separate kingdom under his nephew, the Archduke of Austria.
Henry of Navarre, or Henry IV. of France, who is at heart a Huguenot, issues the Edict of Nantes, which gives full toleration to the Protestants in France. His great minister is the Duc de Sully, Marshal of France, whose financial reforms paved the way for the French supremacy in the next century.
Philip III. succeeds Philip II. of Spain, whose power is now on the wane.

XI.—MODERN HISTORY.
(FROM 1600 A.D.)

Political and Social Progress. The revolt against arbitrary authority, which in the Reformation Period was chiefly concerned with religion, is carried in the 16th and 17th centuries into the domain of politics; that every government exists for the sake of those who are governed is now accepted (in word, at least) as an axiomatic truth, but it was only established through violent revolutions such as those in England (1642), the United States (1776), and above

all, France (1789). When this principle has been successfully demonstrated, there still remained to apply it in detail; and so the 19th century was engrossed with such topics as slave emancipation, parliamentary reform, universal education, the betterment of the poorer classes, international arbitration, etc. Diplomacy now concentrates its efforts on the maintenance of the "balance of power," the preservation of political equilibrium by the action of equal and opposite forces, in which the smaller States, such as the Netherlands, Switzerland, and those along the Danube, play no mean part; while Napoleon's meteoric career has effectually discouraged a tendency which had been growing stronger—to indulge in war merely as a means to self-aggrandisement; and probably the death-blow to this tendency was given in 1870 in the Franco-German War, when vaulting ambition so signally over-leaped itself.

Great Political Changes. The last two centuries have witnessed the entrance of Russia into European politics as a civilized power; the gradual weakening of the Turkish Empire, "the sick man of Europe," who now exists only on sufferance; the consolidation of the Italian peninsula into one kingdom, and the disappearance of the Pope's temporal power; the birth of a united Germany, with a proportional decrease in the power of France; and the unprecedented expansion of a single empire (the British), and of the English-speaking people throughout the world. But transcending in importance, perhaps, these changes on the chess-board of Europe is the recurrence, in the war between Russia and Japan, of the problem that is almost as old as history itself—what is to be the relation of Europe and Asia? how can East and West be harmonized in one wide-embracing unity? or has the Aryan race already passed its zenith?

Literature, Art, and Science. In this department of human life the record of the last three centuries affords food for serious thought. The triumphs of physical science, and the accompanying betterment of man's material surroundings, are marvellous, and yet appear only to be a small instalment of what nature is ready to pay on man's demand. But the betterment of man himself seems more questionable; at all events, literature and art have to tell a tale of quantity gained at the expense of quality, of life's bulk being preferred to life's best, of skill in criticism growing but creative power diminishing, of the newly-won freedom for self-realization producing a morbid self-consciousness that tends to self-destruction; the great names here to be recorded cannot compare with the mighty Florentines and Elizabethans. We can only mention a few representative names, excluding living writers.

(1) In our **own country** we find among the poets Milton (*b.* 1608), Dryden (*b.* 1631), and Pope (*b.* 1688); in the first half of the 18th century Thomson, Gray, Oliver Goldsmith, and Cowper; then follow Burns (*b.* 1759), Wordsworth (*b.* 1770), Scott, Coleridge, Southey, Campbell, Moore, Byron, Shelley, and Keats; and in the 19th century Hood, Tennyson, Browning, Matthew Arnold, William Morris, the Rossettis, and Sir Edwin Arnold. In English prose there are Bunyan (*b.* 1628); **Defoe (*b.* 1661), Swift, Addison,** Steele; Fielding (*b.* 1707), Dr. Johnson, Smollett; **Charles** Lamb (*b.* 1755), Walter Savage Landor, Sydney Smith, Leigh Hunt, De Quincey, Carlyle; **Thackeray (*b.* 1811),** Dickens, Charles Reade, Kingsley, Wilkie Collins, and R. L. Stevenson. Among historians we have **Hume** (*b.* 1711), Gibbon (*b.* 1737), Hallam (*b.* 1777), **Grote (*b.* 1794),** Macaulay (*b.* 1800), Froude, Freeman, and **J. R. Green.** The philosophers, theologians, etc., include **Hobbes (*b.* 1588),** Locke (*b.* 1632), Sir Isaac Newton (*b.* 1642), **Bishop** Butler (*b.* 1692), Adam Smith (*b.* 1723), **Burke, Paley,** Jeremy Bentham, Sir W. Hamilton (*b.* 1788), **J. S. Mill,** Bain, Ruskin, Herbert Spencer, and **Max Müller (*b.* 1823).** Science boasts of Cavendish (*b.* 1731), **Priestley, Dalton,** Sir Humphry Davy, Faraday, Herschel, Sir **Richard Owen** (*b.* 1804), Darwin, Tyndall, and Huxley. **Eminent painters** are Hogarth (*b.* 1697), Sir Joshua Reynolds, **Gainsborough,** Turner (*b.* 1775), Constable, Landseer (*b.* 1802), **Watts,** Millais, Leighton, and Burne-Jones (*b.* 1833).

(2) Among **French** names must be mentioned **the** dramatists Corneille (*b.* 1609), Molière, and Racine (*b.* 1629); the philosophers Descartes (*b.* 1596), **Pascal,** Voltaire (*b.* 1694), Rousseau (*b.* 1712), Comte (*b.* 1798), Montalembert (*b.* 1810); the historian Guizot (*b.* 1787); the Encyclopædists of the 18th century, led by **Diderot;** the novelists Balzac (*b.* 1799), Victor Hugo, and **Georges** Sand; the poets Béranger (*b.* 1780) and Alfred **de Musset;** the musicians Auber (*b.* 1782) and Gounod; and the painters David (*b.* 1748), Delaroche, Delacroix, Meissonier (*b.* 1815), Rosa Bonheur, and Doré.

(3) With **Germany** (a vague term) may be associated the poets Goethe (*b.* 1749), Schiller (*b.* 1759), and **Heine** (*b.* 1799); the philosophers Leibnitz (*b.* 1646), Kant (*b.* 1724), Lessing, Fichte, Hegel (*b.* 1770), Schelling, and Grimm; the historians Niebuhr (*b.* 1776), Curtius, and Mommsen; the scientists von Humboldt (*b.* 1769) and Liebig (*b.* 1803); and the musicians (in nearly every case closely connected with Vienna) Handel (*b.* 1684), **J. S. Bach,** Gluck, Haydn (*b.* 1732), Mozart (*b.* 1756), **Beethoven** (*b.* 1770), von Weber, Schubert, Schumann, Spöhr, Meyerbeer, Mendelssohn (*b.* 1809), and Wagner.

(4) Among the **Italian** musicians are Cherubini (*b.* 1760), Rossini, Donizetti, Bellini (*b.* 1802), and Verdi (*b.* 1813); the great **Spanish** painters include Velasquez (*b.* 1599) and Murillo (*b.* 1618); the Flemish painters are Rubens (*b.* 1577), Vandyck, and Rembrandt (*b.* 1607). Mention also must be made of the **Dutch** philosophers Hugo Grotius (*b.* 1583), and Spinoza the Jew (*b.* 1632); of the **Swedish naturalist** Linnaeus (*b.* 1707); and in **Denmark,** of the novelist **Hans** Christian Andersen (*b.* 1805), and of the **sculptor** Thorwaldsen (*b.* 1770).

(5) **America** can point with pride to such well-known writers as the poets Longfellow (*b.* 1807), Edgar Allan Poe, and Whittier; the historians Prescott (*b.* 1796) and Motley; and Washington Irving, the essayist (*b.* 1783), Nathaniel Hawthorne, Emerson, the novelist Fenimore Cooper, and the sculptor Hiram Powers (*b.* 1805).

BRITISH EMPIRE.

A.D.

1600. Charter granted to the East India Company.

1601. The first Poor Law enacted—rendered necessary after the dissolution of the monasteries.

Struggle between King and Parliament.

1603. James VI. of Scotland becomes King of England as James I., thus founding the Stuart line, and uniting the crowns of England and Scotland. The "divine right of kings" now comes to the fore, and the struggle between King and Parliament (which the Tudor sovereigns had ignored) becomes acute.

1607. Henry Hudson starts on his Arctic voyages.

1611. The Authorized Version of the Bible translated.

EVENTS ABROAD.

A.D.

The Ascendency of France.

1608. Champlain, a Frenchman, founds a settlement at Quebec, and gradually French influence predominates along the St. Lawrence in Canada.

1609. Spain makes a truce with the United Provinces of the Netherlands, virtually recognizing their independence.

1610. Assassination of Henry IV. of France, who is succeeded by Louis XIII. His great minister is Cardinal Richelieu, who maintains the royal supremacy against the great nobles and the Huguenot factions.

1611. Gustavus Adolphus, grandson of Gustavus I., becomes King of Sweden.

The Duchy of Prussia and the Electorate of Brandenburg are united under the house of Hohenzollern.

1613. Michael Romanoff, descended from Rurik in the female line, becomes Czar of Russia and founds the present dynasty.

1614. New York founded by the Dutch, and at first called New Amsterdam.

1619. The Thirty Years' War breaks out between the Romanist and Protestant parties in central Europe; on the former side are the Emperors Ferdinand II. and III. (whose generals were Tilly and Wallenstein), and the French kings Louis XIII. and XIV. (whose generals were Turenne and the Prince of Condé); the Protestant leaders were Christian IV. of Denmark and Gustavus Adolphus of Sweden.

BRITISH EMPIRE (*continued*).

A.D.
1615. Chief Justice Sir Edward Coke condemns benevolences as illegal.
1618. Execution of Sir Walter Raleigh.
1619. The first negro slaves introduced into America (Virginia).
1620. The "Pilgrim Fathers" sail in the "Mayflower" and found Plymouth and the colony of New England (Massachusetts).
1625. Accession of Charles I.
1628. The "Petition of Right" against the Royal tyranny is passed by the Commons, and receives the King's assent.
Harvey demonstrates the circulation of the blood.
1629. Charles dissolves his Parliament, and rules for eleven years without one.
1633. William Laud becomes Archbishop of Canterbury.
1637. John Hampden refuses to pay ship-money.
1638. The "Solemn League and Covenant" signed in Scotland to defend the Reformation.
1640. Settlement at Madras by the East India Company.
The Long Parliament summoned.
Charles allows the Earl of Strafford to be executed.
1641. Massacre of the Ulster Protestants.
1642. Civil War breaks out between the Royalists and Parliamentarians. Charles's great defeats were at Marston Moor (1644) and Naseby (1645).
1643. General Assembly of Presbyterian and Independent Divines at Westminster.
1649. Execution of Charles I.
Cromwell harries Ireland.
1651. The Navigation Act only allowed goods to enter England in English vessels. War follows with Holland.
1653. Cromwell is made Lord Protector.
1655. Jamaica taken from Spain.
1658. Death of Cromwell.
1660. Restoration of the monarchy under Charles II.
1662. The Royal Society founded.
Charles receives Bombay from Portugal as part of the dowry of his wife Catharine.
1664. New Amsterdam taken in the Dutch War, and re-named New York.
1665. The Great Plague of London.
1666. The Great Fire of London.
1670. The Secret Treaty of Dover between Charles and Louis of France undoes the Triple Alliance of England, Holland, and Sweden against France (1668).
1679. Habeas Corpus Act passed.
1681. Penn founds the Quaker colony of Pennsylvania.
1685. Accession of James II. Monmouth's rebellion.
1688. James flees to France, and the crown is offered to William of Orange (grandson of Charles I.) and his wife Mary (daughter of James II.).
1689. Siege of Londonderry.
England, Spain, Germany, Holland, and Sweden make an alliance against France.
1690. Battle of the Boyne ends James II.'s hopes in Ireland. The Pacification of Limerick promises liberty to the Irish Romanists.
1693. Commencement of the National Debt.
1694. The Bank of England founded.
1697. The Peace of Ryswick ends the French War.
1701. The Grand Alliance of England, Holland, Austria, Portugal, Denmark, and Sweden supports the Archduke Charles's claim to the Spanish crown.

EVENTS ABROAD (*continued*).

A.D.
1621. Philip IV. becomes King of Spain, and the Netherlands entirely renounce allegiance to Spain.
1623. Ferdinand II. of Bohemia overthrows his rival Frederick, Elector Palatine, husband of Elizabeth, the daughter of James I. of England.
1626. Wallenstein wins the victory of Dessau.
1628. Richelieu takes La Rochelle, a Huguenot fortress, aided by the Duke of Buckingham.
1631. Tilly takes Magdeburg by storm, but is defeated by Gustavus Adolphus at Breitenfeld, and again the next year at the Lech.
[Manchu Tartars conquer China and found the present dynasty].
1632. Gustavus Adolphus gains the battle of Lutzen, but is killed on the field.
1637. Death of the Emperor Ferdinand II.
1640. Portugal revolts from Spain, and sets up the royal house of Braganza.
1642. Death of Cardinal Richelieu.
1643. France wins a great victory over Spain at Rocroi.
Louis XIV., the "Grand Monarque," ascends the throne of France, his chief minister being Cardinal Mazarin. He marries Maria Theresa (1659), and engages in various wars of aggrandisement, which are concluded by the Treaty of Ryswick (1697). In his reign flourish the great writers Racine, Corneille, Pascal, Molière, and Bossuet.
1648. The Peace of Westphalia ends the Thirty Years' War, adding Alsace to France, and weakening Germany by formally approving her disunion. The independence of the Federal Commonwealths of the Netherlands and Switzerland is recognized.
1657. Under William I., the Duchy of Prussia becomes independent of Poland.
1658. Marshal Turenne, helped by the English, defeats Spain at Dunkirk.
1661. On the death of Cardinal Mazarin, Louis XIV. becomes autocratic ruler, with Colbert as his finance minister. "L'état, c'est moi," (I am the State), was a saying of Louis'.
1669. The Turks take Crete from the Venetians, after besieging its chief town, Candia, for twenty years.
1672. Murder of De Witt, the Dutch statesman and patriot. William (afterwards William III. of England) becomes stadholder of Holland.
1678. Peace of Nimeguen, ending France's war with Spain and Holland.
1683. John Sobieski, king of Poland, comes to the rescue of the German forces under the Duke of Lorraine, and saves Vienna from the Turks under Muhammad IV.
1685. Louis revokes the Edict of Nantes (1598) and proscribes the Huguenots.
1687. The Turks defeated at the battle of Mohacs and driven out of Hungary.
1689. Peter the Great, son of Alexis and grandson of Michael Romanoff, after reigning with his brother Ivan V. for seven years, becomes sole ruler of Russia. He takes the title of "Emperor of all the Russias," founds St. Petersburg and makes it his capital, and lays the foundations of his country's navy, army, and commerce. Hitherto Archangel had been the only Russian port, but Peter makes his empire touch the Sea of Azov, the Caspian, and the Baltic, at the expense of the Turks, Persia, and Sweden respectively.
1697. Charles XII. becomes King of Sweden.
Prince Eugene of Savoy routs the Turks at Zenta on the Theiss.
1698. Gold mines discovered in Brazil.
1699. The Treaty of Carlowitz (the first between Christians and Turks) limits the Turkish dominions, giving Hungary to Austria, and Dalmatia and the Peloponnesus to Venice.
1700. Charles XII. of Sweden defeats Russia at Narva.
Death of Charles II. of Spain without a son. Louis XIV. of France and the Emperor Leopold of Austria, both being grandsons of Philip III. of Spain, nominate claimants to the throne; the former proclaims his grandson Philip of Anjou as Philip V., the latter proclaims his son the Archduke Charles as Charles III. (Louis XIV.'s wife, Maria Theresa, was a daughter of Philip IV. of Spain, and on her marriage had renounced all claims to the Spanish throne.) Thus the War of the Spanish Succession breaks out.
1702. Prince Eugene of Savoy defeats the French forces under Villeroy at Cremona.
1709. Charles XII. of Sweden is utterly overthrown by Peter the Great at Pultowa.
1713. The Treaty of Utrecht ends the War of the Spanish Succession. Philip V. is recognized as King of Spain, but in order to maintain the balance of power (a principle which now for the first time distinctly comes to the front in international politics) it is settled that he must renounce any claim to the French crown on the death of Louis XIV.; the Archduke Charles (who had become the Emperor Charles VI. in 1711) receives Lombardy, Naples, Sardinia, and the Netherlands; Gibraltar is left in English possession.
1715. Louis XV. becomes King of France. In his reign live Voltaire and Rousseau.
1718. Charles XII. of Sweden killed at the siege of Frederickshall. Sweden's power now declines, as Russia's increases.
The Peace of Passarowitz gives the Morea and other Venetian dominions in the eastern Mediterranean (except the Ionian Isles) to Turkey.
1720. The Pragmatic Sanction by the Great Powers recognizes that the Emperor Charles VI. shall be succeeded by his female heirs if he has no son.
1725. Death of Peter the Great, who is succeeded by his widow Catharine.
1728. Diamond mines discovered in Brazil.
1739. Austria cedes Servia to Turkey.
1740. Death of the Emperor Charles VI., who is succeeded on the throne of Austria (with Hungary and Bohemia) by his daughter Maria Theresa. Charles, Elector of Bavaria (Emperor from 1742 to 1745) claims the throne, and Frederick II., "the Great," of Prussia takes Silesia. So comes the war of the Austrian Succession, in which England and the Netherlands help Maria Theresa, "The Empress Queen," against the Bourbons of France and Spain, with Prussia and Bavaria.

BRITISH EMPIRE (*continued*).

A.D.

1702. Accession of Queen Anne. Whigs and Tories now become party names.
France recognizes the "Elder Pretender" as James III. of England.

1704. Marlborough, by a forced march, prevents Villeroy's forces joining Marshal Tallard's, and defeats the latter at Blenheim.
Sir George Rooke takes Gibraltar.

1706. Marlborough defeats Villeroy at Ramillies.

1707. Act of Union of England and Scotland passed.

1708. Marlborough and Prince Eugene win Oudenarde, and next year Malplaquet.

1710. St. Paul's Cathedral completed by Sir Christopher Wren.

1714. George I., grandson of Elizabeth the daughter of James I., ascends the throne, and founds the Hanover line.

1715. The Earl of Mar's rebellion on behalf of the "Elder Pretender." Battles of Sheriffmuir and Preston.

1716. The Septennial Act passed.

1720. The South Sea Bubble gives Walpole the opportunity for showing his financial genius.

1727. George II. becomes King.

1736. The Porteous Riots at Edinburgh.

1740. Anson starts on his voyage round the world.

1745. Rebellion on behalf of the "Young Pretender," Charles Edward, grandson of James II. Battles of Prestonpans and Culloden.

1752. The New Style (of the Calendar) introduced.

Growth of the British Empire.

1757. Clive's victory at Plassy, from which dates the British Empire in India.

1759. Wolfe's victory at Quebec.

1760. George III. becomes King.

1763. The Treaty of Paris acknowledges Britain's right to her conquests in India, Canada, and elsewhere.

1768. Captain Cook explores New Zealand and the east coast of Australia.

1774. Warren Hastings, first Governor-General of India.

1775. War of American Independence begins.

1776. The thirteen North American Colonies issue their Declaration of Independence (July 4th).

1777. Burgoyne surrenders at Saratoca.

1780. Admiral Rodney defeats the Spanish off Cape St. Vincent.

1781. Lord Cornwallis surrenders at Yorktown.

1782. The siege of Gibraltar by the French and Spanish raised after lasting three years.
Rodney defeats the French fleet off Dominica.
Independent Parliament established at Dublin.

1783. By the Treaty of Versailles, American Independence recognized.
[In 1764 James Watt began his improvements in the steam-engine, and Hargreaves designed the spinning-jenny; in 1769, a barber named Arkwright invented the spinning-frame, and in 1776 Crompton brought out his mule. Shortly afterwards a power loom for weaving was designed by Cartwright, a clergyman, and another by Horrocks, a weaver.]

1788. First settlement of the British in Australia; Sydney made a convict station, with Captain Phillip as Governor.

1794. On June 1st, a day known as "the glorious first of June," Lord Howe defeats a French fleet off Brest.

EVENTS ABROAD (*continued*).

A.D.

1743. France defeated at Dettingen (the last battle in which an English king was present in person).

1745. The Allies, under the Duke of Cumberland, defeated by France at Fontenoy.

1748. The Peace of Aix-la-Chapelle ends the War, and recognizes Francis, the husband of Maria Theresa, as Emperor.

1755. Great earthquake at Lisbon.

1756. The Seven Years' War begins, in which Great Britain and Prussia are allied against France and Austria.
France captures Minorca from the British.

1757. France compels a British army to evacuate Hanover.
Frederick the Great of Prussia defeats the French at Rossbach and the Austrians at Leuthen.

1758. The French lost Louisburg, taken by the British.

1759. The French were defeated at Minden by the Prussians and their British allies.
In Canada the French lost Quebec, taken by the British under General Wolfe.

1760. The French troops in Canada surrender to the British.

1762. Murder of Peter III. of Russia, and succession of his widow, Catharine II.
Russia takes the Crimea from the Tartars and encroaches on Poland.
The Spaniards join the French and lose Havana in the West Indies and Manilla in the Philippines, both taken by the British. They invade Portugal, an ally of Great Britain, but are driven out of the country by a combined force of Portuguese and British.

1763. The Treaty of Paris, by which France renounces all claims to Canada and Nova Scotia.

1768. France takes Corsica from the Genoese.

1771. Suppression of the Parliament of Paris (the supreme legal tribunal of France).

1772. The first partition of Poland among the three neighbouring powers—Russia, Austria and Prussia.

1774. Louis XVI. becomes King of France. He marries Marie Antoinette, daughter of Maria Theresa of Austria.
The Treaty of Kainardji recognizes Russia's right to protect the Greek Church in Turkey.

1776. Necker becomes Finance Minister in France and restores public credit.

1781. Necker dismissed, and France in the next few years is brought to the eve of bankruptcy and anarchy.

1786. Death of Frederick the Great, who had greatly extended the territory and power of Prussia.

The French Revolution.

1789. France has in the course of the last century passed through many revolutions and made trial of many different forms of government. The first great upheaval in the fabric of society of France occurred in 1789. This great catastrophe was the result of an unjust code of laws, of an oppressive system of taxation, and of a corrupt court. Society was divided into the privileged classes and the unprivileged. No Frenchman who was not of noble birth could rise to high office in the state, the church, or the army. Not only were the taxes enormous, but they were unjustly distributed. Thus the land-tax, one of the heaviest, was paid by only a third of those who held land; the nobles, the clergy, and those in the service of the government were exempt from payment. But of all the imposts the most detested was the *gabelle* or salt-tax. The government monopolised the trade in salt, and put on this necessary article any price it pleased. Every householder was compelled to purchase a certain quantity, fixed for him by the authorities, whether he desired to purchase it or not. Further, the quantity differed in the several provinces, and some of them were free entirely from the gabelle. Such arbitrary and unequal measures as these were the seeds of the Great Revolution.
Signs of the coming harvest were visible before Louis XIV. died in 1715, leaving his crown to his great grandson, Louis XV. Under this monarch the French court revelled in every form of costly luxury and shameful debauchery. Crowds of courtiers, worthless and dissolute men, hung about the palace and lived in the most extravagant style, chiefly at the public expense. The people, ground down with taxes to pay for all this vice and luxury and to bear the burden of the accumulated debts of past centuries, became at last almost mad with misery and despair, and, like working bees, banded together to kill the drones, or expel them from the hive.
Louis XV. foresaw that some fearful catastrophe would, after his death, befall France: *Après nous le déluge* was his oft-repeated saying. He was succeeded, in 1774, by his grandson, Louis XVI. Revolution could have been averted only by a just distribution of the national burdens over all classes of the community. The attempt was made by Turgot, the prime minister, in the beginning of this reign, but the opposition of the privileged classes was too strong, and the support of the king too weak for him to effect any real reform. At length, in 1788, finding his kingdom on the verge of bankruptcy, Louis XVI. convoked the *States General*, an assembly (corresponding to our Parliament) which had not met since Richelieu took the helm of state in 1614. The short outline that follows must suffice to show the course of events that led up to the establishment of the French Empire.

1789. The National Assembly meets at Versailles (May 5).
The Bastille is stormed (July 14) and the king and queen are brought from Versailles to Paris, practically as prisoners.

1790. A grand pageant in the Champ de Mars, where the king, the assembly, the soldiers, and the people swore a solemn oath to maintain the new constitution which had been recently framed.

1791. Death of Mirabeau, the master spirit of the Assembly, who might have moderated the Revolution. Futile attempt of the royal family to escape from Paris (June 30). Louis intrigues with Prussia and Austria.

BRITISH EMPIRE (*continued*).

A.D.

1795. Britain has to contend against a combination of three great maritime powers—France, Spain, and Holland.
Mungo Park explores the Niger.
Edward Jenner discovers vaccination as a safeguard against small-pox.

1797. Two great naval victories: (1) over the Spaniards off Cape St. Vincent by Sir John Jervis, (2) over the Dutch off Camperdown by Admiral Duncan.
A mutiny among British sailors, both at Spithead and the Nore, subsided on the redress of their grievances.

1798. Nelson's victory of the Nile. The French fleet almost totally destroyed in Aboukir Bay, and the French army in Egypt under Bonaparte cut off from France.
Risings in Ireland. The rebels defeated at Vinegar Hill by the troops under General Lake.

1799. With the aid of two British ships under Sir Sidney Smith, the Turks successfully defend Acre against Bonaparte.
The British, under the Duke of York, make an abortive attempt to drive the French out of Holland.

1800. Act of Union passed between Great Britain and Ireland, coming into operation on January 1st, 1801.
Malta surrendered by the French to the British after a long blockade.

1801. General Abercrombie defeats the French forces left in Egypt at Alexandria. This led to the evacuation of Egypt by the French.
Danish fleet compelled to surrender to the British after a terrible struggle at Copenhagen (Sir Hyde Parker and Nelson in command).

1802. Peace of Amiens concluded between England and France.

1803. Napoleon imprisons all British subjects travelling in France. War declared. Preparations made at Boulogne for the invasion of England.
Battle of Assaye, in Southern India, won by Sir Arthur Wellesley.

1805. Nelson destroys the fleets of France and Spain off Cape Trafalgar (21st October). Nelson is killed on board the *Victory*.
By the end of the year all the sea coast of India is in the hands of the British.

1806. Cape Colony taken from the Dutch. Colonization in Australia by free immigrants now begins.

1807. Bombardment of Copenhagen. Heligoland seized.
The slave trade abolished throughout British dominions, chiefly through the efforts of Granville Sharp, Clarkson, and Wilberforce.

1808. Sir Arthur Wellesley lands in Portugal and wins battle of Vimiero.

1809. Sir John Moore, chief commander of the British in the Peninsula, compelled to beat a hasty retreat before Napoleon. He succeeded in reaching Corunna, where he defeated the pursuing army, but fell in the battle.
Wellesley's victory at Talavera.
The Walcheren expedition fails.

1810. Wellesley (now Viscount Wellington) withdraws his troops behind the Lines of Torres Vedras in front of Lisbon.
Marshal Massena recoils from the lines and evacuates Portugal.

1811. Wellington defeats Marshal Soult at Albuera.

1812. Wellington at last storms Badajoz, and wins the battle of Salamanca.
War commenced with the U.S.A., who resented our claim to search neutral ships. Washington was taken (1814), but our troops under General Pakenham were repulsed at

EVENTS ABROAD (*continued*).

A.D.

1792. France declares war with Austria and Prussia. The Tuileries Palace is stormed (August 10) and monarchy is abolished.
The Legislative Assembly gives way to the *National Convention* (September 21) in which are two parties—the Girondists, or Moderates, chiefly representing the country districts; and the Jacobins, or Extremists, who are urged on by the Parisian mob, and led by Marat, Robespierre, and Danton.
The Republican General Dumouriez defeats Prussia at Valmy.

1793. The Reign of Terror begins with the execution of Louis XVI. (January 21) and the institution of the *Committee of Public Safety*. France declares war against England and Holland. The *Revolutionary Tribunal* is appointed (March 10) and Marie Antoinette guillotined (October 16).

1794. Generals Hoche and Jourdain put down Royalist revolts, and drive off the attacks of Prussia and Austria. Robespierre is executed (July 28); downfall of the Jacobins and of the Revolutionary Tribunal; end of the Reign of Terror.

1795. The Convention devises a new constitution, consisting of the Assembly of 500 members, the Senate, and the *Directory* (an executive government of five men, of whom Carnot was the most influential).
Final partition of Poland between Russia, Austria, and Prussia. (Previous partitions had been made in 1772 and 1793).

1796. Death of Catharine II. of Russia, who is succeeded by Paul (murdered in 1801) and then by Alexander.
Napoleon Bonaparte, who had distinguished himself at the siege of Toulon (1793), is in command of the French armies against Austria and Sardinia.

1797. After Napoleon's brilliant successes at Lodi and Rivoli, the Treaty of Campo Formio cedes the Austrian Netherlands (Belgium) and Lombardy to France, and the Venetian Republic to Austria.

1798. Napoleon's expedition to the East (really to threaten India). He wins the battle of the Pyramids and occupies Egypt.

1799. Napoleon invades Syria, fails to take Acre, and returns to France. France takes Pope Pius VI. prisoner, and sets up a Republic in the Papal States.
Napoleon ends the government of the Directory (October), and becomes *First Consul* with practically absolute power.

1800. Napoleon's victory at Marengo, and the French general Moureau's defeat of Austria at Hohenlinden.

1801. Alexander I. becomes Czar of Russia.
Thomas Jefferson, who had helped to draw up the Declaration of Independence, becomes President of the U.S.A. for two terms of four years.
The Peace of Luneville between France and Austria fixes the Rhine as the French frontier on the east.

1802. Napoleon institutes the Legion of Honour, and has the Code Napoléon drawn up.

1803. Napoleon sells Louisiana to the U.S.A.

The French Empire.

1804. Napoleon makes himself Emperor of the French and King of North Italy. He has the Bourbon Prince, the Duc d' Enghien, arrested on foreign soil and shot without trial.

1805. Surrender of the Austrian General Mack with 30,000 men to Napoleon at Ulm, who defeats the Austrians and Russians at Austerlitz.

1806. The various German princes renounce all allegiance to the Western Empire, and form themselves into the Confederation of the Rhine (under Napoleon's protection); Bavaria, Saxony, and Wurtemburg become separate kingdoms; Francis II. resigns the title of Emperor, and so the Holy Roman Empire, which had existed for a thousand years, comes to an end, though Francis continues to be Emperor of Austria.
Napoleon defeats Prussia and Saxony at Jena and enters Berlin. He issues the *Berlin Decrees*, which inaugurate his Continental System intended to ostracise England—all British goods being declared contraband, and her ports in a state of blockade.
Joseph Bonaparte is made King of Naples, and Louis of Holland.

1807. Napoleon defeats Russia at Friedland, and concludes the Peace of Tilsit, which brings Russia on to France's side, while Westphalia is taken from Prussia and Jerome Bonaparte is made its king.
Portugal refuses to carry out the Berlin Decrees, and is attacked by Napoleon, who thus commences the Peninsular War.
The first steamboat runs on the Hudson River (U.S.A.).

1808. Napoleon sets up his brother Joseph as King of Spain, and puts Murat in his place as King of Naples. The Inquisition is abolished in Spain.

1809. Austria declares war on Napoleon, and after varying successes the Archduke Charles is overthrown at Wagram.

1810. Revolt of Chili from Spain.
Napoleon having divorced Josephine marries Maria Louisa, daughter of the Emperor of Austria.

1812. Russia grows tired of enforcing the Continental System. Napoleon's invasion, and victories at Smolensk and Borodino; Moscow is taken and fired (September), and the disastrous retreat of the French commences (October), in which nearly half a million men perish.

1813. After a victory at Dresden, Napoleon is utterly defeated by the Allies at Leipzig, and Germany regains her freedom. The Allies invade France from the east, as does Wellington from the south, King Ferdinand VII. having been restored to the Spanish throne.

1814. The Allies take Paris, Napoleon abdicates (March 31) and retires to Elba; the Bourbon line is restored in Louis XVIII., the younger brother of Louis XVI.

1815. Napoleon lands on the south coast of France (March 1), and Louis XVIII. flees. After the battle of Waterloo, Napoleon is banished to St. Helena

BRITISH EMPIRE (*continued*).

A.D.

New Orleans. The famous fight between the frigates *Shannon* and *Chesapeake* occurred in this war.

1813. Wellington, after a great victory at Vittoria (thus closing the Peninsular War), enters France.
Australian explorers make their way across the Blue Mountains and open up a new country to the colonists.

1815. Wellington, who had driven back Marshal Ney at Quatre Bras, reinforced by Blucher, whom Napoleon had repulsed at Ligny, wins the battle of Waterloo (June 18th).

The Long Peace.

1816. Algiers, a nest of pirates, bombarded by a fleet under Lord Exmouth, and 2,000 prisoners set free.

1818. Ross and Parry start on their Arctic Exploration voyage.

1819. Singapore seized by Sir Stamford Raffles for the British.

1820. George IV., who had been regent during his father's insanity since 1810, comes to the throne.
English immigration begins in Cape Colony.

1824. All laws restricting combinations of workmen are repealed, and an Act passed defining what was legal and what not.

1828. Sir Robert Peel organises the London police force.
Repeal of the Corporation and Test Acts, thus opening all offices in the State to Dissenters.

1829. Passing of the Catholic Emancipation Act, by which the Roman Catholics were set free from all the disabilities which had for nearly three centuries been fastened on them.

1830. William IV. succeeds to the throne.
George Stephenson, who had constructed the "Rocket" locomotive, completes the first English railway, between Liverpool and Manchester.

1832. The First Reform Act passed.

1833. Act passed abolishing slavery throughout the British dominions, but not to take effect till 1838. £20,000,000 paid in compensation to the slave-owners.

1837. Accession of Queen Victoria (June 20th); the crown of Hanover is separated, under the Salic Law, from that of Great Britain.

1838. The first steamship crosses the Atlantic.

1839. Aden, at the entrance of the Red Sea, is occupied by the British.
Chartist risings begin.
New Zealand begins to be colonized by British immigrants.

1840. Queen Victoria marries her cousin, Prince Albert.
Penny Post instituted, thanks to Sir Rowland Hill.

1841. Local self government granted to Canada.
O'Connell's agitation begins for repeal of the Union between Great Britain and Ireland.

1842. The First War with China, begun over the opium traffic, ends in the cession of Hong-Kong, and opening of five Chinese ports to foreigners.

1843. General Pollock makes an expedition into Afghanistan and takes Cabul.
Natal (settled by Dutch Boers or farmers from the Cape in 1837) occupied by British.

1845. Potato famine in Ireland.
Sir John Franklin's ill-fated Arctic expedition.

1846. Repeal of the Corn Laws by Sir Robert Peel.
End of the First Sikh War in India.

EVENTS ABROAD (*continued*).

A.D.

(where he died on May 5, 1821) and Louis is reinstated on the throne of France.
[At the close of the Napoleonic wars in 1815, the Congress of Vienna adjusts the boundaries of the European states and determines their foreign possessions: (1) the German states are grouped in a Confederation with the Emperor of Austria as President; (2) Norway is taken from Denmark and joined with Sweden; (3) Poland is placed as a separate kingdom under the crown of Russia; (4) Italy is divided into a number of small states including the Papal states and the two Sicilies (Naples and Sicily)—the northern states being placed under Austria; (5) Belgium is united with Holland; (6) Great Britain is assigned what is now called British Guiana, Ceylon, and Cape Colony, Mauritius, Trinidad, Tobago, and Malta, all of which she had taken during the war.]

1818. Napoleon's marshal Bernadotte becomes King of Sweden as Charles XIV.
The German States form a zollverein or commercial union, repealing all duties on their mutual frontiers, and only maintaining duties along their external boundaries. Prussia is now rising in importance.

1820. John VI. returns from Brazil and accepts the constitutional monarchy of Portugal.

1821. The Greeks rebel against the Ottoman power, and their cause is espoused by Lord Byron.
Peru and the various Republics of Central America revolt from Spain; Bolivar, who died in 1830, frees the South American States of Venezuela, New Granada, and Upper Peru (called in his honour Bolivia) from Spain.
Missouri is admitted among the U.S.A. as the first "slave state," i.e. state in which slavery was legally recognized. The President is James Monroe, who in a message to Congress enunciated the "Monroe Doctrine" of "America for the Americans"—that any attempt by a European nation to acquire territory in America would be considered an unfriendly act.

1822. Brazil is declared independent of Portugal, though remaining under the rule of John VI., who is succeeded by his son Pedro as Brazilian Emperor, and his daughter Maria as Portuguese Queen (1826).
The revolt of Chile from Spain is successfully established, thanks to the help of Lord Cochrane, the Earl of Dundonald.

1824. Louis XVIII. is succeeded by his brother Charles X.

1825. The Mexican Republic established in independence of Spain.
Alexander I. succeeded by his brother Nicholas I. as Czar of Russia.

1826. The Sultan Mahmoud II. massacres his Janissaries or Praetorian Guards.

1827. England, France and Russia intervene in the war between the Sultan and the Greeks. The Ottoman fleet is utterly routed at Navarino by the allied Powers, who establish an independent Greek kingdom under Otto of Bavaria.

1828. Don Miguel, brother of Don Pedro, is made King of Portugal in opposition to Queen Maria.

1830. Ferdinand VII. of Spain abolishes the Salic Law in order to make his daughter Isabella eligible for the crown.
Charles X. abolishes the freedom of the press, and dissolves the Chamber of Deputies. He is driven out by the "Revolution of July" (27th to 29th), and his cousin Louis Philippe, Duke of Orleans, and son of Philippe Egalité, is made King of the French. France acquires the coast of Algiers.
Revolt of the Southern Provinces of the Netherlands, which form the separate kingdom of Belgium under Leopold of Coburg, husband of the English Princess Charlotte; the Northern Provinces continue, as the Kingdom of Holland, under the House of Orange.

1831. Don Pedro I. resigns the crown of Brazil to his son, and comes to Europe to support Maria in Portugal; Don Miguel is overthrown, and Maria becomes Queen again (1833), and marries Ferdinand of Saxe-Coburg, the brother of the late Prince Consort.
Revolt of the Poles at the cruelties of the Grand Duke Constantine ends in their losing their constitution and name, and being entirely absorbed in Russia.
A new Federal Constitution is created in Switzerland to end the war between the Protestant and Romanist cantons.

1833. Russia aids Turkey against the rebel Muhammad Ali, Pasha of Egypt.
On the death of Ferdinand VII. of Spain, civil war breaks out between the supporters of his daughter Isabel and his brother Don Carlos; the latter are strong in the north, but are finally subdued in 1840.
The Genoese Mazzini forms the "Young Italy" party to free Italy (especially its northern states) from Austrian or other foreign control.

1840. Muhammad Ali rebels again, and though reduced to submission by England Russia, and Austria, is recognized as hereditary Viceroy of Egypt, on condition of paying homage and tribute to the Sultan.

1841. The Treaty of London (between England, France, Austria, Russia, and Turkey) closes the Dardanelles to all men-of-war so long as Turkey remains at peace.
Elias Howe invents the sewing machine.

1844. The Mormons settle at the Great Salt Lake under Brigham Young.

1846. Pius VI. becomes Pope.
Austria gains the commonwealth of Cracow.

1848. In France, corruption and financial mismanagement lead to the Revolution, when Louis Philippe flees to England, and a Republic is constituted (the Second Republic). After a revolt of the extreme republicans in June, Louis Napoleon Bonaparte, son of Louis Bonaparte, King of Holland, and nephew of the great Napoleon, is chosen President.
A revolution at Berlin (March) compels the King of Prussia, Frederick William IV., to grant a free constitution to his subjects.
Mazzini and Garibaldi expel the Pope, and set up a Republic in the States of the Church.
The Emperor Ferdinand I. abdicates, and is succeeded by his son Francis

BRITISH EMPIRE (*continued*).

A.D.

1848. Suppression of the great Chartist rising in London.
Lord Gough ends the Second Sikh War with the victory of Goojerat, and annexes the Punjab.

1849. Repeal of the Navigation Acts, thus admitting foreign vessels to our ports without any restriction.
Local self-government granted to the Australian colonies.

1850. Death by accident of Sir Robert Peel.

1851. The first Great Exhibition, held in Hyde Park, London, of the art and industries of all nations.
Gold discovered in Australia. This led to a great influx of people, and gave a great impetus to all kinds of employment. In the next ten years the population nearly trebled itself. In the following 40 years £300,000,000 worth of gold has been extracted.

1852. The Second Burmese War, by which the whole Burmese seaboard passed into British hands.

End of the Long Peace.

1854. Beginning of the Crimean War. Britain in alliance with France comes to the help of Turkey against Russia. The war centred in Sebastopol, which withstood for a year all attempts of the allies to capture it. The chief battles outside Sebastopol were the Alma, Balaklava, Inkermann, and Tchernaya. The famous charge of the Light Brigade occurred in the Battle of Balaklava.
Florence Nightingale goes out with a band of nurses to nurse the sick and wounded in the soldiers' hospital at Scutari.

1855 The fall of Sebastopol after the French had taken the Malakoff by storm.

1856. Peace concluded with Russia (See opposite).

1857. The India Mutiny breaks out at Meerut (May 10th).

1858. The Mutiny suppressed. The governing power transferred from the India Company to the British Crown. The title of Empress of India was not assumed by Queen Victoria until 1876.
Fenian movement begins in Ireland.
The Treaty of Yeddo opens Japan to British commerce.
Speke and Burton discover Lake Tanganyika.

1859. A rumour of invasion by France causes the formation of our Volunteer force.

1860. War with China, when Pekin was taken and the country opened up still more to Western commerce and influence.

1861. Death of the Prince Consort from typhoid fever.
Cotton famine fund started to relieve distress in Lancashire from the failure of the cotton supply through the American War.

1862. Speke and Grant discover the source of the Nile.

1863. The Prince of Wales (now Edward VII.) marries Princess Alexandra of Denmark.

1865. Death of Lord Palmerston, who for six years previously had been Prime Minister.

1866. The first electric cable laid across the Atlantic.

1867. The Fenians make a futile attempt to raise an insurrection in Ireland. Later, they begin a series of dastardly outrages with gunpowder and dynamite.
Dominion of Canada constituted.

EVENTS ABROAD (*continued*).

A.D.

Joseph, whom Hungary will not accept, setting up instead a Republic under Louis Kossuth. This is crushed with Russia's help, and the two kingdoms of Austria and Hungary are united under a common sovereign, the Emperor Francis Joseph (1867).
The war between Mexico and the U.S.A. ends in the cession of New Mexico and Upper California to the latter.
Gold is discovered in California, and San Francisco springs up at once into a large town.

1849. Charles Albert, King of Sardinia, who had invaded Austria, is defeated at Novara. On his abdication he is succeeded by his son Victor Emanuel II., who with his minister Count Cavour consolidates the power of Sardinia, and prepares for the unification of Italy.

1850. The Pope is re-instated in Rome, which had been taken by France after a splendid defence by Garibaldi.
Amidst great opposition, the Fugitive Slave Law is passed in the U.S.A., providing for the restoration of slaves to their owners, even if they had taken refuge in a "Free State" (i.e. one in which slavery was illegal).

1851. Louis Napoleon achieves a *Coup d'état*. He dissolves the National Assembly by force, and seizes absolute power.

1852. A plebiscite is taken and Louis Napoleon is accepted as Emperor of the French with the title Napoleon III.

1853. Pedro V. succeeds his mother Maria on the throne of Portugal.
Russia invades Turkey, and is several times defeated by Omar Pasha.

1854. Beginning of the Crimean War (See opposite).

1855. Alexander II. succeeds his father Nicholas I. as Czar of Russia. The fortress of Kars capitulates to the Russian general Mouravieff. The Russians evacuate Sebastopol, after losing the Malakoff to the French.

1856. The Treaty of Paris ends the Crimean War, and guarantees the integrity of the Ottoman Empire, Russia losing all claim to the mouth of the Danube, and the Black Sea being declared neutral (a provision which was annulled in 1871).

1859. War breaks out between Austria and Sardinia, France helping the latter and defeating the former at Magenta and Solferino. Lombardy and other duchies in North Italy join the kingdom of Victor Emanuel; Garibaldi's efforts and triumphs over Francis II. of Naples add the Two Sicilies, and Victor Emanuel enters Naples and becomes King of Italy (1861) just before the death of the patriot and statesman, Count Cavour, who had laboured to unite the Italian peninsula. Only the Papal States (the city of Rome and a small territory round it) hold aloof.
The famous incident of "John Brown's Raid," when Captain John Brown sought to establish a slave-refuge in Virginia, U.S.A.

1860. Abraham Lincoln elected President of the U.S.A. In December South Carolina secedes from the Union, and is followed by other Southern States, which form the "Confederate States of America" under Jefferson Davis as first President.

1861. Alexander II. emancipates over 40 million serfs in Russia.
Louis I. succeeds to the throne of Portugal, and William I. succeeds his brother Frederick William IV. in Prussia.

American Secession War.

1861 to 1865. This war arose out of the slavery question in the United States. On one side were the *Democrats*, who wished to allow each State of the Union entire freedom of action, even to the extent of seceding from the Union. They were in favour of free-trade, and greatly predominated in the South, where slavery was a common institution. On the other side were the *Republicans*, who were resolved to maintain the Union at all costs, and ready to support the Central Government—even at the expense of the freedom of individual States. They were Protectionists, and formed the bulk of the population of the North, and were to a man in favour of the abolition of slavery.
In 1861 war broke out in the U.S.A. between the North (Abolitionists or Federals) and the South (Secessionists or Confederates). The chief generals on the former side were Grant, McLellan, and Sheridan; on the southern side, Lee and "Stonewall" Jackson. The chief engagements were at Bulls' Run (1861); the Potomac, Fredericksburg, and New Orleans (1862); Gettysburg, Chattanooga, and Chancellorsville (1863). Gradually the North under Grant, as commander-in-chief, asserts its superiority. Richmond in Virginia, the Southern capital, was taken after a splendid defence by General Lee, who with his remnant of 8,000 men had to surrender to General Grant on the James River (1865).
The Confederates then laid down their arms, the Union was restored, and slavery abolished. President Lincoln was assassinated by John Wilkes Booth five days after Lee's surrender. During the war the trade of the Northern States had been driven off the sea mainly through the raids of the "Alabama," a ship built in England but manned by American sailors fighting on the Southern side. The indignation roused in America against England for allowing, through negligence and sympathy with the Southerners, the Alabama to leave port and to be handed over to an American crew, nearly resulted in war, which was happily averted by the two nations agreeing to refer the matter to arbitration, with the result that Great Britain had to pay £3,000,000 damages to the United States (1872).

1863. Otto of Bavaria having abdicated the throne of Greece (1862), Prince George of Denmark, brother of Queen Alexandra, is chosen to succeed him.
Britain cedes the protectorate of the Ionian Islands to Greece.

1864. Russia subdues the tribes of the Caucasus.
Denmark is compelled to cede Schleswig-Holstein to Germany.
France sets up the Austrian Archduke Maximilian as Emperor of Mexico.

1865. End of the Secession War in U.S.A.
Leopold II. succeeds Leopold of Saxe-Coburg on the throne of Belgium.

BRITISH EMPIRE (*continued*).

A.D.

All the provinces except Newfoundland join the Confederation.

1868. Mr. Gladstone becomes premier and begins the attempt to remove Irish grievances.
An Abyssinia expedition sent under Sir Robert Napier against King Theodore. War ends with the king's suicide.

1870. Diamonds discovered at Kimberley.
End of the war with the Maoris of New Zealand.

1871. Purchase in the army abolished.

1872. Vote by ballot adopted in parliamentary and municipal elections.

1874. Disraeli becomes premier.
General Wolseley takes Kumasi, the Ashanti capital.
Fiji Islands ceded to Britain.

1875. The British Government purchases the Khedive's shares in the Suez Canal.
The Prince of Wales pays a state visit to India.
The Transvaal annexed.

1876. Queen Victoria proclaimed Empress of India.

1878. Second Afghan War begins.

1879. War with the Zulus and Ketshwayo their king. British disaster at Isandlana. Defence at Rorke's Drift. Victory at Ulundi. Capture of Ketshwayo. Prince Louis Napoleon killed in this war.

1880. British defeat at Waiwand, Afghanistan. Disaster retrieved by Lord Roberts. Abdur Rahman made Ameer.
Dutch Boers of the Transvaal claim their independence.

1881. After a Boer victory at Majuba Hill, their independence granted by the Gladstone Government.

1882. A military revolt in Egypt under Arabi Pasha against the Khedive leads to British intervention.
Alexandria is bombarded by the British fleet. Lord Wolseley's victory at Tel-el-Kebir ends the revolt. British troops enter Cairo, where they are still retained.

1884. General Gordon is hemmed in by the Mahdists at Khartoum. General Graham defeats the Mahdists under Osman Digna in the Eastern Soudan at El-Teb and Tamai.
Passing of the Third Reform Bill, giving household suffrage to the counties.
A British force is sent to Gordon's relief.

1885. General Stewart defeats the Mahdists at Abu-Klea and Metammeh, but the British advance is too late to save Gordon, who perishes in the fall of Khartoum (January 26th).
Upper Burma is annexed.
A British Protectorate is proclaimed in Somaliland, and Bechuanaland is made a British Colony.

1886. Mr. Gladstone's Home Rule Bill is rejected.
The Canadian Pacific Railway is opened from Montreal to Vancouver.

1887. Queen Victoria's first Jubilee.
Zululand is annexed.
Gold-mining begun in the Transvaal, and Johannesburg founded.

1888. British East Africa Company is formed under Sir W. Mackinnon.
Local Government Act creating County Councils.

1889. Charter granted to the British South African Company under Mr. Cecil Rhodes, to develop the district north of the Transvaal (called Rhodesia in 1895).

EVENTS ABROAD (*continued*).

A.D.

Rise of Prussia.

1866. The "Seven Weeks' War" breaks out between Prussia (with Italy) and Austria. The latter gains successes in Italy, but the war is speedily terminated by the victory of Sadowa, gained by Count von Moltke and the Crown Prince Frederick William of Prussia. The Treaty of Prague that follows shuts out Austria from Germany, and recognises Prussia as the head of the North German Confederation; Venice is handed over by Austria to Italy; Bismarck becomes Chancellor of the Confederation, and Prussia bids fair to be the leading continental power.

1867. The Emperor Maximilian of Mexico, left by the French to defend himself, is shot and the President Juarez is restored.

1868. An insurrection is raised by General Prim and Marshal Serrano against Queen Isabel of Spain, who flees to France.
The insurrection of the *Daimios*, or independent feudal lords in Japan, results in the crushing of the *Tycoon* (or lay-emperor) by the forces of the *Mikado* (or priestly emperor), who henceforth becomes sole emperor. The Japanese now begin to acquire Western civilization, which they assimilate very rapidly.

1869. The Suez Canal is completed (constructed by M. Ferdinand de Lesseps).
General Grant elected President of the U.S.A. The Pacific Railroad from New York to San Francisco is opened.

1870. Amadeus, Duke of Aosta and son of Victor Emanuel, is chosen King of Spain.
Outbreak of war between France and Germany:—
Prussia is joined by Bavaria and the other German States. The allies with Moltke in supreme command cross the French frontier (August 4). Napoleon III. takes the chief command, with Marshals Bazaine and MacMahon as his chief generals. After the battle of Gravelotte (August 18), Bazaine is shut up in Metz, and with 170,000 men has to surrender (October 28); Mac Mahon's forces attempting to relieve Metz are routed at Sedan, and 80,000 men accompany their Emperor as prisoners of war to Germany. A revolution now occurs at Paris, and the third Republic is set up under M. Gambetta. Paris is invested (September 21). The French troops are withdrawn from Rome, which is entered by Victor Emanuel, and becomes the capital of Italy, the Pope's temporal power now ceasing.

1871. William I. of Prussia is acclaimed German Emperor at Versailles (January 18, 1871); ten days later, in spite of desperate attempts to raise the siege, Paris has to surrender. M. Thiers is elected President of the French Republic; the Communists rise in Paris (March), but after great bloodshed they are crushed by the Republican troops. The Treaty of Frankfort ends the war, France having to pay £200,000,000, and ceding Alsace and Lorraine, with her Rhine frontier, to Prussia.

1873. Marshal Mac Mahon is elected President of the French Republic.
King Amadeus of Spain abdicates, because of Carlist insurrections; a Republic is declared.

1874. The Carlists (supporters of the son of Don Carlos, the claimant to the throne in 1833) win the battle of Estella, but lose Pampeluna and Irun.

1875. Queen Isabella's son comes to the throne of Spain as Alphonso XII.
Insurrections against Turkish tyranny in Herzegovina, Bosnia, Servia, and Montenegro, which are followed by atrocious massacres by Turkish troops in Bulgaria (1876).

1877. Russia goes to war with Turkey, avowedly to redress the wrongs of the Christians. After making a stand at Plevna for six months, Osman Pasha and his army surrender.

1878. The treaty of San Stefano ends the war between Russia and Turkey. This treaty is considerably modified by a Congress of the Great Powers at Berlin. As a result, Servia and Montenegro gained independence, Bosnia and Herzegovina became dependent on Austria, a new State, Bulgaria, was carved out of Turkey, and Thessaly was ceded to Greece, while England received Cyprus from Turkey.
Victor Emanuel dies and is succeeded by his son Humbert.

1879. M. Jules Grévy elected President of the French Republic.
Through disputes over boundaries, Chile and Bolivia declare war on Peru.
Attacks of the Nihilists cause the Czar, Alexander II., to enter upon a reactionary policy.

1881. Alexander II. of Russia is assassinated and succeeded by Alexander III.
President Garfield, of the U.S.A., is assassinated.
Anti-Semitic League formed at Berlin.
Muhammad Ahmed claims to be the Mahdi, and makes war upon the Egyptian forces in the Soudan.
The International African Association, founded to suppress slavery in Africa, forms the Congo Free State, which is financed by Belgium.
The St. Gothard railway tunnel opened between Italy and Switzerland.

1883. Hicks Pasha's Egyptian army is annihilated by the Mahdi at El-Obeid.
Paul Kruger is elected President of the Transvaal Republic.
End of the war between Chile and Peru in favour of the former.

1884. British and German Protectorates established in New Guinea—the former in the south, the latter in the north.
Dr. Nachtigal founds a German colony in the Cameroons, West Africa.

1885. King Leopold of Belgium is proclaimed Sovereign of the Congo Free State.
Great Britain and Russia come to terms as to the boundaries of Afghanistan.
Italy annexes Massowah, a port on the Red Sea.
War between France and China closes with the latter's recognition of a French protectorate over Annam and Tonquin.
Death of Alphonso XII. of Spain; his posthumous son, Alphonso XIII., was born to the Queen Regent Christina in May, 1886.

1886. The German East African Company formed, chiefly through the efforts of Dr. Peters.

BRITISH EMPIRE (*continued*).

A.D.

1890. Matabeleland and Mashonaland occupied by the British South African Company.
M'wanga places his kingdom of Uganda under British protection.

1891. British Central Africa (between Rhodesia and Lake Nyassa) formed into a Protectorate.

1892. British South-West Africa Company formed to develop Damaraland.

1893. The Matabeleland tribes defeated and Buluwayo taken. Their country annexed.

1894. Mr. Gladstone retires from parliamentary life and Lord Rosebery becomes Prime Minister.
British Protectorate established over Uganda.

1895. The Government takes over the British East Africa Company's territory.
The Jameson raid into the Transvaal, defeated at Krugersdorp and Vlakfontein.

1896. Sir Herbert Kitchener starts on a campaign to suppress the Khalifa.
Sir Francis Scott occupies Kumasi, and a British Protectorate is established in Ashanti.
Severe famine in India.

1897. Expedition to subdue the frontier tribes in Chitral.
Queen Victoria's Diamond Jubilee.
Gold discovered in the Klondyke and Yukon districts of British North America.
Sir W. Lockhart leads the Tirah expedition against the Afridis; battle of the Darghai Heights.

1898. Lord Kitchener defeats the Khalifa at the Atbara and at Omdurman, thus bringing the Soudan back into subjection to the Khedive of Egypt.

1899. The Khalifa is defeated and slain at Om Debrikat.
Famine severe in India.
The Boer War begins. Ladysmith, Kimberley, and Mafeking besieged by the Boers. In one week in December three British reverses—at Stormberg, Magersfontein, and Colenso. Lord Roberts, with Lord Kitchener as his chief of staff, now took the chief command. In 1900 Kimberley, Ladysmith, and Mafeking relieved; Cronje surrendered with 4,000 men at Paardeberg; Bloemfontein and Pretoria entered by the British army, and the Boer army broken up. A guerilla war ensued, and for eighteen months longer the stubborn struggle went on. Meanwhile Lord Roberts returned to England, leaving Lord Kitchener "to fight to a finish." The end came on May 31, 1902, when peace was signed at Pretoria.

1900. British Protectorate established in Nigeria (taken over from Royal Niger Company).
Sir J. Willcocks relieves Kumasi, and puts down the rising in Ashanti.

1901. Proclamation of the Australian Commonwealth (January 1st).
Death of Queen Victoria (January 22nd) and accession of Edward VII.

1902. Anglo-Japanese alliance concluded, maintaining the independence of China and of the Corea, and enforcing the "open door."
Death of Mr. Cecil Rhodes.
Terms of peace accepted in the Transvaal, thus closing the Boer War (May 31st).
Mr. Balfour becomes Prime Minister.
Education Act passed.
Illness of King Edward VII., post-

EVENTS ABROAD (*continued*).

A.D.

1887. Great Britain and Russia again mark out the Afghan frontier.
Ferdinand of Saxe-Coburg elected Prince of Bulgaria, but not recognized by all the Powers till 1896.
Triple Alliance formed between Germany, Austria, and Italy.

1888. Death of William I., Emperor of Germany (March 9th), and of his son Frederick III. (June 15th), who is succeeded by his son William II.

1889. Revolution in Brazil; the Emperor Pedro II. deposed; a Republic formed.
Dom Carlos succeeds his father, Louis I., as King of Portugal.
King Milan of Servia abdicates, and is succeeded by his son Alexander.

1890. Death of Count von Moltke, and of William III. of Holland, who is succeeded by his daughter Wilhelmina.
Treaties between Great Britain, France, Germany, Italy, and Portugal, defining their respective spheres of influence in Africa; Heligoland is ceded to Germany, by whom Zanzibar is left wholly to Britain.
The German East Africa Company transfers its rights to its Government.
Railway completed from Delagoa Bay into the Transvaal.
First Parliament elected in Japan.

1891. Great earthquake in the Niphon Islands of Japan.

1892. Death of Tewfik, Khedive of Egypt, who is succeeded by his son Abbas.

1893. Dr. Nansen's Arctic Expedition sets out from Christiania on the "Fram" (returning in 1896).
Seal fishing dispute between Britain and U.S.A., in the Behring Sea, settled by arbitration.

1894. Death of Alexander III., who is succeeded by his son, the Czar Nicholas II.
Treaty between Great Britain and Belgium, defining the limits of the Congo Free State.
The French President Carnot assassinated.
Japan invades the Corea and Manchuria; war follows with China, and Port Arthur is taken by Marshal Oyama.

1895. Great Britain and Russia settle their respective spheres of influence in the Pamirs (Turkestan).
Insurrections in Cuba against Spanish rule.
Wei-hai-wei bombarded by the Japanese under Admiral Ito and Marshal Oyama.
Peace is made between China and Japan, Corea being rendered independent of China, and Japan gaining the Liao-tung peninsula (but on protest from Russia, France and Germany, Japan abandons her claims to it).
Numerous massacres of Europeans occur in China, at Ku-cheng, etc.
The French, under General Duchesne, bombard Antananarivo, and compel the Queen of Madagascar to submit to French suzerainty.

1896. Defeat of the Italian forces under General Baratieri at Adowa (near Massowah).
Assassination of the Shah of Persia.
The U.S.A. urge Spain to recognize the independence of Cuba.
Great earthquake and seismic wave in Japan, destroying 25,000 people.

1897. Treaty between Russia and Japan to preserve the independence of the Corea under the protection of the two Powers.

1898. Major Marchand occupies Fashoda on the White Nile in the name of France, but is directed by his Government to withdraw.
The Anglo-French Convention settles the boundaries of Northern Nigeria.
The German Navy League is founded. Death of Prince Bismarck.
The Empress of Austria assassinated.
The United States annexes the Sandwich Islands, and war breaks out with Spain, who refuses to recognize Cuban independence. Admiral Sampson bombards Santiago, which at length has to surrender; Admiral Dewey destroys the Spanish fleet off Manila in the Philippines.
Russia obtains from China a twenty-five years' lease of Port Arthur and Ta-lien-wan.

1899. Peace made between the United States and Spain, the latter abandoning all claims to Cuba and the Philippines, and receiving an indemnity of twenty million dollars.
The International Peace Conference meets at the Hague.
Captain Dreyfus, found guilty of high treason in 1894, is again tried and found guilty, but is pardoned by President Loubet.

1900. The Samoa Treaty cedes Samoa to Germany, and the Tonga, Savage, and Solomon Islands to Great Britain.
Death of the Duke of Edinburgh, Prince of Saxe-Coburg and Gotha.
King Humbert of Italy assassinated, and succeeded by his son Victor Emanuel III.
Numerous massacres by the Boxers in China; the rioters besiege the Pekin Legations, which are saved by a combined force of the Great Powers, including Japan.

1901. Capture of Aguinaldo, the Philippine insurgent leader.
Death of ex-King Milan of Servia at Vienna.
The constitution of the Hague Arbitration Court settled, its first case being between the United States and Mexico in October, 1902.
Assassination of President Mc Kinley, who is succeeded by President Roosevelt.

1902. The Triple Alliance renewed between Germany, Austria, and Italy.
Volcanic eruptions destroy St. Pierre in Martinique, when 80,000 people are said to have perished.
Cuba is organized as a republic under the suzerainty of the United States.

1903. Alexander I. of Servia and his wife Draga assassinated in a military insurrection.
Cardinal Sarto (Pius X.) succeeds Pope Leo XIII.

BRITISH EMPIRE (*continued*).

A.D.

poning the Coronation from June 24th to August 9th.
The Uganda Railway to Lake Victoria Nyanza nearing completion.

1903. The Tariff Reform League inaugurated.
Col. Morland takes Kano and Sokoto. and subdues Hausaland in W. Africa.

1904. General Egerton represses Dervish risings in Somaliland.
An Anglo-French agreement is signed in April as the result of the *entente cordiale* established between the two nations, chiefly through the tact, geniality and wisdom of King Edward. The agreement consisted of a convention concerning Newfoundland and West Africa, a declaration dealing with Egypt and Morocco, and also with Siam, Madagascar and the New Hebrides.
Colonel Younghusband, escorted by a force under General MacDonald, penetrates Tibet and concludes a treaty with the authorities at Lhasa.

1907. The grant of self-government to the Transvaal and Orange River Colony.

EVENTS ABROAD (*continued*).

A.D.

Disturbances become serious in Macedonia, and **Austria and Russia jointly** intervene to impose reform.
The Alaska Boundary Commission meets and defines **the rights of Canada** along the Pacific coast adjoining territory ceded by **Russia to the United States.**
Corea is gradually drawn under Russian influence and control, **and refuses** to open Wi-ju to Japan ; the situation is made worse by **Russia's refusing** to withdraw from Manchuria by the specified date (October 8) **without first** gaining important concessions. The Grand Duke Alexieff **is sent out as** viceroy of Eastern Siberia—apparently **to foster Russia's forward policy.**

1904. Japan refusing to temporise, war breaks out with **Russia ; Japan makes** many attacks on Port Arthur, which is isolated by **Kuroki's victory at the** Ya-lu River ; the Russians fall back to Liao-Yang, and **after much fighting** to Mukden, where is fought an eleven days' battle on the Shaho.
The Russian Baltic fleet, en route for the East, fires on **British trawlers in** the North Sea.
There is great discontent in Russia ; **assassinations of General Bobrikoff** (Governor-General of Finland), and M. de Plehve (Minister of the Interior).
President Roosevelt re-elected in the United States.

1905. Fall of Port Arthur, after an eleven months' siege. **Great Japanese victory** near Mukden. A still greater Japanese victory in the **Strait of Corea.** The Japanese fleet, under Admiral Togo, sunk or captured **nearly all the** ships of the Russian fleet, under Admiral Rojdestvensky **(May 27, 28).** Peace was concluded, 29 August, Russia agreeing to evacuate **Manchuria,** to leave Corea under the protection of the Japanese, **and the Liao-tung** peninsula in their possession.

1906. International Conference at Algeciras, Spain, to settle certain questions relating to Morocco.

THE RELIGIONS OF THE WORLD.

A.—DISTINCTIVELY MONOTHEISTIC RELIGIONS (claiming a special Revelation).

I. INTRODUCTION.
II. CHRISTIANITY.
1. Church of England.
2. Roman Catholicism.
3. Greek Church.
4. Lutheranism.
5. Presbyterianism.
6. Nonconformists.
7. Other Denominations.
III. JUDAISM.
IV. MUHAMMADANISM.

B.—OTHER GREAT RELIGIOUS SYSTEMS (traditional in origin).

I. PRIMITIVE RELIGIOUS IDEAS.
II. HINDUISM.
III. BUDDHISM.
IV. PARSEEISM.
V. CONFUCIANISM.
VI. TAOISM.
VII. SHINTOISM.

C.—TABLE OF THE RELIGIONS AND THEIR ADHERENTS.

INTRODUCTION.

It would be a vain task here to give a sketch of Christian doctrine ; an acquaintance with this must be assumed, and all that will now be attempted as an introduction to the treatment of the other world-religions, will be to survey the latter from the Christian standpoint. Two dangers are to be guarded against : one, of disparaging other religions by minimizing the truth they contain in common with Christianity, of forgetting that "the true Light lighteth every man as he cometh into the world" ; the other, of disparaging our own religion by minimizing the truth that is peculiar to it, of overlooking the correctness of proportion which completeness alone can give, and so of deeming unnecessary the command to "make disciples of all the nations." We shall examine the great "Book Religions" of the world—Hinduism, Buddhism, and Zoroastrianism, springing up among the Aryan race ; Confucianism, Taoism, and Shintoism, belonging to the Mongolian or Turanian race ; and Semitic Muhammadanism. In all these can be discerned the purity of a primitive monotheism, which in course of time has been overlaid by baseless speculation or meaningless ceremonial, and so has degenerated into superstition ; but it is not to be forgotten that these two causes of corruption tend to operate universally, and have played no little part in the history of Christianity itself ; nor should a religion's degradation blind us to its underlying, if distorted or exaggerated, truth ; while the study of other religions may furnish us with illustrations of our own, and criteria to test its purity.

Hinduism and **Buddhism** take a wholly pessimistic view of man ; the former feels the need for sacrifice, but its sacrifices insist on no corresponding moral activity ; the latter knows the value of meditation, but meditation does not lead to a "walk with God." The Hindu system of caste speaks of subordination in unity, of the religious character of all life ; the Buddhist denial of caste tells of the brotherhood of man. In both systems, the transmigration of souls shows forth the unity of all life—"the whole creation groaneth and travaileth in pain together" ;

both look for the extinction of personality, for Brahman is not the "I AM" of Exodus, but merely the "It is"; both speak of incarnation, but the Hindu incarnations of Vishnu are apparent only, and Buddhist incarnations do not serve to raise man's whole nature; neither system has learnt to distinguish subject from object, imagination from reality, fancy from truth. On the other hand, the third Aryan religion, **Zoroastrianism**, views the universe not as a delusion or a snare, but as an expression of the glory of the Creator, to which man may contribute, and in which man may eternally share.

Confucianism and **Taoism** are optimistic in their view of man; he is by natural endowment good, so that sin as a fact and power in life drops out of sight. Thus they indulge in so profound a reverence for the past as to set effectual limits to all aspirations for the future. They realise vividly the oneness, the solidarity, of the human race throughout history, but they know no Incarnation which can enable them along the vista of humanity to catch a glimpse of God.

Last comes **Muhammadanism**, the only great world-religion later than our era. It made its protest against a lifeless Christianity which had ceased to preach the gospel, but it proceeded itself to proselytise with the sword; it realised the need for man's submission to God, but not for his co-operation with Him; it put away the idols of the day, and replaced them with an idolatrous regard for places, times, and formulas; it caught a fleeting vision of truth, and sought to fix it as an eternal ideal; and as its self-imposed limitations grow more apparent in the march of history, so is its human origin more clearly established.

The Christian's Faith is not in a book, like the Muhammadan's in the Koran, but in a Person, Whose Life does not belong to the past, whither Confucianism and Taoism would have us look, but covers past, present and future; yet that Life which was from all eternity has entered the realm of history, and so submits to the test of verification which Brahman or Buddhist neither expects nor gives. It is a power in man's life now, and a hope for the life to come, and thus offers what none else has professed to offer—pardon for the past, grace for the present, glory in the future. The Christian's view of man's nature, development, and destiny is marked by neither a hopeless pessimism nor a baseless optimism, but it foresees the time when the actual and the ideal shall be harmonised in one great reality; and so it contains the living germ of all progress, both for the individual and the race.

If such be the facts, doubly sad is it to turn to the next portion of our task, and to seek to portray the differences which exist among those who profess a common allegiance to one Divine Master. Such differences are inevitable, if the divine truth transcends any one expression of it; they are natural if the revelation is many-sided, while man is limited; they are pitiable if they lead men to "compromise for the sake of peace, rather than comprehension for the sake of truth"; they are inexcusable if they are made the cause of mutual jealousy, hatred, or dissension; but they must be understood before they can be reconciled, and with this as an aim, their study becomes most profitable.

We shall attempt, therefore, to present the characteristic tenets of the various Christian bodies in the light in which they themselves regard them, and to abstain from criticism; just as in dealing with other religions we shall try to outline the positive teaching of each, without emphasising any errors or lack of proportion in handling the truth. If any appearance of dogmatism be incurred, the limits of space must be pleaded, which prevent any discussion of moot points. The purpose of this article will be served if it stimulates any reader to further research for himself.

CHRISTIANITY.

Christendom consists of three great divisions—the Roman, Greek, and Anglican communions—together with the Lutherans, the Wesleyans, and a number of smaller bodies more or less independent of each other. The Roman Church extends no recognition to any other, as it insists on submission to the Papacy, as an essential to Catholicity; but intercourse between the Greek and Anglican communions seems growing in intimacy and cordiality. In England we have the unhappy spectacle of a country whose Christianity is too divided to fight effectually against the common foes of sin and ignorance, though we all hope that it may yet be reunited by mutual charity to perform its mission in the world.

1.—THE CHURCH OF ENGLAND.

Its History. Acting on the principle stated near the end of the Introduction, we shall, in speaking of the Church of England, let history and her own formularies speak as much as possible for themselves. The conversion of the English to Christianity began with the preaching of Augustine in 597. During the next century, the work of conversion went on with varying success. This work was carried on by Birinus and other missionaries from Rome, and by Aidan and other missionaries from Columba's monastery of Iona. The Anglo-Saxons Kingdoms were thus Christianised by a number of different missions of different origin; but in 673 at the Council of Hertford the Churches of the Heptarchy were united into one Church, under the headship of the See of Canterbury, in communion with that of Rome. Archbishop Theodore, under whose leadership this union was effected, then proceeded to organise the Church of England, settling the number and boundaries of its dioceses, and dividing each diocese into parishes. This settlement of the English Church preceded by a century and a half the nominal union of the English State under Egbert, 827. With the advent of William I., the National Church came more immediately under the jurisdiction of the see of Rome, but it never ceased to resist the encroachments of the Papal power until, at last, in the reign of Henry VIII., by the action of the Crown, and with the assent (willing or unwilling) of the Church, as represented by Convocation, it was withdrawn entirely from the Pope's jurisdiction, 1534.

The Reformation, thus begun, after a struggle lasting more than a century, ended, 1662, in the *Act of Uniformity*, which ordered the performance of public worship in accordance with "The Book of Common Prayer," then issued in the form in which we see it still. But the Church thus reformed claims to be historically and essentially the same Church that was organised in 673, just as England remained the same kingdom after the Revolution which placed William of Orange on the throne, as before that event. "The popular notion," says Freeman, the historian, "clearly is that the Church was 'Established' at the Reformation. People seem to think that Henry VIII. or Elizabeth having already 'disestablished' an older Church, went on of set purpose to 'establish' a new one, whereas in reality in all that they did, Henry and Elizabeth had no more thought of establishing a new Church than they had of founding a new nation." Bishop Chavasse, in his address to the Church Congress of 1904, sums up the historical position of the English Church in these few words: "The position of the Church of England is unique. She is English and not foreign. The State did not make her. No Parliament or political party can claim her as their creation. She is older than the State and stood at its cradle. . . Like the State, she has passed through change and revolution, but her continuity has remained unbroken. . . . She is the same Church in the same sense as the English people are the same people."

Catholic and National. The Church of England claims to be as truly Catholic and Apostolic as that of Rome, whilst protesting against the departure of the latter from the doctrine and discipline of the Christian Church in the first four or five centuries of its history. She asserts that her ministry of three orders—bishops, priests, and deacons—is not only in accord with the rule of the Church in the days of the Apostles, but that the bishops derive their authority (so she maintains) by uninterrupted succession from the apostles themselves. Whilst claiming to be as truly Catholic as any branch of the Christian Church, the Church of England has persistently, through the centuries

of her history, maintained her ideal of national churches existing within the Church Catholic, and has asserted the right of "every particular or national Church to ordain, change and abolish ceremonies or rites of the Church ordained only by man's authority" (Art. xxxiv.). Whilst affirming that the Sovereign has "the chief government of all estates of this realm, whether they be ecclesiastical or civil," she declares that "the Bishop of Rome hath no jurisdiction in this realm of England" (Art. xxxvii.). The English Church has undoubtedly played a great part in the cause of national freedom.

Its Diversity and Comprehensiveness. Nowhere does the Church of England lay claim to "distinctive doctrines." What she calls upon her members to believe is contained in the three Creeds of antiquity—the Apostles' Creed, the Nicene Creed, and the Athanasian Creed. The acceptance, indeed, of the Apostles' Creed is all that she demands of those who come to be admitted into the Christian Church. She aims at preserving the unity and proportion of the faith and avoiding the presentation of a distorted image of the truth by bringing any doctrine into undue prominence.

One of the most striking differences between the Church and the various sects which have gone out from her, lay in the fact that in the seceding bodies the bond of union consisted in identity of opinions or similarity of religious experiences; certain distinctive views or spiritual experiences marked a man off as a Baptist or as a Wesleyan; but the Church of England tolerated within her borders a great diversity of views among her members. Owing to the freedom of thought, which was both the cause and the consequence of the Reformation, there have been always since that event two extreme parties within her fold. But the great body of her members has usually followed the *via media*, which at the Reformation was deliberately taken between Rome and Geneva. "It hath been the wisdom of the Church of England," as we read in the opening lines of the Preface to the Prayer Book, "ever since the first compiling of her Public Liturgy, to keep the mean between two extremes."

Supremacy of Holy Scripture. Another characteristic of the English Church—which she shares with all Protestant bodies—is the commanding position she assigns to Holy Scripture, which she regards as the final court of appeal in all things pertaining to spiritual life and godliness. "It is not lawful," she says, "for the Church to ordain anything that is contrary to God's Word written, neither may it so expound one place of Scripture that it be repugnant to another" (Art. xx.). And of Holy Scripture as a fountain of heavenly knowledge she declares, "Holy Scripture containeth all things necessary to salvation; so that whatsoever is not read therein, nor may be proved thereby, is not to be required of any man that it should be believed as an article of the Faith, or be thought requisite to salvation" (Art. vi.).

Besides the Church of England, which is limited to England and Wales, there are in the **"Anglican Communion"** many Churches elsewhere which are in full communion with her, but in independence of her. These Churches are:

(*a*) The Episcopal Church in Scotland; (*b*) the Church of Ireland, under the archbishops of Armagh and Dublin; (*c*) the Protestant Episcopal Church in the United States of America; and (*d*) the Churches of the following Provinces: (1) Canada, (2) Rupert's Land, (3) the West Indies, (4) New South Wales, (5) New Zealand, (6) India and (7) South Africa. There are, in addition, in each continent several independent dioceses which have not yet been grouped into provinces.

2.—THE ROMAN CATHOLIC CHURCH.

The members of this Church so predominate in number as to constitute nearly the half of Christendom. Holding that the Church of Christ is a visible unity, they believe that for the Church upon earth there has been divinely appointed a visible Head, who is the Pope, "the Vicar of Jesus Christ, the successor of Saint Peter, Prince of the Apostles." Consequently they hold that membership of the Church involves submission to its Supreme Pontiff; and that that alone can be the true Church, which is in communion with the Roman Pontiff sitting in the seat of the Apostle Peter, who, as they believe, received supreme authority from Christ Himself (Matt. xvi. 17, 18).

The Creed of Pope Pius IV. (1564), to which all converts subscribe, begins with the Nicene Creed, and then professes acceptance of apostolic and ecclesiastical tradition, and of Holy Scripture in that sense in which the Catholic Church has held and holds it. It admits seven sacraments—Baptism, Confirmation, the Eucharist, Penance, Extreme Unction, Orders, and Matrimony. As to the explanation of the manner of Christ's presence in the Holy Eucharist, it receives the doctrine of Transubstantiation—the change of the whole "substance" of the Bread and Wine into the Body and Blood of Christ. And, finally, it affirms a belief in Purgatory, Prayers for the Dead, and Invocations of the Saints, with an acceptance of Indulgences, Images, and obedience to the Holy See.

Though *semper eadem* (always the same), Rome recognises a possibility of development in doctrine; for instance, in 1854 the dogma of the Immaculate Conception of the Blessed Virgin Mary was promulgated; and in 1870, the Vatican Council regulated and legitimized this development by decreeing the Papal Infallibility, viz., "that the Roman Pontiff, when he speaks *ex cathedrâ* (i.e., when, fulfilling his office of Pastor and Teacher of all Christians, in his supreme apostolic authority, he defines a doctrine of faith or morals to be held by the Universal Church), through the divine assistance promised him in the Blessed Peter, is endowed with that infallibility with which the Divine Redeemer has willed that His Church—in defining doctrine of faith or morals—should be built up: and that therefore such definitions of the Roman Pontiff are of themselves, and not merely because of the consent of the Church, irreformable." To this decree the **Old Catholics** of Switzerland, Germany, and Bohemia refused assent; they were headed by Dr. Döllinger and Professor Friedrich, and procured an episcopal succession through the Archbishop of Utrecht.

3.—THE GREEK CHURCH.

This Church, which is often known as the **Eastern** or **Orthodox Church**, numbers some 85 millions of adherents, two-thirds of whom are Russians, and includes among its sects the Armenian, Abyssinian, and Nestorian Christians, and other bodies round the east end of the Mediterranean. The schism of Christendom into Eastern and Western, had many causes: the rivalry of Rome and Constantinople, the differences of temperament between the Latin and the Greek, and the variations of doctrine and ritual that naturally followed; but the main cause was Papal aggression, and the centralizing tendencies of the Roman See, which outraged Greek susceptibilities and traditions.

The final separation came in 1054, when Pope Leo IX. excommunicated the Patriarch of Constantinople, Michael Cerularius. While submission to the Pope presents an insurmountable barrier to the re-union of the Greek Church with Rome, no such obstacle exists towards the Anglican Church; and the last half century has witnessed a great development in cordiality and mutual understanding between these two bodies.

The Greek Church has maintained a conservative attitude in doctrine and ceremonial, and can make the appeal to antiquity with entire composure. It accepts the first seven Councils as Œcumenical, but protests against the surreptitious insertion of the *Filioque* (the clause stating the Procession of the Holy Ghost from the Son as well as from the Father) into the Nicene Creed. It requires its parochial clergy to have married before ordination, but its bishops are celibate, being selected from the monastic orders. It recognises seven sacraments, uses triple immersion in Baptism and leavened Bread in Holy Communion, and gives the Cup to the Laity. It uses an elaborate and ancient ceremonial in its worship, and its churches are adorned with pictures, but sculptured or graven images are rigorously forbidden. The *ikons*, which take so prominent a position in Russian homes and Churches, are only pictorial representations or

portraits of Christ, the Virgin, or Saints. Not even the Crucifix is now used in the East.

4.—LUTHERANISM.

LUTHERANISM is the form of Protestantism which prevails among the Teutonic races of continental Europe, with the exception of Upper Germany. It is computed that there are over 30 millions of Lutherans in the world, chiefly in Lower Germany, Denmark, Norway, Sweden, some of the Russian Baltic Provinces, and the United States of America. The name "Protestant" was first applied to the minority at the Second Diet of Spire in 1529, when the majority reversed the verdict of the First Diet (1526), which allowed every prince to regulate religious disputes within his dominions until a General Council should be held; whereas the Second Diet decreed that no change should be made until the holding of a General Council. Thus the term "Protestant" historically denotes simply opposition to the papal theory of Church government.

Strictly, the leading tenet of Lutheranism is *Consubstantiation*—namely, that in the Holy Communion Christ's Body is "present in, with, and under the unchanged bread and wine"; thus Transubstantiation is rejected, which makes the substance of the bread and wine disappear after consecration; and a denial is given to the view of the Swiss reformers, headed by Calvin and Zwingle, who taught that the bread and wine were mere symbols of the Body and Blood of Christ, Who is not really present in the Sacrament at all.

The belief of the Lutherans is summarised in the *Confession of Augsburg*, which was drawn up in 1530, under the guidance of Luther's friend, Melanchthon; and as Luther, in his protest against the Papacy with its system of Indulgences and Pardons, made no objection to the use of vestments, the crucifix, or paintings, these things still are used in worship in Lutheran Churches. In the 18th century, *Rationalism* made its appearance in Germany, and now permeates Lutheranism very widely, so far as to reject some of Luther's most cherished dogmas (as for example on the Inspiration and Authority of Holy Scripture), while claiming to expound more faithfully the spirit of his teaching. The **Old Lutherans** are the separatists in the early years of the 19th century—the conservative minority, who objected to the action of the Prussian Government in uniting the Lutherans and other Reformed (often anti-Sacramentarian) bodies into one National Church.

5.—PRESBYTERIANISM

PRESBYTERIANISM has been maintained in the Established Church of Scotland since 1689. It is worthy of note that Scotland has passed from one extreme to the other: before the Reformation it was, like France, devoted to the Papacy in a way that England never was; since the Reformation it has shown a distaste for episcopacy and other marks of Catholic antiquity, such as England has never felt. Presbyterianism holds stoutly to the authority and divine appointment of the sacred ministry, but maintains that the apostolic succession lies in the order of presbyters, and that the bishops' assumption of the sole power to ordain is a usurpation; herein is a marked contrast to the attitude of the Congregationalists, who regard ministers as the delegates of the congregation, without any special divine commission. The machinery of Presbyterian government consists of Kirk-Sessions, Presbyteries, Synods, and General Assemblies; but its doctrine has very largely been permeated by the teaching of the French reformer, John Calvin, as preached in the 16th century by John Knox. The main tenets of **Calvinism** are:—

(1) *Election:* that God fore-ordained Adam's fall, and from all eternity elected some men to be saved, others to be lost. (2) *Particular redemption:* that Christ died for the elect only. (3) *Denial of free-will:* that unregenerate man has no freedom of the will. (4) *Effectual grace:* this is given only to the elect. (5) *Final perseverance:* that the elect have irresistible grace, and cannot fail of final salvation.

In the Confession of Faith drawn up at Westminster in 1643 by an Assembly of Divines, who had been convened by Parliament to organise a Presbyterian Establishment in England, there were thirty-three articles, to which the ministers of the Scots Established Church still subscribe assent; and these articles embody Calvin's teaching on all the above points. On these articles also were founded the Longer and Shorter Catechisms, which are in general use in Scotland.

Presbyterianism and Episcopacy struggled with each other for supremacy in Scotland from the Reformation until the Revolution. But from 1689 onwards, the **Established Church of Scotland** has been Presbyterian. During the 19th century numerous secessions occurred on the question of patronage (which was claimed for the whole congregation, not merely for its lay-elders, still less for private patrons); the bodies thus formed amalgamated in 1847 as the **United Presbyterian Church** ("U.P."). In 1843 the **Free Church of Scotland** seceded from the Established Church in condemnation of its system of private patronage (which was abolished in 1874), although the seceders fully approved of Establishment in principle. In 1900 the Free Church with the assent of all its members, except a small minority, joined the "U.P.", but in doing so forfeited all right to its former property, which was adjudged by the House of Lords (1904) to belong to the minority that had refused to join the "U.P." But by an Act, passed in 1905, the property has been equitably divided between the two sections. The Presbyterian Churches now in Scotland are the **Established**, the **United Free**, and the **Free**.

6.—NONCONFORMISTS.

1.—THE CONGREGATIONALISTS, or INDEPENDENTS. These were the first formally to separate themselves from the Church of England. They were at first called *Brownists*, from the Rev. Robert Brown, of Southwark, who led the secession in 1570; the part they played in the national history during the 17th century, under the name of Independents, is too familiar to all to need telling here. They regard creeds and articles of religion as needless, and protest against requiring subscription to human formularies as a condition for communion; but their main reason for secession was due to their principles of Church order and discipline. By the circumstances of their origin they were Presbyterian in sympathy, and "they believe that the only officers placed by the apostles over individual Churches are the bishops or pastors, and the deacons; . . That to these, as the officers of the Church, is committed respectively the administration of its spiritual and temporal concerns—subject, however, to the approbation of the Church. . . . That the power of a Christian Church is purely spiritual, and should in no way be corrupted by union with temporal or civil power."

Each congregation, or society of true believers who voluntarily assemble together, constitutes a Christian Church: and while it is the duty of Christian Churches to hold communion and to co-operate with each other, yet "no Church, nor union of Churches, has any right or power to interfere with the faith or discipline of any other Church, further than to separate from such as, in faith or practice, depart from the Gospel of Christ." Every Church, therefore, has New Testament precedent for electing its own officers and managing its own affairs, in independence of, and without responsibility to, any human authority; and this it does by the vote of the majority of its Church members, i.e., of those who have formally been enrolled in the Church body, after having given to the pastor and the deacons satisfactory evidence of their being Christians. However, to promote fellowship and co-operation it was deemed well, in 1832, to form the Congregational Union of England and Wales.

2.—THE BAPTISTS. They are successors of the *Anabaptists* (i.e., re-baptizers), who at the end of the 16th century found a home in the newly enfranchised States of Holland, whence they exerted a powerful influence in England, and specially in its eastern counties. Their formal secession from the Church of England took place in 1633, and among their early and most distinguished names are those of Milton and Bunyan.

Their theory of Church government was Presbyterian, as was that of nearly all bodies which dissented from the Church in the 16th and 17th centuries; their essential characteristic was Puritan, or as they put it in their Confession of Faith (1646), "The Church is a company of visible saints, called and separated from the world by the Word and Spirit of God, to the visible profession of the faith of the Gospel, being baptized into that faith." Therefore the baptism of infants or of ignorant persons, or of people whose after life was ungodly, was worthless; "those who do actually profess repentance towards God, faith in, and obedience to, our Lord Jesus Christ, are the only proper subjects of this ordinance (i.e. baptism); . . . immersion, or dipping of the person in water, is necessary to the due administration of that ordinance" (Confession of Faith, 1689).

Though their form of government is congregational, the Baptists of the United Kingdom, in 1813, formed a Union for the purpose of mutual support and encouragement, and for the better ordering of Christian missions to the heathen, in which they have long taken a distinguished part, as witness the names of Carey and Marshman. The Baptists are most numerous in America, where they number more than four millions, a number about ten times as large as that of the Baptists in Great Britain and Ireland. The distinction between General and Particular Baptists was originally similar to that between Arminians and Calvinists, a distinction that no longer holds good.

3.—THE QUAKERS, or SOCIETY OF FRIENDS. This society came into being with the preaching of George Fox in 1646. A chance phrase of his about "quaking at the Word of the Lord," led to what is really a popular nickname; but they speak of themselves as forming the Society of Friends. Neither the Church, nor the Scripture, is to them the sure source of truth; truth only comes by direct and personal inspiration. In the quest for an entire spirituality, and for a perfect response to the divine visitation, all that is outward or formal must be abandoned, as it proceeds from human volition. They, therefore, reject any ordained ministry (for the Spirit moves whom He will), Baptism (except that of the Spirit), Communion (except the inward and spiritual participation of Christ's flesh and blood), a liturgy, and all ritual acts. Specially strong was their protest against Calvinism: "Christ hath tasted death for every man; not only for all kinds of men, as some vainly talk, but for every one, of all kinds." (Article VI., Apology for Quakers, 1678).

Hence came a lengthy conflict with the Baptists, with whom, however, they shared persecution in New England at the hands of the Independents. But in spite of frequent persecutions, and of small numbers, the influence of the Society of Friends has been great. In religion, their protest has been for spiritual experience, rather than intellectual, still less merely conventional, assent. To them, chiefly, has been due the abolition of slavery, even as now they are striving for the abolition of war; and it is rich Quakers who in the present day are most successful in solving the problem of the relationship of employees to employers.

4.—THE UNITARIANS. They first appeared as a distinct denomination in 1719, but they represent a tendency of thought which has always existed in the Church, among its most famous exponents having been Arius in the beginning of the 4th century, and such men as Servetus the Spaniard (who was burnt at the stake by Calvin in 1552), and his contemporary, Socinus the Italian, after whom these views are often called *Socinian*. The Unitarians reject the Catholic doctrine of the Trinity, because they consider that it destroys the Unity of God, but they vary widely in their estimate of our Lord's Person—some acknowledging Him to be divine, others regarding Him merely as a man. They all deprecate a fixity of creed as being an incubus, not an impetus, to free thought; they seek to protect religious thought from crystallization through over-definition; and they agree in laying special stress on morals, and in devoting their foremost attention to the cultivation of character. In the last half century, their most brilliant representative was the famous Dr. James Martineau, most of whose writings would receive the cordial assent and admiration of any Churchman. The Unitarians primarily appeal to the intellect, and their tenets have permeated many other sects—largely in reaction from the Calvinistic view of the Atonement, as the propitiation of an angry Father by the Son. Their organization is *Independent* or *Congregational* in principle.

5.—THE WESLEYANS, or METHODISTS. John Wesley was born in 1703 and ordained in 1725. At Oxford he had been deeply moved at the spiritual lethargy of the Church, and with his brother Charles and others, among whom Whitefield was pre-eminent, he formed a small society of undergraduates to observe the Prayer Book more closely, to keep its appointed fasts, to attend Holy Communion regularly, and to apportion their time methodically. Hence came the name Methodists, which was originally a nickname, such as Ritualists in the present day. In 1735 Wesley entered on his unsuccessful mission to Georgia, and fell in with some Moravians, by whose system he was captivated for years.

The **Moravians** insist on the need of instantaneous and sensible conversion, and consequently depreciate the value of Baptism. Those who have a living faith in Christ have a vivid assurance of their deliverance from sin; and so the life of the Christian is marked by confidence and tranquility. They recognise episcopacy, and their missionary efforts have been the most brilliantly successful of any denomination. Indeed, were their enthusiasm and success reproduced elsewhere in like proportions, the whole world would probably now be Christian. From this sect Wesley broke away to start his revivalist preaching up and down England, appealing to men's emotions, and trying to raise the lives of the most debased.

As Wesley's teaching became distinctly Arminian (i.e., anti-Calvinist), George Whitefield, with the Calvinistic Methodists, seceded in 1741, and formed what is commonly known as the **Countess of Huntingdon's Connexion**, a body which is partly Presbyterian and partly Congregational in attitude. The results of Whitefield's preaching in Wales led to the formation of the **Welsh Calvinistic Methodists**, who became fully organized on a Presbyterian basis in 1811.

In 1744 Wesley summoned a conference of six Methodist clergy of the Church of England and four lay-preachers, and this is commonly regarded as the first of the famous series of Wesleyan Conferences. In 1784, after much hesitation, he consecrated two clergymen as bishops of the long-neglected Christian laity in the United States, whence has sprung the **Episcopal Methodist Church** of that country; yet Wesley, down to his death, stoutly maintained his membership of the Church of England, and earnestly warned his followers never to secede from her. Herein his words and acts were not altogether consistent, and in 1795, four years after his death, an open separation came. The Conference at Manchester yielded to the pressure of the majority of the adherents, and sanctioned the administration of the Sacraments in Methodist chapels, whereas till then they had been received in the parish churches.

Two years later, the **Methodist New Connexion**, which is now so strong in Yorkshire and Lancashire, was formed as a separate body, because the parent body had refused to admit lay representatives to Conference. In 1810 the **Primitive Methodists** seceded, because they objected to the apparent departure from the earlier system of open-air preaching and revivalist meetings. In 1815 the followers of Mr. O'Bryan, a lay-preacher, seceded and formed themselves into separate congregations under the name of **Bible Christians**; and similar disputes as to organization and management have led to the formation of several other independent bodies, whose membership is too small to be named here. But all these bodies are united in regarding preaching as the work of the laity (under suitable restrictions), as well as of the clergy, and in insisting on a definite spiritual experience as the universal foundation of the religious life.

7.—OTHER RELIGIOUS DENOMINATIONS.

We may briefly mention a few other Christian bodies which have gained some adherents:—

(1) The **Free Church of England** was founded in 1844 in protest against the "Oxford Movement" of Keble, Newman, Pusey, etc.; it has bishops, but is distinctly Evangelical and Protestant in character.

(2) The **Catholic Apostolic Church** takes the other extreme. Its adherents only claim to be members of *a congregation of* the Catholic Church, not to form the whole Church. Each congregation has its fourfold ministry of elders, prophets, evangelists, pastors, with deacons—all under an "angel." The members are often called *Irvingites*, because they hold that the miraculous gifts of prophesying and tongues have not ceased from the Church, and this was taught by Edward Irving, who died in 1834; but the Catholic Apostolic Church was not organized till the following year.

(3) The **Plymouth Brethren** form an evangelical sect of strongly Calvinist views, which rejects any organised ministry. They have sometimes been called *Darbyites*, after one of their founders, who enunciated his peculiar views to his congregation at Plymouth in 1830.

(4) The **Swedenborgians** are the followers of Emanuel Swedenborg, who was born at Stockholm in 1688, and died at London in 1772. He was a great scientist and philosopher, and for the last thirty years of his life a great mystic; to him God is Christ and Christ is God, and the New Jerusalem is now on earth.

(5) The **Salvation Army,** under *General Booth* (who was formerly a minister of the Methodist New Connexion), recognizes a truth often forgotten—that the mission of the Church is to the outcast, "to compel them to come in"; unfortunately, in its protest against conventionality, it has lost hold on the Sacraments.

(6) **Christian Science** is the name given by Mrs. Eddy to what she believed to be the discovery of the manner in which Jesus healed the sick and reformed the sinner. It claims that the creation is spiritual and perfect, and evil unreal, and that it proves its position by healing disease without resort to material remedies.

JUDAISM.

Judaism as a religion of the present day has two distinct varieties, which may be termed *Orthodox* (or Strict), and *Reformed* (or Progressive). Nearly all Jews accept the Old Testament as inspired, and consequently are strict monotheists.

The Orthodox Jews add to the Old Testament the Rabbinical traditions. These began to grow up round the Mosaic Law from the time of the return from the Captivity (539 B.C. and onwards), and they were committed to writing in the Jerusalem and Babylonian Talmuds of the fourth and fifth centuries A.D., respectively. Such a Rabbinical Jew looks forward to the coming of the Messiah and the restoration of his race to Palestine, when the Temple will be rebuilt and the sacrificial ritual revived. Meanwhile he observes the Mosaic Law as far as possible, with the Rabbinical traditions that have since been added, and has the highest regard for ceremonial purity in even the smallest minutiæ.

The Reforming Jew has no such hopes, and keeps no ritual observances. He mostly regards the Mosaic sacrifices as only incumbent on a primitive age, and his belief is deeply tinged by a Rationalism similar to that which has invaded German Lutheranism. He is without aspirations for his nation as such, and seeks to assimilate himself to the citizens of the country in which he dwells. Among ourselves, the Jews of East London are mostly strict Talmudists, but as they gain wealth and rise in the social scale, they move to the North or West of London, and abandon the more distinctive tenets and practices of their faith, while they are often entirely ignorant of Hebrew.

The persecution of the Jews in Russia led to the movement known as *Zionism*, which was inaugurated by the late Dr. Herzl. To relieve the oppressed and poorer Jews, a kind of Joint-Stock Company was formed to purchase from the Sultan permission for the Jews to return to Palestine, and there form a commonwealth of their own; but as a rule, the idea has not received support among the richer and more influential Jews. Nevertheless the number of Jews in Palestine has been steadily growing. It is computed that in 1841 there were 8,000; that in 1881 there were 40,000; and that now there are upwards of 120,000, of whom 40,000 reside in Jerusalem itself.

MUHAMMADANISM.

LIFE OF MUHAMMAD. The Christian religion had scarcely supplanted paganism within the limits of the old Roman Empire, when a rival religion was promulgated in the deserts of Arabia by a remarkable man named Muhammad, or Mahomet, who appeared early in the 7th century with the sword in one hand and the Koran in the other for the conversion and subjugation of the nations. Long before the Prophet's birth, Mecca, his native place, had been esteemed a sacred town. Thither came pilgrims to make seven times the circuit of the *Kaaba*, the temple which contained the famous Black Stone, probably an ærolite, but said to have been given to Abraham by an angel; and there, too, sprang up in course of time idolatry of all kinds, entirely obliterating any true worship of the One God. The guardianship of the Kaaba was in the hands of a priestly caste, the Arab tribe of the Koreish, which claimed descent from Ishmael, the son of Abraham and Hagar; and to this tribe belonged both the parents of Muhammad—Abdallah and Amina by name. Their son was born at Mecca in 570 A.D., a few months after the death of his father.

The child was brought up by his nurse, Halima, of the hill-tribe of the Beni-Saad, for five years; and shortly after his return to his mother, Amina, the latter also died. The orphan boy was then taken care of at Mecca by his grandfather, Abd-al-Muttalib, and later by his uncle, Abu-Talib, the high-priest of the Kaaba. After journeying with caravans and acting as a shepherd, Muhammad entered the service of Khadija, a rich widow of Mecca; and so well did he manage her business, that he soon won her hand and fortune. Having thus become a rich man, he had more leisure to indulge in the meditations to which he had always been prone. Each year he spent longer time in solitary contemplation in the cave of Hira (3 miles north of Mecca), where he saw many visions, and experienced many ecstasies, which were perhaps not entirely unconnected with the epileptic seizures to which he had been subject from childhood.

In his fortieth year he saw in a vision the angel Gabriel, and was told that he was to be the prophet of the Almighty, to drive out idolatry, and to restore the pure worship of the One True God. For four years he laboured quietly among his relatives and friends, announcing to them from time to time the divine messages which he received (the earliest elements of the Koran). After thus making only thirteen converts, at the command of an angel to preach openly, he took the "house of Arcam," near the Kaaba, and commenced his public mission. His denunciations of idolatry aroused the hostility of the Koreish, who persecuted his followers, and harshly treated the Prophet himself; and in spite of the generous protection afforded him by his uncle, Abu-Talib, Muhammad would doubtless have been crushed if his foes had been united. In 619 death deprived him of his wife Khadija, to whom he had always been faithful. Her sympathy with her husband's aims had enrolled her name among the four "perfect women," the other three being Pharaoh's wife Asia, the Blessed Virgin Mary, and the Prophet's daughter Fatima. Muhammad's cup of misfortune was filled by the death of his uncle in 620; but then the tide turned. Some pilgrims from Medina were attracted by the new doctrine, and offered their town as a refuge to the persecuted Moslems of Mecca. This was gladly accepted, the last to leave Mecca being Muhammad and his bosom friend and early convert, Abu-Bekr. These two spent three days in hiding in the cave on Mount Thaur, and then made their way into Medina on June 28th, 622, this episode of the HEJIRA or Flight marking the commencement of the Muhammadan era.

But Muhammad's character could not stand the test of prosperity so well as that of adversity. At Medina he extended his sanction to polygamy, and in a few years had taken to himself eleven wives, besides numerous concubines. The Koran having prescribed four wives as a limit, he obtained a special revelation entitling him to

this "peculiar privilege above the rest of the believers," and exonerating him for marrying Zeinab, the wife of his adopted son Zeid. At Medina, too, his former friendliness with the Jews, due to a common monotheism, became the bitterest hostility, and he substituted Mecca for Jerusalem as the *Kibla*, or point to which the faithful must turn in prayer.

Now began his marauding attacks on the caravans from Mecca, his brigandage being viewed as missionary effort, receiving divine approbation. More and more did Muhammad indulge in treachery and assassination, his victims being chiefly Jews or members of the unbelieving hill-tribes; while in 627, after Abu Sofian, the chief of Mecca, had unsuccessfully laid siege to Medina, the Prophet in cold blood butchered 800 of Abu's allies, selling their women and children into slavery. Three years later he found his chance for attacking Mecca, and Abu Sofian, being too weak to resist, was obliged to admit Muhammad into the city, and to profess his own adhesion to the new faith. The Prophet entered Mecca in triumph, and at once swept the city of idols. Then he proceeded to declare a holy war against all idolaters, while Christians and Jews were only permitted to exist in subjection as tributaries. Thus his sway spread over all Arabia; but his end was at hand. He had long been in ill-health, and in 632, after setting an example of making a pilgrimage (*Hadj*) to Mecca, he died at Medina in his 63rd year.

TENETS OF MUHAMMADANISM. The two main points inculcated by Muhammad, were the hatred of idolatry and the worship of the One God. The two chief articles of his creed which every convert had to profess were these: "There is no God but God (*Allah*), and Muhammad is His prophet." His teaching was fully developed in the *Koran*, a book containing the revelations he claimed to have received from the angel Gabriel. Therein was taught the existence of angels (Gabriel, Michael, Azrael, and Israfil, as well as Eblis, the devil), the immortality of the soul, the resurrection of the body, and a state of future rewards or punishments in one of the seven heavens or seven hells. God's predestination was absolute, and therefore it behoved man to be submissive to His will (*Islam*—resignation; *Moslem* or *Mussulman* one who has surrendered). The chief religious practices imposed were (1) prayer (five times a day, especially on Fridays, while certain seasons and places gave it a special efficacy), (2) fasting (specially in the ninth month Ramadhan), (3) almsgiving, (4) a pilgrimage to Mecca (the Kaaba being still deemed sacred, only its idols had been cleared away), and (5) recitation of the Moslem creed. Gambling and the use of wine were strictly prohibited, and sacred war (*Jehad*) against the infidels was enjoined, while an end was put to infanticide, of which the Arabs had often been guilty. Women had no rights except that of inheritance of property. They could be divorced, re-married, or exchanged, at their husbands' slightest whim, and concubinage with slaves was permitted, but a Moslem might not have more than four wives at a time (as a matter of fact, from poverty or other causes, most Moslems are content with one).

To sum up, Islam is a creed that can found an empire, but not govern it. It cleverly humours the weak points of the Arab character, while repressing one or two of its glaring evils. Worst of all, it uses divine sanction to stereotype a faulty code of ethics, and thus leaves no room for progress either in morals or in civilization; while it demands no personal conviction of its truth, for it is propagated by means of the sword, and professed by means of a formula.

Here, perhaps, may be explained a few terms which commonly occur in writings about Muhammadans:—

The *Mosque* or temple contains (1) the hall of prayer, which marks the direction of Mecca (the Kibla); (2) the place for ablutions which must precede prayer; and (3) the place where the Koran is read and expounded. It is adorned with minarets, from which the Imam calls out the five hours of prayer; and the Moslem's constant reverence and recollectedness in worship would read a valuable lesson to many a Christian congregation. The *Ulema* (=wise) or upper class in Turkey comprises: (1) the *Imams*, ministers, whose chief duty is to offer prayer; (2) the *Muftis*, lawyers; and (3) the *Cadis* or *Qazis*, judges. *Sheikh*, or elder, is the title of the chieftain of a tribe, the Sheikh-ul-Islam being the Muhammadan primate of Turkey. The *Fakirs* (=poor) or *Dervishes* (=beggars from door to door: a Persian term) are an order of ascetic mendicants, claiming to have been founded by Abu-Bekr. Their practices include the *Zikr*, a physical exercise in voice-production which consists of repeating the ninety-nine names of Allah in various ways, rosaries being used for counting; and the *Muraqaba*, or meditation on the verses of the Koran. Some mendicants live in communities, others wander alone from place to place; the most famous order is that of the *Dancing Dervishes*, who are to be seen in Constantinople.

THE KORAN. The Koran (reading) consists of 114 *Suras* (chapters), which vary in length as much as do our Psalms. Each chapter commences "In the name of the most merciful God." Every word is of direct inspiration, and so the book has an infallibility to which Muhammad personally laid no claim, for with him a confession of sin was not infrequent. Texts from the Koran are, therefore, popular charms, and are often enclosed in amulets and worn on the person. The chapters were originally learnt by heart by the Prophet's disciples, and then committed to writing. Their present arrangement is not chronological, but is that of the collection made for the Caliph Omar shortly after the Prophet's death. Those of earlier date are mostly the shorter and more poetical, but their teaching is often superseded in later chapters which contain a revelation more suitable to the Prophet's exigencies. The earliest suras (of 610–613 A.D.) contain noble teaching on righteousness and judgment to come; but then there creep in denunciations of the infidels who "accuse the Prophet of imposture," or "charge the Koran with falsehood," and a lower moral tone both as to life here and hereafter. Gradually there is evolved the sensual Paradise that every believer is to enjoy, whilst the taking up arms to spread the faith is first allowed and then commanded. The later suras show a superficial acquaintance with parts of the Bible (or rather, with some of the Jewish rabbinical and apocryphal literature), and contain distorted legends of the patriarchs and of the birth, life, and miracles of our Lord. Muhammad acknowledged the authority of Moses and our Saviour as Prophets, and asserted that he came to complete their work.

SPREAD OF MUHAMMADANISM. On the death of Muhammad, the Saracen empire embraced little more than Arabia, but in a hundred years after the Hegira, the *Caliphs*, as the successors of Muhammad were called, ruled from the Indus to the Pyrenees, and wherever their rule extended, there also their religion was of necessity accepted.

Abu-Bekr, the first caliph (632-34) began the conquest of Syria. **Omar**, the second caliph (634-44), completed the conquest of Syria and reduced Persia and Egypt to submission. The mosque of Omar, on the site of Solomon's temple, was founded by this monarch. In his reign "these Saracens reduced to his obedience 36,000 cities or castles, destroyed 4000 Churches or temples, and erected 1400 mosques." Then followed **Othman** (644-55) who spread *Islam* (the Muhammadan religion) along the north coast of Africa; and on his assassination **Ali** became caliph (655-61).

Ali was the cousin of the Prophet, and had married his daughter Fatima. One sect of Muhammadans, the *Shias*, who are especially numerous in Persia, regard Ali as the rightful successor of the prophet and the first three caliphs as usurpers. They also reject the *Sunnah*, or traditional law which had grown up to supplement the Koran, and was codified early in the ninth century. Taking Ali as their *Imam* (sacred leader), they trace from him twelve successors, the last being the Imam Mahdi, who will return to earth with Elijah to complete the establishment of Islam throughout the world.

At the end of the first century of the Hegira, the caliphs were the most potent monarchs of the globe, but then their empire had almost reached its furthest limits. On crossing the Pyrenees to conquer France, they were utterly defeated by *Charles Martel* (the hammer), grandfather of Charlemagne, at the decisive battle of Poitiers, in 732. The Saracen empire was now on the eve of partition, but

Egypt and the Moslem countries of Asia remained united, and constituted a powerful State under the government of the Abbassides, the descendants of Abbas, Muhammad's uncle. The capital of this new dynasty was Baghdad, and the most famous of the line was Haroun-al-Raschid (786–808), who with his spouse Zobeida, is celebrated in the "Arabian Nights."

The Turks (of Turkestan), who formed the body-guard of these caliphs at Baghdad, soon became strong enough to dictate to their nominal masters. One of their Emirs, Othman by name, subdued Asia Minor in 1299, and assumed the title of *Sultan* (i.e. victorious). From him the present Ottoman dynasty is sprung. These Ottoman Turks invaded Europe in 1355, and took Constantinople in 1453; but the battle of Vienna in 1529 did in the east of Europe what Poitiers had done in the west eight centuries earlier, and effectually set limits to Muhammadan power in Europe.

During the 11th and 12th centuries, the Moslems spread over India, across the Punjab, and into the Deccan; but early in the 18th century their power there began to decline, and the re-capture of Delhi in the Indian Mutiny (1857), put an end to all their pretensions to empire beyond the Indus. Muhammadanism is still the dominant religion in some parts of India. The Indian Muhammadans are concentrated chiefly in Bengal, the North-west Provinces, and the Punjab, and number about 60,000,000 people. Thus the Emperor of India rules over far more Mussulman subjects than any other sovereign.

PRIMITIVE RELIGIOUS IDEAS.

PRIMITIVE MAN. The religions which have been already described—Christianity, Judaism, and Muhammadanism—alike claim to be based on a direct revelation from God to man, and equally make monotheism the central point of their creeds. They are thus pre-eminently *positive* religions, for they appeal for authority to certain definite, positive facts, just as positive law finds its obligations in certain definite statutes; but their claim to convey a revelation does not at all imply that man was previously in utter ignorance of the One Supreme Being; rather would they say with Saint Paul, "Whom therefore ye ignorantly worship, Him declare I unto you"; they found their appeal on *natural* or *customary* religion, of which they assume every man to be more or less possessed. What then are these religious ideas which form in greater or less degree the common inheritance of the whole human race? Whence were they derived? What is their validity? These three questions perplex the wisest among us at the present day; even to suggest their answers taxes the resources of the philosopher who is well equipped with a knowledge of the facts discovered about human origins, early social customs in tribe or family, folk-lore, and mythology. The student of such matters will, of course, make resort to authorities like Max Muller, Tylor, F. B. Jevons, and Andrew Lang; here we can only faintly indicate the main features of the problems involved.

For instance, it is a moot point whether monotheism was the primitive form of religion, which degenerated into various kinds of polytheism, or whether the process was the reverse. The difficulty is enhanced when we notice that evolution includes both progress and retrogression—the former, in religious matters, being exceptional, the latter general. Nor are we warranted in expecting, still less in pre-supposing, a uniform course of development in all cases alike. Our ignorance of primitive man is profound, but there is no reason for identifying his condition—moral, intellectual, or social—with that of savage races with which we are acquainted to-day; for why should the latter be considered exempt from any process of evolution? And if not, how can their present state illustrate the early state of primitive man? Rather is it the case that in the savage can be detected signs of a deterioration, a degradation, which has already taken place; while researches, archæological and other, are tending to push back the beginning of civilisation to a much earlier date than used to be thought possible; and as we follow up the lines of history towards their source, they seem to converge, not in a state of barbarism, but in a state in which man was simply undeveloped.

In the simplicity of his experience, primitive man, we may assume, had not learned accurately to differentiate or distinguish; definitions were impossible, and he did not at first detect the contradictions in which his methods of thought plunged him; and the development of his religious, as of his scientific, ideas, was the result of the way in which he faced such contradictions as they emerged into distinct consciousness. So gradually his ideas cohered in a system, while new ideas would cause older ones to be rejected or re-modelled. Then came the prophet, the religious genius, to impress the touch of a master-hand, and thus would result faiths such as Buddhism and Confucianism. Nor need this humble origin of such (or any) religious systems be considered a defect. Whatever may have been the connection between early religion and magic (and a direct connection is stoutly denied by many), at least the former is no more discredited by the latter than are astronomy and chemistry by their early ancestors, astrology and alchemy.

Without then attempting to put these primitive religious ideas into either logical or historical order, we may analyse this substratum of early notions into its various ingredients, by observing the different developments which have been reached at different times and places in man's history, and the survivals of rudimentary conceptions and practices in more cultured stages of thought. So we shall briefly touch on Nature Worship and Animism, Totemism, and Idolatry, Fetishism and Magic, Taboo and Morality, Polytheism and Pantheism, and related subjects; but as whole libraries are insufficient for such topics, naturally nothing will be here attempted except an explanation of the terms themselves, and a few comments to show how these notions are the rough material out of which traditional systems of religion have been hewn.

ANIMISM. Through dreams, phantoms, ghosts, etc., man is driven to believe in spiritual existence, that is, to refuse to identify life with matter in all cases. Thus attributing vaguely his own life to spirit within himself, he proceeds by analogy to trace the changes and movements of the external world as being due to similar causes. He has not learned to differentiate conscious and unconscious existence, he cannot define personality, but he looks on all nature—rivers, mountains, winds, storms, rocks, stones, as well as plants and animals—as being the abode of spirits. The drama of nature around him, its successions of repose and strife, lead him to think of these spiritual beings as capable of assuming various forms—mineral, vegetable, animal; his instinct for a unity in nature makes such a continuity of life, a transmigration of soul, appear a likely process; and this stage of thought, in which soul or spirit is attributed to all natural objects, is called *Animism*.

But sometimes the phenomena of nature produce unexpected results; for instance, the cold water which has refreshed man times without number, one day gives him (when heated) erysipelas. So he learns in a tentative way to distinguish natural spirits from supernatural, malevolent from benevolent. Surrounded by such spirits, he is compelled in self-preservation to attempt to form friendly relations with them; partly in love, partly in fear, he makes his first experiments in worship, he seeks to establish communion with the unseen world; and then arise Nature Worship, Ancestor Worship, Animal Worship, etc.

ANCESTOR WORSHIP. As the existence of the soul is unbroken by death, so its characteristics in the unseen world are the same as during mortal life. Again, as primitive man finds his allies among the members of his own clan, so too, he learns to look for aid to the spirits of his ancestors. To win their favour or to propitiate other spirits, he must adopt the same methods as would have pleased them on earth—he must make funeral feasts and commemorative rites. This method of coming into communion with the spirits of the departed suggests a way of

entering on friendly relations with the supernatural as such. Love and fear which prompted the funeral feast, now give rise to the sacrificial meal offered to a supernatural or divine being; later perhaps are added ideas connected with the expiation of sin; but the fundamental notion in the sacrificial meal is communion with the deity, and the meal itself is the primitive rite of worship. Lastly, by association of ideas, the funeral feast also assumes a sacrificial aspect, and worship is paid to the departed ancestors. In races in which the imaginative faculty is weak, religion often does not rise above such ancestor worship; thus it seems all that is required by the Chinese at the present day, while the worship of the Manes, or spirits of the deceased, was one of the most marked religious characteristics of the ancient Romans.

TOTEMISM is the superstitious veneration which a savage pays to a certain class of material objects with which he believes his tribe has some peculiar relation and to which he gives the name of *totem*. Some tribes, indeed, actually believe themselves to be descended from their totem. It may be interesting to enquire how this strange notion arose. It seems that at first only the ties of the clan were recognised as binding or even as existent among men. To kill a member of another clan was not murder; moral obligations, even of the most rudimentary sort, only bound those who were of one blood, of one kin. If the blood relationship could be extended, the sphere of moral obligation was correspondingly enlarged; and this was commonly done by making a blood-covenant between different clans, which so became united—thus paving the way for the replacement of clans by nations. For the blood-covenant, it was sufficient if a few drops of blood were mutually exchanged between the members of the different clans—a ceremony which still is enacted among the natives in some parts of Africa.

Again, analogy played its part. The objects of the natural world were seen to fall into genera and species, much as the human race into clans and families. So was suggested the idea of forming a blood alliance with one or other of such species, which was deemed to possess supernatural power and therefore to be meet to be conciliated. First, the animal species would be chosen, and the animal thus selected would become the *totem* (family mark), or kith and kin to the human clan; afterwards the analogy would be extended to include plants and other natural objects. A moral obligation was thus established mutually; the life of the animal or plant must be cherished equally as the life of one's brother-clansman; and so developed the domestication of certain animals, and the preservation and cultivation of certain plants.

Then imagination came into play, and the relationship between the clan and its totem was explained as being not artificial, but natural. A myth would be invented to explain that the kinship was real, and either the totem would be taken as being the ancestor of the clan (as in the earlier myths), or it would be shown how the man had at one period or another assumed the totem form (as in later rationalizing myths). So arose the numerous myths of transformation into or from animals which have prevailed almost universally.

Essentially the totem was an object of worship, for it was the abode of supernatural power, and this was the reason why an alliance with it was sought. To procure the presence of this supernatural ally when needed, the blood-covenant must be renewed, the blood of the totem animal must be shed. This shedding of blood was next interpreted as the offering of the animal to the god. Finally, it was felt that the presence of the god, and communion with him, could best be ensured by the worshippers consuming the totem in whole or in part; and so the sacrifice to the god became a meal in which the worshipper symbolised and realized his unity with the god. But the blood must not be shed on the ground and so dissipated; that would be taboo; so a heap of stones was raised, or a simple stone pillar, on which the sacrifice was made. Thus an altar was originated; and again, by association of ideas, it became sufficient to procure the god's presence if the pillar was smeared with the blood. Then the pillar became the symbol and instrument of the god's presence, and was often carved into some resemblance of the god or of the totem; and so, whether marble monolith or wooden asherah (the "groves" of our Old Testament), the pillar became an idol, to which in turn sacrifices were often offered.

TABOO. This is a Polynesian term, denoting the sacredness of certain things, which must rigidly be avoided in touch, hearing, or sight. They are equally sacred and accursed, they communicate sanctity or impurity. Women, corpses, blood, new-born children, the totem, etc., were taboo; all that touched these or came into communication with them were equally taboo. One's "Sunday-best clothes" are historically taboo; hence, too, comes the inviolability of sanctuary in mediæval times. A sacred monarch of an African tribe can even communicate the contagion of taboo by infecting the daylight with his glance; wherefore he must needs always have an umbrella over his head when he goes out of doors. The distinction of certain things as taboo is by no means based on expediency or common sense, it is not derived from any experience of their harmfulness; rather it is an instinctive recognition of the categorical imperative "Thou shalt not" (as Professor Jevons points out); it is the acceptance of a moral law based on intuition, not on utility. It may issue in enactments of ceremonial purity such as are contained in the Mosaic Law, and reason and experience may subsequently add to, or take from, its enactments; but primarily it is the rudimentary distinction between what is essentially the morally right and the morally wrong—it contains the germ of morality.

FETISHISM. A fetish (or fetich) is a material object which is regarded as the vehicle of a supernatural presence, as containing a spirit which possesses supernatural powers. By a false identification of the sign and the thing signified (just as a person's name is sometimes considered to be identical with the person himself), races of low civilization often consider that the possession of such an object gives its possessor control over the supernatural power associated with it. Thus the fetish is not an idol, for it is not worshipped, but is treated as a means of compelling the deity to yield to man's desires, and to become his protector and even his slave. Then follows the notion that the spirit can, under certain circumstances, be compelled to adopt a certain object as its dwelling-place. Consequently there grows up a whole system of magic which is essentially hostile to the spirit of religion; for it replaces dependence on a higher power by a belief in the possibility of controlling the higher powers, and making them subservient to man's wishes. It may be remarked that a *fetish* is always some particular object, whereas a *totem* is never an isolated individual, but always a class of objects.

POLYTHEISM AND PANTHEISM. The notions expressed in animism, totemism, fetishism, etc., may lead to the separation of various deities from one another, and the regarding them as each having a distinct sphere of action and dominion, in which they are to be the supreme objects of worship. This is **Polytheism**, whose "many gods" are mostly in origin powers of nature, "nature gods," which gradually are personified, and by this process of **Anthropomorphism** are supposed to exist and act as men, only with less limited powers. Among these gods are often enrolled ghosts, the spirits of the departed, and especially departed heroes. Anthropomorphism is the inversion of the truth contained in Genesis i.; instead of viewing man as made in God's image, it makes God in man's image, and sees in Him some of the limits and many of the imperfections which exist in man.

A natural re-action from Polytheism and Anthropomorphism, is to **Pantheism**, which seeks to identify the universe with God, and, in its baser form, God with the universe. Thus it regains that unity in the world to which experience testifies, but which polytheism had lost; and it finds a sacredness in the universe which lower systems of thought miss. So far as it "sees God in all things, and all things in God," it is consistent with the teaching of Saint Paul

in Acts xvii., and Colossians i., ii.; it is only when it seeks wholly to identify God with the universe that its tendencies become un-Christian (as is the case with the Vedantic philosophy in Hinduism).

The term itself is a modern one, and is in contrast to the **Deism** of the 18th century, which entirely separated God from His creation, and denied the necessity or possibility of any revelation from God to His creatures. At the present day, Pantheism is rather known as **Monism**, a term which strictly denotes the unity of all substance, of all existence. Unfortunately it is often used as the equivalent of **Materialism**, which would make mind merely a function of matter, and thereby deny all spiritual existence; while **Spiritualism** would either reverse this relationship, or else maintain an ultimate dualism between mind and matter.

Having thus outlined some of the fundamental religious conceptions of man, when unenlightened by revelation, we now proceed to deal in detail with those great world-religions which do not claim for themselves the authority of a special revelation.

HINDUISM.

RACE AND LANGUAGE. Asia has been the birthplace of all the great religious systems of the world, and therefore, to understand these systems, we must have a clear notion of the varieties of race and language which have originated in that continent. These varieties group themselves in the three well-known families of the Semitic, Turanian, and Aryan races. The SEMITIC languages include Arabic, Syrian, Phœnician, Hebrew, Babylonian, and Assyrian; and though the area in which they have been spoken has been comparatively limited, yet the religious genius of these nations has had the profoundest and widest influence.

The original home of the TURANIAN race seems to have been the belt of mountain-land in central Asia, which stretches from the north of the Sea of Aral into Mongolia; in the west, this people was identified with the Scythians (whose representatives in modern Europe are the Turks, Hungarians, and Finns), in the east, with the Mongolians (who very early settled along the Yellow River, and peopled China). In pre-historic times this race had penetrated into India, partly through the Punjab, partly by the eastern passes of the Himalayas; the aborigines whom they dispossessed, but who probably were of kindred blood, were the Kolarians, whose descendants are the lowly-civilised inhabitants of Chota-Nagpur of the present day; while the immigrants became known as Dravidians, whose modern dialects comprise Tamil, Telugu, Malabar, etc.

The cradle of the ARYAN peoples was the source of the Oxus, nestling between the Pamir steppes and the Hindoo Koosh mountains; thence originated two waves of migration, one north-west into Europe, the other south-west over Persia and India, from which circumstance Indo-European or Indo-Germanic is often used as an equivalent term to Aryan. In Europe, offshoot after offshoot was thrown off from the parent stock to settle in the lands which were successively mastered, and so there developed such families of languages as the Celtic, Hellenic, Italic, Slavonic, and Teutonic; while the invasion of Persia and India gave rise to the Iranian and Indic tongues respectively. The ancient Iranian language became afterwards known as *Zand* or *Zend*, because in it was written the Zend-Avesta (i.e., commentary and text), the sacred scripture of the Zoroastrians, the modern Parsees. In India, the Aryans spread in successive incursions first over the Punjab, then along the valley of the Ganges, and at last southwards into the Deccan; their early speech is preserved for us in *Sanskrit* (=refined), the language of the Vedas and other sacred literature of the Brahmans, which is now recognised as being only one remove from the primitive Aryan tongue.

> As centuries passed, there evolved from the original Sanskrit numerous vernacular dialects, and before our era Sanskrit ceased to be spoken except in the Brahman schools, where it is still studied, and occupies much the position that Latin does in the Roman Church. These various dialects are called *Prakrit* (=natural, unrefined), and of them there are some hundreds, one of the most notable being *Pali*, the language of the Buddha himself, and of the early Buddhist scriptures; all these dialects stand related to Sanskrit as Spanish or Italian does to Latin.

Thus in the population of India three distinct strains are to be traced—Kolarian, Dravidian, Aryan; but there are comprised at least a dozen different nationalities, whose varieties of language number between five and six hundred. Nor is this wonderful if one bears in mind the constant foreign influence to which the country has been subjected, not only through the various European settlements of the last three centuries, but also in earlier ages through Persian, Greek, and Muhammadan invasions; and though native princes at various times won for themselves wide power, there never seems to have existed a unified native Indian empire—we must regard India rather as a continent than as a country. Of its 300 million inhabitants, about one-fifth profess Muhammadanism; the religion of the great mass of the remainder can best be denominated Hinduism, a convenient term to denote an agglomeration of every conceivable form or negation of philosophy and faith, which knows only one heresy—the denial of caste and Brahmanic supremacy. It is in the acceptance of caste, and not in any variety of belief or unbelief, that the unity of Hinduism lies; within its pale all inconsistencies of thought can be tolerated, even if they cannot be reconciled, and the law of contradictories may become a dead letter; it is ready to humour any idiosyncrasy, and to show indulgence to any prejudice; but for the distinctions of caste it imperatively demands a universal assent.

CASTE. Doubtless the system of caste originated in the contempt which the Aryan (=noble) conquerors had for the Turanian natives, and in the necessity which they felt for protecting their purity of race from intermixture with that of their conquered foes. By about 1500 B.C., Aryan incursions into India had ceased, and the invaders were losing their nomadic character, and settling down in village communities to the pursuits of agriculture and commerce. Their three chief occupations in life—religious worship, war, trade—had already given rise to the three classes of priests, warriors, and merchants, which in course of time became stereotyped into the three strictly hereditary castes of *Brahmans*, *Kshatriyas*, and *Vaisyas* respectively; and these were afterwards honourably distinguished by the appellation "Dvi-ja" (the twice-born). The Turanian lowlanders, who still lived among their Aryan conquerors, and performed for them the more menial tasks in life, were added as a fourth caste of *Sudras*, artisans and labourers; but the other aborigines, many of whom were driven southwards, were of no caste at all, *Pariahs*, men outside organised society.

Members of different castes could not inter-marry, nor eat food in common, nor even touch one another; and gradually there grew up an elaborate system of domestic ceremonial, whose observance was of vital importance. As civilization became more complex, and new occupations in life arose, the four castes subdivided again and again; further, for some centuries the prohibition against inter-marriage seems to have been so far relaxed that the children born of an unequal union, say of a Brahman father and a Vaisya mother, constituted a new caste, neither Brahman nor Vaisya. But while the castes thus multiplied till they became several hundreds in number, the rigidity of their demarcation continued as severe as ever. The system was in some degree justified by its practical utility, for many castes served the same purpose as guilds, trades-unions, and professional societies among ourselves. When the custom of caste had grown inveterate, it was traced back to divine appointment, and a myth explained how, as animals had been created in various classes, so, too, God had made the Brahmans from His mouth to teach men, the Kshatriyas from His arms to defend them, the Vaisyas from His stomach to feed them, and the Sudras from His feet to serve them.

GENERAL CHARACTERISTICS OF HINDUISM. The easiest way to analyse Hinduism into its constituent, and often contradictory, elements, is to trace historically the growth of its sacred literature—only remembering that there is no process of discrimination or rejection between its different strata, but simply one of accumulation; a Hindu's belief is rather within than in his religion. The whole of this literature is in Sanskrit, and falls into two divisions:—

(1) The VEDA, whose composition occupied roughly the thousand years from 1500 to 500 B.C.; this is entirely *Sruti*, "revealed," attributable to no human agency, but divinely communicated to a succession of Brahman sages (*Rishis*), who handed it on orally, and at length committed it to writing.

(2) The POST-VEDIC LITERATURE, which is *Smriti*, "tradition," which has gradually been formed by human, yet inspired, authors to supplement and illustrate the original revelation.

As we dissect these scriptures, we may detect how a positive monotheism passed into nature worship and pantheism. Then side by side there developed an exoteric ritualism and an esoteric rationalism. Scepticism followed and the ethics of society found their basis in convention and law rather than in religion. Last appeared polytheism and idolatry, superstition and magic, unbridled immorality, and unlimited credulity. But it is open to the Hindu of to-day, without incurring the disapprobation of his co-religionists, to select and combine the characteristic features of all or of any of these stages of religious belief and practice, according to his personal judgment. One thing, and one thing only, is obligatory—the observance of *caste*; for *caste* is the single thread which runs through the whole complex tissue of Hindu belief and practice, and pervades a Hindu's entire existence.

In the study of the Hindu religion, we may conveniently distinguish three main periods—Brahmanism proper, down to the 5th century B.C., the Buddhist reformation on to the 7th century A.D., and their complex product, Hinduism, which exists in India to-day. To learn the nature of Brahmanism we must study the Veda or Brahmanic scriptures. The earliest hymns in the Veda suggest to us what was the primitive faith of our Aryan forefathers, they speak to us of the one reality of the universe—self-existent force, all-embracing self, universal spirit (*Brahman*). They tell us that the way of eternal life, the path of salvation, lies through knowledge (*Veda*). In the most ancient hymns *Brahman* is all in all; the whole of existence represents his successive emanations, the whole of sense-experience is due to his illusory appearances.

VEDIC LITERATURE. The Veda falls into three divisions: the text (*Mantras*) and its two sets of commentaries (*Brahmanas* and *Upanishads*).

1. The MANTRAS (charms to communicate thought) consist of five collections of hymns and texts of praise and prayer, probably compiled from 1500 to 1200 B.C., which contain no references to images, temples, the system of caste, or the doctrine of the transmigration of souls. The chief of these collections is the *Rig-Veda*, containing 1,017 hymns, in praise of the deified powers of nature.

2. The BRAHMANAS are prose-works, the result of priestly activity between 800 and 500 B.C., and are appended to the Mantras as a manual of ceremonial, arranging them for sacrificial use. The Brahmanas exhibit a belief in a future state with rewards and punishments, and hint at the transmigration of souls; but their main theme is sacrifice, which can alone avail for propitiation and for impetration of benefits, but which is only effective when duly performed by priestly mediators. Their sacrifices are of horses, oxen, sheep, and goats, which are regarded as substitutes for men.

3. The UPANISHADS are chiefly in prose, and belong to the same period as the Brahmanas, which was also the age of Pythagoras, Zoroaster, and Confucius. These treatises convey mystic doctrines respecting the everlasting problems of psychology and ontology. Each individual soul is like Brahman, and has neither beginning nor ending; its conscious life can only be when linked to a body, and here is the source of all suffering and sorrow; for thus is initiated a chain of cause and effect, of action and result—all summed up in the word *Karma*. At death, the soul, according to the karma (or the nature of the life spent on earth), is led through one of the temporary heavens or hells to another birth, to a second existence as mineral, vegetable, animal, man, or god, in all possible gradations. Again and again does such transmigration take place, until the soul, freed from all taint of individuality (*atman*, self), and released from all activity or suffering, finds its eternal bliss in its entire re-absorption into Brahman.

POST-VEDIC LITERATURE. The most important of this branch of Hindu literature is the LAW-BOOK OF MANU (a mythical sage), which consists of twelve books, a moiety of which deals with the life of the Brahmans, first as students, and secondly as married householders. These two stages are compulsory, but not every Brahman passes through the two remaining stages of hermit and mendicant. The other books treat of the principles of government, of the status of women, of various religious observances, etc. The whole twelve books have gradually won a general acceptance, and form the basis of modern Hindu jurisprudence, while they are the authority on all social customs, such as those concerned with the ceremonial purity of food, its preparation and consumption.

The remaining portion of Post-Vedic literature is known as the BHAKTI-SASTRAS. These writings inculcate *bhakti*, love or devotion to the gods, as a third way of salvation, the two others being *veda* (knowledge), and *karma* (good works). Of these writings, two claim our especial attention, namely, the *Puranas* and the *Tantras*. Lack of space prevents any consideration in detail of the later and baser forms of religion that are inculcated in the Puranas and Tantras; yet, as they are what constitute the popular Hinduism of to-day, a brief survey of them must be attempted.

In both these sets of writings, soul (*purusha*) is distinguished from primordial matter (*prakriti*). This distinction was identified in popular fancy with that between male and female, purusha being regarded as the male principle, and prakriti as the female; for, to the Hindu, activity is ever a sign of inferiority, and the quiescent purusha is deemed far nobler than the active energizing prakriti. Hence BRAHMAN, the one essence or germ of all being, was regarded as dividing into Brahma and Prakriti; and thus was evolved a scale of being, which reached from inanimate nature, through vegetable life, animals, men, heroes, and gods, up to its highest manifestation in the so-called trinity (or *Tri-murti*) of Hinduism: (1) BRAHMA, the Creator whose special quality (*guna*) is activity; (2) VISHNU, the Preserver, whose guna is goodness; and (3) SIVA, the Destroyer, whose guna is darkness.

Of the eighteen Puranas, one-third is devoted to the glorification of each of these three deities, with their corresponding gunas; yet, while six Puranas specially celebrate Vishnu, the other twelve commonly regard Brahma and Siva as being only manifestations of that god. Thus the Tri-murti is a triad rather than a trinity, the functions and attributes of the deities being interchangeable; indeed, the worship of Brahma soon fell into the background, thus leaving the cults of Vishnu and Siva, each of which male deities was associated with a consort (*Sakti*), who represented the female or more active element.

POPULAR HINDUISM. The worship of Vishnu (*Vaishnavism*) is the more popular cult, for Vishnu has more sympathy with man, and is thus the object of more loving devotion. It is Vishnu that pervades the heavens and all creation, and that is specially manifest in certain trees and animals—such as the tortoise, boar, or fish—in the sacred Ganges, and in man; and of his many incarnations (*avataras*) the most complete were in the heroes, Rama and Krishna, with their consorts, Sita and Radha. On the other hand, the cult of Siva (*Saivism*) is too cold and severe for ordinary Hindus, and is chiefly honoured by the ascetic mendicants, called *Yogis*.

Indirectly, however, Siva's worship has become most popular, for his "Sakti" (energy, female principle) is

commonly regarded as including all other Saktis, and to this deification of force and energy the most general reverence is paid. This form of Hinduism is known as *Saktism* or *Tantrism*, because it is inculcated by the "Tantras" (dialogues between Siva and his consort) just as the cult of Vishnu is by the "Puranas." Those who follow the Puranas are the "right hand worshippers," those who follow the Tantras are the "left hand worshippers." The orgiastic worship of the latter is most immoral and superstitious, its license being so great that even the distinctions of caste are for the time suspended, while magic is cultivated unrestrainedly.

While the popular worship may be analysed into the three (not mutually exclusive) phases of Vaishnavism, Saivism, and Tantrism, there are countless other deities in whose honour temples are erected and images made. The sun is adored daily, Ganesa (son of Siva and Durga) is propitiated as prince of the devils, vermilion-stained images of the monkey-god Hanuman are to be seen on all sides, and early fetishism still lives in the reverence paid to all things in nature—inanimate as well as animate. Among the most sacred objects are various trees, all rivers (especially the Ganges), their banks and towns upon them (Benares, Allahabad, etc.), and numerous animals (cows, monkeys, serpents, etc.).

Though the Hindu worships countless gods, he is earnest and devoted in their service. Every detail of his life is regulated by his religion. Each morning, before he can break his fast, he must go through a certain form of worship, and this always involves a bath. It is interesting to watch a Hindu at his devotions by the river-side; let us give one typical example:

> First he was seen to cast on the river his offering of flowers and then to rinse his mouth with water from the river. This done, he prayed, while standing first on one leg, then on another. Rising, he next bowed to the four points of the compass, and then poured out a libation of water in honour of the sun. Finally he washed his turban and loin-cloth, and was then ready to begin the labours of the day. Sometimes the Hindu places a little image before him as an aid to his devotions, and sometimes the worshipper fashions, out of mud from the river's bank, a little god for himself, which he chucks into the river when his prayer is ended.

Hinduism has always had its reformers, who have sought to return to the purer pantheism or even monotheism of the early Veda. The most famous of these was Rammohun Roy, the founder of the *Brahma Somaj* (Society of God), a Brahman who, early in the 19th century, recognised the value of Christ's moral teaching, and vigorously promoted the abolition of *Suttee* (the burning of wives on the death of their husbands); and his efforts have been continued in various societies whose belief hovers between Pantheism and Unitarianism.

BUDDHISM.

LIFE OF BUDDHA (pronounced Boódha). Round the figure of the Buddha, as has happened with Confucius, Muhammad, and many other of the world's great heroes, there has accumulated a mass of myth and miracle; but when this has been cleared away, we come upon episodes which can safely be regarded as historical, and which we now proceed to relate.

In the 6th century B.C., as one result of the Aryan invasion of India (see the commencement of the section on Hinduism), there dwelt in the N.E. of India an Aryan tribe, the Sakyas, who had secured to themselves a home in the eastern part of the valley of the Ganges, on the borders of Nepaul, stretching between the modern towns of Allahabad and Patna. The chieftain or rajah of the tribe was Suddhodana, to whose wife Maya, about the year 564 B.C., was born a son, Siddhartha, or, to give him the family name by which he is better known, Gautama or Gotama (pronounced Gów-tama)—the former being the form in Sanskrit, the latter in Pali. Pali, we may remark, is the dialect of Sanskrit in which the Buddha always taught, and which thus is the sacred language of the Buddhists as Sanskrit is of the Brahmans. This child afterwards became the *Buddha* of history, "the Perfectly Enlightened One," whose nominal followers now number more than a third of the world's population.

To Gotama, engrossed from youth in the problems of the vanity of life, and the universality of suffering, there came at last a crisis in spiritual experience. He had married his cousin Yasodhara, the daughter of Suprabuddha, rajah of the neighbouring tribe of Koli, and by her, in the twenty-ninth year of his age, he had a son, Rahula. "There is one more tie I shall have to break," said Gotama, when the news was told him, and straightway he made the "GREAT RENUNCIATION."

Abandoning the privileges of his caste, and leaving his home and kindred, he wandered into the neighbouring kingdom of Magadha or Behar (which occupies the valley of the Sone, a tributary on the right bank of the Ganges). In the hills round its capital Rajagriha (Rajgir), he practised the ascetic life, and became the pupil of the Brahman recluses, Alara and Udraka. When he had learnt what they could tell him of the mysteries of life, there remained yet one avenue for further knowledge—that of the severest self-mortification and penance, until the soul, unsoiled by the allurements of sense, was free and able to penetrate the secret of existence. For six years he resolutely pursued this stern course of training, living in the jungles, and associating only with five faithful disciples. Then in despair he abandoned asceticism as profitless, and returned to a more ordinary way of life, thus sacrificing the allegiance of his disciples and dissipating the halo of superhuman sanctity which had gathered round his name. But light was at last to shine in upon his darkness. One day, as he was sitting beneath the Bodhi Tree (the tree of wisdom, thenceforward known as "the sacred Bo-Tree," *ficus religiosa*) near the Gaya (30 miles S.W. of Rajagriha), the conflict with the powers of evil came to an end. He had won the victory, he had attained *Buddhahood* (perfect illumination).

> Two truths seemed to him the solution of all his doubts: (1) "not that which goeth into a man can defile him"—the path of freedom is the middle path between asceticism and sensuality, the way of rational self-control; and (2) "he that will seek his soul shall lose it"—the restless cravings of self disappear in a life of love, of devotion to the service of others. Thus he had attained *Nirvana*, perfect peace, unruffled calm; but in pity and love for humanity, the Buddha consented to remain among men that he might be their Saviour.

Straightway he returned to Benares to preach his gospel to all who would hear, without regard to distinctions of caste or culture. In the Migadaya wood, now called Dhamek, a few miles north of that city, there gradually gathered round him an Order of Monks who were ready to give up all in order to learn, practise, and teach the "WAY OF LIFE." Year by year, during the four months of the rainy season, he imparted to them the knowledge which he had attained, and which he had already formulated into a definite system; the remaining eight months of each year were spent in missionary work, that all might have an opportunity of pressing into the kingdom of righteousness; for he had a message, too, for the layman whom ties of family and household might prevent from joining the Order. Later he found himself driven, though reluctantly, to found an Order of Nuns, among whom the first was his wife Yasodhara. In such efforts he spent forty-five years, and then in the eightieth year of his age (probably 484 B.C.), the Buddha passed away, leaving behind an example and a teaching which have proved the sole consolation in life to millions upon millions, and a system of thought which has won for itself more nominal adherents than any of the world's great faiths.

SPREAD OF BUDDHISM. After steady propagation for two centuries by the monks, Buddhism received a tremendous impetus from the conversion of Asoka, the "Buddhist Constantine." Asoka was the grandson of Chandragupta, the robber chieftain, who, some ten or twelve years after Alexander the Great's visit to India, had made himself rajah of Magadha and, after effectually defending the Indus valley from Greek aggression, had

spread his empire over the greater part of Hindustan. When Asoka succeeded to the throne in 272 B.C., he at once recognised Buddhism as the established faith within his dominions; his son Mahinda became a missionary to Ceylon, whither in 245 B.C. his daughter Sanghamitta brought over a body of nuns, with a branch of the sacred Bo-Tree, which was planted at Anuradha-pura, where it is still pointed out as the oldest historic tree in the world. Asoka died in 232 B.C., but the state-recognition of Buddhism preluded its downfall. True, Brahmanism learnt from it to emphasise the value of virtue and of meditation, to hold all animal life in high respect, and to ameliorate in some respects the hardships of caste, and it recognised Buddha as an incarnation of Vishnu; but Buddhism began to grow corrupt at least as early as the second century in our era, while from 600–800 A.D. its adherents were bitterly persecuted by the Brahmans. When the Moslems overran India, in the 12th century, but few avowed Buddhists were to be found; and now, with the exception of Ceylon and semi-Mongolian Nepaul, Buddhism is as rare in India as Christianity is in Palestine.

But while the faith was dying out in its native land, missionary effort was spreading it vigorously abroad. Missionaries entered China in the first century of our era, and in the 4th century Buddhism was established there, and emissaries from China converted Corea. In the middle of the 5th century Burma was evangelised from Ceylon; a century later Japan received the faith from Corea; yet another century, and Siam also gave in its allegiance. Now, Buddhism is professed throughout China (including Manchuria, Corea, Mongolia, and Thibet), Japan, Further India, and among the Kalmuck Tartars north of the Caspian, and the number of its adherents is reckoned as being not far short of 500 millions.

Just as Christendom has been divided into Eastern and Western (Greek and Roman), so Buddhism has experienced a schism between what may roughly be called Southern and Northern. The former predominates in Ceylon, Siam, and Burma, and is known as the *Hinayana* or "Lesser Vehicle" (for conveyance to Nirvana); it adheres strictly to the simplicity and morality of Gotama, and limits its canon of scripture to the *Tri-pitaka* (see below). The Northern School prevails in Kashmir, Tibet, China, and Japan, and is called the *Mahayana* or "Greater Vehicle"; it allows an elaborate ceremonial and a laxity of morals such as Gotama strenuously denounced, and its canon of scripture is more extensive.

THE BUDDHIST SCRIPTURES. Gotama himself left behind no written works, but a body of oral teaching which had been during his lifetime committed to memory by his disciples in full and precise detail. The death of their founder made it necessary for the monks to crystallize his teaching, and so was held the first Council of the Order near Rajagriha in 483 B.C. A century later, a second Council was held at Vaisali (Besahr), when the majority who were laxer in discipline were ruled out as heretic by the orthodox minority. About the year 250 B.C., under king Asoka, a third Council was held at Pataliputra (Patna), when certain books were recognised as containing the orthodox teaching; and there is little reason to doubt that these were substantially identical with the *Tri-pitaka* (three baskets, or three collections), the canonical books of the Ceylon Buddhists.

> These consist of (1) the *Vinaya Pitaka*, the book of discipline for the Order; (2) the *Sutta* or *Sutra Pitaka*, the book of aphorisms, precepts, and discourses for the laity, teaching them how to attain *Dharma* (righteousness, the Law, virtue and benevolence), and including the *Jataka*, a collection of folk-lore which regarded the heroes of old as previous incarnations of the Buddha; and (3) the *Abhidharma*, or supplementary philosophical dissertations.

The text of these is in Pali, and it is interesting to notice that the Brahman Sanskrit literature entirely ignores Buddhism (while the Pali Buddhist literature ignores all Sanskrit literature subsequent to the Vedas), just as Josephus or the pagan writers of the 3rd century A.D. studiously ignore Christianity. Besides the Three Pitakas (the length of which, excluding the numerous repetitions, Professor Rhys Davids estimates to be less than that of our Bible), there are various Sanskrit Commentaries which contain many legends of the life of Gotama, while in addition there are the sacred books of Chinese and other Buddhists, which bear to the original history much the same relation that Milton's Paradise Lost and Paradise Regained bear to our Bible.

TENETS OF BUDDHISM. Naturally a system which has been in existence for over two thousand years, and has won adherents from among races that are almost savage, as well as from among those that are highly civilised and profoundly thoughtful, must present varying and even inconsistent features at different times in its history, and at different points in its empire. The very capacity for development, the very adaptability, which enable such a system to prevail, must also tend to obscure its origin. Here, however, we shall endeavour to recover its primitive form, and to deal with the salient points of the Buddha's own teaching.

Strictly, Buddhism is not a religion: it has no theology, it claims no knowledge of God, it teaches no duty to Him; its gods (*devas*) are finite beings, subject to the same laws of change and decay as man himself; it recognises no soul, in our sense of the word; it finds no place for prayer, sacrifice or priest. Rather is it a philosophy of life, a scheme of morality, with "work out your own salvation" for its motto. So it is possible in China for a Buddhist to worship in a Taoist temple, or in Japan in a Shintoist. Again, it is misleading to regard Buddhism as the opponent of Brahmanism; many of the early Buddhists were Brahmans (nearly all were drawn from the higher castes), and Gotama regarded himself simply as a restorer of that inner truth which Brahman ritual had obscured; indeed, the relation of Buddhism to Brahmanism is not unlike that of Christianity to Judaism. The Brahmans, accordingly, welcomed its teaching among their other philosophies, and were only led to exclude it as a system from Hinduism, because of its rejection of caste and its apparent atheism. Further, we must notice that underlying the Buddha's thought is a profound pessimism, such as has found a Western exponent for later days in Schopenhauer; the very constitution of man's nature necessitates its dissolution, and all that is in the world, and the lust of life itself, do but serve to lure man from true bliss. Here we can only trace in outline the main doctrines which the Buddha taught.

SUFFERING is ever co-extensive with conscious life, for life, as man knows it, is not mere unqualified existence, but a constant passage from one stage to another; in other words, human life consists not in being but in becoming. It is made up of potentialities, whose realisations do but serve as the potentialities of something further. The only release from suffering comes, not by the gratification, but by the extinction of desire; but since desire is inseparable from life, what then remains? The extinction of life, *such as we can know or can imagine*, the calm of *Nirvana*, perhaps not strictly annihilation, but an existence from which the baleful consciousness of self has been eliminated —existence, apparently, without personality. So Gotama enunciated his "Four Noble Truths"—(1) that suffering is co-extensive with life, (2) that the cause of suffering is desire, (3) that release from suffering depends upon the extinction of desire and the attainment of Nirvana, and (4) that Nirvana can only be obtained by following the "Noble Eightfold Path."

> This path is the *via media* between licentiousness and asceticism, and it contains eight principles, the first four being applicable to all men, the last four only to monks. These principles concern right vision or belief, right aims or thoughts, right words, right actions, right mode of living as a monk, right endeavour in the study of the law, right mindfulness in remembering the law, and right meditation.

The doctrine of the *transmigration of souls* found a place in Gotama's system. He taught that the soul on resuming its earthly course (which had been interrupted by death), enters upon a form of existence which is conditioned by the net result of the previous life, i.e., by its *Karma*, (its doing, desert, merit). According to the quality of the

Karma, the new being will be in one of the different grades of plants, animals, men, or gods; yet whatever bliss may thus be attained is transient; all sentient being is finite, imperfect, the prey of change, of desire and sorrow; the "ocean of transmigration" has again and again to be crossed by all except the blessed few who have found the safe haven of Nirvana.

The distinction of caste in Gotama's code of ethics becomes insignificant, when compared with the reality of "Karma." Love and benevolence must characterise the man who has gained a glimpse of the universality of suffering, none of which is vicarious; kindness to animals becomes the plainest of natural duties; actions must issue in their rightful consequences, and so sacrifices are vain—"to obey is better than sacrifice"; only by the way of self-denial and contemplation can men hope to shake off the infirmities of their nature.

On the "Eightfold Path" already mentioned, are four stages: (1) the stage of those who are converted, (2) the stage of those who will return but once to this world, (3) the stage of those who will never return, and (4) the stage of the *Arahats*, who have attained perfection of insight. As progress is made along these stages, the ten "fetters of error" are struck off men's minds: these fetters are delusion of self, doubt of the Buddha, reliance on ceremonies, sensual passion, hatred, lust of material existence on earth, and of immaterial in heaven, pride, self-righteousness, and ignorance.

> For laymen there are five prohibitions—not to kill, steal, lie, drink intoxicants, or be unchaste. For monks there are five more—not to eat except at stated times, to abstain from dancing, singing, music, and theatres; to use no garlands or perfumes; to use no bed except a mat spread on the ground; and not to receive gold or silver. The monks are also enjoined to dress in rags, to have only one meal a day, which must be on food begged from door to door, to have no furniture but a carpet, to live part of the year in the open air, etc. A weekly Sabbath, or fast, is to be observed by everybody at the four quarters of the moon. The Buddha gives definite instructions concerning mutual duties between parents and children, teachers and pupils, husbands and wives, friends, masters and servants, etc. Much of this moral teaching is contained in aphorisms like those of the Book of Proverbs, or in parables and similes, which remind us of the parables of the New Testament.

So for all men the Buddha "came to turn the wheel of the excellent law," that is, to found the kingdom of righteousness, and to all men he seemed to think, was possible the religion he taught—"To cease from all wrong-doing, to get virtue, and to cleanse one's own heart." Yet the Buddha felt that *practically* it was almost impossible for men living in the world to escape its allurements, and for this reason he founded his order of monks. Very early, however, the vow of poverty was regarded as applying only to individuals, not to the communities. The latter soon acquired houses, lands, and other wealth, and their monasteries sprang up on all sides, liberally endowed by the alms of the faithful; still more frequently did this happen from the time of Asoka onwards; and so within the monasteries were to be encountered the very dangers to escape which the monks had left the world.

CORRUPTION OF BUDDHISM. It was this inner corruption of spirit that mainly led to the disappearance of Buddhism from India. Nor elsewhere could Buddhism remain pure; it had one fatal deficiency—*it knew no God.* The blank was sometimes filled, as has been said, by superadding a definite religious belief to the Buddhist morality and metaphysics; but often a theology has been developed within the system, and so there have reappeared in monstrous forms the superstition and externalism which Gotama had sought to destroy. Southern Buddhism (in Ceylon and Further India) has retained much of its pristine purity; but the taint has spread wide and deep through the Northern Buddhism of China, Japan, Tibet, and Nepaul. Endless genealogies and fables were invented according to the merest whim of fancy; the world as we know it had to have a First Cause, and links had to be devised, by which the material universe might be brought into touch with the Eternal and Infinite. Buddhism was assailed by the same Gnostic heresy as had tried to lodge itself within Christianity; and then followed idolatry, incantations, magic, and the belief in ritual as efficacious *per se*. Buddhism, then, has taken very different forms in different lands, and is often mixed with much idolatry and many superstitious observances.

> Tibet, for instance, has invented its praying-wheels, or praying-flags, on which the winds spread to the heavens the magic word *Anritaya Om!* In Tibet too has arisen the weird phenomenon of *Lamaism*, whose worship—with its altars, incense, holy water, images, and rosaries—outwardly seems a travesty of High Mass. For nearly five centuries the *Dalai Lama* (abbot of a monastery near Lhasa) has been recognised as head of the Buddhist Church throughout China—the head of a Church which contradicts almost every tenet of its reputed founder.
>
> In Burma, to take another example, the Buddhist religion is seen in a more favourable aspect. The number of temples or shrines to be seen there erected in honour of Buddha is extraordinary. Still more numerous, perhaps, are the monasteries, which also serve as the schools of the country. In the Burmese capital there are said to be thirty thousand Buddhist monks. They must eat, wear, and use nothing that is not given to them in charity. They may be seen each morning, dressed in their shabby yellow robe, going round from door to door, with bowl in hand, to receive any present of rice, fruit, or fish which the charitable may be disposed to offer.

We may add, in conclusion, that modern *Theosophy*, as known in the West through the efforts of Madame Blavatsky, Mr. Sinnett, and others, whatever else may be said of it, is not typical of ordinary Buddhism. Its professors avow it to be an esoteric Buddhism, and admit that it is only known in Tibet, and there but very scantily.

PARSEEISM (Modern Zoroastrianism).

ITS HISTORY. Modern Parseeism is a survival of ancient Zoroastrianism, the religion of the Medes and Persians in days long past. These Aryan races were closely akin. The Medes broke away first from their early home in the Oxus valley and overran modern Persia, subduing the aboriginal Accadians, who were of Mongolian extraction. Later, the Persians occupied the province of Farsistan (*Farsees*=Parsees=Persians), and in 558 B.C., under Cyrus, overthrew the Median empire. Centuries earlier than this, while they were passing from the nomadic life to the agricultural, must be dated their *Gathas*, the hymns contained in their sacred writings—the *Avesta*. In the obscurity of pre-historic times seems also to have occurred a religious schism between them and the Brahmans of North India, with the result that the Hindu devas (gods) became the Persian demons, the Vedic *Indra* became the Persian devil, and the Hindu enemies of the gods became the Persian beneficent powers, the *Ahuras*.

The Persian modification of the original Aryan religion took the name of *Zoroastrianism* from its great reformer Zoroaster, the date of whose life is most doubtful. Perhaps two or more reformers became identified in later times, but while Pliny would put Zoroaster centuries before Moses, Persian tradition places him in the 6th century B.C.; the probable duration of his life seems to have been from 589–539 B.C., and he is said to have perished in the siege of Balkh by the Turanians. He may have been one of the Magi, or hereditary priests of the Medes, and in his reformation may have enlisted the aid of the Persian conquerors against his fellow-priests who withstood him.

The *Zend-avesta* (=commentary and text) is attributed to his authorship. It comprises four divisions: the hymns and prayers for worship, the sacrificial ritual, and a code of laws, both religious and civil; and so the Zend-avesta in pure *Zend* (or early Persian) ranks with the Veda in Sanskrit, and the Buddhist Tri-pitaka in Pali.

ITS DOCTRINE. The Zoroastrian religion is essentially dualistic. *Ahura-Mazda*, "Lord Wisdom" (=Ormuzd), the god of the sky—who is symbolised by the sun, or the fire, or light—is eternal justice and righteousness, and with him are the *Amshaspands*, the immortal saints, personifications of the virtues which Ormuzd has created in man.

Over against him is *Ahriman*, the prince of darkness, who was sprung from the Spirit of Evil, *Angro-Mainyu*, who in turn had been driven from heaven by the victorious angel *Mithra*, and whose agent and legate is *Indra*. But this dualism is not to be everlasting; light is to overcome darkness, good is to exterminate evil; the wicked will perish in hell, but the just will rise again in their bodies, and experience the eternal bliss of heaven. Meanwhile purity in thought, word, and deed (not ceremonial purity alone), with honesty and truth, are the chief virtues to be cultivated by man.

This noble religion was almost exterminated from Persia during the Muhammadan invasions of the 7th century A.D. Some few Zoroastrians are left at Kirman and Yazd, but the majority took refuge in India around Bombay. These form the *Parsees*, or Fire-worshippers, a rich merchant-class that is eminently susceptible and responsive to British influence. In no wise are they idolaters, they reverence the sun or fire only as a symbol of the Divine majesty. They have kept entirely aloof from the natives around them, preserving their race and religion alike intact from all extraneous influences. They still retain their ancient custom of exposing the corpses of their relatives to be devoured by vultures.

CONFUCIANISM.

LIFE OF CONFUCIUS. The life of Confucius was singularly destitute of striking events. He was born in the State of Lu (part of the province of Shang-Tung) in the year 551 B.C., his father being a famous soldier, Shu-lang Heh, and his mother's name Yen Ching-tsai. The name Confucius is a Latinized form of Kung Futze (i.e. Kung, the master or philosopher). His married life seems to have been unhappy, and after the birth of a son and two daughters he divorced his wife. But his chief aim was the reformation of the State; so, not unlike the Sophists or Socrates in Greece during the following century, he wandered from court to court, seeking to instil into the minds of princes his maxims of wisdom and virtue, while round him there gathered a band of devoted disciples, anxious to imbibe and promulgate his teaching. His meeting with Lao-tsze (see section on Taoism) was almost as famous as that of Alexander with Diogenes, and his discomfiture in the presence of that austere philosopher seems to have been complete. In 501 Confucius was appointed magistrate of Chung-tu, where for three years his political theories met with practical success in reducing crime and increasing general happiness; but this aroused the jealousy of neighbouring States; the Duke Ting's patronage was cunningly alienated from him, and Confucius felt obliged to resign office and return to his travels. After some fourteen years he returned to Lu, but though honoured by all, he held no office. He died in the year 478 B.C.

While in his lifetime Confucius met with scant success, his memory has been honoured most highly, and his precepts reverenced far and wide. Every town or country district in China has its temple for the worship of the Sage and of his most distinguished followers in various ages, their canonisation being effected by imperial decree; emperors have vied with one another in devising titles that may express the Master's worth; his tomb at Shang-tung has been the object of many a pilgrimage, and at his temple in Peking the emperor solemnly worships twice a year; while his descendants are honoured and enriched, his lineal successor being entitled Kung (duke), and ranking next to the imperial family.

THE CONFUCIAN SCRIPTURES. The books which are considered to contain the teaching of Confucius in its purity are, (1) the *Lun Yu*, or "Confucian Analects," which was compiled by his immediate disciples, and, somewhat like Xenophon's Memorabilia of Socrates, records the Master's maxims and conversations, and gives a detailed picture of his personal life; and (2) the *Ta Heo* (Great Learning), and (3) the *Chung Yung* (Doctrine of the Mean), which are supposed to have been written by the Sage's grandson, Tsze-sze.

Confucius himself edited the ***Yih King*** **(Book of Changes),** the *She King* (Book of Odes), **and the** ***Shu King*** **(Book of** History). The last-named **gives a record of the "Golden** Age" under Yaou (c. 2356 B.C.), **and his successor Shun,** and tells how their dynasty **degenerated until it was** replaced by that of T'ang (1765 B.C.), **whose line again had to** give way before the reformer Wu (1122 B.C.). **Confucius** also composed the *Ch'un ts'ew*, **a continuation of the Shu** King, which relates how the evil **example and misgovern**ment of the kings had **produced the oppression and disorder** which were so rife in his own day.

These books, with the *Mang-tsze* **or works of Mencius** (born 371 B.C.), the reforming **enthusiast who tried to** revive Confucius' teaching **in its purity, form the Chinese** classics, on which are based **all education and all the** competitive examinations, by **which promotion in public** life has been regulated for **the last thirteen centuries.**

TENETS OF CONFUCIANISM. **The dissimilarity of the** Mongolian and Aryan races is clearly **reflected in the** contrast that Confucianism **presents to Hinduism. The** Brahmans have no regard for history, **and no aptitude** for natural science; **their speculations are never submitted** to the test of facts. **The Mongolian temperament is** deficient in imagination, **it does not nourish ideals that** might help towards progress, **it has no mystical side, but** self-contained and self-contented **it limits its speculations** to questions of practical utility; **and it was as the exponent** of the national character **at its best that Confucius won** and has retained among **his countrymen his unique position** as Sage and Master.

As has been said of Buddhism, Confucianism (which may aptly be termed Chinese Positivism) is not strictly a religion at all. It leaves the worship of *Shang-te*, the One God, as the peculiar duty of the sovereign, who is both father and priest to his people; it recommends wise men to be reverently minded towards, but to hold aloof from, the members of the spirit world: and it recognises no need for either prayer or confession of sin. Really, Confucius did not interfere with the native religion of China, which is often called *Sinism* (*Sin*=faith); as it was the emperor's province to sacrifice to Shang-te, so it behoved the various provincial dignitaries to worship the "hosts of spirits," the gods of hills, and rivers, and winds, while on all alike were incumbent the duties of filial piety, as expressed in orderly ancestor-worship.

The chief aim of Confucianism is to promote the welfare of the state, here and now. The weakness and discontent, ignorance and poverty, such as characterised the petty states of China in the Sage's lifetime, it seeks to remove by returning to the methods of government of the "good old days" of Yaou and Shun and Wu. Thus it avoids any claim to originality, and seeks only to transmit the wisdom and virtue of the past, not in a coherent system, but by means of moral maxims. All men are born good, but are liable to contamination, even as river water, which rises pure from its source; yet it is admitted that men "are prone to err, and their affinity for the right way is small." All the greater, therefore, is the need for a good example, specially from those in authority; rulers must seek the "welfare of the people," and the loyalty of the subjects is conditioned by the ruler's devotion to their interests. A similar reciprocity must prevail in conduct between man and man; and "what you do not want done to yourself, do not do to others." If mutual duties are thus observed in a state, "those who are near will be made happy, and those who are far off will be attracted"; but if the government neglects the welfare of the governed, it may be superseded. To this teaching no doubt Confucianism owes much of its popularity; the rulers find in it a sufficient title to their position, while the ruled feel that the means of redress of grievances is in their hands; and it is to be noticed that dynastic revolutions in China have been both numerous and peaceful.

But while all men are born good, occasionally there appears a man so richly endowed by nature with knowledge and virtue, that he is "the equal of Heaven (T'ien)"; he is the ideal man, the *sage*, of whom there are now officially

recognised thirteen (who lived between 2850 and 1100 B.C.), in addition to Confucius himself; but the latter never deemed himself a sage, nor even a "superior man." This is the name for the man, who, by learning, has gained knowledge (specially knowledge of the right way of life), and by resolution of will has preserved his native virtue uncorrupt. To this height all can reach, and the superior man is the pillar equally of family and state; he, and he alone, unless a sage appears, can ensure tranquillity and happiness. His virtue is founded on sincerity, where words and acts, names and things, correspond; benevolence is his characteristic, in which are exhibited loyalty to duty (tempered by the principle of reciprocity), and reverence in all the relationships of private or public life.

Reverence is the seed of filial piety, whether displayed in obedience to parents, in ancestor worship, or in good citizenship; and piety finds its expression chiefly in the five duties towards prince, father, brother, husband, and friend respectively. Here woman finds no place; her only title to regard lies in motherhood; polygamy and divorce are common; "men being firm by nature are virtuous, and women being soft are useful." But all virtue is to be regulated by propriety, and propriety is mostly outward. Ceremonial and etiquette are of the highest importance, but rather in order to train the disposition than to express it. It is this somewhat Pharisaic externalism, this lack of any counsel of perfection, that evoked the scornful contempt of such a man as Lao-tsze; but it rendered possible the adhesion of multitudes to a system which makes no exorbitant demands on either their intellectual or their moral capacity.

TAOISM.

LAO-TSZE. While considerable doubt has been entertained as to whether Lao-tsze is the name of a historical person, it seems probable on the whole that such a man did live and teach in China during the 6th century B.C. The records tell us that he was born in the district K'u (part of the modern Honan), to an aged peasant father by a young wife; and if, as is said, he was fifty years older than Confucius, the year of his birth must have been about 600 B.C. We are told that he held office, apparently the superintendence of the Record Office, at the imperial court; and there seems reason to accept the story of Confucius' visit to him as historically true, especially as it exhibits so natural a contrast between the scorn for all activity of the aged philosopher, and the reforming zeal of the younger one. In his closing years, Lao-tsze abandoned public life, and disappeared into the west, having first entrusted to his disciple Yin He the *Tao Tih King*, or book which contained his teaching on *Tao* (the way), and *Tih* (virtue). We hear of his descendants to the fifth generation but no further—a marked contrast again with Confucius, whose family is still identified, and whose daily life in the minutest details is fully recorded.

TAO. It is difficult to decide how much of Lao-tsze's philosophy was due to Brahman sources; but his ethical teaching is clearly original, and in many respects approaches most nearly the teaching of the New Testament. In philosophy, Lao-tsze's "Tao" is closely akin to the Hindu's Brahma. *Tao* is "the way," the law of existence, the potentially existent, from which "nothingness" have issued heaven and earth, and all creation, and into which they will return. Thus in Tao lies the unity of the universe, and its "form" in the technical sense of the word; and so nothingness, non-existence, is demonstrated to be superior to existence, for it is both source and goal to existence.

But it is in the application of these ideas to the sphere of ethics that Lao-tsze's originality is so striking. Tao then becomes the moral law, man's moral nature; self-effacement is far nobler than self-seeking, for it is Tao on the ethical side; and thus we reach not so much the Buddhist's Nirvana as the Christian's humility, and are face to face with a "Quietism" which wholly penetrates the secret springs of action. On the political side, Lao-tsze is a philosophic anarchist. The troubles of the State he puts down to an accumulation of laws and of all the paraphernalia of government both in peace and war, and their cure can only be found in self-abnegation and a return to primitive simplicity. To be simple of heart according to nature's pattern, not to be learned in the corrupting wisdom of this world, is the path of bliss; legal enactments may foster the profession of virtue, but they are fatal to its possession; the good ruler will seek peace not war, defence not aggression, and will prefer the humility of apparent inactivity to any display of power, however imposing; indeed, "he who bears the calamities of his country shall be called the king of the world."

LAO-TSZE AND CONFUCIUS COMPARED. Neither sage gave the world a religion, or sought to be a prophet of God. Both confined their attention to the spheres of politics and ethics; both looked back to the reign of virtue in early days, and sought to restore it in their own times; both believed that man was by nature inclined to goodness, and could be by example stimulated to it. But the elder philosopher was a recluse, who felt that social and moral evils were due to activity, and that programmes of reform (especially by way of learning and knowledge) were only attempts "to cast out Beelzebub by the power of Beelzebub"; while the younger philosopher was a courtier, who was in danger of mistaking the appearance for the reality, the name for the thing, and who sought a ceremonious observance of duty and convention rather than a heartfelt devotion to virtue and goodness. Nor can the superiority of Lao-tsze be better marked than in three of his maxims—(1) "Judge not your fellow-men," (2) "Be content to know yourself," and (3) "Recompense evil with good," to which Confucius deliberately demurred.

DEVELOPMENT OF TAOISM. The teaching of Confucius would naturally enlist patriotism in its support, but Lao-tsze's doctrine has found nationalism its foe rather than its ally. That all existence issues from Tao, and returns to it, is a tenet capable of varied application; and speedily the self-abnegation so nobly inculcated by the "aged philosopher" dropped out of the Taoist system.

Early in the 5th century B.C., Lieh-tsze used the dogma of Tao to justify licentiousness of conduct, and to authorise the practice of magic; for on the one hand with ignoble men Tao can give rise to moral indifference, a subordination of right and wrong to the pleasure of the immediate moment (such as later Epicureanism witnessed); and on the other hand, the ultimate return of all to Tao can instil the hope that here and now (the limits of the Mongolian mind) man can become superhuman and attain unlimited longevity, if not absolute immortality. In the 4th century B.C., Chwang-tsze expounded something more like the original teaching of Lao-tsze. He maintained that all human effort is merely an interference with nature, and decried all activity as vanity. The fussiness of the legislator in the State, the noisy profession of benevolence and propriety in the individual, were equally destructive of the life according to nature that man was destined to lead. But popular Taoism soon became reduced to a fond following of astrology and alchemy, a search for the herb of immortality in the Isles of the Blest, and for the philosopher's stone, in order to escape the two great evils of death and poverty. The Taoist priests easily enlisted the sympathies of the emperors in support of their superstitions, their most notable patrons being Che Hwang-te, who had ordered all the Chinese classics (except the Taoist) to be burnt in 220 B.C., and Wu (c. 100 B.C.).

In the 2nd century A.D., as Buddhism was spreading in China, a re-action set in, and the philosophy of Lao-tsze was reinstated along with the ethics of Confucius, while the emperor Hwan offered sacrifices to Lao-tsze in his temple at K'u (c. 150 A.D.). In the 5th century A.D., Taoism and Buddhism were formally recognised by the emperor. Taoist temples and monasteries sprang up everywhere to rival the Buddhist ones, and the indigenous system became impregnated with ideas from the foreign. After being alternately patronised and persecuted under various dynasties, Taoism made one more effort at reform. On

the 16th century, its ethical side was restored in the wide publication of the *Kan-ying-peen* (Book of Rewards and Punishments), and the *Yin-chih-wan* (Book of Secret Blessings), which consist of moral maxims enforced by sanctions drawn from the present life.

Meanwhile Taoism had yielded to necessity (even as Chinese Buddhism had to do), and had devised a pantheon for its adherents. Lao-tsze, like the Buddha, was deified in triple form. The supreme god is *Yuh-hwang Shang-te*, whose representative on earth dwells in Kiang-se, and is the hierarch of the faith, just as the Dalai Lama in Tibet heads the Buddhist Church. But the most popular divinities are undoubtedly *Kwan-te*, the god of battles, and *Wan Ch'ang*, the god of literature and examinations. This is the Taoism that prevails so widely in China at the present day, and especially among the lower classes.

SHINTOISM.

ITS CHARACTERISTICS. When Buddhism was introduced into Japan from Corea in the middle of the 6th century A.D., the Chinese name *Shinto* (the way of the Spirits or Genii) was bestowed on the original Japanese religion. Shintoism contains two main elements—nature-worship and ancestor-worship. It recognises one supreme, benevolent God, existent from all eternity; next to Him, and as His manifestations, it worships the personified powers of nature; and it has a vague belief in a future state of existence, with rewards or punishments according to the life that has been lived on earth. But its characteristic feature is its ancestor-worship, which is the expression of national patriotism and filial piety.

From the left eye of Izanagi, the creator of Japan, was born the sun-goddess Ama-terasu, to whose temple at Ise pilgrimages are still made; for thousands of years demi-gods and heroes, sprung from her in descending scale of divinity, ruled the land, till the first human emperor of the line, Jimmu Tenno, appeared in 660 B.C. It is the Spirits or *Kami* of these mythological rulers who are the special objects of Shinto veneration. With them are associated the national heroes of every subsequent age, as well as the *Mikado*, whose divine descent is unquestioned, and who till recently lived in sacred seclusion from his subjects. Evidently Shintoism leaves plenty of room for another religion to co-exist with it; and as a matter of fact, most of the Japanese have combined Buddhism with Shintoism, the same temples and altars having been used in turn by the priests of each system.

RECENT RELIGIOUS CHANGES. Everyone knows what a rapid development Japan has undergone in the last half-century, but few realise that it was only in 1853 that her interdict of foreigners was grudgingly and partially removed. Then came the great Revolution of 1868; the *Shogun*, or commander-in-chief, who had assumed the title of *Tycoon* or *Taikun* (great sovereign), had for eight centuries ousted the Mikado from all temporal power; against his tyranny and that of the *Daimios* (feudal lords) a successful rebellion was made, and the Mikado was installed as sole, but constitutional, ruler of his country. Shintoism was then recognised as the established religion of the land, the more so as the Shogun and Daimios had always been zealous Buddhists. Temples and shrines had now to be clearly differentiated as Shintoist or Buddhist, the former being subsidised from the imperial revenues (this subsidy has since been discontinued). Most of the Japanese, however, continued to combine the two systems, worshipping in two temples instead of as before in one. Since 1892 Shintoism may be said to have ceased to claim to be a religion at all, an edict having then been issued that its observances were to be regarded merely as patriotic and political, but not as religious.

SHINTOISM TO-DAY. The *Kojiki*, or Records of Antiquity, which contain Japanese mythology and traditions, are the sacred books, but the Shinto doctrine and rites mentioned therein are of the simplest. Shintoism inculcates love of country and obedience to the Mikado, but otherwise it leaves will and conscience untrained. There is no preaching, nor any public worship. Twice a day the priests present unbloody offerings on the altars, and recite invocations of praise; the private worshipper approaches the sanctuary, rings a bell to summon his deity, makes his offering, prostrates himself, claps his hands to signify that the interview is ended, and then withdraws. Occasionally he makes his pilgrimage to Ise, returning with sacred charms which he places in his miniature temple at home, by the side of the names of his patron Kami, and the tablets of his ancestors.

Thus Shintoism makes its appeal to the conservatism of the upper classes and to the superstition of the lower; but it makes no provision for devotion of heart and soul, for training of character, or for producing intellectual conviction; and the ground it is constantly losing as a religion seems at present to be gained by neither Christianity nor Buddhism, but is rapidly being occupied by agnosticism.

THE WORLD'S FAMOUS EXPLORERS.

The only parts of the world known to Europeans before the discovery of America were all situated in the northern half of the Eastern Hemisphere. A large part even of Russia, or Muscovy as it was then called, was completely unknown to the rest of Europe. In Asia, our countrymen were acquainted with the lands mentioned in the Bible, and had heard vague accounts of Tartary, Mongolia, India, and Cathay, or China. In Africa, Egypt and the countries along the north coast were well known; but except Ethiopia or Abyssinia, and a strip of country on the west coast reaching to the Gulf of Guinea, all the rest lay in darkness.

EARLY PORTUGUESE EXPLORERS.

The Portuguese have the glory of leading the way in discovering new lands. By the middle of the 15th century the Portuguese had reached Cape Verd, and seen men with skins as black as ebony. It now occurred to the sagacious mind of Prince Henry of Portugal that India could be reached by following the African coast.

BARTHOLOMEW DIAZ. In 1486 Prince Henry sent out Diaz on a voyage which took him almost to the mouth of the Orange River, where he landed. On resuming his voyage a storm arose which drove him past the Cape of Good Hope, and he anchored in Algoa Bay. His men would go no further, and he had the vexation of seeing the command of the next expedition given to Da Gama.

VASCO DA GAMA. The greatest of the Portuguese navigators, Da Gama, set out in July, 1497. Despite adverse weather and a mutinous crew, he rounded the Cape by the end of the year. Hugging the coast as far as Melinda, he then sailed straight across the Indian Ocean, landing at Calicut in May, 1498. He was subsequently employed several times by the King of Portugal to establish colonies on the coast of Africa and India.

EARLY SPANISH EXPLORERS.

CHRISTOPHER COLUMBUS. This extraordinary man, a native of Genoa, had gone to sea at fifteen, and for thirty years had sailed about every part of the known world. He had had also much experience in drawing maps and charts, and had convinced himself on reflection that India could be reached by sailing westward. After many years of effort, he at length found patrons in Ferdinand and Isabella of Spain, who gave him three small ships in which to make the attempt.

Setting out from Palos in August, 1492, he sailed to the Canary Isles, and then started on his voyage to the unknown west. The trade-winds carried them along smoothly enough for thirty days, and then just as the quest began to seem hopeless, land was sighted. Columbus thought the islands he found himself among were near India, so he called them the Indies, a name they retain to this day, with the addition of "West," to distinguish them from those islands which are really near India. It was not till his third voyage, in 1498, that he discovered the mainland, which Cabot had reached before him.

AMERIGO VESPUCCI. In 1499, and succeeding years, Vespucci, a Portuguese in the service of Spain, explored a good deal of the South American coast, and after him the continent was named.

FERDINAND MAGELLAN continued the work of Amerigo, and was directed by Charles V. of Spain to find, if possible, a way from the Atlantic to the Pacific, which had been sighted from the Isthmus of Panama in 1513 by Balboa. Sailing southwards then along the east coast of America, he made his way, in 1519, through the Strait that now bears his name. Then striking boldly westwards, he held on till he came to the Ladrone Islands. Magellan himself was killed soon afterwards in a fight on one of the Philippine Islands, but his crew continued the voyage westward, and made their way back to Cadiz in 1521, their ship being the first to circumnavigate the globe.

ENGLISH NAVIGATORS IN THE TUDOR PERIOD.

Till the reign of Elizabeth, Englishmen took little part in exploration. It is true that in Henry VII.'s reign, Sebastian Cabot, sailing under the English flag, landed on the coast of Labrador in 1497, and took possession of the country in the name of Henry VII. But the expedition was not followed up.

WILLOUGHBY AND CHANCELLOR. In 1553 Sir Hugh Willoughby and Hugh Chancellor set out to explore northern regions and find out ways to reach new and unknown kingdoms. The result of this voyage was to open up English trade with Archangel, and to encourage exploration in that direction. Willoughby and his ship's company perished of starvation and cold in Lapland, after discovering Nova Zembla, but Chancellor reached Archangel and penetrated to Moscow. For several years after this, attempts were made to get through the Arctic Ocean eastwards, and the strait leading into the Kara Sea was discovered.

FROBISHER. In 1576 Sir Martin Frobisher made a gallant attempt to reach India by the north-west, round the north of America. Harassed by storms, and deserted by one of his two ships, Frobisher held on, and reached what is now called Frobisher Bay, naming the land round it "Meta Incognita."

DAVIS. John Davis took up the work in 1585. He made his way to Greenland, which had been lost to Europeans for about 200 years, and then, crossing the strait now known by his name, he explored some of the opposite coast. He went again in 1586 and 1587, reaching in the latter year nearly to the 73rd degree of latitude.

EARLY FRENCH EXPLORERS.

CARTIER. A French navigator, Jacques Cartier, was sent out by Francis I., 1534, with two ships, to explore the mainland of America. He crossed the Atlantic to Newfoundland, then sailed through Belle Isle Strait, and landing near Cape Gaspé took possession in the name of the King of France. He went again the next year and ascended the St. Lawrence as far as the present Montreal. A third expedition in 1541 had little results, and French enterprise in America halted for some time.

DE CHAMPLAIN. In 1603–1608, three voyages to America were made by Samuel de Champlain, and much of the Canadian coast was surveyed. Champlain founded Quebec, and busied himself in extending French influence to the west and south. He explored the beautiful lake which bears his name, as well as Lake Ontario, and sailed round the coast of Acadia (Nova Scotia). He died in Canada.

EARLY EXPLORERS IN THE ARCTIC REGIONS.

BARENTZ. In 1594 William Barentz sailed in a 100 ton ship to search for the north-east passage. He spent the summer in exploring the western side of Nova Zembla. His second voyage was unproductive, but the third, in 1596, had two important results; he discovered Spitzbergen, and spent the winter at Ice Haven, on the eastern side of Nova Zembla, being thus the first European to brave the winter cold of the Arctic region. He died, however, on his way back. The Barentz Sea, between Spitzbergen and Nova Zembla, commemorates his daring and enterprise.

HUDSON. One of the most daring navigators of this time was Henry Hudson. Starting in 1607 in a small ship carrying ten men and a boy besides himself, he made

his way northward along the coast of Greenland, and then skirted the ice pack across to Spitzbergen, getting beyond the 80th parallel northward. On his way home he discovered Jan Mayen Island. A fourth voyage, in 1610, resulted in his being abandoned in Hudson Bay by his mutinous crew. He was never afterwards heard of.

BAFFIN. In 1615 William Baffin, who had had experience in the Spitzbergen whale-fishery, made a careful examination of the coasts of Hudson Strait, and in the following year sailed up Davis Strait, went beyond Davis's farthest north, and entered Baffin's Bay. The northernmost channel leading from it he named Smith Sound, after Sir Thomas Smith, who had promoted the expedition. Many other names in this region were bestowed by Baffin.

OTHER EXPLORERS. The merchants of London had so far borne the major part of the expense involved in these exploring expeditions, but in 1670 the Hudson Bay Company was formed, and many interesting and important details were brought home by their officers. Thus the courses of the Coppermine and Mackenzie Rivers were traced to the Polar Seas. The Dutch, too, in the prosecution of their Spitzbergen whale-fisheries, found time to aid the great work. The book of Frederick Martens on Spitzbergen is an exceedingly interesting account of that land. Meanwhile the Russians, on their side, had taken up the work, and in the course of the 17th and 18th centuries they traced out the whole coast of Siberia. Cape Chelyuskin, the Liakof Islands, Behring's Strait, and many other places bear witness by their names to Russian enterprise. The Liakof Islands became the seat of an important Russian whale-fishery, as well as the source of much ivory, the fossilized remains of the mammoth, rhinoceros, and buffalo being here found in great abundance.

CAPTAIN COOK'S VOYAGES.

Modern scientific exploration may well be said to have commenced with Captain Cook. From his time few years have passed without one or more expeditions being at work investigating and mapping out land and sea, and noting scientific facts with a view to forwarding the progress of knowledge rather than individual, or even national, gain. The regions then unknown to men, either wholly or in great part, were Africa, Australia, and the North and South Polar Regions. We propose to mention the chief explorers of these parts, after relating the fruitful labours of Captain Cook.

CAPTAIN COOK. This famous explorer, a native of Yorkshire, began his exploring voyages in 1768. He had previously gained much credit by surveying the channel of the St. Lawrence so accurately that Wolfe's expedition against Quebec sailed up without a single mishap. Cook sailed from Deptford in August, 1768, and reached Tahiti the following April. He made this island for some time his headquarters. On leaving it he circumnavigated New Zealand and surveyed its coasts. He then sailed to Australia, and mapped out the east coast. He became aware of the existence of the Great Barrier Reef by striking on it. The damage done to his vessel was repaired at a spot where now stands Cooktown. The captain afterwards completed the survey of the east coast, gave the name of New South Wales to the whole country, and took possession in the name of King George. Cook then passed round Cape York, between Australia and New Guinea, thus proving that the two were separate, and reached home by the Cape of Good Hope in June, 1771.

Cook's second voyage, 1772-1775, was undertaken to determine the limits of the Antarctic Continent. He skirted the edge of the ice, making excursions southwards when opportunity offered, on one occasion getting to 71° 10′ south latitude. During this voyage Cook explored the New Hebrides, and discovered many other of the Pacific Islands. His success in warding off scurvy from his men in this voyage deserves mention.

Cook's third voyage was arranged primarily to discover, if possible, a passage from the Pacific to the Atlantic by the north coast of America. He set sail in July, 1776, discovered the Sandwich Islands, traced the north-western coast of America, and advanced into the Arctic Ocean, until his progress was blocked by impenetrable ice. Returning therefore to the Pacific, he reached the Sandwich Islands, where he was slain in a sudden dispute that arose with the islanders, February, 1779.

BRITISH EXPLORERS IN AFRICA.

BRUCE. In 1768 James Bruce, who enjoyed the confidence of the English Government, and had already travelled extensively in the East, made his way up the Nile to Syene, near the modern Assouan, then crossed the desert to Kasseir, and got to Jeddah. He subsequently visited Gondar, the capital of Abyssinia, whence he made his way to the sources of the Abai, or Blue River (Bahr-el-Azrek), then considered the chief branch of the Nile, to discover whose source had been his main aim. The narration of his travels on his return to England caused much scoffing and scepticism, but we now know that his accuracy and truthfulness are unimpeachable.

MUNGO PARK. This great traveller undertook two expeditions to Africa, the first at the instance of the African Association of London. His object was the exploration of the Niger. In 1795 he sailed up the Gambia to Pisania, where he spent some months learning as much as possible of the language, habits, etc., of the tribes he would have to encounter. Then, setting out eastwards, he struck the River Niger at Sego, and made his way down it to Silla. Here, however, he was compelled to turn back, and had much difficulty in getting to the Gambia, from which he had set out nineteen months before. In 1805 Park was prevailed upon by the British Government to resume his task. He set out from Pisania in April, with forty-five companions, of whom seven only survived to reach the Niger in August, the fevers and other diseases incident to the wet season having carried off the rest. At Sansanding, Park remained for two months, trading with the natives. Meanwhile he constructed a large, flat-bottomed boat in which to sail down the river, hoping to follow its course and to find out where it entered the sea. But he perished in the attempt. It was afterwards learnt that he and four of his companions reached Boussa, and were intercepted in the rapids there by the natives and drowned in the struggle that ensued.

RICHARD LANDER. The publication of Park's journals, which he had sent home from Sansanding before setting out, led many to take part in exploring that part of Africa. Richard Lander, the servant of Captain Clapperton, who had done much to make known the country between Lake Chad and the Niger, is generally held to have settled all doubts about the Niger's course. Accompanied by his brother John, he went out in 1830, commissioned by the British Government, landed at Badagry, on the Slave Coast, and proceeded by land to Boussa. From that town they made their way, after many difficulties, to the sea by the channel called the Brass River, and thus settled the river's course. Lander took part in many journeys after this, and died at last of wounds received in conflict with the natives, 1834.

DAVID LIVINGSTONE. This great missionary and explorer was fired to take part in forwarding Christianity and civilization in Africa by Robert Moffat's account of his work in Bechuanaland. After working for some years as a missionary, he set out on the exploring journey that ended in the discovery of Lake Ngami, 1849. In 1851 he set out again, following his old track, but passed Ngami, and travelled on to Linyanti on the Chobe River, whence he made his way down to the Zambesi.

Livingstone now determined to devote himself wholly to exploration, and after sending his wife and children to England, he set out, in 1853, to Linyanti. From Linyanti he started on a voyage up the Zambesi to Lake Dilolo, and thence north-west to St. Paul de Loanda, the capital of Angola. After some rest he returned to Linyanti, and now sailed down the Zambesi to its mouth, discovering the famous Victoria Falls on his way, and reached Quilimane in May, 1856, being thus the first white man to cross the continent.

His next journey commenced from Quilimane in March, 1858. He went up the Shiré river to Lake Nyassa, visited Lake Shirwa, and explored the river Rovuma for some distance. In 1866 he sailed up the river Rovuma to Lake Nyassa, rounded its southern shores, and then struck out a course north west to Lake Tanganyika, which he reached after much privation and illness, April 1st, 1867.

In July, 1868, we find him at Lake Bangweolo. Having explored the lake carefully, he made for Ujiji, on the eastern side of Tanganyika, to which place he had ordered supplies and medicines to be sent. Here Livingstone arrived in March, 1869, and made a long stay to recruit after his fatigues and sufferings. From July, 1869, to October, 1871, he travelled about the region westward of Tanganyika, tracing the course of the Lualaba, to find out whether it joined the Nile or not. It was on his return to Ujiji that the dramatic meeting with Henry M. Stanley took place.

Stanley had been sent out by the "New York Herald" to find Livingstone, alive or dead. His cheerful company, and the large stock of comforts he had brought, made a new man of Livingstone, and he resolved to start again and find out, if possible, where the Lualaba went. Stanley left in March, 1872, promising to send up carriers, and in August, when these arrived, Livingstone set out on his last journey.

For months he explored the swampy district between Lakes Bangweolo, Moero, Tanganyika, and Nyassa. At last, carried in a litter, the famous explorer reached Chitambo's village, south of Tanganyika, April 30th, 1873, and died next morning. His body was brought to England and buried in Westminster Abbey.

SIR RICHARD FRANCIS BURTON. Together with Speke, Sir R. Burton has the honour of having discovered Lake Tanganyika, in 1858. But Burton's title to fame lies in the journeys he made in known regions, and the accurate, as well as entertaining descriptions he gives of them, rather than in the actual discovery of unknown places. He travelled in India, Arabia, the land of Midian, West Africa, and Somaliland, and his works on these lands are authorities.

JOHN HANNING SPEKE. Speke, the discoverer of the source of the Nile, accompanied Sir Richard (then Lieutenant) Burton in his unsuccessful expedition into Somaliland in 1854. In 1856 the Royal Geographical Society arranged for Burton and Speke to lead an exploring expedition into central Africa from the East Coast. They made Zanzibar their headquarters, from whence they had not much difficulty in making their way westward to Tanganyika, which they reached in January, 1858. Burton being ill, Speke crossed the lake alone, but did not attempt to sail round it. Hearing of another and larger lake to the north, Speke set off to visit it, leaving Burton at Kazé to recruit. He reached its most southern point on July 30th, and on August 3rd had the satisfaction of getting a full view of its broad expanse. He named the lake Victoria Nyanza, but left to rejoin Burton without exploring it much.

Speke felt convinced that the latter lake would prove to be the source of the Nile, and immediately after his return to England an expedition was arranged for him to test his belief. Setting out again in April, 1860, by way of Zanzibar, Speke, accompanied by Captain Grant, made his way again to Kazé, a convenient station south of Victoria Nyanza, and east of Lake Tanganyika. From Kazé they proceeded by the west of the Nyanza to Karague, and thence to Uganda, which they reached in February, 1862. Marching through Uganda, they struck the Nile near Urondogani, some way below the Nyanza, and from this point Speke marched up the river to the lake. Then coming down again, he followed the left bank of the river to the Karuma Falls. From this point, leaving the river, he struck north by land until he met the river again above Dufile. Thus he missed the sight of Lake Albert Nyanza, although he knew of its existence from native reports. Speke then proceeded to Gondokoro, and thence by Khartoum and Alexandria home, having solved the Nile problem.

SIR SAMUEL BAKER. While Speke was descending the Nile, Sir Samuel Baker was ascending it with a view to exploration. They met at Gondokoro, February 15th, 1863, and Speke related what he had done, advising Baker to investigate the great lake he had heard of. Baker, accompanied by his wife, had great difficulty in getting forward, but reached the Karuma Falls on January 23rd, 1864. From thence he made his way south-westward through Unyoro, and reached the lake, which he named Albert Nyanza, at Mbakovia. From this point he proceeded in boats to Magungo, where the Nile flows into it from Victoria Nyanza, and after exploring the part, from Magungo to Karuma, which Speke had not touched, he turned his face homewards in November, 1864. In 1869 Baker was appointed Governor-General of the Soudan, and in this capacity he did much to clear up doubtful points in the Nile geography.

GRANT. Speke's companion in the Victoria Nyanza expedition was James Augustus Grant. By the loyal and unselfish support he gave his chief, and the importance of his scientific notes during the expedition, he deserves emphatic mention as an African explorer, though he never held independent command.

SIR HENRY M. STANLEY. The first journey Stanley made in Africa was as correspondent of the "New York Herald" with Lord Napier's expedition into Abyssinia. His journey to Ujiji and meeting with Livingstone in 1871, no doubt aroused a longing to examine the still vast unknown territory in Africa.

Leaving Bagamoyo, on the east coast, in November, 1874, he crossed the Ugogo country to the southern shore of Victoria Nyanza. Having circumnavigated the lake, and fixed its main outlines, he proceeded to Uganda, where he made a great friend of King Mtesa. From Uganda he went to Tanganyika, and thence to Nyangwe, on the Lualaba, where he arrived in October, 1876. Was this another affluent of the Nile, or did it bend round and form the Congo, the mystery of the West Coast? He resolved to follow its course as the only reliable means of answering the question, a task which took him till August, 1877, and turned his hair from black to white. But the Congo mystery was solved. Lualaba, Luapula, and Congo were all one. The Chambezi, rising near Tanganyika and Nyassa, flows into Lake Bangweolo; the Luapula flows into Lake Moero; and from Moero the Lualaba, afterwards called the Congo, flows with a semi-circular sweep into the sea on the west coast. The foundation of the Congo Free State by the Belgian King was the immediate result of this journey.

In 1887 Stanley set out on his famous journey to relieve Emin Pasha. He ascended the Congo to its confluence with the Aruwimi, then sailed up the latter river as far as Yambuya. From Yambuya the route lay through an almost impenetrable forest, tenanted by malicious and implacable tribes. But he went on, and in April, 1888, met Emin on the shores of the Albert Nyanza. One result of this journey was the clearing up of the geography of the northern part of the Congo Basin, and the discovery of Mount Ruwenzori. After meeting Emin, Stanley pushed on to Bagamoyo, which he reached in December, 1889, thus crossing the continent from west to east.

EMIN PASHA. Edward Schnitzer, a German Jew by birth, took the name of Emin, the better to ingratiate himself with the Turks, whose service he had entered as medical officer. He entered the Egyptian service in 1876, and in 1878 was appointed governor of the Egyptian Equatorial Province, where he remained till the coming of Stanley in 1889. He did inestimable services to the cause of civilization and knowledge; for he accurately surveyed vast tracts of Central Africa, and made besides constant meteorological observations, in addition to securing specimens of new plants, birds, animals, and insects. He also made numerous experiments in agriculture, and mastered the chief local African dialects, so that the light he shed upon Central Africa is in its way as important as that produced by any other explorer.

CAMERON. Livingstone, as we have mentioned, was the first to cross Africa from west to east, but the honour

of being the first to cross Africa from east to west belongs to Vernon Lovett Cameron, who was chosen in 1872 to take aid to Livingstone after Stanley left him at Ujiji. Having made due preparations at Zanzibar, Cameron and his companions proceeded by Bagamoyo to Unanyembe, in August, 1873, and there heard of Livingstone's death. Having made arrangements for the body to be conveyed to the coast, Cameron set out for Lake Tanganyika, which he surveyed. Thence he went to Nyangwe, on the Lualaba, intending to sail down that stream in the hope of proving its identity with the Congo. Had he done so he would have anticipated Stanley's great discovery made four years later. But the natives' opposition proved too strong, and he was forced to strike south-west, reaching Bihé, 240 miles from the sea, in October, 1875. The last stage of his journey proved by far the most arduous, and he barely reached Katumbela alive on November 28th. He was afterwards engaged in surveying expeditions in Asiatic Turkey and Persia, and on the West Coast of Africa.

FOREIGN EXPLORERS IN AFRICA.

Among eminent foreign travellers who have assisted in making Africa known, besides Emin Pasha, should be mentioned:—

BARTH. One of the greatest of German travellers, Heinrich Barth, began his explorations in 1845 from Tangier, visiting and traversing Tunis, Tripoli, and Barca. In 1850 he started from Tripoli at the instance of the British Government to explore Central Africa. His companions, Dr. Overweg and Mr. Richardson, died of fatigue and privation, but Barth continued his work until 1855, when he returned with a rich store of knowledge of Central Africa, comprising almost the whole of the Sahara, its chief oases and routes.

DU CHAILLU. An American of French descent, Pau du Chaillu, spent four years, 1855-59, in the neighbourhood of the Ogoway river, which falls into the Gulf of Guinea just south of the Equator. He made great additions to our knowledge of the ethnology and zoology of the district; indeed many of his statements were at first utterly discredited, especially those about the gorilla tribe.

ROHLFS. Friedrich Gerhard Rohlfs, a German explorer, began his work in Africa in 1861. He travelled over the Western Soudan, and made his way to Tafilet in Morocco, on the southern side of the Atlas Mountains, René Caillié having been the only European that preceded him there. Leaving Tafilet he was robbed and left for dead, but recovered through the good-natured attention of two marabouts. He then went to Tuat, some distance to the south-east, which he was the first European to visit. In 1865 he proceeded to Tripoli with the intention of exploring the Ahaggar, or Hogar, a mountainous region south of Algeria, but was prevented by tribal wars. He therefore turned his face to Bornu, exploring the oases on his line of route. He then directed his march to the Benue, and sailed down that river to Lokoja. Making his way to Lagos, he set sail for Europe, 1867, bringing with him much valuable information. He took part in several subsequent expeditions.

SCHWEINFURTH. This German traveller spent three years, 1869-71, in exploring the sources of the Bahr-el-Ghazal. Starting from Khartoum, he traversed the country of the Dinka, Bongo, and Niam-Niam. He also discovered the Welle river, a tributary of the Congo. Having settled in Cairo, he afterwards took part in expeditions to explore the Libyan and Arabian deserts.

DE BRAZZA. A Frenchman of Italian extraction, Pierre Paul de Brazza, was sent by the French Government in 1875 to explore the upper part of the Ogoway river. He was absent three years, but in this time he thoroughly explored not only the upper Ogoway, but also some of the northern affluents of the Niger, and paved the way for the foundation of the important colony of French Congo.

AUSTRALIAN EXPLORERS.

The first explorers in Australia naturally devoted their attention to the coast. Then, as the coast districts got settled and crowded, efforts were made to reach the interior an effort rendered difficult, and sometimes even dangerous, by the perennial scarcity of water in some parts and long-continued droughts in others.

BASS AND FLINDERS. In 1798 George Bass, a surgeon, examined the coast from Botany Bay to Western Port, a distance of 600 miles, sailing through the strait that bears his name, and thus proving that Tasmania was detached from Australia. He afterwards sailed round the island and surveyed a considerable part of the coast. Bass was accompanied in his explorations by Matthew Flinders, who subsequently was appointed captain of many expeditions fitted out to survey the Australian coasts. Between 1801 and 1803 Flinders mapped out nearly the whole coast of Australia except the west and north-west.

OXLEY. In 1817, accompanied by Allan Cunningham and others, Lieutenant Oxley crossed the Blue Mountains, followed the Lachlan river downward for 300 miles to the point where still a little settlement bears his name. Here it seemed to end in a limitless marsh. Returning, he struck north-east and reached the Macquarie at Wellington, and followed this river up to Bathurst. In a second journey he traced the course of the Macquarie till it also led into marsh, near Mount Harris. Thus arose the idea of a vast inland sea in Australia. Oxley now turned eastwards, crossed the Arbuthnot Range, the Liverpool Plains, and the Blue Mountains, and struck the sea at Port Macquarie. A sea expedition under Oxley in 1823 led to the discovery of the Brisbane River, and the foundation of Brisbane itself.

HAMILTON HUME. In 1824 Hamilton Hume, a native of Paramatta, accompanied by Mr. Hovell, started from Lake George, near Sydney, to try and reach the south coast. They had no difficulty in getting to the Murrumbidgee, but after crossing it they had to abandon their carts and pack the loads on their oxen. They followed the Murrumbidgee only a short way, then struck south-west, sighted the snow-clad Australian Alps, crossed the Murray, Ovens, and Goulburn, reaching at last the sea near where Geelong now stands, on Port Philip. The importance of this journey lies in the fact that a vast district of great fertility was laid open to colonization.

STURT AND HUME. Captain Charles Sturt, in 1828, was sent out with Hamilton Hume to follow the Macquarie river, and ascertain the limits of the reedy marsh in which Oxley had lost it. The drought of the previous two years had wiped out the greater part of the water, and the party had difficulty in getting enough to drink. To advance northward proved impossible, so Sturt turned west, and after some hard work, struck a fine stream flowing south-west, which he named the Darling, after Sir Ralph Darling, who had sent him out. An attempt to explore the country to the north-west proved unsuccessful, and the party retreated.

CAPTAIN STURT. In 1829 Sturt started to trace the course of the Murrumbidgee, taking with him a boat in sections. He found that the river led, as did the Lachlan and Macquarie, into a region of swamp and weeds. But the channel had enough water to float his boat, and he held on until he reached the Murray, and thus solved one of the great problems of Australian topography. Down the Murray they continued, until a broad river flowed into it from the north. Sturt felt sure that this must be the Darling. His next object was to discover the Murray's outlet on the southern coast. Near the sea he found that it widened into a shallow lagoon, which he named Lake Alexandrina, and that its course thence to the sea was by shallow channels of shifting sand difficult to navigate.

In 1843 Sturt made an attempt to cross the continent northwards. Starting from the Lachlan river above its junction with the Murray, he made his way to the "Stony Desert," near the centre of the continent. The heat was intense, and the drought severe, and the sufferings he underwent resulted in blindness, but by making known Eyre's Creek and Cooper's Creek, Sturt opened the way to a knowledge of the inland water system centred in Lake Eyre.

MAJOR MITCHELL. In 1831 Major Mitchell, afterwards Sir Thomas Mitchell, commenced by clearing up the geography of the Darling's upper tributaries. In 1833 he travelled down the Bogan river to the Darling river, and then for 300 miles down the latter until he was sure it was the one that Sturt had seen join the Murray. In 1836 he followed the course of the Lachlan from Bathurst. Arrived at Oxley's farthest point, he found that the marshes which had turned the latter back had dried up into grassy plains, and these furthered his advance to the Lachlan's junction with the Murrumbidgee. Proceeding down the latter to the Murray, he ascended it to survey the unknown country on its left bank. Swan Hill, the rivers Loddon, Avoca, Wimmera, and Glenelg were surveyed; then the party made its way down the latter to the coast, between Cape Northumberland and Portland Bay, having thus opened up the finest country in Australia.

Mitchell's last expedition set out in 1845. His object was to open up the country between Moreton Bay and the head of the Gulf of Carpentaria. As a matter of fact he was preceded by Dr. Ludwig Leichardt, who had started in 1844, but had not returned when Mitchell set out. Between the two, however, the geography of North Queensland was made clear. Leichardt kept near the coast in a northward direction till he came to the river Burdekin, when he turned westward and struck the shores of the Gulf, round which he travelled, making many valuable discoveries by the way, to Arnheim Land. Mitchell kept more to the north-west, and got as far as the Barcoo, or Victoria river, which belongs to the Eyre system of drainage. But Mitchell, thinking it flowed into the Gulf, concluded he had accomplished his object, and returned southwards, exploring the Maranoa river on his way.

EDWARD JOHN EYRE. This daring adventurer, afterwards Governor of Jamaica, began his exploring experiences by driving cattle in 1838 from Port Philip to Adelaide. In this journey he discovered Lake Hindmarsh, which receives the river Wimmera, but has no outlet. In 1839, after a journey up the east side of Spencer Gulf, in which he reached Mount Arden and discovered Lake Torrens, he turned westward from Port Lincoln, and got to Streaky Bay, 300 miles away, without seeing a pond or a river. He continued westward till he passed the head of the Great Bight, and then, finding neither water nor grass, returned. In 1840 Eyre went north again, explored the east side of Lake Torrens, and the Flinders Range. After this he returned to Port Lincoln, resolved to make his way westward round the Bight or perish. He accomplished it after a terrible journey, but the practical results were nil.

JOHN McDOWALL STUART. In Sturt's last expedition of 1843 he was accompanied by J. McDowall Stuart as draughtsman, who began in 1858 to turn the experience he had thus gained to his own account. His first journey was in the district lying between Lake Torrens and Streaky Bay, and he surveyed a part of Lake Gairdner. His second and third journeys were rather reconnoitring expeditions with a view to his great aim of crossing the continent from south to north. In actually doing this, he was anticipated by Burke and Wills in 1861, who, however, lost their lives in the return journey, as well as by others. But the honour of finding a practicable route belongs to Stuart, and the overland telegraph, which follows his route, is a proof of this. In 1860 he advanced past Lake Eyre, and made known the Finke river, the Albert river, McDowall Range, Central Mount Stuart, and Ashburton Range. His journey of 1861 took him but little farther, but in 1862 he managed to strike the Chambers river, a tributary of the Roper, up which he advanced to the head waters of the Adelaide, then down the latter to the sea opposite Melville Island.

JOHN McKINLAY. The non-return of the Burke and Wills expedition of 1860-61 caused several expeditions in search of them. Of these, that of John McKinlay in 1861-2, was most fruitful in results. He went by way of Lake Torrens and Cooper's Creek, kept on the high ground to the west of the Diamantina till he reached the ridge now bearing his name. From this point he made for the Leichard River, and hoped to make the Gulf of Carpentaria. But marsh and bog stopped his progress, and he turned eastwards, crossed the Leichard Range, and made his way down the Burdekin, having proved that the westward portion of Queensland was a habitable country.

ARCTIC EXPLORERS.

Captain Cook had made an attempt to pass from the Pacific Ocean to the Atlantic by way of the Arctic Ocean, but the idea was not pursued for some time.

SIR ALEXANDER MACKENZIE. Although not strictly an Arctic explorer, Sir A. Mackenzie well deserves a place among those who have devoted themselves to geographical investigation and discovery. An officer in the employ of the Hudson Bay Company at Fort Chippewayan, on Lake Athabasca, he offered to make his way from thence to the frozen northern ocean, which he did in 1789, by way of the Mackenzie river, which has since borne his name. A still more notable achievement was his journey across the Rocky Mountains to the Pacific coast, which he reached near Cape Menzies. He was thus the first white man to cross the continent in these latitudes, and the journey took him nearly a year, July, 1792, to June, 1793.

CAPTAIN SCORESBY. The work of William Scoresby deserves especial mention, as his investigations and observations were all additional to his nautical work. The son of an expert whaler, he early attended his father on his voyages, keeping a most exact account of their observations. In 1806 their ship, the *Resolution*, reached 81° 30′ North. For years after this Scoresby continued his voyages, and his "Account of the Arctic Regions," in which he records the results of his observations, is still a standard work on the subject.

ROSS AND PARRY. The impulse given by Scoresby to Polar exploration found an ardent backer in Sir John Barrow. In 1818 he caused an expedition to be prepared to make explorations by way of Baffin's Bay. Captain John Ross and Lieutenant William Parry took the command, and some valuable discoveries were made.

The next year Parry was sent out in command of the *Hecla*, to make his way, if possible, through Lancaster Sound. This he did, naming its continuation westward Barrow Strait, in honour of his patron. Leaving Wellington Channel on his right, he entered Melville Sound, and wintered on Melville Island. The precautions he had taken for the health of the ship's company had excellent results, and his return to England in 1820 excited great interest and admiration. Next year Parry again went out to pursue his investigations in these regions. He rounded Baffinland, came down the Gulf of Boothia, and discovered a narrow strait leading into Hudson Bay, which he called "Fury and Hecla" Strait, after the two vessels under his command.

In 1827 Parry made a determined attempt to reach the North Pole, starting from the northernmost point of Spitzbergen. He had conceived the idea that by utilising boats that could be fitted on sledges, he would be able to travel on either water or ice, and thus go always forward. He had, however, left out of his calculations the drift of the ice, and was obliged to give up after reaching latitude 82° 45′.

JOHN AND JAMES ROSS. John Ross's expedition of 1818, though attended with valuable results, had rather served to enhance Parry's credit than his own. But in 1829 he was again, through the liberality of Sir Felix Booth, enabled to fit out an expedition to go northwards. His nephew, James Ross, who had served under Parry in the expeditions named above, accompanied him. They made their way down the Gulf of Boothia, and wintered on the tongue of land named "Boothia," after their patron, which they thoroughly explored. Here they spent three winters, making long sledge journeys in the intervening summers, in one of which James Ross found the North Magnetic Pole (97° W. Long.; 70½ N. Lat.). In May, 1832, they abandoned their ship and began their homeward

journey. After enduring great hardships, they had the good fortune to come across a whaler in Lancaster Strait, which enabled them to arrive in England, October, 1833, after more than four years' absence. A knighthood rewarded John Ross for his successes and endeavours.

For some years after this great expedition, the chief work in Arctic Exploration was left to the Hudson Bay officers, who finished the work so well begun by John Franklin and others, of tracing out the shores of the continent, and established the fact that Boothia was a peninsula.

RUSSIAN EXPLORERS. During the first half of the 19th century, the Russians were as busily engaged in marking out the north coast of Asia as we were in North America, and by 1843, through the agency of Anjou, Wrangel, and Middendorf, the work had been done. It was now, therefore, known that, except from ice, no barrier existed to the passage of a ship from Europe to India, either by a North-West or a North-East Passage, and once more men's minds reverted to the idea of making the passage.

SIR JOHN FRANKLIN. In 1845, therefore, an expedition was fitted out with the object of making the North-West Passage. Sir John Franklin, who had distinguished himself in 1819–22 and in 1825–27, by tracing out the northern coast, was chosen to make the attempt. He was instructed to make his way from somewhere about the mouth of the Fish River, to and through Behring's Strait. With a picked body of men he sailed in the *Erebus* and the *Terror*, on May 19th, 1845, was spoken in Melville Bay by a whaler on the 25th of July in that year, and from that time disappeared. Until 1859 no certain news of his fate could be gained. From information supplied by the Esquimos, and from articles in their possession, it appeared that the ship had been abandoned, but nothing further was certain. It was the determined devotion of Lady Franklin that made all clear.

With her own money and that of sympathising friends, Lady Franklin had the *Fox* fitted out in 1857, and gave the command to Captain McClintock, who was to proceed to King William Island, and search there and in the neighbourhood. The search proved successful. A cairn was found containing documents that gave the history of the expedition. From this we learn that the winter of 1845-6 was spent on Beechey Island, near North Devon. In the spring they made their way, by Peel Strait and Franklin Strait, towards the mouth of the Fish River. But on nearing King William Island they met the full force of the polar ice coming down McClintock Channel, which drove them against King William Island, and cut off all chance of getting out again. Franklin died on the 11th June, 1847. By April, 1848, it had become clear that the ships were never to get away, and the survivors, under the command of Captains Fitzjames and Crozier, resolved to abandon them and try to make their way by land to the Fish River, and thus get in touch with the Hudson Bay hunters. From that time our knowledge of their doings is fragmentary. The Esquimos told of white men going southward, and dropping dead as they marched, and skeletons have been found, together with clothes and other relics, which prove that these white men belonged to Franklin's crew.

CAPTAINS AUSTIN AND PENNY. The experience of Parry and Ross had prepared people to hear nothing of Franklin's party for some time. But when 1848 came, and still no tidings, alarm began to be felt, and for some years expeditions were sent out to search for him. These expeditions caused great additions to be made to our knowledge of the Arctic regions.

In 1850, after Sir James Ross had returned from a two years' search without any results, it was resolved to make a grand combined search both from Behring Strait eastwards and by the route Franklin was expected to follow. Captains Austin and Penny took the latter route, and were ably assisted in the work by Lieutenant McClintock. The result of this expedition was to clear up much of the geography of the region north of Lancaster Sound, Barrow Strait, and Melville Sound. They discovered Franklin's first winter quarters on Beechey Island; they made their way up Wellington Channel, over a good part of Melville Island, and as far south as Prince of Wales Island.

McCLURE AND COLLINSON. Meanwhile Captain Collinson in the *Enterprise*, and Captain McClure in the *Investigator*, had set sail to attempt the passage through Behring Strait into the Arctic Ocean. The latter ship passed Behring Strait a fortnight ahead of the *Enterprise*, and thus just escaped the grip of the ice, fast closing in on the land. Following the coast to Cape Bathurst, McClure sailed through Prince of Wales Strait till he came to Melville Sound. Here he wintered, having achieved the honour of being the first to make the NORTH-WEST PASSAGE.

The summer of 1851 he spent in trying to pass through or across Banks Strait, but it was not till 1852 that he managed to get across to Melville Island. After another winter among the ice it was high time to get away somehow, and McClure had just made up his mind to abandon his ship and try to get to Hudson Bay Territory, when a sledge party from the *Resolute*, anchored off Melville Island, took them off, and they got safely to England on September 20th, 1854. The officers and crew of the *Investigator* received £10,000 for their services, and McClure the honour of knighthood.

Collinson, in the *Enterprise*, lost his chance for a year, for by the time he got to Point Barrow the ice, which had let McClure through a fortnight before, now barred his passage altogether. He therefore returned to Hong Kong for the winter, and came again in 1851. Then he spent three years exploring Prince Albert Land and Victoria Land, and in 1854 he brought his ship safe back to England.

CAPTAIN KELLETT. The next expedition in search of Franklin had a curious ending, to which there was a still more curious sequel. Sir Edward Belcher was put in command of four ships to try the Lancaster Sound route once more. One of the four was the *Resolute*, commanded by Captain Kellett, and officered by many who had been in Captain Austin's fruitful expedition. The *Resolute* rescued the *Investigator's* crew as related above, and then by means of sledge parties examined the shores of Melville and Prince Patrick's Islands. But in 1854 Sir Edward Belcher, becoming alarmed lest the expedition should be compelled to winter again among the ice, ordered the ships to be abandoned, and the crews to be taken to England, Kellett and his able helpers, McClintock, Mecham, and Hamilton, vainly protesting. The *Resolute* was thus abandoned in Lat. 74° 41′ North, Long. 101° 11′ W., on May 14th, 1854. She was sighted near Cape Mercy, in Davis Strait, on September 10th, 1855, having drifted a thousand miles, and being in good condition then, thus proving that the abandonment was, to say the least, premature.

McCLINTOCK AND THE "FOX." In 1854 Dr. Rae, employed by the Hudson Bay Company to clear up some doubtful points about the extent of King William Island, heard from the Esquimos that they had seen white men in 1850 dragging a boat over the ice near King William's Land, and that later they had seen their dead bodies. They also handed over to Dr. Rae various articles that had undoubtedly belonged to the expedition. This news enabled Dr. Rae to claim the reward of £10,000 the Government had offered for certain tidings of the expedition. It also inspired Lady Franklin to make a supreme effort to make certain of her husband's fate. So Captain McClintock, who had gained great distinction under Austin and Kellett, was asked to command the *Fox*, and make a thorough search about King William's Land. He set out in July, 1857, and returned in 1859, having ascertained the particulars of Franklin's end, as related above, and the probable fate of the others.

HALL. Perhaps the most striking character among the many who sought Franklin is Charles Francis Hall. With no nautical training, he volunteered in 1860 to undertake the quest. He sailed to the Arctic regions on a whaler, landed, and lived for two years among the Esquimos, learning their language, and diligently pursuing his search.

He then came home, but set out again in 1864, this time remaining five years. He succeeded in finding some relics of Franklin's party, and brought back the bones of one of the men. In a third expedition, which started in 1871, he commanded the United States Government ship *Polaris*. He sailed up Smith Sound, and continued for 250 miles along its continuation, styled Kane Basin and Kennedy Channel, reaching Lat. 82° 16′—the farthest north up to date. Then turning southward, he fixed his winter quarters in Thank God Harbour, on the coast of Greenland, Lat. 81° 38′. Here he fell suddenly ill, and died on November 8th, 1871. His companions had great difficulty in getting away.

NORWEGIAN AND SWEDISH EXPLORATION. The Arctic Regions northward of America seeming almost the special province of Englishmen, the part northward of Europe seemed almost as naturally to fall to the northern nations, and the valuable fisheries of Spitzbergen aided in attracting their attention. Between 1860 and 1870 Spitzbergen was circumnavigated, and much of its surface surveyed. Professor Nordenskiold and Lieutenant Payer commenced their exploring experiences at this time, the one the future explorer of the interior of Greenland, the other the discoverer of Franz Joseph Land.

NORDENSKIOLD, Nils Adolf Erik, created a baron in 1880, had a long and successful career in Arctic Exploration. He took part in the surveys of Spitzbergen in 1861 and 1864. In 1870 he did valuable work in exploring the interior of Greenland. But in 1878 he started on the voyage which was to crown his life. Leaving Karlskrona in June, 1878, in the *Vega*, he passed Cape Chelyuskin in August, and in another month had nearly reached Behring Strait. Now, however, they were frozen in. Getting free in July of 1879, they passed Behring Strait on the 20th, and thus made the NORTH-EAST PASSAGE. As a route to Eastern Asia, the north-east passage will probably never be valuable, but this voyage, together with Nordenskiold's other enterprises along Asia's northern coast, proves that maritime intercourse with Siberia is more practicable than was thought.

LIEUTENANT PAYER. An Austrian army officer, Lieutenant Julius Payer, from experience gained in exploring Greenland, Nova Zembla, and Spitzbergen, had conceived the idea that the north-east passage must be sought by passing to the north of Nova Zembla, rather than by hugging the coast. His opinion was wrong, but his attempt led to most important results. Setting out in the *Tegethoff* from Tromsö, in July, 1872, he passed the winter near the north of Nova Zembla. When summer came, the ice, still holding the ship, started drifting northward under the influence of the wind, and soon they came in sight of land till then unknown. They wintered on a small island near the main mass of land, and spent the early spring in sledging expeditions, discovering that the new land consisted of two large islands, Wilczek Land and Zichy Land, with many others. In one expedition the adventurers reached Lat. 82° 5′, which remained the "farthest north" in the Eastern Hemisphere for about twenty years. In May, finding their ship still icebound, they left it, and set out southwards, placing their boats on sledges. They reached open water on August 14th, and had the good fortune to meet with a Russian ship, which conveyed them to Vardo, after a highly successful expedition.

SIR GEORGE NARES. English zeal for Arctic exploration, which had waned after Franklin's fate was determined, increased again after the exploits of Payer and Nordenskiold. In 1875 the *Alert* and *Discovery*, under Captain Nares and Lieutenant Markham, set out by way of Smith Sound to ascertain whether the much talked of open Polar Sea had any existence. The *Alert*, passing through Robeson Channel, wintered between the land and the edge of the Palæocrystic Sea, facing the cliffs of ice, in Lat. 80° 27′ N., the highest a ship had so far reached. Then with sledge-parties under Lieutenant Markham, a further advance was made to Lat. 83° 20′ North, but no open Polar Sea was found.

DR. NANSEN. The failure of an American expedition in the *Jeannette*, under Lieutenant De Long, led to Nansen's great attempt on the North Pole. The *Jeannette* had been crushed in the ice north of Siberia in Long. 155° E., in 1881. In 1884 some articles from this ship made their appearance on the coast of Greenland, on the exact opposite shore of the Arctic Sea. Therefore, argued Dr. Nansen, the same agency, namely drifting ice, should drift a ship across, and in the journey it must go pretty near the Pole. His reasoning was justified, for after getting his ship, the *Fram*, fixed in the ice near the new Siberian Islands in September, 1893, she started on her slow journey across the Arctic Ocean, and came out near Spitzbergen. The *Fram* got as near the Pole as 84° North Lat. in March, 1895, and here Nansen and his trusted comrade, Johansen, left her, and made their way northward. In 24 days they made 150 miles, thus reaching Lat. 86° 14′ North, and Long. 95° E. Turning back, they made for Franz Josef Land, and had to winter there. Resuming their retreat in May, 1896, they met Mr. Jackson, of the Harmsworth Exploring Party, who conveyed them to Norway in his ship, the *Windward*, the *Fram* arriving from Spitzbergen not long after.

THE DUKE OF ABRUZZI. It seems hard on Nansen that his record stood but a year or two, but so it is. The Duke of Abruzzi, an Italian prince and naval officer, took an expedition to Franz Josef Land in 1899, and wintered on Rudolf Land. Sledge parties were sent out, one of which, commanded by Captain Cagni, reached Lat. 86° 33′, in Long, 56° E., beating Nansen by 20 miles. The party did good work in surveying the neighbouring islands.

ANTARCTIC EXPLORERS.

CAPTAIN COOK. As mentioned above, Cook, in his second voyage (1772–1775) circumnavigated the Southern Ocean, and established the fact that no great expanse of land stretched northward from the Antarctic Circle. He got as far south as Lat. 71° 10′ on the meridian of 107° W. Longitude.

CAPTAIN WILKES. While a French expedition under Dumont d'Urville was exploring the land known to exist due south of Tasmania, which he named Adélie Land, on the very verge of the Antarctic Circle, Commander Wilkes, of the U.S. navy, was making an extended survey of the supposed land on each side of it, from E. Longitude 154° 27′ to 97° 30′, and he made it pretty certain that the land here, though not quite continuous, is so joined up by everlasting ice as to present an impassable barrier.

SIR JAMES ROSS. The great English Antarctic expedition of 1839–1843 was under the command of James Clark Ross, nephew of Sir John Ross. He sailed in the *Erebus*, with Captain Crozier commanding the *Terror*. After passing through an advance guard of ice in Lat. 70° S. and Long. 172° E., early in January, 1841, they had a fairly clear course straight south for some weeks, with land all along on their right hand, which Ross named Victoria Land. Two volcanic mountains here, the active one "Erebus," and the extinct one "Terror," were named after the ships. Beyond these mountains the coast turns to the east, and is fringed by a barrier of ice from 100 to 200 feet high. Both in this and the next year Ross failed to find a break in this ice barrier, though he reached the high latitude of 78° 11′. The early part of 1843 was spent in surveying the southern part of the South Shetland Islands, and in the autumn of that year the expedition returned home.

C. E. BORCHGREVINK. No great or sustained expedition was made in Antarctic Regions for some years after Sir James Ross's great success, although little points were settled by different parties. In 1894, however, a young Norwegian named Borchgrevink, in default of other means, shipped as ordinary seaman on a whaler bound for Victoria Land, and had the honour, together with his captain, of first setting foot on the great Antarctic continent.

CAPTAIN SCOTT. The importance of Antarctic exploration being now fully recognised, a strong expedition was organised in 1901. (See under *Antarctic Ocean*, p. 41).

THE BRITISH EMPIRE

INCLUDING PROTECTED STATES AND TERRITORIES.

Component Parts.	Form of Government.
UNITED KINGDOM.	Constitutional Monarchy.
BRITISH INDIA.	
Ceylon	Crown Colony.
BRITISH AMERICA.	
Canada	Self-governed.
Newfoundland	Self-governed.
British Honduras	Crown Colony.
British Guiana	Representative Government
WEST INDIES.	
Bahamas	Representative Government
Jamaica	Representative Government
Windward Islands	Representative Government
Leeward Islands	Representative Government
Barbados	Representative Government
Trinidad and Tobago	Crown Colony.
BRITISH AUSTRALASIA.	
New South Wales, Victoria, Queensland, South Australia, Western Australi, Tasmania	Forming the Australian Commonwealth, a federation of self-governed colonies.
British New Guinea	Administered by the Commonwealth Government.
New Zealand	Self-governed.
BRITISH AFRICA.	
(1) South Africa.	
Cape Colony	Self-governed.
Natal	Self-governed.
Basutoland	Crown Colony.
Orange River Colony	Transitional.
Transvaal	Self-governed.
Rhodesia	Administered by Chartered Company.
Bechuanaland	Protectorate.
(2) West Africa.	
Gambia	Crown Colony.
Sierra Leone	Crown Colony.
Gold Coast	Crown Colony.
Lagos	Crown Colony.
Nigeria	Protectorate.
(3) East Africa.	
East Africa Protectorate	Protectorate.
Uganda	Protectorate.
Zanzibar	Protectorate.
East Africa (*continued*) :—	
Central Africa Protectorate	Protectorate.
Somali Coast Protectorate.	Protectorate.
SMALLER POSSESSIONS.	
(1) In the Mediterranean.	
Gibraltar	Crown Colony.
Maltese Islands	Representative Government
Cyprus	Representative Government
(2) In the Atlantic Ocean.	
Bermuda Islands	Representative Government
Ascension	Board of Admiralty.
St. Helena	Crown Colony.
Tristan D'Acuna, Falkland Islands, South Georgia	Crown Colony.
(3) In the Indian Ocean.	
Aden, Perim, Kuria Muria Isles, Socotra	Dependencies of Bombay.
Mauritius	Crown Colony.
Rodriguez, Chagos Isles	Dependencies of Mauritius.
The Seychelles	Crown Colony.
Laccadive Isles	Dependency of Madras.
Maldive Isles	Dependency of Ceylon.
Andaman Isles, Nicobar Isles	Administered by the Government of India.
Straits Settlements	Crown Colony.
Malay States	Protectorate.
(4) In the Pacific Ocean.	
British Borneo	Protectorate.
Labuan	Crown Colony.
Hong Kong	Crown Colony.
Wei-hai-wei	Protectorate.
Fiji Islands	Crown Colony.
B. Solomon Isles, Tonga Islands, Gilbert Island, Ellice Islands, Phœnix Group, Union Group, Pitcairn Island, Fanning Island	Protectorate administered by the Governor of Fiji as High Commissioner of the Western Pacific.

The **Self-governed Colonies** possess legislative assemblies, the members of which are elected by the colonists. The Governor is appointed by the Crown, and is the only official controlled by the home government. In those colonies having **Representative Government**, the legislative powers are in the hands of a council, consisting partly of officials appointed by the Crown and partly of members elected by the people. **Crown Colonies** are under the direct control of the Imperial Government, and the administration is carried on by governors and officials appointed by the home authorities. **Dependencies** are subject to the government of the colony to which they are subordinate and are administered by officials appointed by such government. **Protectorates** retain a considerable measure of internal independence, under the general influence and direction of British officers, but in their external relations they are completely under British control.

THE UNITED KINGDOM.

SITUATION AND EXTENT. The United Kingdom includes the two large islands of Great Britain and Ireland, and a number of smaller islands, and is situated to the north-west of the continent of Europe, from which it is separated by the North Sea and the English Channel, the shortest passage being that across the Strait of Dover, viz., 21 miles. The total area is 121,089 square miles, of which Great Britain covers 88,729 square miles and Ireland 32,360.

The most important of the smaller islands are:—

The Isle of Wight, in the English Channel, off the coast of Hampshire.
The Scilly Islands to the south-west of Land's End.
Anglesey to the north-west of Wales.
The Isle of Man in the Irish Sea.
Arran and Bute in the Firth of Clyde.
The Hebrides off the west coast of Scotland.
The Orkneys and Shetland Islands to the north of Scotland.

The Channel Islands—Jersey, Guernsey, Alderney, and Sark—situated from 15 to 30 miles from the coast of France, 90 miles from Weymouth and 150 miles from Southampton, have been attached to the realm of England since 1066.

INHABITANTS. The bulk of the people are of Teutonic origin, and are the descendants of the tribes of Jutes, Angles, and Saxons, who settled in England during the 5th and 6th centuries. People of Keltic origin occupy the Highlands and islands of Scotland, the greater part of Ireland, and most of Wales, and Keltic words are still employed as names of places, rivers, and mountains. Thus *dun* (a fortified height) appears in London and Dunedin; *Afon* and *Uisge* (water) in Avon, Ouse, Usk, Esk, and Exe. The English language is spoken almost everywhere in the United Kingdom, less than five per cent. of the people making use of various Keltic dialects—Gaelic in the Scottish Highlands, Cymric in Wales, Erse in Ireland, and Manx in the Isle of Man.

There is complete religious freedom. In Great Britain the great majority belong to the Established Churches of England and Scotland and to other Protestant bodies; but in Ireland, three-fourths of the people are Roman Catholics. The Established Churches of England and Scotland are episcopal and presbyterian respectively. The branch of the Anglican Church in Ireland was disestablished by the Act of 1869, but it is reorganized and numbers more than 500,000 members. Of the various Nonconformist bodies, the Methodists, Baptists, and Congregationalists have the greatest number of adherents.

PHYSICAL CHARACTERISTICS. The islands that form the United Kingdom rise out of shallow seas, the bed of which is a submarine plateau forming a continuation of the Central Plain of Europe. Geological evidence proves that, in past ages, Ireland was connected to Great Britain, and that the whole formed part of the continent of Europe.

In Great Britain a backbone of high land extends, with but few interruptions, from north to south. In Scotland this backbone is formed by the Northern Highlands and the Grampians, and, with a short break at the plain of the Forth and Clyde, is continued through the Lowther Hills to the Cheviots and Pennine Range. The latter chain runs southward to the centre of England, and the line is completed by means of the detached ranges of the Clent, Cotswold, Mendip, and Quantock Hills, which link it with the granite ridges of the Devonian System in the south-west. This lofty belt gives a short, steep slope to the Atlantic, and a longer and more gradual one to the North Sea, and ensures good drainage for the greater part of the country. The worst drained district is that of the Fens, lying round the Wash. The Eastern plain is broken here and there by ranges of hills of no great elevation. The greater part of Wales is mountainous.

The middle of Ireland is occupied by a plain broken by a single low range, and bordered near the coast by detached mountain masses. As a result, much of the interior is badly drained, and bogs cover more than one-third of the country.

No part of the United Kingdom is above the snowline. The highest peak is Ben Nevis in the Grampians, which reaches a height of 4,400 feet.

RIVERS. The United Kingdom is well watered. Most of the longer English rivers have a slow current, and their depth, but little varied by seasons of drought or flood, and the absence of impeding rocks and other obstacles in their course, render them of great service for water carriage, and their wide estuaries give access from the sea to important ports and industrial centres. The Scottish rivers are shorter and swifter, while those of Ireland are so sluggish as often to expand into lakes or to give rise to swamps.

The following table gives the great commercial rivers, with the ports and industrial centres connected with them:

Rivers.	Towns.
England.	
Thames, 215 miles	London, Woolwich, Chatham (Medway).
Trent	Gainsborough, Nottingham, Burton, Stoke, Stafford (Sow), Derby, (Derwent), Leicester (Soar).
Yorkshire Ouse. .	York, Sheffield (Sheaf), Leeds (Aire), Rotherham, Doncaster (Don), Halifax, Wakefield (Calder), Hull, Grimsby (Humber).
Tyne	Newcastle, Gateshead, Shields, Tynemouth.
Severn, 240 miles .	Bristol (Avon), Newport (Usk), Cardiff (on the estuary).
Scotland.	
Forth	Leith, Grangemouth, Stirling.
Tay	Dundee, Perth.
Clyde	Glasgow, Greenock, Dumbarton.
Ireland.	
Shannon, 254 miles	Limerick.

In Ireland, the important ports of Dublin, Belfast, Cork, and Waterford stand at the mouths of the rivers Liffey, Lagan, Lee, and Suir respectively.

CLIMATE. The islands lie between the parallels of 50° and 60° of north latitude, and thus receive as much of the sun's direct heat as the centre of Russia or Labrador; but the prevailing winds are from the south-west and blow strongest during the winter months, and these bring with them the warmth and moisture of the Atlantic, and render the winters everywhere mild and equable, particularly on the south-west coasts. The myrtle and arbutus grow out of doors in the counties of Devonshire and Kerry, and frost is almost unknown in the Scilly Islands. Cold east winds are common in late autumn and early spring. The summer heat is modified by the surrounding ocean, so that there is seldom a day when labour is attended with discomfort on account of the temperature. The average annual temperature for the whole of the United Kingdom is about 48° F.

In Ireland, since there is no continuous belt of high land to stop the moisture-laden clouds from the Atlantic, the rainfall is fairly uniform in all parts of the island, with a slight preponderance in the west and south-west, and averages about 40 inches per annum. In Great Britain, the amount decreases from west to east. On the western slopes of the Scottish Highlands the annual fall reaches 80 inches, and in Cumberland, Westmoreland, Wales, Devonshire and Cornwall it exceeds 60 inches. The eastern counties receive less than 30 inches, and in Lincolnshire, Cambridgeshire, Norfolk, Suffolk, and Essex the average is less than 25 inches.

FERTILITY. The moist and mild climate produce a natural freshness in the vegetation at all seasons of the year, and the vivid green of its pastures has gained for Ireland the appellation of the "Emerald Isle." Scotland is the least fertile part of the United Kingdom, only about one-fourth of that country being fit for cultivation, while 80 per cent. of the surface of England is productive, and rich pasture is abundant in nearly every part of Ireland. The water-worn summits and steep western declivities of the mountains are bare of soil. Where the slope is more gentle, the bracken and heather that characterise the high moorlands of Scotland, Ireland, and Wales are able to establish themselves. In most other parts good pasture for sheep and cattle is obtainable, and the plains and river valleys are generally very fertile. The excessive moisture of Ireland and the west of Great Britain militates against the growth of cereals, and favours dairy-farming and cattle raising.

MINERALS. Great Britain is particularly rich in useful minerals. There is abundance of coal and iron, and these have been the principal source of the nation's wealth. The coal-fields cover an area of 12,350 square miles, and the output exceeds 230,000,000 tons annually. The Royal Commission on the Coal Supplies of the United Kingdom reported, in January, 1905, that at the present rate of consumption, the proved supply of coal is sufficient to last more than 400 years. Iron is found in close proximity to the coal-beds, and the limestone necessary for smelting at no great distance. Ireland suffers from a scarcity of both coal and iron. Other products of the mines and quarries include lead, tin, copper, zinc, salt, building-stone, slate, granite, and marble. Clay for the manufacture of the coarser kinds of pottery is abundant in North Staffordshire; that for the finer kinds of porcelain is obtained from Devon and Cornwall. The extensive importation of copper from Spain and South America, and of tin from the Straits Settlements, has so reduced their price as to cause the shutting down of most of the mines formerly worked for those minerals in Great Britain.

ENGLAND AND WALES.

England, together with Wales, forms the southern part of the island of Great Britain, and occupies rather more than two-thirds of its surface—England, 50,823 square miles, Wales, 7,363. It has the sea on all sides except for a distance of 70 miles towards the north, where Solway Firth, the Cheviot Hills, and the river Tweed separate it from Scotland. On the west, the Irish Sea and St. George's Channel divide it from Ireland. England contains 74.3 per cent., and Wales 4.1 per cent. of the total population of the United Kingdom. The former returns 465 and the latter 30 members to the House of Commons.

COAST LINE. Few countries in the world have so long a coast-line in proportion to their area. The numerous bays and river estuaries provide excellent harbours, and penetrate so deeply into the land that no part of the country is more than 80 miles from a seaport. The west coast is generally bold and rocky, and broken by wide openings which give easy access to the important industrial centres. The east is, for the most part, low, and contains but few indentations. The south presents the characteristics of both, being generally bold and broken up into excellent harbours to the west of the Isle of Wight, and east of the island, low and flat, or ending in chalk cliffs.

INDUSTRIES.

AGRICULTURE. Though for many years agriculture has been in a depressed condition, 96 per 1,000 of the male population of England and Wales are still employed on the land, and farms and pastures occupy three-fourths of the surface. The acreage under grain crops is decreasing. The soil and climate of the Eastern Counties favour the growth of wheat, but the average price—twenty-seven shillings per quarter during the last decennial period—allows of little or no margin of profit. In the west and north barley and oats are the principal grain crops. Large vegetable and fruit gardens are found near most of the large towns. Dairy-farming is of importance, but poultry-farming is comparatively neglected.

MINING. England is one of the greatest mining countries in the world. More than 640,000 men are employed in or about the mines and quarries, by far the larger proportion in coal-mining. The coal-fields are the seats of the staple manufactures of the country, and, as a result, they are the most densely populated. The table gives the principal coal-fields, with the leading industries connected with each:—

COAL-FIELD.	INDUSTRIES.
NORTHUMBERLAND AND DURHAM	Iron and steel, ship-building, engineering.
YORKSHIRE AND DERBY	Woollen manufactures, iron, steel, and cutlery.
NORTH STAFFORDSHIRE	The Potteries.
SOUTH STAFFORDSHIRE	Iron-smelting and hardware.
SOUTH WALES	Metal-smelting, tin-plate working.
SOUTH LANCASHIRE	Cotton goods.
CUMBERLAND	Iron smelting.

MANUFACTURES. England is pre-eminent as a manufacturing country, the pre-eminence being due to her mineral wealth, especially in coal and iron. Her staple manufactures are cotton goods, iron, and wool.

Cotton. Most of the towns on the South Lancashire coal-field are engaged in cotton spinning and weaving. Manchester is the centre of the trade, and Liverpool the great cotton port. Nottingham is famous for cotton hosiery and lace.

Iron. The chief iron-smelting districts are:—(1) The Cleveland District of North Yorkshire. (2) The Furness District of North Lancashire. (3) South Staffordshire. (4) South Wales.

There are extensive steel works at Sheffield, Middlesborough, Elswick, and Barrow. Sheffield is the headquarters of the cutlery trade, and also manufactures armour-plates, guns, and steel rails.

Wool. The woollen manufacture is the oldest in the kingdom. It is carried on chiefly in the West Riding of Yorkshire, Leeds and Bradford being the principal centres. Leicester manufactures woollen hosiery, and Bradford and Trowbridge (in Wiltshire) are celebrated for cloths of fine texture.

Minor manufactures are numerous and include pottery silk, glass, linen, chemicals, and leather.

FISHERIES. The most valuable fisheries are those of the North Sea, and the Dogger Bank is the most prolific fishing ground. Herrings, haddock, cod, and various species of flat fish yield the greatest harvest. Shoals of pilchards frequent the south-west coasts. The introduction of steam power into the fishing boats tends to transfer the industry from numerous fishing villages all along the coast to a few large ports in railway communication with the great centres of population. The chief fishing ports are Grimsby, Hull, Yarmouth, Plymouth, and Penzance.

COMMERCE.

England is as pre-eminent as a commercial nation as she is in manufactures. The *imports* are mainly food and raw materials for manufacture, the chief items being grain and flour, cattle and sheep, dairy produce, sugar, raw cotton, wool, metals, and timber. The principal sources of supply are the United States, the British Colonies, France, Holland, Germany, Russia, Belgium, Denmark, Scandinavia, Spain, and Egypt. The *exports* consist of manufactured or partly manufactured goods—cottons, woollens, iron in all forms, machinery—and coal. The British Colonies and Dependencies purchase nearly one-third of the total amount, India, South Africa, Australia, Canada, and New Zealand, in order, being the best colonial customers. The United

States, Germany, France, Russia, Holland, and Belgium provide the greatest foreign markets.

The following table gives the principal ports, arranged in order of the tonnage of vessels entered and cleared annually, together with the characteristic trade of each :—

Port.	Trade.
London	Colonial and Coasting.
Liverpool	North and South American, Irish.
Cardiff	Exports coal. Imports metals for smelting.
Newcastle	Exports coal, machinery, and chemicals.
Hull	Trades with Dutch, Norwegian, and Baltic ports.
Southampton	Passenger traffic to South Africa and America.
Bristol	Import trade with United States and West Indies.

The principal ports for passengers for the continent are :—

Dover, connecting with Calais.
Folkestone, connecting with Boulogne.
Newhaven, connecting with Dieppe.
Harwich, connecting with Hamburg, Rotterdam, and Antwerp.

COUNTIES AND COUNTY TOWNS.

England is divided into 40 counties and Wales into 12. Of the English counties 20 border the sea and 20 are inland. The largest are Yorkshire, Lincolnshire, Devon, and Norfolk; the smallest Rutland, Middlesex, Huntingdon, and Bedford.

SIX NORTHERN COUNTIES.

County.	Capital.	Situation.
Northumberland	Newcastle	River Tyne.
Durham	Durham	River Wear.
Yorkshire	York	River Ouse.
Cumberland	Carlisle	River Eden.
Westmoreland	Appleby	River Eden.
Lancashire	Lancaster	River Lune.

These counties are the seats of the iron, cotton, and woollen industries, and are generally densely populated. Yorkshire is divided into three parts called Ridings. The North and East Ridings are agricultural, the West Riding mining and manufacturing. South Lancashire, the West Riding of Yorkshire, and the Tyne District of Northumberland and Durham are among the busiest and most populous districts of England. Cumberland and Westmoreland are chiefly pastoral, but a small coal-field runs along the Cumberland coast, and iron-mining and smelting are also engaged in.

SIX EASTERN COUNTIES.

County.	Capital.	Situation.
Lincolnshire	Lincoln	River Witham.
Norfolk	Norwich	River Wensum.
Suffolk	Ipswich	River Orwell.
Essex	Chelmsford	River Chelmer.
Cambridgeshire	Cambridge	River Cam.
Huntingdonshire	Huntingdon	The Great Ouse.

The principal industries in these counties are agriculture and fishing. The land is generally low and flat, or crossed by ranges of chalk hills of no great elevation. The Fens occupy portions of Lincolnshire, Cambridgeshire, and Norfolk. Most of the marshes have been reclaimed by drainage, and now bear good crops of corn or grass. Numerous turkeys and geese are reared on the Norfolk farms, and crowds of wild fowl haunt the "Broads."

COUNTIES ADJACENT TO LONDON.

County.	Capital.	Situation.
Middlesex	Brentford	River Thames.
Kent	Maidstone	River Medway.
Surrey	Guildford	River Wey.
Berkshire	Reading	River Thames.
Buckinghamshire	Aylesbury	——
Hertfordshire	Hertford	River Lea.

These counties are agricultural, and the districts round London, which occupies portions of Middlesex, Surrey, Kent, and Essex are engaged in market-gardening. Kent is known as the "Garden of England," and is famous for its hop-gardens, apple, cherry, and filbert orchards. Surrey contains much heath and woodland in the north, but the south is very fertile. Bucks is a dairy county, and Hertfordshire has paper-making and straw-plaiting industries.

SEVEN SOUTHERN COUNTIES.

County.	Capital.	Situation.
Sussex	Lewes	River Ouse.
Hampshire	Winchester.	River Itchen.
Wiltshire	Salisbury	River Avon.
Dorset	Dorchester	River Frome.
Somerset	Taunton	River Tone.
Devonshire	Exeter	River Exe.
Cornwall	Bodmin	——

Agriculture is the principal occupation of the people. The various chalk downs provide rich pasturage for sheep, while the rich soil of the lowlands and the moist climate of the south-west are favourable for dairy-farming. A few tin mines are still worked in Cornwall; the clay-pits of that county and Devonshire furnish excellent clay for the manufacture of the finest porcelain; and sandstone for building purposes is quarried in Somerset and Dorset. Wiltshire, an inland county, and Somerset have manufactures of "West of England Cloth." The Scilly Islands now grow flowers and early vegetables for the London market.

FIVE NORTH-MIDLAND COUNTIES.

County.	Capital.	Situation.
Derbyshire	Derby	River Derwent.
Nottinghamshire	Nottingham	River Trent.
Staffordshire	Stafford	River Sow.
Leicestershire	Leicester	River Soar.
Rutland	Oakham	——

Rutland is purely agricultural, and Leicestershire is to a large extent a pastoral county. There are, however, important manufactures of woollen hosiery and boots and shoes. The majority of the inhabitants of the other counties are engaged in mining or manufactures. A number of small towns in North Staffordshire are known collectively as the "Potteries." South Staffordshire is the "Black Country." The people are engaged in some branch of iron manufacture, each town specialising in a particular branch of the trade.

SIX SOUTH-MIDLAND COUNTIES.

County.	Capital.	Situation.
Warwickshire	Warwick	River Avon.
Worcestershire	Worcester	River Severn.
Northamptonshire	Northampton	River Nen.
Bedfordshire	Bedford	The Great Ouse.
Oxfordshire	Oxford	River Thames.
Gloucestershire	Gloucester	River Severn.

With the exception of the Northern portions of Warwickshire and Worcestershire, which form a part of the "Black Country," and are engaged in the iron industry, the counties are mainly agricultural. Northamptonshire has extensive manufactures of boots and shoes. Bedfordshire is a county of market-gardens. Gloucestershire contains two small coal-fields—those of the Forest of Dean in the west and Bristol in the south.

FOUR COUNTIES BORDERING ON WALES.

County.	Capital.	Situation.
Cheshire	Chester	River Dee.
Shropshire	Shrewsbury	River Severn.
Herefordshire	Hereford	River Wye.
Monmouthshire	Monmouth	River Wye.

These counties are mainly agricultural, with much rich grazing land. Cheshire produces excellent cheese and butter; salt is extensively worked in the southern part of the county, and the South Lancashire coal-field penetrates into the northern portion. Herefordshire is famed for its hop-gardens and apple orchards. Monmouth contains a part of the South Wales coal-field.

COUNTIES OF NORTH WALES.

County.	Capital.	Situation.
Flintshire	Flint	River Dee.
Denbighshire	Denbigh	——
Carnarvonshire	Carnarvon	Menai Strait.
Anglesey	Beaumaris	Menai Strait.
Merionethshire	Dolgelly	——
Montgomeryshire	Montgomery	——

Much of the surface is mountainous, Carnarvonshire containing the highest ranges. The lower slopes afford pasturage for sheep and cattle. There are small coal-fields in Anglesey, Denbighshire, and Flintshire; lead, copper, and zinc are mined in various parts; and excellent slate is quarried. Merionethshire and Montgomeryshire manufacture Welsh flannels.

COUNTIES OF SOUTH WALES.

County.	Capital.	Situation.
Cardiganshire	Cardigan	River Teify.
Pembrokeshire	Pembroke	Milford Haven.
Carmarthenshire	Carmarthen	River Towy.
Glamorganshire	Cardiff	River Taff.
Brecknockshire	Brecon	River Usk.
Radnorshire	Radnor	——

The great feature is the South Wales Coal-field, which is the most extensive in Great Britain, having an area of 1,000 square miles. The smelting of metals is a leading industry. Copper is imported from all parts of the world, and tin from Singapore. The tin-plate trade employs a large number of people in the towns, and is also carried on in the villages in all the valleys on the coal-field. Glamorganshire is the wealthiest and most thickly peopled of the Welsh counties.

SCOTLAND.

Scotland forms the northern part of Great Britain, and, including the numerous islands off the west and north coasts, has a total area of 29,820 square miles. At the North Channel it approaches within 13½ miles of the Irish coast. The country contains 10.8 per cent. of the total population of the United Kingdom. In the Highlands 28,100 of the people speak only Gaelic. Scotland is represented in the House of Commons by 72 members, and in the House of Lords by 16 representative peers.

GENERAL CHARACTERISTICS. Scotland is much more mountainous than England. It is divided naturally into three regions:—

(1) **The Southern Uplands**—a tableland of broad moors crossed by ranges of hills covered with thin pasture.

(2) **The Central Plain**, gently undulating in character, and forming the richest part of Scotland, both in mineral wealth and fertility of soil. It is also the most densely populated portion.

(3) **The Highlands** of the north and west, consisting of wide stretches of wild moorland, crossed from west to east by bold mountain masses. Much of the land is preserved as deer forests or grouse moors. Parts of this region are famed for the picturesque beauty of their scenery.

The rivers of Scotland, except where they open out into large estuaries or firths, are of little use for navigation, but many of them have valuable salmon fisheries. The coast is so deeply indented by firths and lochs that no part of the country is more than 40 miles from the sea.

INDUSTRIES.

Of the total male population, 64 per cent., and of the female population, 25 per cent., have some employment.

AGRICULTURE. Less than one-fourth of the surface of the whole country admits of cultivation. Cattle and sheep are pastured. Barley and oats are the characteristic cereals.

MINING. Coal and iron abound in the Central Plain; lead is mined in the Lowther Hills; and granite is quarried in the Grampians.

FISHERIES. The fisheries are valuable all round the coast, herrings providing the greatest catch. Many vessels are engaged in the Greenland Whale fishery. Salmon are taken in nearly all the rivers. The chief fishing ports are Dundee, Arbroath, Stonehaven, Wick, Thurso, and Stornoway.

MANUFACTURES. The principal manufactures are linen, cotton, and woollen goods, machinery, iron, and shipbuilding.

Linen and **Jute** are manufactured in the counties of Forfar and Fife, Dundee and Dumfermline being the chief centres.

Cotton goods are made at Glasgow and Paisley.

The Woollen manufacture is carried on in the valley of the Tweed, and also in the counties of Stirling and Ayrshire.

Machinery is produced chiefly in and around Glasgow.

Iron is smelted on all the coal-fields, but especially on those of Lanarkshire and Stirlingshire.

The banks of the Clyde from Glasgow to Greenock are lined with ship-building yards, some of which are capable of turning out the largest liners or the most powerful battle ships.

COMMERCE.

The commerce is steadily increasing. There is a considerable trade with England and the north of Ireland, the former taking cattle and agricultural produce generally, while the latter receives large shipments of coal. Glasgow and Greenock, in addition to a large coasting trade, do a considerable business with America. The principal ports on the east, Dundee, Aberdeen, and Leith, trade extensively with the Baltic, India, and the East.

The principal *exports* are manufactured goods and coal, cattle, sheep, oats, and fish. The *imports* are raw materials for manufactures, food-stuffs, and colonial produce.

COUNTIES AND COUNTY TOWNS.

Scotland is divided into 33 counties, the largest of which are Inverness, Argyllshire, Ross and Cromarty, and Perthshire, and the smallest Clackmannan, Kinross, Linlithgow, and Nairn.

HIGHLAND COUNTIES.

County.	Capital.	Situation.
Shetland	Lerwick	Isle of Mainland.
Orkney	Kirkwall	Isle of Pomona.
Caithness	Wick	Wick Harbour.
Sutherland	Dornoch	Dornoch Firth.
Ross & Cromarty	Dingwall	Cromarty Firth.
Inverness	Inverness	Beauly Firth.
Argyll	Inverary	Loch Fyne.
Bute	Rothesay	Firth of Clyde.
Nairn	Nairn	River Nairn.
Elgin	Elgin	River Lassie.
Banff	Banff	River Deveron.
Aberdeen	Aberdeen	River Dee.
Kincardine	Stonehaven	East Coast.

These counties are but sparsely peopled and Aberdeen is the only large town. There are some fertile spots in the narrow, low-lying plains bordering the east coast, but generally the land yields but a scanty livelihood to the crofters. The principal occupations are the rearing of cattle and sheep, fishing, quarrying, and game-preserving.

CENTRAL LOWLAND COUNTIES.

County.	Capital.	Situation.
Perth	Perth	River Tay.
Forfar	Forfar	——
Fife	Cupar	——
Kinross	Kinross	Loch Leven.
Clackmannan	Clackmannan	Near River Forth.
Stirling	Stirling	River Forth.
Dumbarton	Dumbarton	River Clyde.
Renfrew	Renfrew	Near River Clyde.
Ayr	Ayr	River Ayr.
Lanark	Lanark	River Clyde.
Linlithgow	Linlithgow	——
Mid-Lothian	Edinburgh	Near Firth of Forth.
Haddington	Haddington	——

The northern portions of Perth and Forfar belong to the Highland region. The remainder of the Central District embraces the most fertile parts of Scotland, and also contains the principal industrial centres. In several of the counties coal and iron are abundant, and Lanarkshire, which is especially rich in those minerals, is the wealthiest and most densely populated of the Scotch counties. An oil-shale bearing district covers the eastern part of Linlithgow and the west of Mid-Lothian. These two counties and Haddington are also noted for their excellent farms. Ayrshire is known as the Dairy County. Other extremely fertile districts are the Carse of Gowrie, in Perthshire, and the Carse of Stirling.

SOUTHERN LOWLAND COUNTIES.

County.	Capital.	Situation.
Berwick	Greenlaw	River Blackadder.
Peebles	Peebles	River Tweed.
Selkirk	Selkirk	River Ettrick.
Roxburgh	Jedburgh	River Jed.
Dumfries	Dumfries	River Nith.
Kirkcudbright	Kirkcudbright	River Dee.
Wigtown	Wigtown	Wigtown Bay.

This district is mainly pastoral, with a few fertile regions suitable for tillage, such as Nithsdale and Annandale, in Dumfries, and the central plain of Berwickshire known as the Merse. Towns in the Tweed basin manufacture the cloth called tweed, from the home-grown wool.

IRELAND.

Ireland lies about 60 miles to the west of England, and in the north-east approaches to within 13½ miles of the nearest point of Scotland. The island has an area of about 31,760 square miles, and now contains 10.8 per cent. of the total population of the United Kingdom. Since 1845 emigration has caused a steady diminution in the number of the inhabitants. The country is represented in the Imperial Parliament by 103 members of the House of Commons, and by 28 representative peers in the House of Lords.

INDUSTRIES.

AGRICULTURE is the leading industry, and, under the fostering care and direction of the Board of Agriculture, is making great advances. The climate and soil are suitable for dairy-farming, and the rearing of cattle and sheep. Good crops of oats, barley, potatoes, and roots are raised, and in the north there is a considerable acreage under flax.

MANUFACTURES. The dearth of coal is a depressing factor, and, as a consequence, the principal manufactures have their seat in the north-east of the country, within easy reach of the Scotch coal-fields, Belfast being the greatest industrial centre. Linen and ship-building are the principal manufactures. Brewing and the distillation of whisky are carried on in several towns, and lace, frieze, and poplins are produced in many localities, chiefly in the north and east.

FISHING is carried on all round the coast, though the sea-fisheries are not so well developed as those of England and Scotland. Salmon and trout are taken from most of the rivers and lakes.

COMMERCE.

The trade of Ireland is chiefly with Great Britain. Lines of coasting steamers trade regularly between Belfast, Dublin, Waterford, or Cork, and Glasgow, Liverpool, Bristol, the south of England ports, and London. Other important Irish ports are Limerick and Galway on the west, and Londonderry in the north. The *exports*, of which more than 90 per cent. is taken by Great Britain, consist of agricultural and dairy produce, linen, whisky, and malt liquors. The principal *imports* are coal, manufactured goods, clothing, tea and sugar. Queenstown, in Cork Harbour, is a calling place for the Atlantic liners sailing between Liverpool and New York, and Moville, on Lough Foyle, for those sailing between Liverpool or Glasgow and the Canadian ports.

COUNTIES AND CHIEF TOWNS.

Ireland is divided into four provinces, Ulster in the north, Leinster in the east, Munster in the south-west, and Connaught in the west; and these are sub-divided into 32 counties.

COUNTIES OF ULSTER.

County.	Capital.	Situation.
Donegal	Lifford	River Foyle.
Londonderry	Londonderry	River Foyle.
Antrim	Belfast	River Lagan.
Tyrone	Omagh	River Foyle.
Armagh	Armagh	Ulster Canal.
Down	Downpatrick	Near Strangford Lough.
Fermanagh	Enniskillen	River Erne.
Monaghan	Monaghan	River Blackwater.
Cavan	Cavan	——

Ulster is the most densely peopled and the most enterprising of the provinces. A large proportion of the inhabi-

tants are descendants of immigrants from England and Scotland who settled here in the 17th century. Donegal is the most mountainous of the Irish counties, and contains extensive bogs. Antrim is also mountainous, and Tyrone has much bogland. The remainder of the province is generally well cultivated. Coal and iron are worked to a small extent in Fermanagh and Tyrone, and marble, limestone, slate, and freestone are quarried in various parts. The linen manufacture and the distillation of whisky flourish in Belfast, Londonderry, and other towns, and the ship-building yards of Belfast are world famous.

COUNTIES OF LEINSTER.

County.	Capital.	Situation.
Longford	Longford	River Camlin.
Westmeath	Mullingar	River Brosna.
Meath	Trim	River Boyne.
Louth	Dundalk	Dundalk Bay.
King's County	Tullamore	Grand Canal.
Queen's County	Maryborough	—
Kildare	Naas	River Liffey.
Dublin	Dublin	River Liffey.
Kilkenny	Kilkenny	River Nore.
Carlow	Carlow	River Barrow.
Wicklow	Wicklow	River Vartry.
Wexford	Wexford	Wexford Harbour.

With the exception of County Wicklow, which is mountainous and contains some of the beauty spots of Ireland, Leinster is generally flat, with a considerable proportion of bogland in Kildare, King's County, and Queen's County. Rich pasture is abundant, and agriculture, cattle rearing, and dairy-farming are the leading industries. Anthracite coal is worked in Kilkenny and Queen's County, and the former has also valuable quarries of black marble.

COUNTIES OF MUNSTER.

County.	Capital.	Situation.
Clare	Ennis	River Fergus.
Tipperary	Clonmel	River Suir.
Kerry	Tralee	Tralee Bay.
Limerick	Limerick	River Shannon.
Cork	Cork	River Lee.
Waterford	Waterford	River Suir.

The maritime counties possess many excellent harbours, and the sea fisheries are of importance. The lakes and rivers yield salmon, and there are valuable oyster beds round the coast of Clare. The leading industries inland are cattle raising and dairy-farming. The "Golden Vale," which occupies portions of the counties of Tipperary and Limerick, is one of the most fertile parts of Ireland. Limerick has small manufactures of woollens, paper, and lace.

COUNTIES OF CONNAUGHT.

County.	Capital.	Situation.
Mayo	Castlebar	—
Sligo	Sligo	River Garvogue.
Leitrim	Leitrim	River Shannon.
Galway	Galway	River Corrib.
Roscommon	Roscommon	—

Connaught is the poorest and most sparsely peopled of the provinces. Mountains, bogs, and lakes cover a large part of the surface. The sea and fresh-water fisheries are valuable, and slate is quarried in Mayo. Attempts are being made, by the construction of light railways, to develop other industries.

THE BRITISH DOMINIONS BEYOND THE SEAS.

INDIA.

SITUATION AND EXTENT. India consists mainly of an immense peninsula, triangular in shape, lying to the south of Asia, and washed on the south-west, south, and south-east by the Indian Ocean. The length of the country from Kashmir to Cape Comorin is 2,000 miles, the breadth from Baluchistan to China exceeds 2,600 miles, and each side of the triangle is about 1,900 miles. The total area is about 1,766,000 square miles, that is, nearly fourteen times the size of the British Islands. On the north-west, north, and east the territory borders on Persia, Afghanistan, the Russian Empire on the Pamirs, the Chinese Empire along the summits of the Himalayas and on the Burmese eastern frontier, French Colonial territory along the upper Mekong, and Siam.

Afghanistan acts the part of a buffer state between India and Russian territory. The Suliman mountains, which separate it from India, are crossed by the Khaiber, Kuram, Gomul, and Bolan Passes, through one or other of which the various conquerors of India from the land side have passed. These passes are now strongly fortified and occupied by British troops. Troops are also stationed in the Malakand Pass in order to keep open the road from Peshawar through the Swat Valley and the Lowari Pass to Chitral, lying north-east of Afghanistan. The roads across the Himalayas are at a great elevation, and are considered impassable for a modern army.

INHABITANTS. According to the census of 1901, the total population, including that of the native states, exceeds 294¼ millions, an increase of more than 7 millions during the preceding decade. This gives a density of 166 per square mile. The population of the British Provinces is nearly 232 millions, an increase of more than 10 millions, and a density of 213 to the square mile. The increase is below the normal rate, owing to the ravages of famine and plague. The greatest density is in the Ganges Valley, where it amounts to 1,828 per square mile. In Baluchistan the density is only eleven.

The inhabitants vary greatly in race, language, religion, and the degree of civilization attained. About three-fourths of the people are Hindus, but these represent many distinct tribes, each speaking a language unintelligible to the others. The one thing they have in common is the social organization known as "caste." (See *Caste*, p. 845.) The Hindus inhabit the north-west, the northern plain, the river deltas, and the west coast plain. The Himalayan slopes and portions of the Brahmaputra and Irawadi valleys are occupied by Mongolian tribes, while the tableland of the south is inhabited by peoples speaking various Tamil or Telugu dialects. In all, 145 distinct languages are spoken in India, the two chief being Hindi and Bengali. In religion, the majority of the people profess some form of Brahmanism. Muhammadanism claims about 62½ million followers, chiefly in the north. Buddhism has almost died out except in the Himalayan valleys and in Burma. Native Christians number nearly three millions, an increase of 28 per cent. during the ten years. The Parsees, who are of Persian origin, are found in small numbers all over the country, but their chief settlements are in and around Bombay. They number less than 100,000.

COMPONENT PARTS. The Indian Empire comprises a vast peninsula, a large continental portion stretching northward to Kashmir, and extending beyond the base of the peninsula westward into Baluchistan, and eastward into Burma, together with the following oversea territories:

(1) Andaman and Nicobar Islands in the Bay of Bengal.
(2) Laccadive and Maldive Islands in the Arabian Sea.

(3) Aden and its hinterland.
(4) Perim.
(5) Protectorates over Socotra, Bahrein, and the Arabian coast from Aden to the Persian Gulf.

Of this vast territory nearly two-thirds is under direct British rule. The remainder consists of native states, Portuguese territory, French territory, and two independent native kingdoms.

(1) The Feudatory states are scattered all over India and number several hundreds. The most important groups are Rajputana, including an area greater than the British Isles; and Haidrabad, Kashmir, and Central India, each nearly as large as Great Britain. These states are governed by their native princes, but acknowledge the suzerainty of Britain. They are controlled by political residents, who act as advisers to the native rulers, who may not declare war, nor send ambassadors to other states. Some pay an annual tribute to the Indian Government.

(2) The Portuguese possess Goa, a territory of 1,400 square miles on the south-west coast; Daman, about 100 miles north of Bombay; and Diu, a small island and fortress in the Gulf of Cambay.

(3) The French retain territory about 200 square miles in extent, including a small town and factory north of Calicut, three on the south-east coast, the chief of which is Pondicherry, and another on the Hugli, north of Calcutta.

(4) Nepal and Bhutan, are two independent states on the slopes of the Himalayas. Nepal is inhabited by the Gurkhas, many of whom volunteer for the Indian army. East of Nepal is the feudatory state of Sikkim, through which trade is carried on with Tibet.

GOVERNMENT OF BRITISH INDIA. In England, Indian affairs are in charge of the Secretary of State for India, and he alone is responsible to the British parliament. He is aided by the Council of India, the members of which are appointed for a period of ten years, and are selected on account of their long experience as civil or military officers, merchants, or lawyers in that country. The King, as Emperor of India, is represented there by the Governor-General or Viceroy, who is appointed by the Crown, usually for a period of five years. For purposes of administration he is assisted by a council of six, who are also appointed directly by the crown. For legislative purposes this council is increased to twenty-two. The additional members are nominated by the Governor-General, and include a proportion of natives. Calcutta is the seat of government except during the hot season, when it is removed to Simla, situated on the lower Himalayas, north of Delhi.

All the great provinces enjoy a certain amount of administrative independence. They are subdivided into a number of districts, 254 in all, each administered by an officer called a "collector," or deputy commisioner. The districts, which vary in area from 100 square miles to 19,000 square miles, are combined into Divisions under commissioners. The more responsible posts are filled by British officials, but natives take an important part in administrative work and form 97 per cent. of the official staff.

BRITISH PROVINCES. The following are the principal provinces under direct British rule:—

(1) **Bengal** includes the delta and lower valleys of the Ganges and Brahmaputra. It is one of the most prosperous provinces. The soil is exceedingly fertile and produces rice, jute, indigo, tea, and the opium poppy. The coal mines employ 95,000 labourers, and thousands of others work in the jute mills, which are increasing in number. Area, 110,000 square miles; population about 51 millions.

(2) **Eastern Bengal and Assam** includes the portion of the basin of the Brahmaputra and the adjacent hills and valleys lying east of Bengal. Rice, jute, and all kinds of useful vegetable products are cultivated. In Assam the principal industry is the growth and manufacture of tea. Area 101,150 square miles; population 31 millions.

(3) **The United Provinces of Agra and Oudh,** comprise the upper basins of the Ganges and Jamna. The naturally fertile soil is improved by artificial irrigation, and it is one of the richest corn-growing districts in India. Other products include millet, rice, indigo, sugar, cotton, and tobacco. Area, 107,500 square miles; population about 48 millions.

(4) **The Punjab** occupies the basins of the tributaries of the Indus, and also includes Delhi. It is the home of the Sikhs. Artificial irrigation is everywhere employed. The chief crops are wheat and other grains, and cotton, and there are rich deposits of rock-salt. Area 97,200 square miles; population about 20½ millions.

(5) **North-Western Frontier Province,** the district lying between the Punjab and Afghanistan, was created a province in 1901. Area 16,500 square miles; population 2¼ millions.

(6) **British Baluchistan** lies to the south of Afghanistan, from which country part of the territory was acquired. A considerable portion is entirely desert, and the country is but sparsely peopled, the density being but 11 to the square mile.

(7) **Bombay,** including Sindh, occupies the western part of India from Baluchistan to Mysore. It contains large fertile tracts that produce millet, rice, wheat, and various pulses. Other districts are subject to periodical droughts and comparatively frequent agricultural distress. Manufactures of cotton, silk, pottery, and brass ware are important. Area 123,000 square miles; population 19 millions.

(8) **Madras** comprises the whole of the south of the peninsula with the exception of the territory of certain native states. Portions are subject to drought and famine. Other parts produce grains, tea, coffee, cotton, and oil-seeds. Area 141,700 square miles; population 38¼ millions.

(9) **The Central Provinces,** including Berar, occupy the northern part of the Deccan. Berar is very fertile and exports wheat, oil-seeds, and cotton. There are extensive wastes and jungle in the other parts of the province. Coal is mined at Warora. Area 104,200 square miles; population 12¾ millions.

(10) **Burma** extends eastward from the Bay of Bengal to Chinese territory, and southwards to Siam and the Malay Peninsula. The coast region produces rice, the hill country wheat, millet, cotton, and oil-seeds. Forests are extensive, and rubies, gold, silver, iron, lead, tin, and coal are mined. Area 236,700 square miles; population 10½ millions.

Bombay and Madras are still styled presidencies. Each has its own civil service, and each is ruled by a governor and council of two appointed by the Crown, with additional members for legislative purposes, seven or eight of whom are appointed on the recommendation of municipal councils, district boards, chambers of commerce, and the universities of Bombay and Madras respectively. The Viceroy, with the approval of the Crown, appoints Lieutenant-Governors for Bengal, Eastern Bengal and Assam, the United Provinces, the Punjab, and Burma. In each case the Lieutenant-Governor is assisted in making laws and regulations by a council, some of the members of which are nominated by public bodies. The Central Provinces, the North-Western Frontier Province, and Baluchistan are placed under Chief-commissioners appointed by the Governor-General in council. Some smaller tracts are directly administered by the Viceroy.

BUILD OF THE COUNTRY. The whole of northern India consists of a vast plain extending from Baluchistan and the Suliman Mountains in the west, eastward for a distance of 1,500 miles to the hills of Assam, and from the Himalayas in the north to the Vindhya Range. This plain is watered and fertilised by three great rivers and their tributaries, the Indus, the Ganges, and the Brahmaputra. The triangular plateau of the Deccan occupies the south. This tableland is flanked by the Western and Eastern Ghats, by the Vindhya Mountains in the north, and by the Nilgiri, or Blue Mountains in the south, leaving a narrow coast plain on the west, and a broader strip on the east. The Deccan has a gentle slope from west to east, and its most important rivers, the Mahanadi, Godavari, Krishna, and the Kavari flow in that direction. The Nerbudda and Tapti enter the Gulf of Cambay from the north of the tableland. Burma is covered with forest-clad hills and mountains, and is watered by the Irawadi, which is navigable for 700 miles from its mouth.

Practically the whole of the rainfall on both sides of the Himalayas finds its way to the Indo-Gangetic Plain by means of the great rivers. The silt carried by these streams is spread out over their lower reaches at the seasons of flood, and the cultivator of the soil is thus enabled to dispense with manure of any kind. Thus, Sindh is fertilised by the silt of the lower Indus, and Bengal owes its extreme fertility—the land produces three crops a year—

to the flooding of the Ganges and Brahmaputra. These rivers unite to form the Bengal delta which is larger than Scotland. Moreover, in their middle courses the rivers are tapped by canals for irrigation purposes. Where the Ganges enters the plain more than half its waters are drawn off to feed a canal which sends out a network of smaller streams, and finally rejoins the river at Cawnpore.

The *Ganges* is navigable to the North-West Provinces, and the *Brahmaputra* right through Assam, almost to the shoulder of the Himalayas. Numerous shifting sandbanks impede the course of the *Indus* so that it is navigable only at certain seasons, and owing to the shifting character of its banks, no important towns are found on the main stream. The deltas of the *Mahanadi*, *Godavari*, and *Kavari* are also very fertile, and produce abundant crops of rice; and the many canals that have been constructed in their basins in recent years, are not only serviceable for navigation, but have considerably reduced the risks of famine. The rapidity of their streams renders the Nerbudda, Tapti, and Krishna useless for navigation.

CLIMATE. Since the whole of the peninsular portion of India lies within the Tropics, while the continental portion extends well into the North Temperate Zone, the temperature is exceedingly varied. Other influences modifying the heat of particular localities are the nearness of the ocean, and the land elevation. There are, speaking generally, three seasons in the year—the hot season from March to June, the wet season from June to October, and the temperate season from October to March.

TEMPERATURE. Over portions of the Indo-Gangetic Plain the average summer temperature exceeds 90° F., while the neighbouring slopes of the Himalayas enjoy a temperate climate, and on the hill stations in the Nilgherries the thermometer rarely rises above 60° F. During the hot season the temperature of the Deccan is higher than that of the west coast plain, but owing to the comparative dryness of the atmosphere it is less oppressive. The heat is greatest on the south-east coast.

RAINFALL. The period of the rainy season varies with different parts, the rainfall being dependent on the periodical winds called "monsoons," which prevail at different times in different regions. From May to October the moisture-laden south-west monsoon blows. The Western Ghats and the Himalayas act as condensers, and there is an abundant rainfall on the west coast strip, and over the plains extending from the foot of the Himalayas. The same air current also carries a heavy rainfall to the Bengal delta and the Burmese plains, and on the mountains of Assam an annual fall of 805 inches has been registered, while the average approaches 500 inches. The east coast of the peninsula is watered chiefly by the north-east monsoon, which prevails from April to October, but since this air-current has traversed a comparatively small stretch of ocean, it accumulates less moisture than the south-west monsoon, and consequently the rainfall is less abundant than on the west. The central portions of the Deccan and of the northern plain receive too little rain when the strength of the winds falls below the average, and are known as "zones of uncertain rainfall." The north-west lies outside the direct influence of the monsoons, and the rainfall is small, averaging less than ten inches annually over portions of Rajputana, while parts of the Punjab are almost rainless.

PRODUCTIONS. The vegetation is as varied as the climate. The valuable forest tracts of the hill regions of central India, of the various mountain slopes, and the river valleys of Burma, are under the care of a government department, and produce teak, sandalwood, blackwood, sal, cedar, and pine. The bamboo and the cocoa-nut palm are widely distributed, and furnish the natives of some districts with almost all they require. The mango is the favourite fruit tree, and other species of palm supply fruit, fibre, and matting. The chief cultivated crops are millet, which forms the principal article of diet for a large majority of the people, rice, wheat, and other grains, cotton, jute, indigo, tea, sugar, opium, pepper, and cinnamon. The forests and jungle abound with wild animals. Tigers and panthers are responsible for the death of more than 1,000 persons and 6,000 cattle, and 20,000 persons fall victims to various species of snakes annually. The lion is almost extinct. The elephant is found in the north-east, and in the forests of Burma and the southern portion of the Western Ghats, and the crocodile in the Ganges. Vultures, jackals, and termites act the part of scavengers.

COMMERCE. Under British rule commercial activity has increased enormously. The Blue Book, reviewing the trade of India in 1903-4, places the value (including bullion and specie) of the exports for that period at nearly £117,000,000, and the imports at more than £93,000,000, an increase of £16,000,000 and £4,000,000 respectively on the amounts for the preceding twelve months, and a still greater advance on the period 1901-2. In summing up the year's commercial history, the review says, "With only one or two exceptions all the principal articles were imported to a greater extent than in any preceding year, and the progress of the exports was scarcely less uniform than that of the imports." The trade is done principally with the United Kingdom—which supplies over 66 per cent. of the imports, and receives more than 25 per cent. of the exports—the British Colonies, China, France, Italy, and the United States. The *exports* consist of grain, including wheat and rice, raw cotton, oil-seeds, jute, tea, opium, coffee, indigo, hides, and skins. The *imports* are chiefly manufactured goods and luxuries. Cotton goods amount in value to two-fifths of the whole. Silver and gold bullion follows next. The silver is manufactured into ornaments and the gold is hoarded. Other imports include woollen goods, hardware, machinery, railway metals and other plant, iron and steel, silk, sugar, petroleum, and coal. There are few good natural harbours. The principal ports are found a few miles up the estuaries of the large rivers. The great centres for collecting and distributing merchandise and produce are Bombay, Calcutta, and Rangoon. Other ports are Karachi, Goa, and Calicut, on the west coast; Negapatam, Madras, and Masulipatam on the east coast; and Maulmain in Burma.

RAILWAYS. More than 27,000 miles of railway are now open for traffic. The chief lines are:—

(1) The North-Western from Calcutta through Patna, Allahabad, Cawnpore, Delhi, and Lahore to Peshawar, with branches to Benares, Lucknow, Meerut, Umballa, and Simla, and Amritsar.

(2) The Indus Valley Line from Karachi through Haidrabad, Multan, and Rawal Pindi to Peshawar, with a branch to Quetta and Nashki on the extreme border of British Baluchistan fronting Persia.

(3) From Bombay through Jabalpur to Allahabad, and through Nagpur to Calcutta.

(4) From Bombay through Poona to Madras, with a branch to Haidrabad.

(5) The South Indian Railways, joining the chief places on the coast south of Madras, and also connecting Madras with Calicut.

(6) The Burmese Railway from Rangoon to Mandalay, whence two lines are continued to points close to the Chinese frontier.

PROVINCES.	CHIEF TOWNS.
BENGAL	**Calcutta**, Patna, Howrah.
EASTERN BENGAL and ASSAM	**Dacca**, Shillong.
UNITED PROVINCES of Agra and Oudh . .	**Allahabad**, Benares, Cawnpore, Lucknow, Agra, Meerut, Oudh.
PUNJAB	**Lahore**, Delhi, Multan, Simla, Amritsar, Ambala, Rawalpindi.
NORTH-WESTERN FRONTIER PROVINCE	**Peshawar.**
BRITISH BALUCHISTAN	**Quetta**, Khalat.
BOMBAY	**Bombay**, Karachi, Surat, Poona, Haidrabad.
MADRAS	**Madras**, Calicut, Masulipatam, Negapatam.
CENTRAL PROVINCES .	**Nagpur**, Jabalpur.
BURMA	**Mandalay**, Rangoon, Maulmain, Bhamo.

Agra, on the Jamna, is celebrated for its magnificent mausoleum, the **Taj-Mahal**; population 188,000.

Allahabad, at the confluence of the Jamna with the Ganges, is the junction of the great trunk lines from the north, east, and west, and, consequently, a great commercial centre. It is a place of pilgrimage for the Hindus, who bathe in the waters of the united streams; population about 172,000.

Amritsar possesses important textile manufactures, and is the commercial capital of the Punjab. It is the headquarters of the Sikh religion; population 162,500.

Benares, on the Ganges, is the most holy city of the Hindus, and is crowded with palaces and temples; population exceeds 209,000.

Bombay possesses the largest and safest harbour in India. During the past few years the town has suffered considerable ravages from bubonic plague, and its trade and population have declined in consequence; population 776,000.

Calcutta, 30 miles from the mouth of the Hugli, is the capital of British India. There are jute and paper mills in the neighbourhood; population, including that of the suburbs, exceeds one million.

Calicut, the principal port on the south-west coast, gave its name to calico, though none of it is now manufactured there. The exports of teak and coffee are increasing in quantity.

Cawnpore was the scene of the massacre of English women and children in 1857. It now possesses important manufactures of cotton and leather; population 197,000.

Delhi, on the Jamna, is a great industrial centre, and trades largely in wheat and other agricultural produce; population about 209,000.

Haidrabad, at the apex of the Indus delta, has a considerable trade and increasing manufactures.

Haidrabad, the capital of the Nizam's territories, is the largest town in the Deccan, with a population exceeding 448,000.

Karachi is the outlet for the produce of the north-west. Its trade and population have increased enormously since the opening of its harbour; population 117,000.

Lucknow, on the Gumti, is famous for the defence of its residency by Lawrence in 1857, and its relief, first by General Havelock and afterwards by Sir Colin Campbell; population exceeds 264,000.

Meerut was the scene of the outbreak of the Mutiny in 1857. It is now rising into prominence as a railway and manufacturing centre; population 118,000.

Madras ranks third among the Indian ports. Its roadstead is exposed to the north-east monsoon during half the year, and an artificial harbour and piers have been constructed. During the summer the government is removed to *Utakamund* in the Nilgherries; population exceeds 509,000.

Negapatam, on the south-east coast, does an improving trade with Ceylon, Burma, and Singapore.

Patna is in the centre of a rich agricultural district, and is a great emporium for rice, indigo, and sugar. Near it is *Gaya,* the birthplace of Buddha; population 135,000.

Peshawar is a great military station at the mouth of the Khaibar Pass.

Poona is a health station in the Western Ghats and the headquarters of the government of the Bombay Presidency during the wet season; population 153,000.

Rangoon, in the delta of the Irawadi, is the capital of Lower Burma, and the outlet for the products of the Irawadi basin; population 235,000.

Simla is a health station on the lower Himalayas, and the seat of the Indian government during the hot season.

CEYLON.

SITUATION AND EXTENT. Ceylon is a pear-shaped island, 266 miles in length, 140 miles in breadth, with an area of 25,480 square miles, lying south-east of India, from which it is separated by the Gulf of Manaar and Palk's Strait. Between the two extends the chain of islands and coral reefs known as Adam's Bridge. The water over the reef is too shallow to allow the passage of vessels of deep draught. The South Indian Railways have put forward a scheme for constructing a ship canal across one of the islands, carrying their line to a dock constructed in the middle of the canal, and eventually continuing it across the reef to loop up the Indian Railways with the Ceylon system.

INHABITANTS. The population exceeds 3½ millions. The bulk of the people are Sinhalese, descendants of a race from northern India that conquered the island in the 6th century B.C. There are many Tamil coolies from Southern India, Arabs, Eurasians, and Malays. About 2,000 of the aborigines, Veddas, exist in the interior. The Europeans number about 9,000. The majority of the natives are Buddhists in religion. The Hindus number 827,000, the Christians 350,000, and the Mohammedans 250,000.

GOVERNMENT. Ceylon is a British Crown Colony. The governor, who is appointed by the Colonial Office, is assisted in administrative work by a council of five, and for legislative purposes by a council of eighteen, eight of whom are not officials, but are selected by the governor as representing the different classes and interests of the island. No law becomes operative until it has received the approval of the Secretary for the Colonies. There are nine provinces, each of which is administered by a government agent. The larger towns enjoy municipal government, and in the country districts minor matters are managed by village councils.

CLIMATE. Since the island is everywhere less than 10° from the Equator, the climate is necessarily tropical, but the heat is modified by the surrounding ocean and by the prevailing winds, and the temperature is lower than on the adjacent parts of India. The south-west monsoon blows from June to September, and the north-east from October to January. The heat is most oppressive from February to May, that is the period between the two monsoons. The rainfall is evenly distributed throughout the year, and varies from 80 inches annually on the coast plain, to 100 inches in the hill country.

PRODUCTIONS. The soil is everywhere fertile and the vegetation luxuriant. The extensive forests yield ebony, satin wood, rosewood, and other timber suitable for cabinet work. Cocoa-nut, palmyra, and other palms are abundant, and the bread-fruit tree flourishes. The plantations produce tea, coffee, cinnamon, and other spices, cinchona, and tobacco. Rice is the principal grain crop. The island is deficient in metals, but remarkably rich in gems, that known as cat's eyes being the finest in the world. There is a valuable pearl fishery in the Gulf of Manaar.

TRADE. The principal trade is with India and the United Kingdom. The chief *exports* are tea, cinnamon, coffee, cinchona, and cocoa-nut oil, the chief *imports* being rice, cotton goods, and hardware.

TOWNS. There are only three towns of any importance:

Colombo, the capital, on the south-west coast, is the calling place for vessels bound for Australia and the Far East, and monopolises nearly the whole of the foreign trade; population 165,000.

Kandy, the ancient capital, is situated at a great elevation in the interior, and serves as the summer retreat of the Europeans.

Trincomali, on the north-east coast, has a fine harbour, strongly fortified, once the headquarters of the East India Squadron of the British navy, now transferred to Singapore.

DOMINION OF CANADA.

SITUATION AND EXTENT. The Dominion of Canada occupies the whole of the North American continent lying to the north of the United States, with the exception of the peninsula of Alaska in the extreme north-west, and a part of Labrador, which belongs to Newfoundland. It stretches northward to the Arctic Ocean, and from the Atlantic to the Pacific. The area approaches 3,620,000 square miles, or nearly thirty-three times that of the British Isles. Its only land boundaries march with the United States territory. The southern boundary follows the 49th parallel of latitude from the Pacific to the Lake of the Woods, passes through the middle of Lakes Superior, Huron, Erie, and Ontario, along the river St. Lawrence to Montreal, and then follows a line of hills which lie to the south of that river, and which separate British territory from the states of Vermont, New Hampshire, and Maine, and finally takes a southern line to the entrance to the Bay of Fundy. The north-western boundary follows the 141st meridian of west longitude from the Arctic to the mountains near the Pacific coast, and thence continues in an irregular line

as demarcated by the Alaska Boundary Commission, in 1903, to the head of the Portland Canal.

DIVISIONS. The country naturally falls into the following districts:—

(1) **The Atlantic Region,** comprising the basin of the St. Lawrence. The surface consists largely of plains and undulating lowlands, still covered to a great extent with forests, and providing, where the timber has been cleared, rich pastures, and corn and fruit producing land.

(2) **The Central Region,** extending from the Lake of the Woods to the Rocky Mountains, and consisting principally of prairie land. It comprises an immense wheat belt, said to produce the finest wheat in the world, which extends through Manitoba, eastern Assiniboia, and Saskatchewan; a district stretching through the south of Alberta to the foot hills of the Rockies, fitted for cattle ranching; and a more diversified section lying north of these two, suitable for mixed farming.

(3) **The Pacific Region,** a country of thickly wooded mountains and valleys.

(4) **The Northern Region,** comprising the territories of Ungava, Keewatin, Mackenzie, Yukon, and Franklin. The climate is too severe to allow of cultivation, and the extreme north is a frozen wilderness. South of these "Barren Lands," a belt of forests of spruce and larch of from 200 to 300 miles in width, stretches right across the Dominion. Fur-bearing animals abound, and the Hudson's Bay Company has its trading posts scattered throughout the district, from the coast of Labrador to the frontier of Alaska.

Politically these several regions embrace the following provinces and territories:—

Atlantic Region.	Central Region.	Pacific Region.
Nova Scotia.	Manitoba.	British Columbia, including Vancouver Island.
New Brunswick.	Assiniboia.	
Prince Edward Island.	Saskatchewan.	
Quebec.	Alberta.	
Ontario.	Athabasca.	

INHABITANTS. The population exceeds 5¼ millions, and is rapidly increasing. The bulk of the people are of British descent. The majority of the descendants of the early French settlers, who number nearly 1½ millions, reside in the province of Quebec, and still make use of the French language. More than 300,000 Germans have settled in various parts of the Dominion. The Indians numbered 108,000 at the last census. They are looked after by the government on reservations set apart for their use, but are gradually disappearing. Some have been trained to work at civilized occupations, but in the more remote regions they live by hunting and fishing. Tribes of Eskimo inhabit the Hudson Bay and northern shores.

GOVERNMENT. Canada is a self-governing British Colony. The king is represented by the governor-general, who is assisted by a privy council chosen by himself. The Federal Parliament consists of the *Senate* and a *House of Commons*, and sits at Ottawa. The *House of Commons* is composed of 213 members, elected by ballot for five years on what is almost manhood suffrage. The basis of representation is that Quebec shall always return 65 members, while the other provinces and territories are represented in proportion to their population. Redistribution follows each decennial census. The *Senate* consists of 81 members chosen for life. Vacancies are filled by the Viceroy appointing the nominees of the cabinet, but the principle of proportional representation holds to some extent. All members of both houses are paid. Every bill must receive the assent of the Viceroy before becoming law. The Federal Parliament (unlike that of Australia) has jurisdiction in all matters not expressly reserved for each Province to settle.

The exclusively local affairs of each province are managed by a provincial parliament modelled on the lines of the Federal parliament, and the governor-general is represented by a lieutenant-governor. The central districts are combined under one government. The lieutenant-governor of Manitoba administers Keewatin, and, since 1898, Yukon has been placed under a Commissioner. Ungava, Mackenzie, and Franklin, which are more sparsely peopled, are directly administered by the Federal minister of the Interior, who also exercises a general control over the affairs of the other territories.

BUILD. Parallel to the west coast, at a distance of from 300 to 350 miles, extends the range of the Rocky Mountains, with an average height of 10,000 feet. From their western slope a lofty plateau extends to ranges of less elevation near the coast. East of the Rocky Mountains is a lower plateau which merges into the great plain sloping gently northward to the Arctic Ocean, and north-east to Hudson's Bay, and including the great prairie region of the west and middle, the sub-Arctic forest region, and a broad belt of low land round Hudson's Bay. In the north-east is the Labrador Plateau from which to Lake Superior extends the height of land which forms the watershed of numerous streams flowing south to the St. Lawrence, and north to Hudson's Bay. Parallel to the right bank of the St. Lawrence stretches the northern end of the Appalachian Highlands.

The following table gives the rivers draining the great natural divisions with the lakes in their basins:—

Western Tableland.	Central Plain.	Eastern Plain.
Columbia.	Mackenzie.	St. Lawrence.
Fraser.	L. Athabasca.	L. Superior.
Yukon.	Great Slave L.	L. Michigan.
	Great Bear L.	L. Huron.
	Saskatchewan—Nelson.	L. Erie.
	L. Winnipegos.	L. Ontario.
	L. Winnipeg.	

INLAND NAVIGATION. Canada possesses a magnificent system of internal navigation. Vessels drawing 14 feet may proceed, by way of the St. Lawrence and its lakes, from the Atlantic to the head of Lake Superior, a distance of 2,000 miles, and a project is on foot for deepening the many canals that have been constructed to escape the various falls and rapids, so as to admit ocean-going steamers of large size. The Welland Canal, by means of which the Niagara falls and rapids between Lakes Erie and Ontario are avoided, is the chief of these canals.

More ships are said to pass up and down the Detroit River, between Lakes Erie and Huron, than at any other point in the world; and though the navigation of the canals constructed to avoid the rapids in the St. Mary river, between Lakes Superior and Huron, is open for only eight months of the year, yet in that time a greater tonnage passes through these canals than through the Suez Canal in a whole year.

Hundreds of streams in the St. Lawrence basin supply energy that may be turned to account for driving the machinery of mills and factories, and the immense water-power of the Niagara Falls has been utilised for driving electric dynamos which produce the current for light and traction in neighbouring cities.

Numerous rocks and islands in its upper course, and rapids in the lower, render the navigation of the Nelson impossible, but the Saskatchewan is navigable almost to the foot of the Rockies, and the Mackenzie and its tributaries possess 2,500 miles of navigable water. The rivers draining the Pacific slope are generally too turbulent for water carriage, but they are the world's greatest salmon rivers.

The lakes are of the nature of fresh water inland seas. Ontario is as large as Wales, and Lake Erie, Lake Winnipeg, Great Slave Lake, and Great Bear Lake are somewhat larger. Huron is equal in area to Holland and Belgium, and Superior is of greater extent than Scotland.

CLIMATE. Over a territory of such vast extent the climate is necessarily varied. Speaking generally, it is more extreme than in the corresponding latitudes of Europe, but it is everywhere healthy. A belt of varying breadth along the north has a climate of Arctic severity.

The east is colder than the west, and the range of temperature greater, but Nova Scotia and Prince Edward Island are rendered less extreme by the proximity of the ocean, and the south of Ontario, where the snow fall is light, by the presence of the great lakes. Over the whole of this region the rainfall is abundant. Fogs are prevalent along the east coast during spring and autumn. In the central region the sub-Arctic climate does not penetrate so far south, and the air is dry and exhilarating, cold in winter, hot in summer, with a moderate rainfall. West of the Rocky Mountains, where the effects of the warm North Pacific Current are felt, the climate is mild and humid, and on the coast very mild. British Columbia has but little snow, and the *chinook*, a warm south-west wind from the Pacific, penetrates the various saddles of the mountain ranges, sweeps over the western portion of the great plain, and prevents the snow from lying long, so that cattle are kept in the open throughout the winter.

PRODUCTIONS. (1) FORESTS cover an area estimated at 1¼ million square miles. The sub-Arctic forest supplies unlimited quantities of spruce and poplar for the pulp and paper mills. Immense tracts in the eastern half of Canada are still clothed with pine, and this timber forms the most valuable lumber. Large areas are also covered with maple, beech, birch, ash, and oak. In the magnificent forests of British Columbia the trees are of larger growth, the Oregon pine frequently reaching a height of 250 feet. (2) CROPS. Along the valleys of the Red, Athabasca, Saskatchewan, and Peace rivers, immense quantities of wheat, barley, oats, and root crops are produced. Fruit growing is an important industry in eastern Canada and in British Columbia, and apples, pears, plums, strawberries, peaches, apricots, and grapes grow luxuriantly. (3) MINING. Gold is found extensively in the Klondike district of Yukon, in British Columbia, and in Nova Scotia. Coal-fields cover an area estimated at 100,000 square miles, and this mineral is mined in Nova Scotia and British Columbia. The steam coal from the Crow's Nest Pass district of British Columbia is largely used by steamers engaged in the Pacific trade. Other minerals include silver, nickel, lead, copper, iron, salt, and petroleum. (4) FISHERIES. The Gulf of St. Lawrence and the Bay of Fundy abound in cod, mackerel, halibut, haddock, hake, and herrings, and lobsters and oysters are plentiful along the northern shores of Prince Edward Island. The lakes produce fresh water fish of many kinds, and the salmon fisheries in the rivers of British Columbia are the finest in the world. (5) ANIMALS. Several species of deer are abundant, and the forests shelter numerous fur-bearing animals, the chief of which are the beaver, bear, marten, otter, fox (black, red, and white), mink, skunk, and wolverine.

COMMERCE. The foreign trade is chiefly with Great Britain and the United States. In 1904, the exports reached nearly 44 million pounds, of which the United Kingdom received 24 millions, and the United States 15 millions. In the same year the imports exceeded 53 million pounds, the United Kingdom sending 12¾ millions, and the United States 31 millions. The principal *exports* are animals and animal products, timber, grain, and flour, minerals, fishery products, dairy produce, and fruits. The *imports* include textile fabrics, manufactured iron and steel, tea, coffee, and other colonial produce. There is a protective tariff on imports with a preferential treatment of 33⅓ per cent. to Great Britain and those British colonies that accord preferential treatment to Canada.

The principal ports are:—

(1) On the east coast—Halifax and St. John.

(2) On the St. Lawrence—Quebec, Three Rivers, and Montreal.

(3) On the great lakes—Kingston, Toronto, and Port Arthur.

(4) On the west coast—Vancouver, Victoria, Esquimalt.

Naval dockyards have been established at Halifax and Esquimalt, but the new scheme of naval organization has led to orders being issued for the closing of these at an early date.

RAILWAYS. The total mileage of railways already laid down exceeds 18,500. The Dominion Government own more than 1,500 miles, and they are now engaged in constructing a line from New Brunswick to Winnipeg, via Quebec, a distance of 2,000 miles. Surveys are being made for a Trans-Canada line with termini on the Saguenay river in the east, and at Port Simpson, about midway up the coast of British Columbia.

The principal lines are:—

(1) The Canadian Pacific, including over 9,000 miles of road. The main line proceeds from St. John, on the Bay of Fundy, via Montreal, Ottawa, Winnipeg, Regina, Calgary, and the Kicking Horse Pass, to Vancouver on the Pacific coast. It brings Liverpool within twelve days of the Pacific, and, by means of the company's line of steamers, within thirty days of Hong Kong. Branch lines have been constructed to the most populous districts, and to various mining centres.

(2) The Grand Trunk of Canada, with over 4,000 miles in operation, crosses Western Ontario and Eastern Canada generally with a network of lines. It connects Quebec with Montreal, Toronto, and Sarnia, where it tunnels under the Detroit river, and proceeds thence through the United States territory to Chicago. Another line connects Montreal with Portland, a seaport on the coast of Maine.

(3) The Inter-Colonial, owned and operated by the Dominion government. It runs from Halifax to Montreal, with branches to the chief towns of Nova Scotia and New Brunswick.

(4) The Canadian Northern, running from Winnipeg in a north-westerly direction through the territories.

PROVINCES.	TOWNS.
QUEBEC	**Montreal,** Quebec.
ONTARIO	**Toronto,** Ottawa, Hamilton.
NEW BRUNSWICK	**Fredericton,** St. John.
NOVA SCOTIA	**Halifax,** Sydney.
PRINCE EDWARD I.	**Charlottetown.**
BRITISH COLUMBIA	**Victoria,** Vancouver, Esquimalt.
MANITOBA	**Winnipeg.**
ALBERTA	**Edmonton.**
SASKATCHEWAN	**Regina.**

Dawson City, at the junction of the Klondike with the Yukon, was established in 1896 in consequence of extensive discoveries of gold in the neighbourhood.

Halifax is the chief winter port of the Dominion; population 41,000.

Hamilton, the Birmingham of Canada; pop. 52,500.

Montreal, on an island at the head of the ocean navigation of the St. Lawrence, is the largest city and greatest commercial town of Canada; population about 268,000.

Ottawa is the capital of the Dominion, and has important industries connected with the lumber trade; population 60,000.

Quebec is a strongly fortified town, and an important port with large exports of timber; population 69,000.

St. John, the largest town and chief commercial centre of New Brunswick, is an important seaport, and the Atlantic terminus of the Canadian Pacific Railway; population about 41,000.

Toronto is the largest town and the greatest industrial centre of Ontario; population 208,000.

Vancouver, the Pacific terminus of the Canadian Pacific Railway, possesses a fine harbour, is the port of call for Australian and Oriental steamers, and the centre of the lumber trade of British Columbia; population 29,000.

Victoria, capital of British Columbia, in Vancouver Island, chief port next to San Francisco on the western coast of North America; population over 25,000.

Winnipeg, in the midst of a great wheat growing district, is an important railway centre; population about 85,000.

NEWFOUNDLAND.

GENERAL VIEW. Newfoundland, the oldest British Colony, is an island, 42,734 square miles in area, lying north-east of the Gulf of St. Lawrence, and separated from Labrador by the Strait of Belle Isle, 12 miles across, and from Cape Breton Island by Cabot Strait, 60 miles wide. It is the nearest American land to Europe, Cape Race, the south-eastern point, being less than 1,700 miles from Cape Clear in Ireland. Included in the administration

of the colony is the coast region of Labrador, with an area of 120,000 square miles.

PEOPLE AND GOVERNMENT. The population, including that of Labrador, is about 220,000, the bulk of whom are settled on the peninsula of Avalon in the south-east. The colony is ruled by a governor appointed by the Crown, and by a legislative council and a legislative assembly. The fifteen members of the former are appointed for life by the Crown, and the thirty-six members of the latter are elected for four years on a manhood suffrage, voting being by ballot.

CLIMATE AND PRODUCTIONS. The Labrador Current tends to reduce the temperature of summer, but, though the cold of winter is extreme, the climate is healthy, and the heat of summer rarely exceeds 85° F. Dense fogs are frequent along the south-east coasts, but do not extend far into the interior.

The valleys are clothed with forests of pine, larch, and birch, and there is much fertile land which produces crops of barley and oats. The mining industry is rising into importance. Coal of good quality is abundant, and iron and copper are mined. Fishing is the principal industry, seal-fishing in the spring and cod throughout the summer and autumn. The Newfoundland banks, a marine plateau as large as the British Islands, lying south and south-east of the island, form the most prolific fishing grounds in the world, especially for cod, and the shores of the colony also provide a wealth of fish. Lobster fishing and canning are of importance, and the streams abound in salmon. The long-standing dispute between the English and French fishermen, the latter of whom claimed the exclusive fishing and curing rights along the whole of the north-west and part of the north-east coasts, was settled in 1904, the treaty, signed in April, placing both nations on a footing of equality in that region.

COMMERCE. The *exports* consist of the products of the fisheries, mines, and forests, the *imports* of manufactured articles, wheat, flour, and colonial produce. Nearly one-third of the trade is with Great Britain. *St. John's*, the capital, stands at the head of a land-locked harbour on the east coast of the peninsula of Avalon, and is the chief port and the centre of the fishing industries: population about 30,000. From it a railway crosses the south of the island to *Port Aux Basques*, from which there is a regular service of steamers to Cape Breton Island.

AUSTRALIAN COMMONWEALTH.

The Australian Commonwealth includes the island continent of Australia, lying to the south-east of Asia, and the island of Tasmania on the south-east of Australia. It also includes as a dependency British New Guinea. But New Zealand prefers to stand apart, and to have the full control of its own affairs and to work out its destiny independently of others. Australia contains five colonies, and these, with Tasmania, combined to form a federal commonwealth from 1st January, 1901. These six colonies are now in reality federated *States*:—

STATES.	AREA.	POPULATION, 1904.
New South Wales	310,400	1,461,500
Victoria	87,900	1,210,300
Queensland	668,500	521,700
South Australia	903,690	372,700
Western Australia	975,920	242,300
Tasmania	26,215	180,200

BRITISH NEW GUINEA, comprising the south-eastern portion of the island and several adjacent islands, has an area exceeding 90,000 square miles, and a population estimated at 350,000, of whom 500 are Europeans.

PEOPLE AND GOVERNMENT. Of the total population of the Commonwealth, about one-half are of English descent, and about 1,000,000 of either Scottish or Irish extraction. The aborigines, estimated to number 20,000, are not included in the population given above.

The Federal Parliament consists of a Governor-General, representing the King, a Senate, and a House of Representatives. The Senate is composed of thirty-six members, six of whom are elected by the people of each State for a term of six years, half retiring every three years. The House of Representatives, numbering in the first instance seventy-five members, is elected for a period of three years, the number chosen for each State being proportional to the population, but not less than five for any State.

In the First Commonwealth Parliament New South Wales was represented by twenty-six members, Victoria by twenty-three, Queensland by nine, South Australia by seven, and Western Australia and Tasmania by five each. Under the new constitution each State manages its own affairs, whilst all matters of common interest to the whole community, such as Defence, Railways, Postal Service, and Tariff Questions come before the Federal Parliament. Each member of this Parliament receives an annual allowance of £400. All laws must receive the assent of the Governor-General. Dalgety, a small township, 296 miles south of Sydney, on the Snowy River, has been chosen as the Federal capital.

The internal affairs of each State are in the hands of a Governor appointed by the Crown and a State Parliament of two houses—the Legislative Council and the Legislative Assembly. The members of the *Legislative Council* are in New South Wales and Queensland appointed for life by the Governor, in the other States they are elected for six years, by those who possess a certain property and residential qualification. The members of the *Legislative Assembly* are elected triennially on a manhood-suffrage basis, except in South Australia and Western Australia, where the two sexes exercise the franchise on equal terms. The State Parliaments retain all rights not expressly delegated to the Federal Parliament.

BUILD. Nearly two-thirds of the interior of the Australian Continent is occupied by an immense plain which slopes gradually towards a central lake region, and, round its edges, merges into lofty tablelands or mountain ridges. The principal watershed is in the east, and, under the generic name of the Dividing Range, extends, with decreasing elevation and under various names in different parts, from south to north. This mountain mass gives birth to the Murray and its tributaries, the fertile basin of which occupies nearly a quarter of the continent. Much of the Central Plain is desert or covered with "salt-bush" or "scrub." Along the south coast, for a distance of 1,000 miles, not a single stream reaches the sea, and the continent generally is characterised by the scarcity of rivers and fresh-water lakes. The north-eastern shores of Queensland are protected by the Great Barrier Reef, which extends for more than 1,000 miles at an average distance of thirty miles from the shore. Tasmania is a mountainous island, the mountains rising from and around a central plateau, from which numerous streams find their way to the sea.

CLIMATE. The climate of Australia varies from temperate to tropical, but is everywhere characterised by dry heat. Among its drawbacks are the sudden great changes of temperature, the dust-laden winds from the interior, and the uncertain rainfall, which gives rise to long periods of drought followed by devastating floods. Within the Tropics the wet season occurs during the summer months, from November to April; in the temperate regions the winter—May to October—brings the greatest rainfall. On the Downs and western slopes of the Dividing Range scarcity of rainfall has been compensated for by numbers of deep borings, those in Queensland alone yielding upwards of 180 millions of gallons daily. The climate of Tasmania is warm, moist, and equable, resembling that of the Channel Islands.

PRODUCTIONS. The trees are evergreen, with tough, leathery foliage, the most characteristic being the various species of eucalypti or "gum" trees. They grow to an

immense height and furnish valuable timber. Various grain crops and European fruits have been introduced and thrive well. Much of the land is more suitable for grazing than for tillage, and millions of sheep are reared in all the States. The native animals are peculiar. Many of the mammals, the largest of which is the kangaroo, are marsupials. Two genera—the duckbill and the spiny echidna—are egg-laying. Among the remarkable birds are the emu, lyre-bird, black swan, and bower bird. Crocodiles are found in the northern rivers, and snakes, both venomous and harmless, are numerous. The mineral wealth is very great. Gold, copper, iron, tin, and coal are found in all the States. Silver is mined in New South Wales; the garnet, ruby, emerald, opal, and other gems are found; and there is a valuable pearl fishery off the north-west coast of Western Australia and the north coast of Queensland.

COMMERCE. In proportion to its population the foreign trade of the Commonwealth is equal to that of any country in the world, and a considerable portion of it is with the mother country. There is free trade among the various States, but a protective tariff is imposed on foreign imports. In 1904, the exports including Inter-state trade, exceeded £77,000,000, and the imports exceeded £67,000,000. The *exports* include wool, gold, hides, tallow, and frozen meat from all the States; copper, wheat, and wine from South Australia; coal, wine, and silver from New South Wales; sugar from Queensland, and fruit from Tasmania. The *imports* comprise textile manufactures, clothing, machinery, tea, and coffee.

RAILWAYS. About 14,500 miles of road have been laid down, and this is almost entirely owned and worked by the various State Governments. Lines connect Melbourne with Adelaide, Sydney, and Brisbane, and these towns with the principal mining and agricultural centres. In Queensland the principal railways proceed from the coast inland, but there is also a line connecting Brisbane with Rockhampton, *via* Gympie, Maryborough, and Gladstone. In West Australia the Great Southern Line runs from Perth to Albany, and the Great Eastern connects Perth with Kalgoorlie and other gold districts. It is proposed to continue this line so as to link the colony with the Eastern States. A line, which will eventually connect Adelaide in the south with Palmerston in the north, is completed for about half the distance, following the route of the existing overland telegraph. A railway crosses Tasmania from north to south, thus linking Launceston with Hobart.

STATES.	TOWNS.
NEW SOUTH WALES	**Sydney,** Newcastle, Broken Hill, Parramatta, Maitland, Bathurst.
VICTORIA	**Melbourne,** Ballarat, Bendigo (Sandhurst), Geelong.
QUEENSLAND . . .	**Brisbane,** Rockhampton, Gympie, Maryborough, Toowoomba.
SOUTH AUSTRALIA .	**Adelaide,** Kooringa, Port Adelaide.
WESTERN AUSTRALIA	**Perth,** Freemantle, Kalgoorlie, Albany.
TASMANIA	**Hobart,** Launceston.

NEW SOUTH WALES.

New South Wales, the oldest of the Australian Colonies, is nearly three times the size of Great Britain. Its surface is diversified by mountain, tableland, and plain. The mountains run through the country at a distance from the coast varying from 30 to 120 miles, and in the south rise above the snow line. The coast plain has an area of 50,000 square miles, and is remarkably fertile. Wheat, maize and other grains, tobacco, sugar-cane, grapes and other fruits are cultivated. The manufacture of wine is a growing industry. Much of the interior, which is subject to alternate periods of drought and flood, is covered with forests and mallee scrub. Portions are well adapted for sheep farming, and wool is the staple production of the colony. It is richer in coal than any other State of the Commonwealth. The other mineral wealth includes gold, copper, silver, lead, zinc, and platinum.

Bathurst, centre of an agricultural district and largest town west of the Blue Mountains.

Broken Hill, in the extreme south-west of the colony, is famous for its rich silver mines; population 27,500.

Goulburn, centre of a rich wheat district.

Maitland, on the Hunter River, in the midst of a most fertile district.

Newcastle, sixty-two miles north of the capital, is the greatest coal-mining centre of Australia, and is also the outlet for a rich agricultural district; population 59,000.

Parramatta, the second oldest town in the Colony, centre of a fruit-growing district.

Sydney, on the magnificent harbour of Port Jackson, is the oldest city in Australia, and, from its beautiful situation, fine buildings, and extensive public parks, has been called the "Queen City of the South"; population 518,500.

VICTORIA.

Victoria, the most densely populated of the States, occupies the south-eastern portion of the continent. The country is crossed from west to east by mountain ranges, which attain an elevation of 6,000 feet. Forests are extensive and yield valuable hard woods suitable for piles, railway sleepers and girders, and also for cabinet work. The pasture lands rank with the finest in the world for sheep rearing. The dairy industry is improving. There is a surplus of wheat and flour for export, and tobacco, hops, and fruits are cultivated. The mines are valuable and produce gold and coal of good quality, and limestone and marble are quarried. Manufactures, chiefly for home consumption, employ upwards of 74,000 persons.

Ballarat stands in the midst of a district rich in gold and agricultural produce; population 51,000.

Bendigo, or Sandhurst, is now the greatest mining centre in the Colony; population 43,000.

Castlemaine, in a mineral district, where the culture of the vine is carried on.

Geelong, on Port Phillip Bay, is an important seaport and a seat of the manufacture of cloth.

Hamilton, chief town of the western district.

Maryborough, an important railway centre, with large workshops for making and repairing engines.

Melbourne, on the Yarra Yarra, is a great railway centre, and enjoys a considerable trade, ninety per cent. of the imports and exports of the colony passing through it. It possesses a university and many handsome public buildings; population 503,000.

Warrnambool, a seaport town with a good trade in wool and wheat.

QUEENSLAND.

Queensland occupies the north-eastern portion of the continent, and is more than twice as large as New South Wales, about half the area being within the Tropics. The mountain ranges follow the coast and send out spurs towards the north-west and south-east. Much of the interior is occupied by tablelands, which afford rich grazing ground. The rainfall varies from upwards of 100 inches per annum in the tropical regions of the Pacific slope to 10 or 12 inches in the south-west, where also the heat is greatest. The forests, which cover nearly half the total area, produce cedar, pine, and other useful timbers. On the Darling Downs wheat, barley, and oats are cultivated. Other crops include maize, coffee, cotton, sugar, and various tropical and European fruits. Cattle and sheep grazing are flourishing industries, and there are valuable fields of gold, copper, tin, lead, and coal, but much of the mineral wealth still awaits development.

Brisbane, on the Brisbane River, is the natural outlet for the rich pastoral and agricultural Darling Downs district. The site of the city is low and is subject to floods; population 125,500.

Gympie, a large, straggling gold-fields town.

Ipswich, the oldest inland town.

Maryborough has factories for sugar, soap and iron.

Rockhampton, centre of a rich mineral district in which gold, silver and copper mines are worked.

Toowoomba, the principal town of the Darling Downs.

Townsville, the principal shipping port of North Queensland.

SOUTH AUSTRALIA.

South Australia, including the Northern Territory, extends across the central portion of the continent, of which it comprises nearly one-third. A portion of the interior is slightly below the sea-level, and is occupied by several extensive salt lakes, into which, during wet seasons, a number of streams find their way. During droughts, to which the colony is even more subject than the other States, the waters of these are absorbed or evaporated, and the whole district becomes a desert. There is a considerable variation in temperature and rainfall. The mean annual fall at Adelaide is 20 inches, while on the northern coast it exceeds 50 inches, and in the interior falls as low as 5 inches. Wheat, oats, barley, oranges, lemons, olives, and grapes, as well as English fruits, are grown. Wine making is an improving industry, and brandy and other spirits are produced. Copper is the principal mineral wealth, but gold, silver, iron, and coal are found.

Adelaide, on the river Torrens, about seven miles from Port Adelaide, has been called the "Model Australian City"; population about 170,000.

Glenelg, a watering-place 7 miles from Adelaide.

Kooringa, 45 miles north of Adelaide, is near the famous Burra copper mine.

Mount Gambier, in the centre of a fine agricultural district.

Port Adelaide, the chief port of the colony.

Port Pirie, wheat its chief export.

Wallaroo, seaport of the copper-mining districts.

WESTERN AUSTRALIA.

Western Australia occupies the whole of the continent west of the meridian of 129° east longitude. Deserts of sand, stones, or gravel cover a considerable portion of the interior. The climate is magnificent, hot, but dry and bracing. In the south-west there are extensive forests of karri, jarrah, and sandal-wood, the timber from which provides a valuable article of export. The gold fields are being rapidly developed, the output approaching £2,500,000 annually. East Coolgardie has been the most productive field. Tin and copper are also mined.

Albany, on King George's Sound, with a fine harbour but a poor neighbourhood.

Freemantle, situated at the mouth of the Swan river, has displaced Albany as the place of call for mail steamers from Europe.

Perth, population 49,500, is situated on the estuary of the Swan River, twelve miles above Freemantle.

TASMANIA.

Tasmania is an island lying to the south of Victoria, and separated from it by Bass Strait, 140 miles across. The rainfall is moderate, being slightly less than that of London, but it is regular. There are forests of useful timber, but sheep farming and fruit growing form the principal industries. The country is rich in minerals, producing gold, silver, copper, tin, iron, and coal.

Hobart, on the river Derwent, possesses a spacious and well-sheltered harbour, and is famed for its fruits; population 35,000.

Launceston, the second town in Tasmania, with a fairly busy port.

NEW ZEALAND.

SITUATION AND EXTENT. The self-governing colony of New Zealand consists of a group of two large islands, and a smaller one, together with several smaller groups, situated in the South Pacific, 1,200 miles east by south of Australia. The total area is about 104,500 square miles, or slightly less than that of Great Britain and Ireland. North Island is 44,500 square miles, South, or Middle Island, separated from the former by Cook Strait, 58,500 square miles, and Stewart Island 670 square miles. Of the other groups the chief are the Bermadees to the north of the main islands, the Chathams to the east, and the Aucklands to the south.

PEOPLE AND GOVERNMENT. The population in 1901 was 816,000, including, 43,000 Maoris, who are found chiefly in North Island. They are of Polynesian origin, and physically and in intelligence a fine race. They practise the various professions, sit in Parliament, and, in fact, enjoy all rights and privileges equally with the white settlers. Parliamentary government has been established since 1856. The Upper House consists of 45 members, nominated for seven years by the Governor, the Legislative Assembly of 80—four of whom are Maoris chosen by the native vote—elected triennially on adult suffrage, the women exercising the franchise freely. The members of both houses receive an annual allowance. Foreign affairs are excluded from the consideration of the Colonial Parliament, and the Governor is empowered to reserve any law for the consideration of the Imperial Government.

BUILD. All the islands are mountainous and well watered by numerous rivers and lakes. A volcanic belt, containing two active volcanoes, crosses the North Island, and on both sides of this belt is a region of geysers and hot lakes, the waters of which possess medicinal properties. A mountain range runs through Middle Island from north to south, rising above the snow line, and leaving a narrow coast plain on the west, and a broader strip—the Canterbury Plains—on the east. Stewart Island is covered with forest-clad hills. The coast-line, especially that of North Island, is broken, and provides many good harbours.

CLIMATE. The climate is exceedingly healthy, and resembles that of England, but is warmer and more equable. The average temperature of North Island is 7° higher, and of South Island 4° higher than that of London. The prevailing north-west winds bring abundance of moisture, which is condensed by the mountain ridges and deposited as rain on their western slopes. Hence the rainfall in the west is greater than in the east. In the fiord region, to the south-west of Middle Island, it amounts to 120 inches annually, while at Christchurch, near the east coast, it is but 26 inches.

PRODUCTIONS. Forests are extensive, especially on the western slopes of the mountains. The most valuable timber is that of the kauri pine. Kauri gum, a resinous exudation from these trees, is dug from the soil on the sites of old forests and at the foot of the growing trees, and forms a valuable export. Another characteristic of the flora is the gigantic tree ferns, which reach a height of 60 feet. The more open parts of the country are grass-covered, and feed millions of sheep and cattle, or, where the ground is sufficiently swampy, produce abundance of native flax. All British grain crops and fruits flourish, and the orange and lemon are cultivated in North Island. The mines produce coal, gold, silver, iron, and copper.

COMMERCE. The foreign trade of the colony is considerable. Three-fourths of it is with Great Britain; Australia, India, and Fiji following next. The *exports* include wool, frozen meat, dairy produce, gold, hemp, hides and pelts, kauri gum, grain, tallow, and timber, and in 1904 nearly reached £15,000,000. The *imports,* chiefly manufactured goods from Britain and Colonial produce, amounted in 1904 to £13,200,000. The principal ports are Auckland, Wellington, and Napier in North Island; Nelson, Dunedin, and Lyttelton in South Island.

Auckland (North Island), the former seat of government, possesses a magnificent harbour formed by an inlet of Hauraki Gulf, and is the largest town in the colony; population 67,200.

Christchurch (South Island), stands inland on the Canterbury Plain, and is a great railway centre; population 57,000.

Dunedin (South Island), on Otago Harbour, is the chief commercial city of the colony; population 52,500.

Invercargill, chief port on the south coast of South Island.

Lyttelton, port to Christchurch, in a land-locked basin.

Napier, chief town in the provincial district of Hawke's Bay.

Nelson, capital of the province of Nelson, a lovely site.

New Plymouth, a small town at the foot of Mount Egmont (or Taranaki).

Wellington (North Island), on Cook Strait, 1,200 miles from Sydney, is the seat of government on account of its central situation; population 49,500.

RAILWAYS. The government lines exceed 2,300 miles in length, and others are in course of construction. There are 113 miles of privately owned railways. The principal lines proceed:—

(1) From Auckland southward to the hot spring region.
(2) From Wellington north-west to New Plymouth.
(3) From Christchurch northward to Culverden, westward to Greymouth on the west coast, and southward to Invercargill, *via* Timaru, Oamaru, and Dunedin.

BRITISH POSSESSIONS IN AFRICA.

The possessions of Britain in Africa are found in the west, south, and east of the Continent.

BRITISH WEST AFRICA.

POSSESSIONS.	AREA. (Including protected territories.)	POPULATION.
Gambia	3,600 sq. miles	90,000
Sierra Leone . .	30,000 ,,	1,100,000
Gold Coast . . .	119,260 ,,	1,500,000
Lagos	26,700 ,,	1,500,000
Nigeria	340,000 ,,	12,100,000

PEOPLE AND GOVERNMENT. The natives, especially in the coast regions, belong to various negro and negroid tribes. Many are still pagans; some profess Muhammadanism, and others are nominally Christians. Northern Nigeria contains several Muhammadan States, the people of which, as the Hausas and Fulanis, belong to a higher type. Gambia, Sierra Leone, the Gold Coast, and Lagos are Crown Colonies, each governed by the Colonial Office through a Governor, assisted by small executive and legislative Councils, the latter of which includes a certain number of unofficial members. In the interior native chiefs still exercise authority over the various tribes, but are supervised by travelling Commissioners. It is intended to amalgamate the administratio of Southern Nigeria with that of Lagos. Northern Nigeria is administered by a High Commissioner assisted by residents.

CLIMATE, COMMUNICATIONS, AND TRADE. The whole of the territory is situated within the tropics, and the climate is generally hot and unhealthy for Europeans. Gambia is less unhealthy than the other colonies. There are few roads, and the rivers form the principal means of internal communication. In Ashanti (Gold Coast Colony) a government railway has been constructed from the coast through the middle of a gold-bearing district to Kumasi, and there are 120 miles of railway laid down in Lagos Colony. The exports consist of the native productions of the various countries, ground-nuts, beeswax, rubber, ivory, copal, palm-oil and palm kernels, hides and skins, and total £4,500,000 annually. The imports amount to £5,500,000 annually, and consist principally of textiles, chiefly cottons, hardware, and tobacco.

1. GAMBIA consists of a narrow strip of territory on both banks of the river Gambia from its mouth as far as navigation extends, that is about 220 miles. The wet season, June to October, is the most unhealthy. Cotton is grown and manufactured by the natives. *Bathurst*, the principal town, has a population of 8,800.

2. SIERRA LEONE was formerly known as the "white man's grave." Parts of the coast are low and swampy, but the interior is hilly. The rainfall is heavy, and the vegetation luxuriant. There is little cultivation. The capital, *Freetown*, which enjoys municipal government, possesses the finest harbour on the west coast of Africa; population 30,000.

3. THE GOLD COAST COLONY, including Ashanti, is enclosed, except on the south, by French and German territory. Much of the country is low and marshy, and the rainfall is heavy except in the east. Agriculture is prosperous, and the mineral wealth is great, but the climate prevents the full development of the mines. *Accra*, population 18,000, is the capital. *Cape Coast* and *Elmina* are also centres of trade. *Kumasi* was the capital of the negro kingdom of Ashanti.

4. LAGOS consists of the island of Lagos, situated in the Bight of Benin, and a strip of territory along the coast, extending from Dahomey to Nigeria. It is one of the most unhealthy parts of Africa. The rainfall in places exceeds 120 inches annually. There is a wealth of natural productions; maize, yams, plantains, cocoa, and coffee are grown, and the cultivation of cotton is being developed. The town of *Lagos* is the largest on the west coast; population 48,000.

5. NIGERIA extends from the Bight of Benin to the borders of the Sahara. It is divided into the two protectorates of Northern Nigeria and Southern Nigeria by a line drawn from east to west. The great natural feature of the country is the Lower Niger and its delta. Proceeding inland, the mangrove swamps of the delta give place to an extensive forest region, producing enormous quantities of timber, rubber, and oil, and this is followed by open grass lands which merge into the sandy plains of the north. The principal towns are *Calabar*, the capital, population about 15,000; *Bonny*, *New Calabar*, and *Benin* in Southern Nigeria; and *Zungeru*, the administrative centre, *Sokoto*, and *Yakoba* in Northern Nigeria.

BRITISH SOUTH AFRICA.

British territory in South Africa occupies about two-thirds of that part of the continent lying south of the tenth parallel of south latitude, and includes the following colonies and protectorates:—

COLONY.	AREA.	POPULATION, 1904.
Cape Colony	277,000	2,410,000
Natal	35,370	925,000
Basutoland	10,300	349,000
Orange River Colony . .	50,000	387,000
Transvaal	117,730	1,318,000
Southern Rhodesia . .	144 000	503,000
Northern Rhodesia . . .	287,000	746,000
Bechuanaland Protectorate	275,000	120,000

PEOPLE. The white population is chiefly of British or Dutch descent, and totals about 1,136,000, the Dutch element preponderating in the western portion of Cape Colony and in the Orange River Colony. The number of British immigrants is steadily increasing, and exceeded 50,000 in 1903. The natives consist mainly of various Kafir and Hottentot tribes, with a few Bushmen. The Kafirs, which include the Zulus, Basutos, Pondos, Swazis, and Bechuanas, are a warlike people of fine physique. They are mainly pastoral and possess large herds of cattle and horses, but they also cultivate their land carefully. The Hottentots are physically inferior to the Kafirs, and have a lighter complexion. They make good herdsmen, but do not practise tillage. The Bushmen are a race of yellowish-brown pigmies who are fast dying out. A number of Malays are found in the coast towns, and there are about 70,000 Indians in Natal. Recently several thousand Chinese have been introduced under indenture for labour in the mines of the Transvaal.

GOVERNMENT. The government of British South Africa is under the supervision of the "High Commissioner," who represents the British Crown and fulfils the office of Viceroy. Four forms of Colonial government are exemplified in South Africa. *Cape Colony* and *Natal* are self-governing, each possessing its own parliament of two houses. The Legislative Council of Cape Colony consists of 26 members elected for seven years, and the Legislative Assembly of 107 members elected for five years. The electors, who are the same in each case, qualify as occupiers of property valued at £75, or as being in receipt of an income of £50. The 13 members of the Upper House of Natal are appointed for ten years by the Governor on the advice of his ministers, a portion retiring every five years. The 43 members of the Lower

House are elected for four years on a franchise resembling that of Cape Colony. Votes are conferred on natives under certain conditions.

Basutoland is a Crown Colony governed by a Resident Commissioner under the direction of the High Commissioner, who alone has the power of promulgating laws. The administration of the *Bechuanaland Protectorate* is carried on by a Resident Commissioner acting under the High Commissioner, and assisted by two Assistant Commissioners. *Rhodesia* is administered by the British South Africa Company, which received its powers by a Royal Charter granted in 1889. The Crown appoints a Resident Commissioner, and there is an Executive Council of six members and a Legislative Council of sixteen. The Company appoints four members of the former and seven of the latter, but the members must be approved by the Colonial Secretary. Seven members of the Legislative Council are elected by registered voters. All laws must be confirmed by the High Commissioner, and may be disallowed by the Colonial Office.

The *Transvaal* has now obtained self-government in home affairs, and the *Orange River Colony* will before the close of 1907 obtain the same privilege, but in matters relating to foreign states the British Government retains full control.

BUILD. From the sea the country rises in terraces to the principal watershed, a chain of mountains which, at their eastern end, attain an elevation of 10,000 feet, and run almost parallel to the coast at an average distance of 150 miles. Between the main chain and the sea the country is crossed by minor ranges, which separate the various terraces. North of the principal watershed the territory consists almost entirely of elevated plateaux, the High Veldt, crossed by ridges of hills, and with many isolated eminences locally known as kopjes. Much of the Veldt is bare, or covered with thin grass or thorny trees and scrub. Other portions are well wooded. West of the Bechuanaland Protectorate lies the Kalahari Desert, an almost waterless waste inhabited by a few native hunters.

CLIMATE. Since the territory extends from the 8th to the 35th parallel of latitude, and presents such differences of elevation, there are many varieties of climate. Speaking generally, the summers are hot and the winters cool, except in the low-lying lands within the Tropics, where the heat is often oppressive, and malarial fevers are prevalent at certain seasons, while heavy falls of snow are not uncommon in the northern highlands of Natal. On the whole, the climate is healthy and suitable for Europeans, the air being usually dry and bracing. The upland plains of Cape Colony provide health resorts favourable for persons suffering from pulmonary diseases.

During summer the prevailing south-east winds bring rain to the eastern portions of Cape Colony and to Natal, but the mountains in the west are of insufficient elevation to arrest the rain clouds, and the moisture passes to the tropical regions beyond. The principal rainfall in the south-west is derived from the north-west winds of winter. A broad belt, extending from the north-west of Cape Colony through Bechuanaland, is practically rainless.

PRODUCTIONS. Vegetation is most luxuriant in the coast strip and in the low lying river valleys. There are several fertile tracts in the interior, but usually successful cultivation demands careful irrigation, and the sparseness of the population checks the necessary expenditure. In some districts wheat and other cereals, mealies, and tobacco do well. European fruits are being successfully introduced. The cultivation of the vine and the manufacture of wine and brandy are important industries in Cape Colony. The coast strip of Natal yields sugar, rice, bananas, and pineapples, and tea is cultivated on the neighbouring hills. The open plains of the interior are well suited for pasturage, and immense flocks of sheep and cattle are reared.

The elephant, rhinoceros, hippopotamus, zebra, and giraffe have disappeared from the settled portions, and in Rhodesia the herds of buffalo have been thinned almost to extinction by rinderpest. The lion and leopard are still met with in the north-east of the Transvaal, and more frequently in Rhodesia. Herds of springbok are common. Of the native birds the ostrich has been domesticated for the sake of its feathers, and the secretary bird is protected by law on account of the war it wages on snakes.

The mineral wealth is great. The diamond fields of Kimberley and the Witwatersrand gold fields are the most famous mining centres. Diamonds are also mined in the Orange River and Transvaal Colonies, and gold has been discovered in Rhodesia, Natal, etc. There are extensive beds of coal, but the finest quality of African coal, that of Natal, is inferior to the best European varieties.

COMMERCE. The foreign trade is extensive and increasing. The special commissioner appointed by the Board of Trade reported in December, 1903, that South Africa promises to become, in the near future, Britain's best customer for manufactured goods, with Germany and the United States as her most dangerous rivals. The *imports* consist of manufactured goods, chiefly textiles, machinery, and railway plant, foodstuffs, and building materials. The *exports* include gold, diamonds, and other minerals, wool, mohair, hides, and skins. The principal ports are Cape Town, Port Elizabeth, East London, and Durban.

RAILWAYS. The railway system is being rapidly developed, the several governments having various extensions under construction. The principal lines are:—

(1) The Western, from Cape Town to Kimberley, *vis* Beaufort West. The line has been continued through Bechuanaland and Rhodesia, *via* Vryburg, Mafeking, and Palapye to Bulawayo and Salisbury, with a branch from Bulawayo to the Wankie coal-fields, and the Victoria Falls on the Zambezi, a total length of 1,950 miles. It is intended to carry this branch across the Zambezi and through Northern Rhodesia to the southern end of Lake Tanganyika.

(2) The Central, from Port Elizabeth to Colesburg, with a loop to Graaf Reinet, and a continuation to Bloemfontein, Johannesburg, and Pretoria.

(3) The Eastern, from East London to Springfontein, in the Orange River Colony, with a branch to Aliwal North.

By means of branches there is intercommunication between these main lines, the principal junctions being De Aar, Naauport, and Stormburg.

(4) The Natal Railway, from Durban through Pietermaritzburg, Ladysmith, and Newcastle to Pretoria, with branches to Harrismith and Vryheid.

Lines also connect Pretoria with Lorenzo Marquez, and Salisbury with Beira, ports in Portuguese East Africa; and a line to link Cape Colony with Natal is under construction.

1. CAPE COLONY.

CAPE COLONY occupies the extreme southern portion of the continent, and extends from the ocean to the Orange River and the Bechuanaland Protectorate. Rivers are numerous, but are of little use for purposes of navigation or irrigation. Wool, wine, and grain crops are produced in the south-west, and maize and tobacco along the south-east coast; cattle, sheep, and horses are raised, and ostrich farming is an important industry in the Great Karroo, the tableland lying to the south of the principal mountain chain. Valuable forests in the south central region produce yellow-wood and Cape mahogany. Diamonds are the most valuable mineral, but gold, coal, and copper are also worked.

Cape Town, the capital, is situated on Table Bay, at the foot of Table Mountain, sixteen days from Southampton. Extensive harbour improvements have been carried out, and further works are in progress; population 78,000 (with suburbs 170,000). *Simon's Bay*, 22 miles to the south, is a naval station.

Port Elizabeth, on Algoa Bay, is the outlet for the central portion of the colony; population 33,000.

Kimberley contains the richest diamond fields in the world; population 34,500.

East London, where extensive harbour works are in course of construction, is the principal port for the fertile Eastern Province; population 25,000.

2. NATAL.

NATAL, including Zululand and Tongaland, extends for 376 miles along the south-east coast of the continent, and

inland to the Drakensberg Mountains. The Vryheid and Utrecht districts were annexed from the Transvaal in 1903. The country is well watered, but none of the rivers are navigable. The coast strip, with an average breadth of about 15 miles, is extremely fertile, and good crops of sugar, maize, coffee, tobacco, arrowroot, and ginger are raised. The midland district is suitable for cereals and European fruits, and the highland district for pasturing cattle and sheep. The valleys and portions of the coast strip are well timbered. Gold, silver, copper, and lead are found, but the most important mineral is coal, which is extensively worked around Newcastle and Dundee. There are valuable deposits of iron in the same neighbourhood. The natives outnumber the whites by ten to one.

Pietermaritzburg, the capital, is situated in the midland district, about 60 miles from the sea; population (all races) 31,000; (whites) 15,000.

Durban, or Port Natal, is the largest town and the only important port on the south-east coast. The harbour may now be entered by large vessels at any time; population (all races) 68,000; (whites) 31,000.

3. BASUTOLAND.

BASUTOLAND is a native province enclosed by Cape Colony, Natal, and the Orange River Colony. It has been called the "Switzerland of South Africa." The country has a magnificent climate, is well watered and fertile, and is a great grain producing district. The natives possess large herds of cattle and horses. The capital, *Maseru*, has a population of 1,300, of whom 200 are whites.

4. ORANGE RIVER COLONY.

THE ORANGE RIVER COLONY, which extends from Cape Colony and Basutoland to the Vaal River, was formally annexed, May 29th, 1900. The country consists principally of gently undulating grassy plains with an elevation of from 4,000 to 5,000 feet. The climate is healthy and bracing, with cold winters in the higher districts. The eastern portion, where the rainfall is comparatively good, contains the best corn land and produces good crops. The remainder of the country is admirably adapted for grazing and cattle breeding, and sheep farming forms the principal industry. There are no forests. Coal is abundant in the Kroonstad and Heilbron districts. The principal diamond mines are at Jagersfontein, near the western boundary of the colony. Garnets and other gems and gold are found. *Bloemfontein*, population 26,000; *Kroonstad*, 5,800; and *Harrismith*, 5,300, are the largest towns.

5. THE TRANSVAAL.

THE TRANSVAAL stretches from the Vaal in the south to the Limpopo in the north, and from Bechuanaland in the west to Portuguese East Africa and Natal, with about one-sixth of the total area within the tropics. The tableland has an average elevation of from 4,000 to 5,500 feet, but towards the north and along the eastern frontier it sinks in places to little more than 1,000 feet. This portion of the country is well wooded, and is known as the Bush Veldt; the heat of summer is oppressive, and malarial fever is prevalent during a portion of the year. The rainfall is greatest in the neighbourhood of the mountain range that crosses the eastern portion of the colony, exceeding 30 inches annually, while in the west the fall is under 15 inches. The country is capable of supporting large numbers of cattle and sheep, except in the lower portions of the Bush Veldt, where the tse-tse fly proves fatal to cattle. Minerals constitute the principal wealth of the country. There are extensive beds of coal, and iron, silver, copper, and lead are found. Diamonds are mined in three districts, and early in 1905 a stone of record size was discovered near Johannesburg. The gold industry is the most important, the output in 1905 being valued at over £20,000,000. The richest field is that of the Witwatersrand, a rocky ridge in the south of the colony.

Pretoria is the capital and has a population of 38,500.

Johannesburg, the centre of the Witwatersrand gold-field, is the largest town; population 155,600.

6. RHODESIA.

1. SOUTHERN RHODESIA comprises Matabeleland and Mashonaland, and extends from the Transvaal boundary to the Zambezi, the whole of the territory being within the tropics. The higher regions consist of prairie land, and the climate is suitable for European colonists. In the north and west there are extensive forests. The mineral resources are great, and are being rapidly developed. Gold and coal are worked, and silver, copper, iron, tin, and plumbago are known to exist. Tobacco, cotton, and rubber are indigenous to the country, and European fruits and vegetables, and the cereals thrive. The white population in 1904 numbered 12,600. The chief towns are *Salisbury*, the political capital, and *Bulawayo*, the chief commercial centre.

2. NORTHERN RHODESIA extends from the Zambezi to the Congo Free State and westward to Portuguese territory. The country is occupied by native tribes under their own chiefs. Forests are extensive, and there are large mineral deposits.

7. BECHUANALAND PROTECTORATE.

The protectorate lies between the Molopo River and the Zambezi, and extends westward from the Transvaal and Rhodesia to German South-West Africa, occupying a portion of the western slope of the tableland. The country suffers from a deficiency of water, and in the west forms a part of the Kalahari Desert. Maize is the principal crop. The large herds of cattle formerly held by the natives have been greatly thinned by rinderpest. The population in 1904 included 120,000 natives and 1,000 whites.

BRITISH EAST AFRICA.

The following table shows the estimated area and population of the British Protectorates in Equatorial East Africa:—

PROTECTORATES.	AREA (Estimated).	POPULATION (Estimated).
East Africa Protectorate .	177,100	2,960,000
Uganda Protectorate . .	223,500	4,500,000
Zanzibar Protectorate . .	1,020	200,000
Central Africa Protectorate	40,980	706,000
Somaliland Protectorate .	68,000	153,000

The whole of these territories is administered by the Imperial Government through Commissioners. The Central Africa Protectorate and the Somaliland Protectorate are controlled by the Colonial Office, the others by the Foreign Office. With the exception of Zanzibar they are divided into a number of districts, each of which is in charge of a Collector or Deputy Commissioner. The Commissioner of the East Africa Protectorate acts as British Agent and Consul-General at Zanzibar, and exercises control over the Sultan and his government.

1. THE EAST AFRICA PROTECTORATE extends for about 400 miles along the coast and inland to Uganda. It consists of a low, fertile, coastal plain of varying width, from which a steep slope leads to an inland plateau, comparatively waterless and barren. Beyond the plateau grass-covered plains slope gradually to the basin of the Victoria Nyanza. Portions of the country are considered suitable for European settlers. A railway extends from Mombasa on the coast to Port Florence, at the north-east corner of the lake, a distance of 584 miles. The chief productions are cloves, ivory, rubber, copra, and hides. Textiles, building materials, rice, grain, and flour are imported. *Mombasa* is the capital and chief port; population 27,000.

2. THE UGANDA PROTECTORATE includes Uganda proper, lying along the north-western shores of Victoria Nyanza, and country extending westward to the Congo Free State, and northward to the Soudan. The climate is unhealthy, and in recent years the people have suffered much from "sleeping sickness." Several steamers trade on the lake, and ivory, cattle, skins, and rubber, together with small quantities of cotton and coffee, are exported. Cotton goods form the principal import. *Entebbe*, on the north-west

shore of Victoria Nyanza, is the administrative centre, but the native capital is *Kampala*.

3. THE ZANZIBAR PROTECTORATE includes the islands of Zanzibar and Pemba, the latter lying 40 miles north of the former. The soil is fertile, and the islands are well cultivated, cloves and cocoa-nuts being the chief productions. The trade is chiefly with India, Great Britain, and German East Africa. Cloves, copra, chillies, and gum are exported. The imports comprise textile fabrics, rice, and coal. The capital, *Zanzibar*, has a fine harbour, and is the largest town and chief commercial centre of East Africa. It is used as a coaling station by the British navy.

4. THE CENTRAL AFRICA PROTECTORATE includes the territory lying round the shores of Lake Nyasa, formerly known as Nyasaland, together with the greater part of the Shire basin, and extends southward to the Zambezi. It consists principally of a well-watered plateau, but the climate is unhealthy. There are about 500 European settlers, chiefly Scotch, who have successfully established coffee, sugar, and tobacco plantations. Other exports include cotton, ivory, and rubber. The imports are textiles, hardware, and provisions. The chief towns are *Zomba*, the administrative centre, and *Blantyre*; population 6,500, of whom only 200 are Europeans.

5. THE SOMALILAND PROTECTORATE extends for 400 miles along the coast opposite Aden, and inland to the eighth parallel of north latitude. British administration is confined to the coast. The Somalis are a nomadic, pastoral people, and possess herds of camels, cattle, horses, and sheep. The exports include cattle, skins, hides, ostrich feathers, ivory, and gum. *Berbera*, opposite to Aden, is the principal town; population 30,000. *Zaila* is the chief starting place of caravans for Abyssinia.

THE SMALLER BRITISH POSSESSIONS.

In addition to the larger territories, the British Empire includes a number of smaller possessions scattered throughout the world, which, though unimportant as markets for British goods, or as the producers of raw material for British manufactures, are of supreme importance in a world-wide empire, serving as links in the chain that binds the mother country to her most distant colonies. They enable the navy to keep the command of the sea by providing (1) fortified coaling stations, (2) dockyards where ships may be repaired or refitted, (3) victualling yards for replenishing depleted stores. They are of equal importance to our mercantile marine, for (1) they assist in protecting the great trade routes, (2) they provide harbours in which merchant vessels may shelter in time of war, (3) they supply coal and fresh provisions to passing ships. In some cases they serve as depôts whence British goods may be distributed to neighbouring countries.

1. IN THE MEDITERRANEAN.

The British possessions in the Mediterranean are Gibraltar at the western end, Malta in the middle, and Cyprus in the Levant.

GIBRALTAR, the "Key of the Mediterranean," is a rocky promontory situated at the southern extremity of Spain, to which it is connected by a low, flat isthmus of neutral ground. The rock is so strongly fortified as to be deemed impregnable. The town, with a population exceeding 27,000, lies on the north-west of the promontory fronting the bay. Extensive harbour works, enclosing an area of about 450 acres, are in course of construction, including docks capable of accommodating the largest battle ships, and commercial and coaling moles for the use of merchant ships. The port is free, and serves as a depôt for the collection and distribution of goods between Britain and North Africa.

MALTA is situated about 60 miles south of Sicily, and 200 miles from the African coast, and is midway between Gibraltar and Port Said. The administration includes the smaller islands of Gozo and Comino, with a total area of 117 square miles, and a civil population exceeding 200,000. The islands are fertile, and cotton, corn, oranges, and other fruits, and early potatoes are grown. Upwards of 5,500 persons are engaged in lace making, but the bulk of the inhabitants are employed in various branches of the shipping industry. *Valletta*, the capital, population 30,000, is strongly fortified, and possesses a magnificent deep-water harbour. It is an important calling place for vessels engaged in the Eastern trade, and its dockyard, arsenal, and splendid anchorage combine to make it the headquarters of the Mediterranean fleet.

CYPRUS is an island about 3,600 square miles in area, with a population of 237,000, situated 60 miles from the nearest point of Asia Minor, and 240 miles from the entrance to the Suez Canal. It is held on lease from the Sultan of Turkey for such a period as Russia may occupy Kars and Batoum. The inhabitants are mainly of Greek extraction. The soil is fertile and produces cotton, grains, grapes, olives, and other fruits. Other productions include wool, silk, hides, and sponges, and the manufacture of wine and spirit is an important industry. The island's main importance to Britain lies in its strategic position as a military base. *Nicosia*, near the centre of the island, is the capital; population 14,800. *Larnaka* is at present the chief port, but it is intended to make the harbour of *Famagusta* available for large vessels

2. WEST INDIAN POSSESSIONS.

The following table shows the various West Indian Islands that form part of the British Colonial Empire:—

Colony.	Capital.	Area.
Bahama Islands .	Nassau . .	4,403 sq. miles
Jamaica	Kingston . .	4,207 ,,
Leeward Islands .	St. John . .	705 ,,
Windward Islands	St. George .	498 ,,
Barbados. . . .	Bridgetown .	166 ,,
Trinidad	Port of Spain	1,754 ,,
Tobago	Scarborough .	114 ,,

THE BAHAMA ISLANDS form the most northern group of the West Indian Islands, and consist of 20 inhabited islands and an immense number of coral islets and rocks, stretching from Florida to the south-eastern point of Cuba. The islands suffer from scantiness of soil, a deficiency of natural water supply, and the want of harbours capable of accommodating large vessels. Their delightful climate is making them a popular winter resort for Americans. The agave, which yields sisal hemp, is cultivated, but the principal industries are fruit growing, sponge gathering, and salt raking.

JAMAICA, the largest and most important of the British West Indian possessions, is a mountainous island lying 90 miles south of Cuba. It possesses several excellent harbours. Sugar, coffee, bananas, oranges, and maize are grown, and these, together with rum and the productions of the forests—cabinet woods, dye stuffs, drugs, and spices—form the principal exports. The population consists mainly of negroes and other coloured people. The administration includes Turks and Caicos Islands at the southern extremity of the Bahamas, and the Cayman Islands. *Kingston* possesses a good harbour, and with the naval station of *Port Royal* has a population of 46,500.

THE LEEWARD ISLANDS form the western section of the Lesser Antilles. The British possessions, including three of the Virgin Islands, Antigua, Dominica, Montserrat, and St. Kitts, are federated under one governor.

THE WINDWARD ISLANDS form the eastern portion of the Lesser Antilles. The British possessions comprise Grenada, the Grenadines, St. Vincent, and St. Lucia, and are administered as a single colony. St. Lucia is a capital coaling station. All the *Lesser Antilles* have a tropical climate, but the heat is modified by the sea breezes. Destructive hurricanes are common. The chief productions are sugar, coffee, cotton, cacao, and fruits.

BARBADOS, the most eastern of the West Indian Islands, has a separate administration. The population is very dense, numbering 1,198 to the square mile. The

island is remarkably fertile, and is considered the most healthy of the West Indian Islands.

TRINIDAD, the second in size of the British West Indies, approaches within 7 miles of the coast of S. America. The soil is fertile, and sugar, rum, molasses, timber, fruit, and cocoa are exported. The Pitch Lake, 110 acres in extent, produces upwards of 100,000 tons of asphalte annually. *Port of Spain* possesses the best harbour in the West Indies; population 54,000.

3. IN THE ATLANTIC OCEAN.

The British possessions in the Atlantic comprise :—

Colony.	Capital.	Area.
Bermuda Islands	Hamilton . .	19 sq. miles
Ascension . .	Georgetown . .	35 ,,
St. Helena . .	Jamestown . .	47 ,,
Tristan D'Acuna	New Edinburgh	18 ,,
Falkland Islands	Stanley . . .	6,500 ,,
South Georgia .		1,000 ,,

THE BERMUDA ISLANDS consist of a group of small coral islets and reefs lying in the North Atlantic, 600 miles east of Cape Hatteras in the United States. They are becoming a favourite winter resort of Americans and Canadians. The group, from its position, is of high strategic value, and forms an important naval station, the fortified approaches to the channels and the strongly defended dockyard enabling ships to refit in safety.

ASCENSION and **ST. HELENA** lie on the route of vessels between England and the Cape. Since the opening of the Suez Canal the islands have declined in prosperity. Both are fortified, and are of importance as coaling stations, and Ascension serves as a health resort for the crews of the South Atlantic squadron.

THE FALKLAND ISLANDS are situated in the South Atlantic, 300 miles east of Magellan's Strait. Sheep farming is the principal industry, and wool and frozen mutton are the staple exports. The islands serve as a station for refitting and provisioning vessels engaged in the southern whale fishery, or proceeding round Cape Horn. The colony includes South Georgia, an inhospitable and frequently ice-bound island, without permanent inhabitants, lying 800 miles east-south-east of the Falklands. The whole colony contains only 360 inhabited houses.

4. IN THE INDIAN OCEAN.

The minor possessions in the Indian Ocean comprise :—

(1) Aden with its dependencies, Perim, Socotra, and the Kuria Muria Islands.
(2) Mauritius, together with Rodriguez and the Chagos groups.
(3) The Seychelles.
(4) The Laccadive and Maldive Archipelagos.
(5) The Andaman and Nicobar Islands.
(6) The Straits Settlements.

ADEN is a strongly fortified rocky peninsula in the south-west of Arabia, to which it is joined by a narrow, sandy isthmus. The town occupies the site of the crater of an extinct volcano. The harbour is good and affords shelter for vessels in all weathers. Lying in the steamer route to India, Australia, and the East generally, Aden has become one of the most important coaling stations in the world. The trade is considerable, reaching nearly £7,000,000 annually. The port is free for nearly all merchandise, and is the great entrepôt of the trade of Southern Arabia and North-East Africa. The population is about 50,000. Aden, which together with its dependencies, is included in the government of Bombay, is the centre of a British protectorate over the tribes occupying the coast region of Arabia, from Perim to Muscat.

Perim is a small rocky island situated in the Strait of Bab-el-Mandeb. It possesses a good harbour and a lighthouse, and serves as a coaling station for merchant vessels.

Socotra lies 150 miles off the north-east point of Africa, and has an area of 1,380 square miles, and a population of about 12,000 of Arab descent. Aloes, dates, and figs are produced.

The Kuria Muria Islands have valuable deposits of guano.

MAURITIUS, with an area of 700 square miles and a population exceeding 370,000, the majority of whom are of Indian descent, lies 500 miles east of Madagascar. The climate is tropical but generally healthy. Cyclones occasionally prove very destructive. The staple production is sugar, and nearly all the necessaries of life are imported from India, South Africa, Australia, and Great Britain. The capital and largest town, *Port Louis,* situated in the north-west of the island, has a good harbour, and enjoys most of the foreign trade; population 56,000.

Rodriguez lies about 350 miles east of Mauritius. The climate is good and the soil fertile. Maize, fruits, and vegetables are cultivated, and cattle, goats, and fish are exported.

The Chagos Archipelago is in the route of vessels from the Red Sea to Australia, and from South Africa to Ceylon or Calcutta. The staple production of the group and of the neighbouring islands is cocoa-nut oil, from which circumstance they are frequently named the Oil Islands. The principal island, Diego Garcia, is a coral atoll enclosing a fine harbour, which is of importance as a coaling station.

THE SEYCHELLES comprise two principal groups of volcanic islands surrounded by coral reefs, situated 930 miles north of Mauritius, of which island they were a dependency till 1903, when they were erected into a separate crown colony. The climate is tropical but very healthy. The chief productions are the products of the cocoa-nut palm and vanilla. *Victoria,* on the largest island, Mahé, has a good harbour, and is the headquarters of the East African squadron.

The Laccadive Archipelago, off the south-west coast of India, is attached to the government of Madras, and the **Maldive Islands,** lying farther south, are included in that of Ceylon.

The **Andamans,** with the little **Cocos** group at their northern extremity, and the **Nicobars** farther south, form the scattered links of a chain with a total area of 3,150 square miles, and are situated in the east of the Bay of Bengal, about 160 miles from the coast of Burma. They are administered by the government of India through a chief commissioner. The Andamans, which are used as a penal settlement, contain valuable forests. *Port Blair,* on South Andaman, the capital and principal convict settlement, possesses one of the finest harbours in the East. The Nicobars export cocoa-nut fibre and copra.

THE STRAITS SETTLEMENTS are so named from their situation on the Strait of Malacca. They include (1) Penang, together with the province of Wellesley, (2) Malacca, (3) Singapore, (4) a protectorate consisting of Malay States occupying the southern portion of the Malay Peninsula.

The total area of the colony is 1,526 square miles, and of the protectorate 25,000 square miles. The inhabitants number 572,000 and 697,000 respectively, and consist chiefly of Chinese, Malays, and Indians. A small number of Europeans are either government servants or are engaged in commercial pursuits. The climate is tropical, with little variation in temperature throughout the year. The rainfall in places exceeds 100 inches annually. The soil is fertile; the forests yield timber, rubber, gutta-percha, and gums; and rice, gambier, tapioca, pepper, spices, and coffee are cultivated. The tin mines produce nearly 70 per cent. of the world's total supply and gold is found in places. The imports exceed £34,000,000, and the exports £28,000,000 annually.

Penang is an island at the northern end of the Strait, and two miles from the mainland. The capital, Georgetown, is the principal port and the centre of considerable local trade. Province Wellesley is the portion of the Malay Peninsula lying opposite to the island, and consists of an alluvial plain with forest-clad hills in the interior. The province is well cultivated, the crops including the betel nut, rice, and spices.

Malacca consists of a town of the same name and territory 660 square miles in area, situated on the Peninsula, 240 miles south of Penang.

Singapore is an island, 200 square miles in area, situated at the extreme south of the Malay Peninsula, from which it is separated by a strait less than a mile wide. *Singapore,* the seat of government of the Straits Settlements, is the head-quarters of the British navy in Eastern Seas, and a commercial port of first rate importance, with excellent dock accommodation. It is the junction for lines of

steamers from the west, east, and south. The port is almost free, custom duties being levied on opium and alcoholic liquors for consumption in the colony only. There are extensive smelting works, at which much of the Straits tin is smelted.

THE FEDERATED MALAY STATES—Perak, Selangor, Negri Sembilan, and Pahang—form part of the peninsula. They are governed by their native rulers, who are controlled by British residents acting under the governor of the Straits Settlements. The soil is fertile, and there are valuable forests. Rubber growing is now a large industry, but the chief source of wealth and revenue is tin.

JOHORE, an independent Malay State at the southern extremity of the peninsula, is under British control in relation to foreign states.

5. IN THE PACIFIC OCEAN.

The smaller British possessions in the Pacific Ocean are (1) Hong Kong and Wei-hai-wei on the coast of China, (2) the Fiji Islands, and (3) a protectorate consisting of a number of groups and scattered islands in the Western Pacific.

HONG KONG is a crown colony situated in the south-east of China, and consists of the island of Hong Kong, 36 square miles in area, at the mouth of the Canton River, and the peninsula of Kowloon, the portion of the mainland opposite to the island, which has been leased from the Chinese government. The population is 326,000, of whom 307,000 are Chinese. The Europeans number 18,600. The climate is generally hot, but there are great variations in temperature during the year, and the colony has proved to be less unhealthy than it was once considered. The harbour, which extends between the north of the island and the southern shores of the peninsula, is one of the finest in the world, and there is splendid dock accommodation. The naval dockyard and workshops provide for the repairing and refitting of the largest battleships, and make Hong Kong the headquarters of the China squadron. The port is free and is the centre of an immense trade, being the great mart for the distribution of European goods to China and the Far East. *Victoria*, the capital, stretches along the northern shores of the island, and has a population of 182,000, of whom 4,500 are Europeans.

WEI-HAI-WEI was leased from China in 1898 to provide the British with a naval station in North China, and "for the better protection of British commerce in the neighbouring seas." The territory is situated on the Shantung Peninsula, 40 miles east of Chefoo, and almost opposite to Port Arthur, and consists of a strip of land, 10 miles in width, extending along the whole front of the Bay of Wei-hai-wei, together with the islands in the bay, a total area of 285 square miles, but Great Britain exercises military rights over 1,500 square miles of the neighbouring country. The climate is good, with cold, dry, bracing winters. *Port Edward* is the seat of government and the chief port.

THE FIJI ISLANDS consist of two large islands, Viti Levu and Vanua Levu, and a number of smaller ones, situated in the South Pacific, about 2,000 miles east of Queensland, and 1,100 miles north of New Zealand, and having an area of 7,740 square miles. The islands are of volcanic origin, and the shores of most of them are protected by barrier reefs crossed by deep channels. The climate is remarkably healthy, but earthquakes are not uncommon. Forests of valuable timber clothe the hill sides, the bread-fruit tree, cocoanut, pineapple, and plantain flourish, and maize, sugar, tea, cotton, tobacco, and arrowroot are cultivated. The trade of the islands is principally with Great Britain and the Australian Colonies. The exports are sugar, fruits, copra, and maize; the imports, cotton goods, machinery, and hardware. *Suva*, the capital, on Viti Levu, has a good harbour.

The Governor of Fiji, as High Commissioner of the Western Pacific, exercises jurisdiction over the various islands to which the British protectorate extends. The principal of these are:—The British Solomon Islands, The Tonga or Friendly Islands, The Gilbert, Ellice, Phœnix, and Union Groups, and Pitcairn Island.

6. REMAINING BRITISH POSSESSIONS.

BRITISH BORNEO. Borneo is the largest island of the Malay Archipelago. Formal protectorates have been declared by Britain over the northern and north-western portions, including British North Borneo, Brunei, and Sarawak. The interior of the territory is mountainous, but few of the peaks reach any great height. The climate is tropical and unhealthy on the plains. There are valuable forests, the soil is fertile, and well adapted for the cultivation of tropical products, and the mineral wealth is great, including gold, diamonds, coal in abundance, quicksilver, and iron. The inhabitants are principally Malays, Chinese, and Arabs.

British North Borneo occupies the extreme north of the island, and has an area of 31,000 square miles. The territory is administered by the British North Borneo Company after the manner of a Crown Colony. Lands have been leased to planters, railways are being constructed, and the mineral wealth developed. Timber, cocoa-nuts, gums, gutta-percha, tobacco, sago, and rice are exported.

Labuan, an island 30 square miles in area, lying about 6 miles off the coast, has, since 1889, been administered by the governor of British North Borneo. The principal product is coal, of which 50,000 tons are exported annually.

Sarawak occupies the north-west of Borneo, and has an area of 50,000 square miles with a coast line of 400 miles. The country is ruled by Sir C. J. Brooke, the nephew of the first rajah, but all foreign relationships are conducted by the British Government. The chief exports are rubber, gutta-percha, sago, coal, and gold.

Brunei, area 4,000 square miles, lies between Sarawak and British North Borneo. The internal affairs of the country are in the hands of the Sultan, but foreign relationships are looked after by the British Government.

BRITISH HONDURAS. British Honduras is a Crown Colony—area 7,562 square miles, population 37,000, forming the south-eastern portion of the Yucatan peninsula in Central America. The colony possesses about 170 miles of coast fronting the Caribbean Sea, but the navigation is rendered difficult by numbers of small islands and coral reefs. The river Belize flows through the middle of the country. North of this river the land is low and flat, and much of the surface is occupied by swamps and lagoons. The south and extreme west are hilly. The climate is tropical but healthy. Forests cover the greater part of the territory, but there is pasture-land of good quality in the interior, and sugar and tropical fruits do well under cultivation. The principal exports are mahogany, logwood, rubber, gum, bananas, and cocoa-nuts. *Belize*, the capital, has no harbour; vessels are loaded and discharged by the aid of lighters; population 9,200.

BRITISH GUIANA. British Guiana is situated in the north of South America. The boundaries between the colony and Venezuela on the west, and Brazil in the south were settled by arbitration. The coast line is about 300 miles in length, and the country extends inland about 600 miles, and has a total area of 104,000 square miles, with a population of 300,000. Rich alluvial plains, varying in width from 40 to 70 miles, fringe the coast, and are in places below the sea-level, and crossed by dykes and canals. The interior is hilly or mountainous, and covered with forests, broken by grassy plains. The climate is hot and damp, the rainfall frequently reaching 140 inches per annum. Cultivation extends but a few miles from the coast or river banks. The staple crop is sugar, but cotton, coffee, cacao, rice, and tropical fruits promise well. Gold and diamonds are found, and the mining industry is being developed. The colony suffers from a scarcity of labour, and Indian and Chinese coolies have been introduced, and now form one-third of the inhabitants. The principal exports are sugar, gold, rum, and timber, sugar forming nearly 70 per cent. of the whole. *Georgetown* (Demerara), the capital and chief port, is situated near the mouth of the river Demerara; population 53,000. *New Amsterdam*, on the river Berbice, is the second town; population 9,000.

GROWTH OF THE BRITISH EMPIRE.

The reign of Queen Elizabeth was a preparation for planting Colonies and founding an Empire. The date of James I.'s accession (1603) may be fitly taken as a starting-point in tracing the growth of the Empire, and the three centuries between that time and ours may be conveniently divided into five periods:

First period ending with the Treaty of Utrecht, 1713.
Second period ending with the Treaty of Paris, 1763.
Third period ending with the Treaty of Versailles, 1783.
Fourth period ending with the Treaty of Vienna, 1815.
Fifth period coming down to the present day.

1. PERIOD OF EARLY COLONIZATION (1603–1713). (1) First permanent settlement at Jamestown in 1607. Colonization of Virginia, New England, and all the remaining Colonies, except Georgia, which have since expanded into the United States. (2) Acquisition of Bermudas, Barbados, Jamaica, and St. Helena. (3) By the Treaty of Utrecht was admitted our claim to Newfoundland, Nova Scotia, and Hudson Bay Territory.

2. PERIOD OF CONQUEST (1713–1763). (1) Conquest of Canada from the French after the capture of Quebec by General Wolfe. (2) Foundation of our Indian Empire laid by Clive at the Battle of Plassy. (3) By the Treaty of Paris, France ceded to England all her former possessions in North America except New Orleans; and Spain yielded Florida in exchange for Havana, which the English had captured.

3. PERIOD OF LOSS (1763–1783). (1) Loss of the Thirteen Colonies in the American War of Independence. (2) As a set-off we have the discovery of New Zealand and New South Wales by Captain Cook about the same time. (3) Consolidation of British rule in India by Warren Hastings.

4. PERIOD OF TRIAL AND TRIUMPH (1783–1815) (1) First settlers landed in Australia (1788); Sydney founded; Tasmania occupied. (2) During the Napoleonic Wars the British captured:—Trinidad from the Spaniards; Ceylon, Cape of Good Hope, and Guiana from the Dutch; Malta, Mauritius, Tobago, and St. Lucia from the French. All these gains were conceded to England by the Treaty of Vienna. (3) In India British rule was made paramount by Marquess Wellesley through the utter defeat of the Mahratta princes and Tippoo, Sultan of Mysore.

5. PERIOD OF EMIGRATION AND EXPANSION (1815–present day). Great impetus was given to emigration by the Peace of 1815, the Irish Famine of 1845–47, and the discovery of gold in Australia in 1851. In some years since then more than a quarter million of persons have emigrated from the United Kingdom. The expansion of the Empire has been equally remarkable. This has been effected in three ways—by peaceful settlement, by force of arms, and by friendly treaty with native princes. The additions made to the Empire need not here be given in detail, for they include, of course, all those parts of the Empire that have not been already stated. We may remark, however, that when Queen Victoria began her reign (1837) British India did not include Oudh, nor the Punjab, nor Burma; in Australia there was no Victoria or Queensland; New Zealand formed no part of the Empire; in Africa there was hardly any British territory except Cape Colony, which then was only about half its present size; in America British Columbia had not received its name, Manitoba had not yet been heard of; and of the numerous small dependencies, which are sometimes of great value, we had neither Aden nor Hong Kong.

DOMINION OF CANADA.

1. Canada was discovered by Cartier, a French explorer, in 1535. It was first colonized by the French under Champlain, who founded Quebec in 1608, and afterwards built a fort on the island of Montreal for the protection of the fur-traders.

2. Canada was conquered by the English in the "Seven Years' War." Quebec was captured by Wolfe in 1759, and in the following year Montreal surrendered to General Amherst, when all French troops in Canada laid down their arms and were shipped off to France.

3. The French Colonists remained under British rule, and being left in the enjoyment of their own laws and customs, proved loyal to the British Crown in the war of American Independence. At the conclusion of this war thousands of "loyalists" left the United States and settled in Canada.

4. Before the end of the 18th century the colony was divided into two provinces, called Upper and Lower Canada, the former inhabited mainly by British settlers, the latter by French. All went well for some years, each province being governed separately. But by the year of the Queen's accession (1837) the colony had outgrown its mode of government, and rose in rebellion. This having been put down, goodwill was restored by the grant of self-government (1841). From this time Canada made rapid progress. In the next quarter-century the population nearly trebled itself.

5. The next great step onward was taken in 1867, when an Act was passed empowering all the British Colonies of North America to form a Federal Union under the name of the Dominion of Canada. By the end of six years the Dominion embraced all British North America except Newfoundland. Whilst each province manages its own particular affairs, the Dominion Parliament, meeting at Ottawa, legislates for the whole country in matters that concern the whole, such as protection against invasion, means of communication (railroads, telegraphs, etc.), and the taxes to be paid on exports and imports.

6. As one important result of this federation the Canadian Pacific Railway was constructed right across the Continent, and opened in 1885. Great progress has since been made in the development of Canada's resources. Rich gold-fields also have been discovered at Klondyke, and there is every prospect of Canada becoming a great nation.

AUSTRALASIA.

1. NEW SOUTH WALES was discovered by Captain Cook in 1769, and in 1788 a shipload of convicts was landed at Port Jackson, and Sydney founded. To Captain Phillip, the first governor, the colony owes its escape from famine and disaster. In 1813 the way across the Blue Mountains was discovered, and a fine agricultural country opened up around Bathurst. Sheep-farming now became the chief occupation, and free settlers began to arrive. After 1840 no more convicts were sent to this colony, and within a few years the system was abolished throughout Australia. Self-government with local Parliaments followed in due course.

2. TASMANIA also began its existence as a convict colony. The first batch of convicts was landed in 1804 on the spot where Hobart was built. The colony suffered for many years from the hostility of the natives and from the depredations of "bush-rangers," as the escaped convicts were called. Both of these evils were effectually dealt with by Colonel Arthur, who ruled the colony from 1824 to 1836, and laid the foundation of Tasmania's prosperity.

3. WESTERN AUSTRALIA began its struggling existence in 1829. By the recent discovery of gold in this colony a brighter prospect opens for it. SOUTH AUSTRALIA dates from 1836, when Adelaide was founded. Only free settlers were admitted. It passed through a period of great poverty and distress. A better day dawned with the discovery of the Burra Burra copper mines (1845). VICTORIA was formed into a separate colony in 1837, the year of Queen Victoria's accession, when Melbourne was founded. QUEENSLAND was separated from New South Wales in 1859. Its progress has since been rapid.

4. The progress of AUSTRALIA was greatly accelerated by the discovery of gold, in 1851, by which a great impetus was given to immigration. It was first found at Bathurst, in New South Wales, but Ballarat and Bendigo, in Victoria, proved to be the richest gold centres. The value of the gold obtained in Australia between 1851 and 1891 amounts to

£300,000,000. The population of Victoria in the meantime rose from 72,000 to 1¼ millions, Melbourne, its capital, now containing 500,000, and forming with the exception of Sydney, the largest city in the Southern Hemisphere. Though gold is still one of Australia's chief products, wool greatly exceeds it in value.

5. NEW ZEALAND began to be colonized in 1840. By the Treaty of Waitangi the Maoris consented to take our Queen as their sovereign, and to permit her people to settle in their country on condition that they purchased the land they required. The colony made great progress under the administration of Sir George Grey, who held office from 1845 to 1853. On his return to New Zealand as Governor in 1861, he found the natives in arms, much discontent being felt at the alarming growth in the number of English settlers and the amount of land which had passed into their hands. The war continued until 1870, when the brave Maoris gave up the struggle as hopeless. During the ten years of the war, which was confined to the North Island, the colonists in the South Island made wonderful progress, especially after the discovery of gold in Otago. The natural resources of the country, and its splendid climate, have continued to attract numerous emigrants, and now there are eighteen colonists to one native, the whole population exceeding 800,000.

BRITISH SOUTH AFRICA.

1. Cape of Good Hope was discovered by a Portuguese Mariner named Diaz in 1483. The Dutch began to settle at the Cape in 1652. Cape Colony was captured by the English in 1806, but no step was taken by them to colonize it until 1820, when Port Elizabeth was founded.

2. The next thirty or forty years were marked by wars between British, Dutch, and Kaffirs for the mastery. There were three Kaffir wars, each ending in an extension of British territory, and by 1865 Cape Colony included all the native states south of the Orange River. Meanwhile the Boers, or Dutch farmers, emigrated from Cape Colony and founded two independent states, namely, the Transvaal or South African Republic, and the Orange Free State. They had previously endeavoured to settle in Natal, but that Colony was annexed by the British Government in 1843.

3. The prosperity of Cape Colony dates from the discovery of diamonds at Kimberley in 1870. Since then the diamond mines have yielded an average revenue of between two and three millions per annum. This discovery of diamonds led to the annexation of Griqualand West, in which Kimberley is situated.

4. North of Natal, and separated from it by the river Tugela, is Zululand. In 1879 a British force crossed the Tugela to make war on Ketshwayo, the Zulu king, whose army was a constant source of danger to the peace and security of Natal. The war was marked by a massacre of our troops at Isandlana, and by the heroic defence of Rorke's Drift, a ford of the Tugela, by a small British force. A pitched battle fought at Ulundi brought the war to a successful close. Zululand is now annexed to Natal.

5. Our next extension of territory took place in 1885, when Bechuanaland to the south of the river Molopo was constituted a Crown Colony under the name of British Bechuanaland. The whole of Bechuanaland north of the Molopo has since been formed into a protectorate. In consequence of the discovery of rich gold-fields in the Transvaal, a great impetus was given to exploration and settlement in the country north of the Transvaal, and now called Rhodesia.

6. Rhodesia stretches from the Limpopo to the Zambezi. It includes the country of the Matabeles and Mashonas. The former, being a warlike tribe, fought bravely for their independence under their king, Lobengula. His army of 10,000 men, however, was no match for a British force of 800 men armed with modern weapons, and well led by Dr. Jameson. The capital, Bulawayo, was taken; the king escaped, but died soon afterwards (1893). The Matabeles have since risen in rebellion, but there is every hope now that Rhodesia has entered on a period of peace and prosperity.

7. Another great addition to the Empire has been made as the result of the Boer War (1902). The Transvaal and the Orange River Colony are now incorporated in the Empire; so that nearly the whole of Africa, from the Zambesi to the Cape, acknowledges British sovereignty.

BRITISH INDIA.

1. The East India Company received its first charter from Queen Elizabeth in 1600. For 150 years it was merely a trading company, and during that time established factories, or trading stations, at Surat, Bombay, Madras, and Calcutta.

2. A new era opened with the year 1748, when Dupleix, the French Governor, interfered in disputes between rival princes for the throne. The English soon followed suit, and in every dispute between native princes the two nations took opposite sides. The first great success on the British side was made by CLIVE at Arcot. This led to the downfall of the prince that Dupleix had set up, and Dupleix himself was recalled to France.

3. In 1757 occurred the tragedy of "The Black Hole of Calcutta." Clive was sent with a small army to take vengeance on Surajah Dowlah, the Nabob of Bengal, and by his victory at Plassy laid the foundation of British rule in India. The new Nabob of Bengal was only a puppet in Clive's hands. This success was followed by the victory of Sir Eyre Coote, at Wandewash, in 1760—a victory which led to the extinction of French rule in India.

4. The next great builder of our Indian Empire was WARREN HASTINGS, who was appointed Governor-General in 1774. He consolidated our rule by his victories over the Mahratta princes, and by his energy and spirit raised an army that enabled Sir Eyre Coote to crush our great enemy, Hyder Ali, Sultan of Mysore, at Porto Novo.

5. Between 1798 and 1805 the office of Governor-General was held by MARQUESS WELLESLEY. He induced the Nizam of the Deccan and other native princes to accept British protection, on the condition that each should be absolute in his own state, but be guided by our representative at his court in all matters relating to other states. War was declared against Tippoo, Sultan of Mysore, the son and successor of Hyder Ali. The storming of Seringapatam, his capital, and his own death when fighting in the breach, put an end to the war, and led to the partition of his kingdom. We next find the Nabob of Oudh ceding the territory called the Doab, between the Ganges and the Jumna, and accepting the same position as the Nizam.

The Marquess next took in hand the Mahratta princes. He induced the Prince of Poona to accept British protection, and made war upon the Mahratta chiefs, Holkar and Scindia. He appointed General Lake to conduct the war against Holkar, and his brother, Arthur Wellesley, the future Duke of Wellington, to deal with Scindia. Wellesley won the hard-fought battle of Assaye, 1803, and brought Scindia to submission, whilst Lake was ultimately successful in his task.

6. LORD HASTINGS, who became Governor-General in 1814, reduced Nepal to submission without depriving it of independence. From Nepal we have since drawn those excellent little soldiers, the Ghoorkas. By this time the British were practically supreme over the whole peninsula south of a line drawn from the mouth of the Indus to that of the Ganges, and over the basin of the Ganges itself.

7. Between 1848 and 1856 India was ruled by the MARQUIS OF DALHOUSIE, who annexed more territory than any other Governor-General before or since. By the defeat of the Sikhs at Gugerat and elsewhere, their country, the Punjab, was brought under British rule. The Sikhs have ever since supplied our Indian army with brave and loyal soldiers. The southern part of Burma, including the Port of Rangoon, was next added to the Empire. Of the many other states drawn into the British net by Dalhousie, the most important was the Kingdom of Oudh, "the Garden of India." His high-handed proceedings in Oudh

had much to do with the Indian mutiny that occurred soon afterwards.

8. The Indian Mutiny broke out in 1857 at Meerut. The chief centres of the war that followed were Delhi, Cawnpore, and Lucknow. Lucknow is celebrated for its siege, and the relief brought to the distressed garrison by General Havelock. Cawnpore was the scene of the "Bloody Well." Delhi was the headquarters of the rebels, and there the neck of the rebellion was broken, when the city was captured by our troops. Before the close of 1858 the rebellion was at an end, and the governing-power transferred from the Company to the Crown.

9. In 1876 Queen Victoria was declared EMPRESS OF INDIA, and in 1885, as the result of another Burmese War, the rest of Burma was incorporated with our Indian Empire. This completed the conquest of India, but nearly two-fifths still remain under the "home-rule" of native princes.

OTHER BRITISH POSSESSIONS.

GIBRALTAR.—Taken by Sir George Rooke in 1704. Withstood a great siege (1779–83) under General Eliott.

MALTA.—Taken from the French in 1800. It is the headquarters of the British fleet in the Mediterranean.

CYPRUS.—Ceded by Turkey in 1878, on the promise of a certain annual payment.

ADEN.—"The Gibraltar of the East" was captured in 1839. It has an excellent harbour, and stands within easy distance of the entrance to the Red Sea. The little island of Perim, situated in the entrance itself, has also been seized and fortified by the British.

CEYLON.—The towns on the coast were captured from the Dutch in the beginning of the 19th century, and the interior was afterwards ceded by the Sinhalese (1815). Colombo is an important coaling-station.

THE STRAITS SETTLEMENTS.—These lie in the Straits of Malacca, and include Penang, Malacca, Singapore, and the Cocos or Keeling Islands. All of these have been acquired by purchase and treaty with the native princes between 1785 and 1824. Singapore is one of the great world centres of commerce. The Cocos Islands are valuable as a coaling-station.

HONG KONG.—It was first occupied by the British in 1841, in the course of a war with China. It now stands fourth in the whole world for the amount of shipping that passes through its waters.

MAURITIUS.—Seized in 1810 from the French. It is of much importance from a military point of view, being situated midway between the British possessions in India and South Africa.

ST. HELENA.—Ceded by the Dutch in 1673; Napoleon's place of exile from 1815 until his death in 1821. Valuable as a coaling-station.

SIERRA LEONE.—Ceded by a native chief in 1787 for the reception of freed negroes. Many then in England were sent out and settled at its capital, Freetown, which long remained a depôt for freed slaves.

NEWFOUNDLAND.—Taken possession of by Sir Humphrey Gilbert in 1583, but not occupied till long after, except in summer by the fishermen of many seafaring nations. The English claim to its possession was acknowledged in the Treaty of Utrecht (1713).

BERMUDAS.—These islands were first occupied in 1609 by Admiral Somers, who was wrecked on one of the islands when convoying eight emigrant ships to Virginia. As a naval station the importance of Bermuda can hardly be over-stated.

BRITISH WEST INDIES.—**Barbados** was the first of these islands to be occupied by the British, who took possession in 1605. It is still the headquarters for British troops in the West Indies. **Jamaica** was captured from the Spaniards by an expedition sent by Cromwell in 1655. Kingston, its chief town, has a splendid harbour, and forms our chief naval station in the Caribbean Sea. **St. Lucia**, after changing masters, English and French, several times, has remained in our possession since 1803. It is of some value to us as a naval and coaling station. **Trinidad** was taken from the Spaniards in 1797.

BRITISH HONDURAS.—The first English settlers (1638) were probably buccaneers. The British took formal possession in 1798, after defeating the Spaniards, who laid claim to it.

BRITISH GUIANA.—Raleigh went on a voyage up the Orinoco in 1595, but no actual settlement resulted. After many dissensions between Dutch, French, and English settlers, Great Britain, in 1814, finally secured the portion now known as British Guiana. Its exact boundary on the side of Venezuela has lately been settled by arbitration.

FIJI ISLANDS.—These islands, situated in the Pacific a little north of the Tropic of Capricorn, were ceded in 1874 by the native chief, who sent to the Queen his great war-club as a token of his allegiance.

Note.—There are in the British Empire many other smaller dependencies which might be mentioned, besides the protectorates in Borneo and Africa, which have not yet come under direct British rule.

LEADING EVENTS IN THE MAKING OF THE EMPIRE.

A.D.	
1588.	Defeat of the Spanish Armada.
1607.	First permanent settlement of the English in America.
1620.	Landing of the Pilgrim Fathers in America.
1655.	Capture of Jamaica from the Spaniards.
1688.	Landing of the Prince of Orange.
1692.	Victory off La Hogue.
1704.	Marlborough's victory at Blenheim.
1707.	Union of England and Scotland.
1713.	Treaty of Utrecht.
1757.	Battle of Plassy.
1758.	Capture of Louisbourg from the French.
1759.	Capture of Quebec by General Wolfe.
1760.	Battle of Wandewash, the death-blow of French rule in India.
1763.	Treaty of Paris.
1769.	Australia explored by Captain Cook.
1782.	Raising of the Siege of Gibraltar.
,,	Rodney's great victory in the West Indies.
1783.	Treaty of Versailles and loss of thirteen American Colonies.
1788.	First settlement of the English in Australia. Sydney founded.
1794.	Victory of Lord Howe off Brest.
1797.	Victory of Admiral Jervis off St. Vincent.
,,	Victory of Admiral Duncan off Camperdown.
1798.	Battle of the Nile.
1800.	The French driven out of Malta.
1801.	Union of Great Britain and Ireland.
1803.	Battle of Assaye.
1805.	Battle of Trafalgar.
1806.	Taking of Cape Town from the Dutch.
1807.	Abolition of the Slave Trade.
1813.	Battle of Vittoria.
,,	Crossing of the Blue Mountains.
1815.	Completion of Conquest of Ceylon.
,,	Battle of Waterloo.
1819.	Occupation of Singapore.
1820.	English immigration begun in Cape Colony.
1830.	Opening of the first railway for passenger traffic.
1838.	Emancipation of slaves in British Empire.
,,	Steamships first crossed the Atlantic.

A.D.
1839. Aden captured and annexed.
1840. Treaty of Waitangi with the Maoris, and first British settlement in New Zealand.
„ Penny Postage established.
1841. Self-government granted to Canada.
1842. Hong Kong taken.
1843. Natal annexed.
1849. Sikhs defeated and Punjab annexed.
1851. Gold discovered in Australia.
1852. Lower Burma annexed.
1856. Kingdom of Oudh annexed.
1857. Outbreak of Indian Mutiny.
1858. Indian Mutiny suppressed and Government of India placed under the British Crown.
1866. First Electric Cable laid across the Atlantic.
1867. Dominion of Canada constituted.
1870. Discovery of diamonds at Kimberley.
1874. Cession of Fiji Islands.

A.D.
1876. The Queen proclaimed Empress of India.
1879. Defeat of Zulus at Ulundi.
1882. Battle of Tel-el-Kebir.
1885. Upper Burma annexed.
1886. Gold discovered in the Transvaal.
1887. Zululand added to the Empire.
1890. Agreement with Germany respecting spheres of influence in Africa.
„ First Settlement in Rhodesia.
1893. Matabeles defeated; Bulawayo taken.
1898. Defeat of the Dervishes at Omdurman.
1900. British Protectorate established in Nigeria.
1901. Proclamation of the Australian Commonwealth.
1902. End of Boer War; Transvaal and Orange River Colony annexed.
1907. Colonial Conference, having for its great object the knitting of the Empire more firmly together.

ACQUISITIONS ACCORDING TO REIGNS.

FOREIGN TRADE.

(IMPORTS AND EXPORTS.)

PRINCIPAL IMPORTS AND EXPORTS OF THE CHIEF FOREIGN COUNTRIES.

RUSSIA. Imports.—Books, Maps, etc.; Chemicals and Drugs; Coal and Coke; Coffee; Copper; Cotton; Dyes; Fish; Fruit, Oranges and Lemons, and dried; Hides and Skins; India-rubber and Gutta-percha; Indigo; Iron; Lead; Locomotives and Machinery; Oils, other than mineral; Plants and Seeds; Rice; Silk; Tea; Tobacco, Cigars, and Cigarettes; Watches and Clocks; Wine; Wool, raw, yarns and manufactures.

Exports.—Horses; Fowls and Game; Cattle, Sheep, and Pigs; Bristles; Butter; Caviare; Corn, Flour, and Meal, including Wheat, Rye, Barley, Oats, Maize, Peas, Wheat-flour, Rye-meal, Bran; Cotton, manufactures of; Eggs; Flax; Fur and Sheep Skins; Hemp; Leather and Hides; Oilcake; Oil, illuminating, Petroleum, etc.; Linseed, Rape Seed, and Kohl Rabi Seed; Sugar; Wood; Wool, raw, unspun.

NORWAY. Imports.—Bacon, Lard, etc.; Coal and Coke; Coffee; Cotton; Corn and Meal, including Wheat, Rye, Barley, Wheat Flour, Rye Meal; Flax, Hemp, and Jute; Hides and Skins; Iron and Iron and Steel Wares; Locomotives and other machinery; Petroleum; Spirits; Sugar; Tobacco; Wine; Wool.

Exports.—Fish, including Cod, Herrings, Anchovies, Lobsters, etc; Ice; Iron Nails; Lucifer Matches; Packing Paper; Skins; Sulphur; Train Oil; Wood and Wood Pulp.

SWEDEN. Imports.—Bacon and Hams; Coal, Coke, etc.; Coffee; Cotton; Fish; Grain, including Rye, Wheat, Rye-meal, and Wheat Flour; Iron and Steel; Machinery and Locomotives; Oil; Paper and manufactures thereof; Skins; Spirits; Sugar; Tobacco; Wearing Apparel; Wine; Wood; Wool.

Exports.—Cattle; Butter; Cotton manufactures; Fish; Glass and Glass Ware; Grain, including Barley, Oats, Wheat-meal; Iron and Steel; Lucifer Matches; Machinery; Paper; Spirits; Wood and Wood Pulp; Zinc Blende.

DENMARK. Imports.—Animals; Bran; Butter; Coal, Coke, etc.; Coffee; Cotton; Fish; Grain, including Wheat, Rye, Oats, Barley, Maize; Hides and Skins; Iron and Steel Wares; Lard and Fat; Meat, including Hams, Sausages, etc.; Metal Wares; Oil; Oilcake; Seeds; Silk manufactures; Sugar; Tobacco; Wood and manufactures thereof; Wool.

Exports.—Animals; Beer; Butter; Eggs; Fish; Grain and Flour, including Barley, Wheat, and Wheat Flour; Hides and Skins; Iron and Steel manufactures; Lard and Fat; Meat, including Hams, Sausages, etc.; Seeds; Sugar; Wood and manufactures thereof; Wool.

GERMANY. Imports.—Animals; Bran, etc.; Coal; Caoutchouc and Gutta-percha, Crude; Cocoa and Coffee; Copper; Cotton, raw and manufactures; Eggs; Flax; Grain, including Wheat, Barley, and Maize; Grease, including Oleo Margarine; Herrings; Hides and Skins; Iron; Linseed; Locomotives and Machinery; Oil; Oil-cake; Palm Kernels; Saltpetre; Silk; Timber; Tobacco; Wine; Wool, raw, yarn, etc.

Exports.—Animals; Beer; Books, Maps, Engravings, etc.; Butter and Margarine; Coal and Coke; Cotton, raw, yarn, and manufactures; Dyes, aniline and other tar dyes; Glass and Glass Wares; Grain, Flour, and Meal; Hops; Musicol Instruments; Iron Wares, etc. Leather; Machinery, including Locomotives; Paper; Silk manufactures; Skins; Spirits; Sugar; Wearing Apparel; Wool, raw, yarn, cloths and stuffs.

HOLLAND. Imports.—Coal; Coffee; Copper, ore and unwrought; Cotton, raw, yarn, and manufactures; Drugs; Dye stuff; Flour and Meal; Grain, including Wheat, Barley, Rye, Maize, Oats; Hides and Skins; Iron; Locomotives and Machinery; Margarine, Oleo; Oil; Potash, Pearlash, Soda, etc.; Rice; Saltpetre; Seeds; Steel and manufactures; Stone for paving; Sugar; Tallow, Lard, and other fats; Tea; Timber; Tin; Tobacco; Wine; Wool, raw, yarn, and manufactures.

Exports.—Animals; Bran; Butter; Cheese; Coffee; Copper; Cotton; Drugs; Dye stuffs; Fish; Flax; Grain and Flour; Hair; Hides and Skins; Iron and Steel; Machinery; Margarine, Oleo; Paper and manufactures; Rice and Rice Flour; Saltpetre; Spirits, including liqueurs; Sugar; Tin, unwrought; Vegetables, fresh and preserved; Wool, raw, yarn, and manufactures.

BELGIUM. Imports.—Animals; Butter; Coal; Coffee; Copper and Nickel; Cotton; Dyes and Dye Stuffs; Fish; Flax; Grain; Hemp; Hides; Iron Ore, Pig Iron, Wrought Iron and Steel; Machinery; Manure; Meat; Minerals, raw, other than iron and coal; Resins and Bitumens; Seeds; Silk; Tallow and other fats; Tow; Wine; Wood; Wool, raw and manufactures.

Exports.—Animals, horses; Arms; Butter and Margarine; Candles; Coal and Coke; Cotton manufactures; Flax, raw; Glass and Glass Wares; Grain; Hides; Iron and Steel; Linen, Hemp, and Jute; Machinery and Locomotives; Meat; Paper; Resins and Bitumens; Salts of Soda; Stone, rough and hewn; Sugar; Tallow and other fats; Woollen Yarn and manufactures; Zinc, unwrought.

FRANCE. Imports.—Animals; Butter; Cheese; Coal and Coke; Coffee; Copper; Cotton, raw, yarn, and manufactures; Flax; Fruit and Seeds; Grain and Flour; Guano and other manures; Hides and Skins; Indigo; Jute; Machinery; Meat; Nitrate of Soda; Oil; Silk, raw, thrown, waste, and manufactures; Sugar (Foreign and French Colonial); Tallow, Lard, etc.; Timber; Wine; Wool, raw, waste, and manufactures.

Exports.—Animals; Apparel; Brandy and other spirits and liqueurs; Butter and Margarine; Cheese; Chemical products; Copper Wire; Cotton, raw and manufactures; Earthen and Glass Ware; Eggs; Fruit, fresh and preserved; Grain and Flour; Haberdashery, small Fancy Wares and Toys; Hides, raw and tanned or curried; Jewellery; Leather Wares; Machinery; Metal Wares and Tools; Millinery, including artificial flowers; Paper and manufactures thereof; Satin; Silk, raw, thrown, waste and manufactures; Sugar; Wine; Wood; Wool, raw, yarn, and manufactures.

SWITZERLAND. Imports.—Animals; Chemical products; Coal and Coke; Coffee; Cotton; Dye Stuffs; Eggs; Flax, Hemp, Jute, etc.; Flour of all kinds; Fruit and Vegetables; Grain, including Barley, Maize, Oats, Wheat; Iron and Steel; Leather; Locomotives and Machinery; Malt; Oil; Silk; Sugar; Wearing Apparel; Wine; Wood; Wool, raw, yarn, and manufactures.

Exports.—Animals; Books and Maps; Cheese; Chemical products; Cotton, Ribbons, Embroidery, and Lace; Dyes; Flour; Hides and Skins; Iron manufactures; Jewellery; Leather; Machinery and Locomotives; Meat; Milk, condensed; Musical boxes; Silk, raw, thrown, spun, and manufactures; Straw Plait; Watches and Clocks; Wearing Apparel; Wood; Wool.

PORTUGAL (including Azores and Madeira). **Imports.**—Animals; Coal; Codfish; Coffee; Cotton; Grain; Hides; Iron, wrought and cast; Linen, Hemp and

Jute; Machinery; Oil; Paper and manufactures; Rice; Silk; Sugar; Wool, raw and manufactures.

Exports.—Animals; Copper ore; Cork; Cotton, manufactures; Sardines and other fish in oil; Fruit, including Dried Figs, Oranges, and Pineapples; Hides and Skins; Iron manufactures; Olive Oil; Onions; Potatoes; Salt; Wine; Wool.

SPAIN. Imports.—Animals; Chemical products; Coal and Coke; Cocoa; Codfish and stock fish, salted; Coffee; Cotton; Wheat; Hides and Skins; Iron and Steel; Linen and Hemp; Machinery; Materials for Railways, Ships' Engines, etc.; Oil; Paper; Ships and Boats; Silk; Timber and Building Materials; Tobacco; Wool, raw, combed, carded, or manufactured.

Exports.—Animals; Boots and Shoes; Cork; Cotton manufactures; Esparto Grass; Fruit, including Almonds, Grapes, Oranges, Raisins, and Nuts; Hides and Skins; Iron and Steel; Copper, regulus; Lead in plates, bars, etc.; Copper, Iron, and other mineral ores; Olive Oil; Paper; Quicksilver; Rice; Salt; Soap; Wheat Flour; Wine; Wool.

ITALY. Imports.—Animals; Cheese; Coal and Coke; Coffee; Cotton; Fish; Wheat; Hides; Iron and Steel; Linen and Hemp Yarn; Machinery; Oil; Silk; Sugar; Timber; Tobacco; Wool and manufactures.

Exports.—Animals; Butter and Cheese; Coral, manufactured; Cotton; Dyeing and Tanning Stuffs; Eggs; Fruit, Oranges, Lemons, and Almonds; Grain; Hemp and Flax; Hides and Skins; Marble, Alabaster, and manufactures; Meat, including Poultry; Olive Oil; Rice; Silk; Straw Plait; Sulphur; Wine; Zinc ore.

AUSTRIA-HUNGARY. Imports.—Animals; Books, Charts, etc.; Coal and Coke; Coffee; Copper; Cotton; Dye Stuffs; Flax, Hemp, and Jute; Maize; Hides and Skins; Iron and Steel; Leather and Leather Wares; Machinery, Locomotives, etc.; Oil; Rice; Tobacco; Wood and Bone manufactures; Wool.

Exports.—Animals; Butter and Margarine; Clothing; Coal; Cotton; Eggs; Feathers; Glass Wares; Grain, including Wheat and Barley; Hides and Skins; Hops; Iron and Steel Wares; Jewellery and Fancy Wares; Leather; Linen; Malt; Paper; Pulse; Silk; Sugar and Molasses; Wood, Bone, etc.; Wool, raw and manufactures.

GREECE. Imports.—Animals; Coal; Coffee; Cotton; Fish; Glass and Earthenware; Grain; Hides and Skins; Iron and Steel; Paper; Petroleum and Mineral Oils; Potash, Soda, Caustic Soda, and Saltpetre; Silk manufactures; Sugar; Wire; Wood; Woollen manufactures.

Exports.—Currants; Figs; Hides; Mineral ores, including argentiferous lead, galena, and zinc (calamine); Olive Oil; Olives; Cognac; Sponges; Tobacco in the leaf; Valonia; Wine.

ROUMANIA. Imports.—Coal and Coke; Coffee; Cotton Yarns and goods; Gutta-percha Wares; Jute; Iron Wares; Machinery; Olive Oil; Oxide of Lead, Zinc, etc.; Soda; Silk Tissues; Sugar; Wool and Woollen Clothing.

Exports.—Cattle; Grain, including Wheat, Maize, Barley, Rye; Wheat Flour; Hides; Petroleum; Seeds, oleaginous; Wood; Wool.

EGYPT. Imports.—Butter; Cheese; Clothing; Coal; Coffee; Wheat and Flour; Cotton Yarn and goods; Maize Meal; Indigo; Linen manufactures, Hosiery, Drapery; Petroleum; Rice; Sacks; Silk; Soap; Wine; Wood; Woollen and Silk manufactures.

Exports.—Beans; Wheat; Maize; Cotton; Cotton-seed; Hides and Skins; Oil-cake; Onions; Rags; Sugar; Wool.

UNITED STATES. Imports.—Chemicals, Drugs, and Dyes; Coal, bituminous; Coffee; Cotton manufactures; Earthen, Stone, and China Ware; Flax, Hemp, and Jute; Fruits; Furs and manufactures of; Glass and Glass Ware; Hides and Skins; India-rubber and Gutta-percha; Iron and Steel manufactures; Silk, raw and manufactures; Sugar and Molasses; Tea; Tin; Tobacco; Wines; Wood and manufactures; Wool, raw and manufactures.

Exports.—Agricultural Implements; Animals; Wheat and Flour; Maize and other grain; Chemicals, Drugs, Dyes, and Medicines; Coal, anthracite and bituminous; Copper; Cotton, raw and manufactures; Cotton-seed Oil; Cycles and parts thereof; Fertilizers; Iron and Steel and manufactures; Wire; Leather and manufactures; Oilcake and Oilcake Meal; Oil, mineral; Paraffin and Paraffin Wax; Beef; Bacon; Hams; Pork; Lard; Oleo Margarine; Dairy products; Tobacco; Wood and manufactures.

MEXICO. Imports.—Boots and Shoes; Carriages, Carts, Wagons, etc.; Chemical and Pharmaceutical products; Coal and Coke; Copper manufactures; Cotton, raw, yarn, and manufactures; Dynamite and similar explosives; Fruit and Vegetables; Furniture; Grain, including Maize and Wheat; Iron and Steel; Lard; Machinery; Cotton-seed and Mineral Oil; Paper and manufactures; Silk manufactures; Spirits; Wine; Wood; Woollen manufactures.

Exports.—Animals; Beans; Broom Root Caoutchouc; Chicle; Coffee; Cotton-seed Meal and Cake; Dye Woods; Fruit; Henequen, raw and manufactures; Raw Ixtle; Hides and Skins; Copper, ore and unwrought; Gold; Lead; Silver; Peas; Tobacco; Vanilla; Wood.

CHILE. Imports.—Animals; Candles; Coal; Coffee; Cotton manufactures; Drugs; Hardware; Iron; Machinery; Mineral Oil; Paper; Railway Materials; Sacks; Steel; Sugar; Tea; Wire; Wood; Woollen manufactures; Yerba-Maté.

Exports.—Animals; Borate of Lime; Coal; Copper; Flour; Wheat; Barley; Guano; Hides and Skins; Iodine; Leather; Silver ore; Copper ore; Manganese ore; Nitrate of Soda; Wool.

ARGENTINA. Imports.—Animals; Clothing and Wearing Apparel; Coal and Coke; Cotton Tissues; Chemical products and Pharmaceutical preparations; Colours, Paints, and Dyes; Leather manufactures; Linen tissues; Iron and Steel; Machinery and Tools; Railway Materials; Tin Plates; Olive and Mineral Oil; Paper manufactures and Books; Sackcloth and Sailcloth; Silk tissues; Sugar; Wine; Wood manufactures; Woollen tissues.

Exports.—Animals; Bones and Bone Ash; Grain and Flour; Grease and Tallow; Hides; Linseed; Meat; Sugar; Wool.

CHINA. Imports.—Cigars and Cigarettes; Coal; Cotton, raw and manufactures; Dyes; Fish and Fishery products; Flour; Machinery; Matches; Metals, including Copper, Iron, Lead, Quicksilver, Tin and Tin Plates; Kerosene Oil; Opium; Rice; Sandalwood; Sugar; Timber; Wine, Beer, and Spirits; Wool, yarn and manufactures.

Exports.—Animals; Beans and Beancake; Bristles; Chinaware, Earthenware, and Pottery; Clothing, Boots and Shoes; Cotton, raw and manufactures; Firecrackers and Fireworks; Fish and Fishery products; Fruits; Hemp; Hides; Mats and Matting; Medicines; Oil; Paper and Books; Provisions and Vegetables; Silk manufactures; Skins; Straw Braid; Sugar; Tea; Tobacco; Wool.

JAPAN. Imports.—Beans, Peas, and Pulse; Chlorate of Potash; Caustic Soda; Cotton; Dye Stuffs; Salted Fish; Flour; Furs; Skins and Leather; Glass; Locomotives and Machinery; Iron, Steel, and other Metals; Oil and Oilcakes; Paper; Rice; Steamships; Spirits; Sugar; Tobacco; Watches and Clocks; Wool and Woollen Yarn and Tissues.

Exports.—Bamboo and other wood; Camphor; Coal; Copper; Cotton Yarn and Tissues; Earthenware and Porcelain; Fans; Fish; Lacquered Ware; Matches; Mats; Paper; Rice; Seaweed; Silk, raw and tissues; Straw Plait; Tea; Umbrellas (European).

TRADE OF THE UNITED KINGDOM (3).

VALUE OF PRINCIPAL ARTICLES IMPORTED AND EXPORTED IN RECENT YEARS.

PRINCIPAL ARTICLES IMPORTED INTO THE UNITED KINGDOM DURING 1903 AND 1904, SHOWING THE CHIEF SOURCES OF SUPPLY.

FOOD.

Wheat. The imports of wheat in 1904 amounted to 97,782,500 cwts., as compared with 88,131,030 cwts. in 1903. The value received from each of the chief countries in the years 1903 and 1904 was as follows:—

Country.	1903.	1904.
	£	£
Russia	5,809,308	8,444,134
Germany	105,554	91,351
Roumania	1,055,912	512,001
Turkey	134,985	127,263
United States	8,444,114	2,517,425
Chile	83,623	327,303
Argentina	4,699,833	7,522,331
India	5,653,066	8,498,529
Australia	10	3,754,402
New Zealand	46	123,633
Canada	3,737,368	2,229,791
Other countries	216,372	118,253

The total value was, in 1903, £29,940,191, and in 1904 £34,266,416. Among the other countries not separately shown above the most important contributor to our wheat supplies is Bulgaria, while France, Persia, Uruguay, and Cyprus in some years furnish appreciable quantities.

Flour. The notable increase in the quantity of wheat received in 1904 was partly attributable to the reduction in the amount sent in the form of Flour. In 1904 the quantity of Flour received was 14,722,893 cwts., and in 1903, 20,601,448 cwts. In value the imports from the chief sources of supply were as under:—

Country.	1903.	1904.
	£	£
Germany	17,481	142,710
France	238,708	647,426
Austria-Hungary	471,025	430,253
United States	7,618,091	4,095,749
Canada	1,253,250	1,014,124
Other countries	125,097	928,338

The total value was, in 1903, £9,723,652, and in 1904 £7,258,600. Other sources of supply, in addition to those named, are Argentina, Belgium, Holland, and Russia.

Barley. The value of Barley imported in 1904 was £7,171,115, as compared with £7,230,741 in 1903. The chief contributor is Russia, which was responsible for £2,729,708, while Roumania £745,445, Turkey £1,239,273, and United States £1,220,287 were the other principal sources of supply.

Oats were imported in 1904 to the value of £3,726,120, of which Russia supplied £1,759,963, Canada £181,388, and the United States £46,971. Germany, Roumania, Chile, Turkey, and in some years New Zealand are substantial contributors.

Peas were imported in 1904 to the value of £767,097, of which India supplied £376,213, Canada £93,316, and Russia £26,293.

Beans were imported in 1904 to the value of £577,097, of which Egypt supplied £225,530, Turkey £144,165, Morocco £95,729, and Germany £52,143.

Maize. The imports of Maize in 1904 amounted to £10,247,134, as compared with £12,465,583 in 1903. The following were the principal contributors:—

Country.	1903.	1904.
	£	£
Russia	914,417	739,963
Roumania	1,116,627	1,021,130
United States	4,684,717	1,956,137
Argentina	4,505,821	5,518,683
Canada	847,696	472,907
Other countries	396,305	538,314

Rice was imported in 1904 to the value of £2,269,707, as compared with £2,050,500 in 1903. About three-fourths —£1,597,399 in 1904 and £1,453,185 in 1903—come from India.

Live Animals. About half a million cattle are imported each year, the value in 1904 being £9,736,436, and in 1903 £9,209,122. In addition, sheep to the value of £591,984 in 1904 and £546,063 in 1903 were imported. The chief sources of supply are now practically only two, as shown below:—

Country.	Cattle.		Sheep.	
	1903.	1904.	1903.	1904.
	£	£	£	£
United States	5,399,243	7,160,062	264,416	456,630
Argentina	455,535	—	134,239	—
Canada	3,315,776	2,547,453	129,045	124,799
Channel Islands	31,035	28,921	—	—
Other countries	7,533	—	18,363	10,555

Meat. The imports of Fresh Beef amounted in 1904 to £8,058,341, and in 1903 to £8,366,141. Of Fresh Mutton the amounts were in 1904 £6,861,531, and in 1903 £7,826,062. The chief sources of supply were as follows:—

Country.	Fresh Beef.		Fresh Mutton.	
	1903.	1904.	1903.	1904.
	£	£	£	£
Holland	—	—	580,673	605,225
United States	5,739,750	5,130,286	—	—
Argentina	2,053,669	2,482,704	2,603,931	2,491,210
Australia	122,511	105,779	365,384	324,239
New Zealand	271,247	281,046	4,153,269	3,391,025
Other countries	178,964	58,526	122,805	49,832

Fresh Pork to the value of £1,378,467 was imported in 1904, of which Holland supplied £1,000,000, Belgium £83,061, and United States £262,450. Rabbits (dead) amounted to £780,737, of which Belgium sent £224,791, Australia £357,710, and New Zealand £121,799. The imports of Bacon amounted to £12,832,142, of which £4,532,420 came from Denmark, £6,209,009 from the United States, and £1,865,159 from Canada. Salt Beef amounted to £187,288, nearly the whole (£173,098) coming from the United States. Hams arrived to the value of £3,104,999, of which £2,606,129 came from the United States and £485,527 from Canada. Of Salt Pork £294,080 was imported, the United States supplying £119,423. "Meat unenumerated, salted or fresh," amounted to £1,164,442, Holland sending £584,725 and the United States £210,624.

Poultry and Game. The imports of Poultry and Game (alive or dead) were not separately registered prior to 1904, but in that year the imports were as follows:—

Country.	Poultry.	Game.
	£	£
Russia	343,761	35,413
Belgium	248,552	14,526
France	235,700	466
United States	219,787	627
Other countries	41,244	77,201
Total	1,089,044	128,233

Butter, Cheese, and Eggs. The imports of these commodities and their chief sources of supply are shown in the following table for the year 1904:—

Country.	Butter.	Cheese.	Eggs.
	£	£	£
Russia	1,817,736	—	2,042,520
Sweden	1,062,353	—	27,449
Denmark	9,003,089	—	1,461,459
Germany	20,547	—	1,191,161
Belgium	329,800	201,487	837,120
Holland	1,225,768	542,530	—
France	1,961,094	138,289	710,057
United States	294,584	503,312	9,548
Victoria	1,212,660	—	—
New South Wales	747,876	—	—
Queensland	270,231	—	—
New Zealand	1,394,455	217,286	—
Canada	1,194,823	4,234,790	129,631
Other countries	582,146	207,563	288,116
Total	21,117,162	6,045,257	6,697,061

Margarine was also received to the amount of £2,494,467, of which £2,390,243 came from Holland, £82,305 from France, and £14,081 from Norway.

Lard, imported to the value of £3,342,389, comes mainly from the United States, which supply £3,041,840.

Fresh Fish to the amount of £647,656, not taken by British boats, was imported, Norway supplying £233,960. Of canned or salted fish the total received amounted to £2,685,000. Canned Sardines, total £505,872, of which France sent £229,259 and Portugal £228,492. Canned Salmon, total £1,165,922, of which the United States sent £755,168 and Canada £408,292. Canned Lobsters, total £342,805, of which Canada supplied £260,151 and Newfoundland £33,856.

Potatoes were imported to the value of £2,437,971 in 1904 and £2,603,238 in 1903. In 1904 Germany sent £332,821, France £987,243, Channel Islands £431,447.

Hops to the value of £1,839,854 were imported, of which £1,081,819 came from the United States.

Raisins amounted to £994,675 in 1904, Spain supplying £471,494 and Turkey £469,067.

Sugar. Of Refined Sugar and Sugar Candy and of Unrefined Sugar, respectively, the imports in 1903 and 1904 were as under:—

Country.	Refined Sugar & Sugar Candy.		Unrefined Sugar.	
	1903.	1904.	1903.	1904.
	£	£	£	£
Germany	7,596,975	6,800,207	2,454,020	3,112,667
Holland	1,301,587	2,000,601	80,646	414,123
Belgium	83,379	331,363	283,220	562,294
France	519,003	1,544,859	237,937	254,864
Austria-Hungary	411,410	98,134	709,708	345,696
Java	—	—	262,171	917,478
Philippine Islands	—	—	25,285	31,165
Cuba	—	—	215,647	—
Peru	—	—	156,824	508,422
Brazil	—	—	31,274	32,294
Argentina	—	—	184,711	—
Mauritius	—	—	109,396	198,838
India	—	—	106,409	86,840
British W. Indies and Guiana	—	—	404,219	711,608
Other countries	465,707	4,288	233,322	285,788
Total	10,378,061	10,779,452	5,494,789	7,462,077

COFFEE, TEA, WINE, AND TOBACCO.

Coffee. The imports of Coffee were in 1904, £3,329,598, of which Central America supplied £831,405, Brazil £241,693, and Ceylon £21,368.

Tea was imported in 1904 to the amount of £9,408,793, as compared with £9,640,496 in 1903. India supplied £5,180,043, Ceylon £2,922,861, and China £809,817.

Wine. The imports of Wine (both in cask and bottle) in 1903 and 1904 were as follows:—

Country.	1903.	1904.
	£	£
Germany	61,791	53,301
Holland	274,290	251,698
France	2,624,226	1,981,280
Portugal	1,003,492	857,822
Madeira	21,385	17,736
Spain (Red	210,160	174,721
Spain (White	315,156	285,268
Italy	54,557	50,029
Cape Colony	1,644	2,344
Australia	90,818	100,487
Other countries	40,079	47,520
Total	4,697,598	3,822,206

Tobacco. By far the greater part of Tobacco of all kinds comes from the United States, as appears from the following statement:—

Description.	1903.		1904.	
	U.S.A.	Other countries	U.S.A.	Other countries
Unmanufactured:	£	£	£	£
Stemmed	1,456,866	96,448	819,654	84,499
Unstemmed	529,430	422,692	1,602,950	450,679
Cigars	1,132,574	259,331	1,145,892	217,285
Cavendish and Negrohead	33,328	69,518	39,996	13,093
Cigarettes	31,233	152,954	3,549	138,740

The total value of Tobacco of all kinds imported was, in 1903, £4,190,853, and in 1904 £4,512,378.

RAW MATERIALS AND ARTICLES MAINLY UNMANUFACTURED.

Wool. Next in importance to cotton as a raw material stands Wool, which is, however, drawn from a wider area of supply, as the following statement indicates:—

Country.	1903.	1904.
	£	£
Russia	109,321	133,259
Belgium	264,640	264,164
France	569,895	759,372
Turkey	294,932	408,420
Uruguay	470,046	152,095
Argentina	648,898	410,230
South America (East Coast)	51	6,428
" " (West Coast)	516,191	567,037
British South Africa	2,453,793	2,063,700
India	824,361	1,048,331
Australia	9,149,303	9,138,189
New Zealand	4,791,836	4,754,168
Other Countries	529,256	660,637
Total	20,622,523	20,366,030

The above figures refer to Sheep and Lamb's Wool. Of Alpaca, Vicuna, and Llama the imports in 1904 were £278,993, of which £194,625 came from Peru and £82,628 from Chile. Mohair (Angora Goat's Hair) amounted to £1,626,734, of which £693,956 came from Turkey and £889,234 from British South Africa.

Cotton. The most important of all raw materials is Cotton, and the principal supplies are as follows, our dependence on the United States being especially noticeable :—

Country.	1903.	1904.
	£	£
Egypt	9,643,295	11,050,792
United States	32,345,746	40,197,242
Brazil	928,750	629,988
India	1,584,388	2,174,036
Other Countries	333,937	645,730
Total	44,836,116	54,697,788

Iron Ore was imported to the value of £4,538,449 in 1904, and £4,837,146 in 1903. Spain supplied about three-fourths of the total, viz., £3,348,799 in 1904, and £3,700,537 in 1903.

Copper Ore was received from the following principal countries in 1903 and 1904 :—

Country.	1903.	1904.
	£	£
Spain	26,817	12,218
United States	5,877	2,648
Chile	267,141	236,245
Cape Colony	245,604	233,864
Australia	50,103	24,757
Newfoundland	1,275	795
Other Countries	279,299	301,519
Total	876,116	812,046

Wood and Timber. The total value of hewn Timber—fir, teak, &c., other than pit props or pit wood—imported was, in 1903, £3,844,589, and in 1904 £3,074,176. Of sawn or split, planed or dressed Timber, the total value was, in 1903, £18,192,519, and in 1904 £15,505,799. The chief sources of supply were as under :—

Country.	Hewn.		Sawn, split, etc.	
	1903.	1904.	1903.	1904.
	£	£	£	£
Russia	650,511	664,819	5,072,868	4,693,327
Sweden	63,839	59,712	4,062,574	3,401,582
Norway	117,586	104,746	1,550,540	1,341,531
Germany	548,750	380,940	341,087	274,641
United States	1,024,063	914,074	2,308,264	1,927,894
India	705,203	425,805	—	—
Canada	443,744	296,952	4,268,886	3,497,456
Other Countries	290,893	227,128	929,387	644,009

Flax was imported to the value of £2,836,361 in 1904, of which Russia supplied £1,523,706, Belgium £1,094,987, and Holland £171,542.

Hemp was imported from the following countries in 1903 and 1904.

Country.	1903.	1904.
Russia	285,940	299,832
Germany	148,101	194,721
Italy	271,176	406,251
Philippine Isles	1,773,374	2,244,465
India	249,193	168,101
Hong Kong	120,036	12,008
New Zealand	504,482	630,379
Other Countries	91,123	87,908
Total	3,443,425	4,043,665

Silk in the raw state was imported in 1904 to the value of £884,769, of which £386,437 came from China, £267,698 from France, £127,509 from India, and £39,658 from Japan. In 1903 the total imports were £738,602, and the principal sources of supply were the same.

Oil Seeds. Of £2,537,499 of Cotton Seed imported in 1904, Egypt supplied £1,830,017. **Flax and Linseed** were imported to the value of £4,502,064, of which Argentina sent £2,292,690, India £1,704,619, and Russia £314,136. Imports of Rape Seed amounted to £386,420, of which Russia sent £163,701 and India £157,307.

Tallow and Stearine amounted to £2,249,445, of which £593,347 came from Australia, £472,175 from Argentina, £435,174 from New Zealand, £411,516 from the United States, and £68,838 from France.

Hides. The imports of dry hides were £940,604, of which £274,770 came from India. Of wet hides the amount was £1,106,360, Italy sending £256,609, Belgium £162,471, France £87,442 and Germany £70,132.

Skins. Of Goat Skins, undressed, the imports in 1904 were £1,217,648, of which £582,509 came from India, and £184,648 from South Africa. The value of Sheep Skins, undressed, was £1,577,411, New Zealand supplying £349,735, Australia £308,170, South Africa £299,796, and Argentina £270,021.

ARTICLES WHOLLY OR MAINLY MANUFACTURED.

Iron. The imports of Pig Iron amounted to £536,657, of which £310,378 came from Sweden, and £51,516 from the United States. Of Wrought Iron, in bars, angles, rods, and sections, Sweden supplied £287,841 out of a total of £684,717.

Copper. The imports of Copper in 1903 and 1904 were as under :—

Country.	Regulus and Precipitate.		Unwrought and part wrought.	
	1903.	1904.	1903.	1904.
	£	£	£	£
Germany	10,270	6,453	68,387	47,751
Portugal	65,750	38,143	—	—
Spain	1,155,479	1,138,731	401,872	407,308
United States	154,764	178,123	1,225,305	2,831,437
Peru	164,755	155,996	—	—
Chile	268,601	144,857	752,238	950,459
Australia	371,070	222,492	560,531	601,532
Other Countries	477,666	476,955	654,371	355,387
Total	2,668,355	2,361,750	3,662,704	5,193,874

Lead. The imports of Pig and Sheet Lead in 1903 were £2,627,056, and in 1904 £2,880,242, from the following chief countries :—

Country.	1903.	1904.
	£	£
Germany	158,850	197,548
Spain	1,240,823	1,289,174
Greece	5,750	13,211
United States	457,497	437,066
Australia	669,616	865,784
Other Countries	94,520	77,459

Tin, in blocks, ingots, bars, or slabs was imported to the value of £4,454,891 in 1903 and £4,930,189 in 1904, of which £4,113,006 came from the Straits Settlements and £525,021 from Australia.

Scientific Instruments and Apparatus (other than electrical) were imported to the value of £784,116 in 1904, £355,664 coming from the United States and £192,861 from France.

Clocks. The value of imported Clocks was, in 1904, £391,167, of which £209,018 came from Belgium, £66,898 from France, and £60,554 from the United States.

Silk Manufactures. Of Broadstuffs £7,365,783 were imported, £4,951,893 coming from France and £1,231,886 from Holland. Ribbons amounted to £2,909,359, of which £1,567,855 came from France and £855,310 from Belgium. The value of "unenumerated" silk goods was £2,518,260.

of which £1,752,046 came from France and £411,087 from India, China, Japan, and Hong Kong.

Leather. The imports of Leather were, in 1903, £8,090,349, and in 1904 £8,036,907, the chief countries of supply being as follows:—

Country.	1903.	1904.
	£	£
France	929,421	779,846
United States	3,390,281	3,522,961
India	2,045,693	2,005,640
Australia	444,608	331,634
New Zealand	79,507	63,163
Other Countries	1,200,839	1,333,663

Paper. The imports of Paper of various kinds in 1904 were as follows:—

Country.	Unprinted.		Printed.
	On reels.	Not on reels.	
	£	£	£
Sweden	356,043	557,208	—
Norway	239,718	439,965	—
Germany	72,086	325,950	90,872
Holland	46,763	449,024	120,966
Belgium	8,260	284,359	190,840
France	10,441	149,755	50,592
United States	126,936	141,745	50,334
Other Countries	60,742	193,570	8,057
Total	920,989	2,541,576	511,661

PRINCIPAL ARTICLES OF BRITISH AND IRISH PRODUCE AND MANUFACTURES EXPORTED FROM THE UNITED KINGDOM IN 1904, SHOWING THE CHIEF COUNTRIES OF DESTINATION.

FOOD AND DRINK.

The exportation of Food and Drink is not very important, as while we *import* large quantities of food stuffs, we *export* very little indeed. The principal articles exported under this heading are Beer and Spirits, which in 1904 were sent chiefly to the following countries:—

Country.	Beer and Ale.	Spirits.
	£	£
Egypt	67,079	—
United States	221,159	395,790
British South Africa	71,351	323,420
British West Africa	—	42,680
India	362,003	338,304
Australia	240,367	531,212
New Zealand	23,441	189,742
Canada	22,348	277,310
West Indies	61,847	—
Other Countries	658,154	612,112
Total	1,727,749	2,710,570

Fish. Herrings to the value of £2,634,419 were exported, of which £1,656,921 went to Germany and £547,417 to Russia.

The remaining Food exports of the country are chiefly made up of special articles like Pickles, Sauces, Biscuits, Confectionery, &c.

RAW MATERIALS AND ARTICLES MAINLY UNMANUFACTURED.

Coal. The total export of Coal was £26,036,303 in 1903 and £25,491,414 in 1904. In the latter year this was made up as follows: Anthracite £858,257, Steam £19,879,961, Gas £3,226,023, Household £773,698, other sorts £753,475. The principal countries of destination were as under:—

Country.	1904.	Country.	1904.
	£		£
Russia	1,440,771	Turkey	295,314
Sweden	1,631,735	Egypt	1,420,976
Norway	658,440	Algeria	275,266
Denmark	1,193,571	United States	68,326
Germany	2,864,867	Chile	261,620
Holland	508,069	Brazil	707,366
Belgium	273,174	Uruguay	281,663
France	3,424,534	Argentina	1,019,510
Portugal	526,228	Gibraltar	225,534
Spain	1,439,649	Malta	368,667
Italy	3,435,675	British S. Africa	296,869
Greece	273,971	India	447,651

Wool. The exports of Sheep and Lamb's Wool in 1903 and 1904 were as follows:—

Country.	1903.	1904.
	£	£
Germany	155,905	137,336
Holland	52,395	69,999
Belgium	13,268	24,277
France	68,577	66,365
United States	677,647	1,044,545
Canada	55,367	63,404
Other Countries	69,838	207,811
Total	1,092,997	1,613,737

Oil Seed. The export of Oil Seed amounted, in 1904, to £1,097,111, of which Linseed Oil was £641,359, and Cotton Seed Oil £326,919. Germany took £137,812, Belgium £135,925, Holland £114,823, Australia £104,056, and Canada £81,907.

Skins and Furs (undressed). Of these the exports amounted to £1,029,575, of which £764,624 went to the United States.

ARTICLES WHOLLY OR MAINLY MANUFACTURED.

Iron. The exports of Pig Iron in 1903 and 1904, and the chief recipients, were:—

Country.	1903.	1904.
	£	£
Sweden	138,076	152,856
Germany	380,493	368,859
Holland	223,250	239,298
Belgium	155,888	223,421
France	160,451	182,204
Italy	267,182	292,184
United States	1,269,583	272,684
Other Countries	765,507	637,704
Total	3,360,430	2,369,210

Of **Wrought Iron** in bars, rods, angles, and shapes or sections, the exports in 1904 amounted to £882,863, of which £160,842 went to Australia, £137,901 to India, £81,589 to South Africa, and £78,174 to New Zealand.

Cast Iron, and manufactures thereof, were exported to the value of £594,557, of which South Africa took £175,674, India £78,643, and Argentina £46,614.

Of **Wrought Iron,** and manufactures thereof, other than that above specified, the exports were £1,082,199, of which South Africa took £198,816, India £162,557, Argentina £107,558, Australia £85,792, Brazil £43,880, and New Zealand £39,094.

Iron and Steel Wire was exported in 1904 to the value of £1,194,670, of which Australia received £174,226, South Africa £152,272, India £94,561, New Zealand £89,033, Argentina £82,684, Germany £80,331, and the United States £76,254.

Galvanized and Corrugated Sheets were exported to the value of £4,383,963 in 1903, and of £4,487,635 in 1904, to the following countries:—

Country.	1904.	Country.	1904.
	£		£
Germany . . .	17,015	Chile	92,890
Portuguese East Africa . . .	112,472	Uruguay . . .	26,519

Canada	85,473	41,885
Other Countries	123,551	479,709
Total	696,558	1,944,473

Steam Engines. The exports of Locomotives amounted to £1,929,311, of which £570,425 went to India, £492,315 to South Africa, £377,030 to South America, and £93,744 to Australia. Of Agricultural Engines the value exported was £930,648, of which £576,957 went to European countries, £93,932 to South America, £45,044 to New Zealand, and £36,324 to Australia. Other descriptions of Steam Engines were exported to the value of £2,167,969, of which £384,877 went to India, £254,654 to South America, £230,948 to South Africa, £155,496 to Australia, and £554,272 to Europe.

Machinery, other than steam engines and electrical machinery, is classified in four main groups, viz.: Agricultural, Mining, Textile, and Sewing Machines. Of Agricultural Machinery the total exports were £1,081,656, of which £597,019 went to European countries, £253,058 to South America, £64,389 to Australia, £35,157 to South Africa, £20,446 to India, and £18,484 to New Zealand. Of Mining Machinery the total was £873,914, of which £331,540 went to South Africa, £134,112 to Australia, £74,389 to India, £88,746 to Europe, and £40,250 to South America. Of Textile Machinery the total exports were £5,001,391, of which Russia took £296,668, Germany £962,722, Holland £118,331, France £540,410, other European countries £1,056,994, India £1,012,527, United States £360,084, South America £233,390, and Japan £135,539. Sewing Machines were exported to the value of £2,268,911, of which Europe received £2,021,604, South America £66,713, India £52,285, and South Africa £29,867. Other descriptions of Machinery than those of the four classes specified were exported to the value of £6,288,426 of which Europe took £2,046,169, India £1,123,280, South America £548,253, South Africa £501,657, Australia £435,134, and United States £146,489.

Yarns and Textile Fabrics. The exports of Cotton Yarn

and Twist, whether grey or bleached and dyed, were as follows in 1904:—

Country.	1904.	Country.	1904.
	£		£
Russia	91,157	Egypt	179,439
Sweden	77,747	China	104,882
Norway	69,579	Japan	32,508
Denmark	100,453	United States	376,366

1906	34,547,016	—	—	4,726,070	—	—	4,386,035	—	—	43,659,121	—	—

The population as given in this table does not include the islands in the British seas, which account for about 150,000 more, or for the Army and Navy serving abroad which would average about 200,000. The proportion of the sexes in the total population of the United Kingdom is rather more than 48 males out of every 100 persons of all ages.

The Census of 1821 was the first in which the figures for Ireland were comparable with those of subsequent years. In 1841 the figures of the number of families in England and Wales were not correctly taken. Statistics of the number of families and of inhabited houses are only available for census years; the population in intercensal years is estimated by the Registrar General from the records of births and deaths. During the 19th century, i.e. from the Census of 1801 to that of 1901—the population of England and Wales increased by 267 per cent., and that of Scotland by 178 per cent. In Ireland during the 80 years 1821–1901 the population decreased by 34 per cent.

The population of the United Kingdom in the middle of 1906, was estimated at 43,659,121 persons; that of England and Wales at 34,547,016, that of Scotland at 4,726,070, and that of Ireland at 4,386,035.

4. RATE OF INCREASE OR DECREASE OF POPULATION

in each Division of the United Kingdom.

	1801–11	1811–21	1821–31	1831–41	1841–51	1851–61	1861–71	1871–81	1881–91	1891–1901

5. POPULATION OF THE METROPOLIS OR "INNER LONDON."

(Comparative Growth during Fifty Years.)

1854	2,504,000	1869	3,176,000	1884	3,940,000	1899	4,494,000
1859	2,725,000	1874	3,427,000	1889	4,140,000	1904	4,649,000
1864	2,950,000	1879	3,712,000	1894	4,352,000		

6. POPULATION OF "GREATER LONDON," 1906.

The above figures relate to Registration London or "Inner London," which is coterminous with the administrative County of London, and which, in addition to the City, comprises twenty-eight Metropolitan Boroughs. But "Greater London," includes the whole of the City and Metropolitan police districts and extends over a radius of 15 miles from Charing Cross. The estimated population in June 1906, was as follows:—(1) Inner London, 4,721,217, being about 40,000 persons to the square mile; (2) Outer Ring, 2,392,344; (3) Greater London (including Inner and Outer) 7,113,561.

LOCAL RECEIPTS AND EXPENDITURE.

Since 1888-9 certain duties and licences, which formerly formed part of the Imperial Revenue and are still collected by Imperial Officers, have been paid into the Local Taxation Accounts and distributed among Local Authorities. They comprise additional Beer and Spirit Duties, Excise Licences and a share of the Probate and Estate Duties, and amounted in 1905-6 to £9,901,000.

Great and rapid as has been the increase in the expenditure and liabilities of the State, the growth of the expenditure and liabilities of Local Authorities, since the passing of the Local Government Act of 1888, has been still more remarkable. The financial statements, which have to be collected from the various authorities throughout the three Kingdoms, are only available for the United Kingdom as a whole after a considerable interval, and consequently the expenditure cannot at present be given for a later year than 1902-3. The following summary shows the receipts and expenditure of all Local Authorities in the United Kingdom for fifteen years:—

Year.	Receipts.				Expenditure.				
	From Rates.	Government Contributions.	From Loans.	Total.	Poor Relief.	School Boards.	Rural Authorities.	Town Councils.	Total.
	£	£	£	£	£	£	£	£	£

1901-2	71,585,000	16,023,000	39,873,000	145,151,000	15,270,000	15,550,000	14,578,000	87,025,000	144,469,000
1902-3	76,450,000	16,248,000	39,774,000	152,291,000	15,992,000	16,274,000	15,062,000	91,830,000	152,167,000
1903-4	80,238,000	19,221,000	36,433,000	158,254,000	Information not yet available.				

The amounts shown under the head of Rates, in the above table, include certain receipts in respect of Gas, Water, and Electric Light undertakings. In addition to the principal items of revenue shown above, the total receipts include revenue from Tramways, Tolls dues and duties (but exclusive of Pilotage and Light dues), Rents and Interest, and Sales of Property. On the Expenditure side of the Account the items not separately shown, but included in the total, comprise Parochial Expenditure payable out of Poor Rate but not in Poor Relief, payments by Parish Councils and Parish Meetings in Great Britain and by Rural District Councils in Ireland, by Drainage Authorities, Burial Boards, and Harbour Authorities. The Rural Authorities, whose expenditure is shown, comprise Rural Sanitary Authorities, County Councils, and Highway Boards.

The amount of the outstanding loans of all Local Authorities in the United Kingdom in 1903-4 was £464,670,000. In England and Wales alone it was £393,882,000, having increased from £198,671,000 in 1889-90, or by 97 per cent. in fifteen years.

NOTE.—The Paid-up Capital of the Railway Companies has from time to time been nominally increased by the conversion and consolidation of stocks. The nominal increase of the capital of English companies amounted in 1903 to £144,351,455; of Scotch companies £46,551,946; and of Irish companies £351,187; the total for all companies in the United Kingdom being £191,254,588.

* Including capital raised for the purpose of subscribing to other undertakings.

PROGRESS OF THE POST OFFICE.

PREFATORY REMARKS.

The aids here offered do not pretend to be a full and formal treatment of the subject, such as would necessitate a methodical exposition of the grammar of the language as a basis for the principles of correct and effective rendering of the English language. Our aim, for instance, in dealing with "Common Errors of Speech," is rather to enable our readers to avoid all solecisms of speech without renewing their study of formal grammar, such as occupied their unwilling attention when at school. This we purpose doing by setting, side by side, the errors commonly made and the correct forms of expression, as illustrations of the particular rule under consideration. The writer has kept constantly in mind the fact that this sub-section, like the rest of the work, is intended primarily for the purpose of reference Great care accordingly has been taken to make references easy by clear arrangement, and by the use of such headings and varieties of type as to make evident, at a glance, the different topics treated and the relation between them. The rules and examples given in treating of "Common Errors of Speech" will be found particularly helpful by any one who has not had the advantage of acquiring the correct use of his mother tongue in early life. The subjects dealt with in the subsequent parts of this section, with the exception of the "Derivation of English Words," are almost solely for reference. Persons who are unacquainted with Latin and Greek would find it well worth acquiring a knowledge of Latin and Greek roots and prefixes as an aid to the knowledge of English, since they serve as a key to the right meaning and application of a large proportion of English words.

COMMON ERRORS OF SPEECH.

The commonest forms of error in speaking and writing fall naturally under the following headings: 1. Grammatical Errors. 2. Errors of Style. 3. Errors in Pronunciation. We may, therefore, conveniently treat them under these headings and in the above order. It must, however, be remembered that English is a living language and, as such, subject to change and modification, so that what was correct a century ago is not necessarily correct at the present time. Changes in grammatical forms, in the meaning of words, in diction, and in pronunciation are continually going on, and we must take account of these changes: otherwise, in our endeavours to avoid laxity we shall fall into pedantry, since it is important to remember that what is, strictly speaking, incorrect according to rule, often becomes correct according to usage.

As types of the changes above referred to we may mention the following:—

Change in Grammatical Form. Many verbs which originally belonged to the strong conjugation (i.e. formed their past tense by vowel change and past participle by the addition of -en, as with *write, wrote, written*), have now become weak, thus conforming to the general rule for the conjugation of English verbs. For example, *helped, lighted, clothed, crowed,* represent the earlier strong forms *help, lit, clad, crew.*

Change in the Meaning of Words. Words are continually changing in meaning, some few improving in the process, but the majority deteriorating, as witness the modern meaning of the following words compared with their original meaning, which is given in brackets—censure (opinion), villain (farm-labourer), caitiff (captive), knave (boy), cunning (having knowledge or skill), crafty (skilled in a craft).

Changes in Diction. Certain words and modes of expression when first introduced into the language are of the nature of slang and belong to the spoken rather than the written language; but, in course of time, these words and phrases either drop out of use altogether or become incorporated in the language.

Changes in Pronunciation. The pronunciation of to-day is not in all respects that of a hundred or even of fifty years ago. The changes which have taken place affect the vowel sounds in certain words; for instance, we now say *oblige* instead of *obleege*. The greatest change, however, has taken place in *accentuation*, the increasing tendency being to throw the accent as far back as possible. Many words, accordingly, are still in a transition stage, and allow of two pronunciations; for instance, we may say lab'oratory or labor'atory, con'tents or contents', de'tail or detail'.

1. GRAMMATICAL ERRORS.

The English language, though not now a highly inflected one, has retained a certain number of case and verbal inflexions, and it is of vital importance that we should use these varying forms correctly. The pronouns, which have retained the greatest number of case inflexions, are a fertile source of error, and will be treated first.

Rule.—The Subject of a verb must be in the Nominative Case.

COMMON ERRORS.	CORRECTED FORMS.
Who is there? *Me.*	Who is there? *I* (am).
He writes better than *us.*	He writes better than *we* (do).
I am not so old as *him.*	I am not so old as *he* (is).
You are taller than *her.*	You are taller than *she* (is).
Mary plays better than *me.*	Mary plays better than *I* (do).
May John and *me* go out?	May John and *I* go out?
He is one *whom* I think will succeed.	He is one *who* (I think) will succeed.
Say *whom* you know will come.	Say *who* (you know) will come.

II.

Rule.—The Object of a verb must be in the Objective Case.

COMMON ERRORS.	CORRECTED FORMS.
He invited you and *I.*	He invited you and *me.*
Who do you think we saw?	*Whom* do you think we saw?
Who did you ask?	*Whom* did you ask?
Let you and *I* lead the way.	Let you and *me* lead the way.
I know *who* you mean.	I know *whom* you mean.

III.

Rule.—The noun or pronoun governed by a preposition must be in the Objective Case.

COMMON ERRORS.	CORRECTED FORMS.
Between you and *I.*	Between you and *me.*
Who were you speaking to?	To *whom* were you speaking?
They all returned save *he.*	They all returned save *him.*
Who is your letter from?	From *whom* is your letter?
Who is this for?	For *whom* is this?
They all walked but *I.*	They all walked but *me.*
Who do you refer to?	To *whom* do you refer?
The girl *who* I speak of is your sister.	The girl of *whom* I speak is your sister.
Who are you relying on?	On *whom* are you relying?

It should be noted that in several of the preceding examples the preposition, instead of immediately preceding the word it governs, is misplaced at the end of the sentence, and this no doubt has led to the error in each case. It must be borne in mind that a sentence should never end with a preposition.

IV.

The case of a pronoun after *as* or *than* depends on the relation in which it stands to the verb which is understood; for instance:—

He likes you better than I. = He likes you better than I (do).
He likes you better than me. = He likes you better than (he likes) me.

She spoke to you as well as I. = She spoke to you as well as I (did).
She spoke to you as well as me. = She spoke to you as well as (to) me.

The personal pronouns and the corresponding possessive adjectives must be carefully distinguished.

Personal Pronouns.—I, thou, he, she, it, we, you, they and their respective cases.

Possessive Adjectives.—My, thy, his, her, its, our, your, their.

COMMON ERRORS.	CORRECTED FORMS.
He hurt *his* self.	He hurt *him*self.
They pride *their*selves on their wealth.	They pride *them*selves on their wealth.
It is no use *me* going.	It is no use *my* going.
What is the good of *him* talking?	What is the good of *his* talking?
Pardon *me* not writing.	Pardon *my* not writing.
It is no good *them* waiting.	It is no good *their* waiting, *or, Their* waiting is useless.

The forms of the *Reflexive Pronouns* must be carefully distinguished. We must say myself, thyself, itself, ourselves, yourselves; but *him*self (not his self), *them*selves (not their-selves). This inconsistency has no doubt given rise to the errors illustrated in the first two sentences in the preceding table.

In the last four sentences quoted above: *going, talking, writing, waiting,* are all *Verbal Nouns,* and must, therefore, be preceded by an adjective and not a pronoun.

REMARKS ON SPECIAL PRONOUNS.

I.

Each, Everyone, One, Either, Neither, are singular pronouns, and must be followed by the verb in the singular, while any pronoun or possessive adjective which refers to one of the above pronouns must also be in the singular number.

COMMON ERRORS.	CORRECTED FORMS.
Each of the men came forward in *their* turn.	*Each* of the men came forward in *his* turn.
Neither of the men got the post *they* wanted.	*Neither* of the men got the post *he* wanted.
I think *one* ought to help *their* friends.	I think *one* ought to help *one's* friends.
Every one must do *their* best.	*Every one* must do *his* best.
No one thinks *themselves* perfect.	*No one* thinks *himself* perfect.
If *any one* thought so *they* were mistaken.	If *any one* thought so *he* was mistaken.
If *either* of these boys wins a prize *they* will be fortunate.	If *either* of these boys wins a prize *he* will be fortunate.
Each one thought *their* own plan the best.	*Each one* thought *his* own plan the best.

II.

Caution.—Either and Neither can only have reference to one of *two* persons or things, and must not be used with reference to more than two. Say: "Either of the two," but "Any one of the three."

Similar care must be exercised in the use of the *Reciprocal Pronouns* :—

each other
the one . . the other } refer to two only.
one . . another are used of more than two.

COMMON ERRORS.	CORRECTED FORMS.
Neither of these various plans will succeed.	*Not one* (or none) of these various plans will succeed.
Either of those three men would fill the post well.	*Any one* of those three men would fill the post well.
Which of those four books did he choose ? *Neither.*	Which of those four books did he choose ? *None.*
These three children love *each other.*	These three children love *one another.*
Those two brothers are devoted to *one another.*	Those two brothers are devoted to *each other.*
All the prize-winners congratulated *each other.*	All the prize-winners congratulated *one another.*

III.

Caution 1. The relative pronoun *which* must have a noun or pronoun, and not a clause for its antecedent. Do not say, "He is very amusing *which* makes him popular," but, "He is very amusing *and that* makes him popular." Do not say, "The boy was frightened *which* caused him to tell a lie," but, "The boy was frightened *and that* caused him to tell a lie."

Caution 2. Emphatic pronouns have the same form as reflexive pronouns, but should not be confounded with them. The latter are used apart from another pronoun, as "He killed himself"; the former in apposition with the pronoun it emphasizes, as "I myself did it."

IV.

Many people have a pardonable difficulty in determining when to use the relative pronoun *that*, instead of *who* or *which*. A few examples will make the distinction clear.

That has been well named the Defining Relative, because the relative clause which it introduces serves to define more precisely what person or thing is indicated; e.g., (*a*) This is the house (*that* Jack built). (*b*) The boy (*that* brought the letter) is still here. The subordinate clause in (*a*) indicates *what house* is meant; and in (*b*) *what boy* is waiting.

Who and **Which**, on the other hand, do not serve to define more precisely the person or thing to which they refer, but merely give some additional information about it, "who"=and he (*or* and she, and it, and they).
"which"=and it; e.g.,

(*a*) Your father, *who* called yesterday, told us of your return. (*b*) His eldest son, *whom* we all like very much, stayed with us last Christmas. (*c*) The rebels, *who* were now greatly exasperated, lost all self-control. (*d*) Your kindness, *which* I greatly appreciate, has relieved me of all anxiety.

In sentences (*a*) and (*b*) it is self-evident that the words *father* and *eldest son* need no further defining.

THE CHOICE OF PRONOUNS.

Great care must be exercised in the use of pronouns in order that ambiguity may be avoided. As a ludicrous instance of this ambiguity we may quote the doctor's advice: "If fresh milk does not agree with the child boil it."

A pronoun is a convenient substitute for a noun, but it has its limits of usefulness, as in the following statement about a dog that had stolen a leg of mutton and dropped it. "*It* is fortunate that *it* dropped *it* and ran away to *its* owner.

Caution.—The use of *it* and *they* with reference to the same antecedent must be carefully avoided; e.g., This crew showed a marked falling off from the high standard *it* attained last year, when *they* won several races. Similarly —The masculine *who* and the neuter *it* should not be used with reference to the same antecedent; e.g., 'Twas love's mistake *who* fancied what *it* feared.

Certain mistakes seem too illiterate to mention here, yet it may be well to allude to them in passing. Among such mistakes may be included the use of *as* and *what* in the place of the relative pronouns *who* and *that*. The pages of Dickens are full of such instances, and most readers will recall one of the advertisements of the immortal Mrs. Jarley's Waxworks, which begins :—

"If I had a donkey *what* wouldn't go
To see Mrs. Jarley's waxwork show . . ."

As instances of the misuse of "as," the following may be given: (*a*) I knew the man *as* said it. (*b*) The boy *as* was injured is now in the hospital. (*c*) Did you see the person *as* called ? (*d*) The parcel *as* came was for you.

In all the above sentences *that* should be substituted for *as*.

Caution.—Avoid using *as* as a relative pronoun unless it has *same* or *such* for its antecedent, as in the following examples: Such aid *as* I can give is at your service. Things are not now the *same as* they were.

FORMS OF THE VERB.

Verbs are inflected or modified in form to indicate changes in voice, mood, tense, number, and person, and as mistakes frequently arise owing to ignorance of those inflexions, the following forms of the verb should be carefully studied.

INDICATIVE MOOD.

	Present Tense.		Past Tense.	
To be	I am	We are	I was	We were
	Thou art	You are	Thou wast	You were
	He is	They are	He was	They were
To have				
	I have	We have	I had	We had
	Thou hast	You have	Thou hadst	You had
	He has	They have	He had	They had
To do				
	I do	We do	I did	We did
	Thou dost	You do	Thou didst	You did
	He does	They do	He did	They did
To love				
	I love	We love	I loved	We loved
	Thou lovest	You love	Thou lovedst	You loved
	He loves	They love	He loved	They loved

I.

Rule.—A verb must agree with its subject in number and person.

EXAMPLES OF THE USE OF SINGULAR FOR PLURAL.

COMMON ERRORS.	CORRECTED FORMS.
You *was* not there.	You *were* not there.
There *is* many *thinks* as I do.	There *are* many who *think* as I do.
Time and tide *waits* for no man.	Time and tide *wait* for no man.
The jury *was* convinced of the man's innocence.	The jury *were* convinced of the man's innocence.
This is one of the best songs that *has* ever been sung.	This is one of the best songs that *have* ever been sung.
There *is* lots of time.	There *is* plenty of time.
You *was* angry but you *was* just.	You *were* angry but you *were* just.
She is one of those people that *knows* everything.	She is one of those people that *know* everything.

Remark 1.—When a collective noun (such as jury, crowd, army, senate) is used it should be followed by the verb in the plural if it is regarded as consisting of individuals acting separately, otherwise it must be followed by the verb in the singular number. Hence we say: "The jury *were* agreed"; but "The army *was* defeated."

Remark 2.—There is an apparent exception to the above rules about the agreement of the verb with its subject in such sentences as the following: "Every bush and every

tree *was* in bud." This seems due to the strongly separative force of *every*.

EXAMPLES OF THE USE OF THE PLURAL FOR THE SINGULAR.

COMMON ERRORS.	CORRECTED FORMS.
Neither you nor I *are* right.	Neither of us *is* right, or, We are neither of us right.
Are either of these books yours ?	Is either of these books yours ?
Every one of you *are* to blame.	Every one of you *is* to blame.
Six weeks' salary *have* been paid.	Six weeks' salary *has* been paid.
These *sort* of people *are* very unreasonable.	People of this sort are very unreasonable.
Each of these sisters *are* very tall.	Each of these sisters *is* very tall.
These kind of excuses *are* useless.	This kind of excuse *is* useless.
When he or his wife *come* we are delighted.	When he or his wife *comes* we are delighted.
The fleet *await* orders.	The fleet *awaits* orders.
Chaucer's "Canterbury Tales" *are* a great work.	Chaucer's "Canterbury Tales" *is* a great work.
The man with his two sons *were* present.	The man *was* present with his two sons.
Aren't I grand ?	*Am* I not grand ?
The number of failures *were* very great.	The number of failures *was* very great.

Remark 3.—In the last example, as in many others, the error is due to the fact that the verb is *attracted* into agreement with the nearer noun.

II.

An Intransitive Verb denotes an action or a state which is confined to the subject of that verb, as, I sleep, I run, I laugh, I wait. Certain intransitive verbs, however, such as *I am, I become, I seem,* need the addition of some other word to enable them to make a complete statement, and this word may be called the completion or *Complement.*

Rule.—The Complement of an intransitive verb must be in the same case as the subject of that verb.

Subject (Nominative Case).	Intransitive Verb.	Complement (Nominative Case).
I	am	he
It	is	I
James	became	king
He	seems	the leader

COMMON ERRORS.	CORRECTED FORMS.
That's *him.*	That is *he.*
I would go if I were *her.*	I would go if I were *she.*
Who is there ? It is *me.*	Who is there ? It is *I.*
Whom do you think I am ?	*Who* do you think I am ?
Whom does she appear to be ?	*Who* does she appear to be ?
I thought it was *her.*	I thought it was *she.*
I wonder *whom* it is.	I wonder *who* it is ?
She is not *me* and I am not *her.*	She is not *I* and I am not *she.*
If any one comes to meet you it will be *me.*	If any one comes to meet you it will be *I.*

III.

Many mistakes in connexion with the verb arise from a confusion between the forms of the different parts of the verb, the Past Tense and the Past Participle being especially liable to be mistaken for each other. The following is a list of verbs about which mistakes are most frequently made :—

PRES. TENSE.	PRES. PART.	PAST TENSE.	PAST PART.
beat	beating	beat	beaten
begin	beginning	began	begun
break	breaking	broke	broken
burst	bursting	burst	burst
come	coming	came	come
do	doing	did	done
drink	drinking	drank	drunk
eat	eating	eat (ate)	eaten
get	getting	got	got
go	going	went	gone
ring	ringing	rang	rung
say	saying	said	said
see	seeing	saw	seen
shake	shaking	shook	shaken
show	showing	showed	shown
shrink	shrinking	shrank	shrunk
sing	singing	sang	sung
sink	sinking	sank	sunk
speak	speaking	spoke	spoken
spring	springing	sprang	sprung
steal	stealing	stole	stolen
swim	swimming	swam	swum
take	taking	took	taken
throw	throwing	threw	thrown
wake	waking	woke, waked	woke, waked
write	writing	wrote	written

COMMON ERRORS.	CORRECTED FORMS.
She has *broke* a glass.	She has *broken* a glass.
Have you *drank* the milk ?	Have you *drunk* the milk ?
He has *stole* a watch.	He has *stolen* a watch.
I have often *sang* that song.	I have often *sung* that song.
She *sung* well.	She *sang* well.
It has just *began* to rain.	It has just *begun* to rain.
The ship *sunk* in the bay.	The ship *sank* in the bay.
They *drunk* your health.	They *drank* your health.
The boy *rung* the bell.	The boy *rang* the bell.
We *done* our best.	We *did* our best.
I *see* him yesterday.	I *saw* him yesterday.
This mistake *sprung* from ignorance.	This mistake *sprang* from ignorance.
I *seen* it myself.	I *saw* it myself.
He *says* to me last night, "Have you *showed* it to her ?"	He *said* to me last night, "Have you *shown* it to her ?"
John has often *beat* me at chess.	John has often *beaten* me at chess.
Have you *wrote* the letter ?	Have you *written* the letter ?
He has *eat* nothing to-day.	He has *eaten* nothing to-day.

Remark. To avoid errors of this kind, learn the forms of the verbs given above *for* the Past Tense and Past Participle, and with "has" or "have" use the past participle. e.g., he has *drunk* the milk, not he has *drank* the milk.

IV.

Verbs somewhat similar in form are often confused with one another, especially the following verbs :—

PRES. TENSE.	PRES. PART.	PAST TENSE.	PAST PART.
lie	lying	lay	lain
lay	laying	laid	laid
rise	rising	rose	risen
raise	raising	raised	raised
fly	flying	flew	flown
flow	flowing	flowed	flowed
sit	sitting	sat	sat
set	setting	set	set
hang	hanging	hanged	hanged (of persons)
		hung	hung (of things)

Remark. *To lie* is an intransitive verb and can, therefore, never have an object.

To lay is transitive, being the causative form of the verb *to lie*, since *to lay* = *to cause to lie*. But the right use of these two verbs "lie" and "lay" is very puzzling, because "lay" is both the present tense of the transitive verb and the past tense of the intransitive verb. Compare the two sentences: (1) *Lay* the book on the table. (2) She *lay* on the sofa. In (1) "lay" is the present tense of the transitive verb *to lay*. In (2) "lay" is the past tense of the intransitive verb *to lie*.

COMMON ERRORS.	CORRECTED FORMS.
The book was *laying* on the table.	The book was *lying* on the table.
I *laid* in bed till six o'clock.	I *lay* in bed till six o'clock.
She *lay* down the money.	She *laid* down the money.
The master *rose* the boy's wages.	The master *raised* the boy's wages.
There he *sets* by the fire.	There he *sits* by the fire.
The river has *overflown* its banks.	The river has *overflowed* its banks.
The man was *hung*.	The man was *hanged*.

V.

It must be borne in mind that the conjunctions—

either—or } are mutually exclusive.
neither—nor }

Consequently, if two singular subjects are connected by these conjunctions the verb must be in the singular number to agree with one *or* other of the alternative subjects.

Do not say: "Either John or Mary *are* going;" but, "Either John or Mary *is* going.

When, however, the persons of the two subjects differ, this construction should be avoided, unless the verb would agree equally with either subject.

We cannot say: "Either he or I *am* going." We must say: "He is going or else I am;" or, "Either he will go or I (shall)."

In the following incorrect sentences the verb does not agree in *person* with its subject. Here, also, as in former instances, the error is frequently due to attraction.

COMMON ERRORS.	CORRECTED FORMS.
I am the one who *am* responsible.	I am the one who *is* responsible.
Is it you who *has* done this?	Is it you who *have* done this?
Thou art the man who *hast* betrayed us.	Thou art the man who *has* betrayed us.
You are the person who *are* referred to.	You are the person who *is* referred to.
She *don't* agree with me.	She *does* not agree with me.
Thinks I to myself.	*Thought* I to myself.
He *do* sing well.	He *does* sing well.
It *don't* matter to me.	It *does* not matter to me.
"Who are you?" *says* I.	"Who are you?" *said* I.

TENSE.

I.

The Future Tense is a stumbling-block to many; we therefore give a model form below:—

Future Tense.

I shall write	We shall write
Thou wilt write	You will write
He will write	They will write

The difficulty which this tense presents to many people is due to the fact that it is conjugated with the help of two auxiliaries, *Shall* and *Will*, and they use the wrong auxiliary.

It is well to note the difference in meaning produced by substituting one auxiliary for the other—

I shall write (futurity simply). I *will* write (determination).

Thou wilt write (futurity). Thou *shalt* write (command).
He will write (futurity). He *shall* write (compulsion).
We shall write (futurity). We *will* write (determination).
You will write (futurity). You *shall* write (command).
They will write (futurity). They *shall* write (compulsion)

COMMON ERRORS.	CORRECTED FORMS.
I *will* be drowned and no one *shall* save me.	I *shall* be drowned and no one *will* save me.
What *will* I do?	What *shall* I do?
Do you think we *will* succeed?	Do you think we *shall* succeed.
Will I send the message?	*Shall* I send the message?
We *will* be starting soon.	We *shall* be starting soon.
What *shall* you do in that case.	What *will* you do in that case.
They say they *shall* know the result to-morrow.	They say they *will* know the result to-morrow.

II.

Tense of the Infinitive. When the Infinitive is used to complete the meaning of another verb the wrong tense is often used. This is due to the mistaken idea that the Present Infinitive must necessarily refer to present time, and cannot, therefore, be used after a past tense. This, however, is not the case, and we must remember that.

Rule.—The Present Infinitive must be used to denote an action or state cotemporaneous with that denoted by the principal verb.

COMMON ERRORS.	CORRECTED FORMS.
I forgot *to have mentioned* the fact.	I forgot *to mention* the fact.
We should have been glad *to have had* some shelter from the storm.	We should have been glad *to have* some shelter from the storm.
We wanted *to have gone*.	We wanted *to go*.
I intended *to have written*.	I intended *to write*.
He was prepared *to have risked* the loss of everything.	He was prepared *to risk* the loss of everything.

A comparison of the two following examples will make the distinction between the two tenses clear.

(*a*) When I heard the truth I was sorry *to have doubted* him. = When I heard the truth I was sorry that I had (previously) doubted him.

(*b*) When I heard the news I was sorry *to be unable* to return. = When I heard the news I was sorry that I was (at that moment) unable to return.

III.

The tenses of a verb may be thus classified:—

PRIMARY TENSES.	HISTORIC* TENSES.
Present—I write.	Imperfect—I was writing.
Future—I shall write.	Past Indefinite—I wrote.
Perfect—I have written.	Past Perfect—I had written.

* They are so called because used in narration.

Rule for the Sequence of Tenses.—Primary tenses follow primary, and historic tenses follow historic, e.g.,

I *am* sorry that I *have* offended you (Primary).
I *was* sorry that I *had* offended you (Historic).

COMMON ERRORS.	CORRECTED FORMS.
I *should* read the book if I *buy* it.	I *should* read the book if I *bought* it; or, I *shall* read the book if I *buy* it.
Should he succeed he *will* not be the happier.	Should he succeed he *would* not be the happier.
I *should* be glad if you *will* take the message.	I *should* be glad if you *would* take the message.

Exception.—If the subordinate sentence states a general truth the verb may be in the present tense even when the principal verb is in one of the historic tenses; e.g.

He *was* not aware of the fact that the earth *moves* round the sun. Surely you *knew* even then that the world *is* round. I *regretted* to hear that the man *is* blind.

THE SUBJUNCTIVE MOOD.

	PRESENT TENSE.		PAST TENSE.	
To be				
(If)	I be	We be	(If) I were	We were
	Thou be	You be	Thou wert	You were
	He be	They be	He were	They were.
To have				
(If)	I have	We have	(If) I had	We had
	Thou have	You have	Thou had	You had
	He have	They have	He had	They had
To love				
(If)	I love	We love	(If) I loved	We loved
	Thou love	You love	Thou lovedst	You loved
	He love	They love	He loved	They loved

The Subjunctive Mood expresses:—

(1) A *wish*: "O that it *were* morning!" "Mine *be* a cot beside a hill."

(2) A *purpose*: "Watch that ye *be* not taken unawares."

(3) A *condition*, when it has not been or cannot possibly be fulfilled: "I know what I would do if I *were* king." "If I *were* you I would act differently."

(4) *Doubt*: "If he *be* guilty he deserves to be punished."

Certain conjunctions, such as *if* and *though*, are followed by the Indicative, if the statement they introduce is an actual fact, and by the Subjunctive, if it is a mere supposition; e.g.

"Though the battle *is* won (fact) yet much remains to be done."

"Though he *were* my own brother (*mere supposition*) I would say the same."

Similarly:—"If you *are* your father's son (*fact*) you should try to be like him;" but, "If he *be* the elder I shall be surprised."

COMMON ERRORS.	CORRECTED FORMS.
Was such a thing possible it should be done.	*Were* such a thing possible it should be done.
I would go if I *was* you.	I would go if I *were* you.
Though he *was* my dearest friend I would not spare him.	Though he *were* my dearest friend I would not spare him.
Beware lest ye *are* taken unawares.	Beware lest ye *be* taken unawares.
Take heed that he *deceives* you not.	Take heed that he *deceive* you not.
O that life *was* ended!	O that life *were* ended!
Every one would be surprised if that man *was* successful.	Every one would be surprised if that man *were* successful.
I wish I *was* you.	I wish I *were* you.

THE VERBAL NOUN.

The form of the verb in "ing" may be used as a noun; e.g. *Writing* is easy. I like *reading*. When thus used *writing* and *reading* are verbal nouns.

Rule.—A verbal noun must be qualified by a pronominal adjective and not by a pronoun. Do not say "Were you surprised at *us* coming?" but "Were you surprised at *our* coming?"

Do not say "Do you mind *me* going?" but "Do you mind *my* going?"

THE ADJECTIVE.

Rule.—An adjective must agree with its noun in number, gender, and case.

As, however, the English language has lost most of its inflexions, this agreement is only seen in the case of the demonstrative adjectives *this* and *that*, with their plurals *these* and *those*.

COMMON ERRORS.	CORRECTED FORMS.
These sort of people are rare.	People of *this* sort are rare.
These kind of amusements are costly.	*This* kind of amusement is costly.
These manner of men are not uncommon.	*This* manner of man is not uncommon.
Those kind of remarks are annoying.	Remarks of *that* kind are annoying.

Caution.—In the use of the Distinguishing Adjectives care must be taken to avoid obscurity. When several different things are mentioned together, the distinguishing adjective should, as a rule, be prefixed to each noun; e.g. *The* horse and *the* dog are useful animals.

In many instances the omission of the distinguishing adjective before the second noun would alter the sense of the passage, as may be seen from the following examples:—

(*a*) She has a black and white dress = She has a dress which is black and white.
She has a black and a white dress = She has a black dress and also a white one.

(*b*) He sent for his brother and friend = He sent for his brother who was also his friend.
He sent for his brother and his friend = He sent for his brother and also for his friend.

COMPARISON OF ADJECTIVES.

I.

Rule.—When only two things are compared the Comparative must be used, but when more than two things are compared the Superlative must be used; for instance,

He is the *taller* of the two.
She is the *tallest* of the three.

The following adjectives are irregularly compared:—

POSITIVE.	COMPARATIVE.	SUPERLATIVE.
old	older	oldest
	elder	eldest (used of persons only)
little	less	least
far	farther	farthest
forth	further	furthest
late	later	latest (of time)
	latter	last (of position or order)
good	better	best
bad, evil	worse	worst
nigh	(nigher)	next
near	nearer	nearest

COMMON ERRORS.	CORRECTED FORMS.
She was his *oldest* daughter.	She was his *eldest* daughter.
Mary was the *eldest* of the two.	Mary was the *elder* of the two.
The *youngest* brother is the *best* of the two.	The *younger* brother is the *better* of the two.
I have *less* supporters than he has.	I have *fewer* supporters than he has.
Scott and Dickens are great novelists, but I prefer the *last*.	Scott and Dickens are great novelists, but I prefer the *latter*.
It had the widest circulation of any newspaper.	It had a wider circulation than any other newspaper; or, Of all newspapers it had the widest circulation.

Observe.—(1) *Oldest* is used absolutely, and with reference to either persons or things; *eldest* is used relatively, and with reference to persons only. Say "He is the *oldest* inhabitant;" "She is the *eldest* of the three."

(2) *Less* refers to quantity, *fewer* to number.

(3) The words *former* and *latter* should be used in speaking of two things only. The following sentence is, therefore, incorrect:—"James, Ellen, and Frances competed, but the *latter* won the prize" (say the *last named*).

(4) *Any newspaper* is singular, and the superlative cannot be used unless at least three things are compared.

II.

Words which do not admit of Comparison. Certain adjectives from their meaning already have a superlative force and cannot, therefore, be compared. Hence the following sentences are, strictly speaking, incorrect, though the first four are by general usage admissible.

Your account is *most complete.*
This is a *very perfect* specimen.
My determination is *more absolute* than ever.
Put on your *very best* gown.
This work is *extremely excellent.*
He is a *most unique* person.
Change of scene is a *most universal* remedy.
What you say is *very possible.*

In the last example, "possible," though not superlative in meaning, should not be compared, because there are not varying degrees of possibility.

THE ADVERB.

One of the commonest mistakes in connexion with the adverb is the use of the adjective instead of the corresponding adverb to modify a verb, adjective, or adverb.

COMMON ERRORS.	CORRECTED FORMS.
The girl walks *slow.*	The girl walks *slowly.*
He plays *beautiful.*	He plays *beautifully.*
You have done it very *quick.*	You have done it very *quickly.*
That man is *uncommon* proud.	That man is *uncommonly* proud.
He came back *quicker* than he went.	He came back more *quickly* than he went.
I can *easier* learn than teach.	I can more *easily* learn than teach.

Caution 1.—*Very* is an adverb which can be used to modify adjectives and adverbs, as in "very good" and "very well," but it should not be used to modify Participles, because Participles should not be modified by adverbs of degree.

Hence such expressions as "very surprised," "very alarmed," "very satisfied," are incorrect.

Very pleased, though commonly used, is not, strictly speaking, correct, but may perhaps be justified on the score that *pleased* has in many instances lost its participal force. For example, in the sentence "I shall be very pleased to see you," *pleased* is equivalent to the adjective *glad.*

Caution 2.—The adverbs *here* and *there* must never be used as adjectives. Hence we must avoid such expressions as "This *here* boy." "That *there* girl."

The personal pronoun and the corresponding demonstrative adjective must also be carefully distinguished. We must not say "I saw *them* pictures,"
but "I saw *those* pictures."

ORDER OF ADVERBS.

Rule.—An adverb should be placed as close as possible to the word it modifies. This rule is frequently broken in the case of the adverb *only.* Do not say "I *only* made one mistake." but "I made *only* one mistake," as "only" modifies "one." The importance of the position of the adverb may easily be realised from a comparison of the following sentences where the meaning varies according to the place of the adverb:—

(*a*) I have *only* taken one (i.e., and done nothing more). (*b*) I *only* have taken one (i.e., and no one else has). (*c*) I have taken *only* one (i.e., and no more). In (*b*) "only" is an adjective.

Compare (*a*) I have *only* a daughter (and no other child) (*b*) I have an *only* daughter (and no other daughter). Similarly: (*a*) I *only* have spoken the truth (and no one else has), (*b*) I have spoken *only* the truth (and nothing else).

Caution 1.—Beware of using *only* as a conjunction equivalent to *but*; e.g. "I knocked *only* (=but) I did not ring." "I spoke *only* (=but) you did not hear."

Caution 2.—An adverb must not be inserted between the sign of the Infinitive (to) and the Infinitive. The "Split Infinitive," as it is called, should be carefully avoided. Instead of saying "He promised to *thoroughly* sift the matter," say "He promised to sift the matter *thoroughly.*" Instead of "They seemed to *greatly* appreciate the joke," say "They seemed to appreciate the joke *greatly.*"

NEGATIVE ADVERBS.

The use of *double negatives* must be avoided, since two negatives make an affirmative.

COMMON ERRORS.	CORRECTED FORMS.
It is *not* here I *don't* think.	I do *not* think it is here.
I should *not* wonder if it does *not* rain.	I should *not* wonder if it rains.
I have *not* got no ink.	I have *no* ink.
He *won't* have *no* more.	He *won't* have any more.
Nothing never did annoy him.	*Nothing* ever did annoy him.
Nobody can't compel me to do it.	*Nobody* can compel me to do it.
No more don't I.	*Neither do* I.
He *never* said *nothing.*	He *never* said anything.
I *never* did *no* such thing.	I *never* did any such thing.
I did *not hardly* have time.	I *hardly* had time.

Remark. The second sentence as it stands would mean "If it does not rain I shall not be surprised," and should therefore be used if that is the meaning intended.

Remark.—The last sentence, though not actually containing two negatives, is practically an example of double negative, since *hardly* is equivalent to *almost not.*

THE PREPOSITION.

Two common errors in connexion with the preposition must be carefully avoided. (1) The use of the Nominative instead of the Objective after a preposition; e.g. "*Who* are you speaking *to?*" instead of "*To whom* are you speaking?" (2) The use of the wrong preposition; e.g. "Yours is different *to* mine," instead of "Yours is different *from* mine."

List of words requiring certain prepositions after them.

WORD.	PREPOSITION.
corresponding	to
different	from
similar	to
in accordance	with
analogous	to
estranged	from
averse	from
agree	with (a person)
agree	to (a thing)
part	from (a person)
part	with (a thing)
prefer (one thing)	to (another)
afraid	of
frightened	at
opposite	to
buy	from
contrast	with
dissent	from
disagree	with
differ (to disagree)	with
differ (to be different)	from
know	of, about
tell	of, about
think	of, about

To compare (to note the points of likeness and difference) must be followed by the preposition *with*; e.g. "Let us compare his hand writing with hers."

To compare (to regard as similar) must be followed by the preposition *to*; e.g. "I should compare your style *to* his."

COMMON ERRORS.	CORRECTED FORMS.
It is different *to* what I expected.	It is different *from* what I expected.
He is clever compared *to* his brother.	He is clever compared *with* his brother.
Think *on* me sometimes.	Think *of* me sometimes.
I bought it *off* him.	I bought it *of* him.
He had it *off of* me.	He had it *from* me.
I prefer to know the worst *than* to linger in suspense.	I prefer knowing the worst *to* lingering in suspense.
English parents who live in India are obliged to part *with* their children.	English parents who live in India are obliged to part *from* their children.
Pour the water *in* the basin.	Pour the water *into* the basin.
The poet had a strong distaste *to* publicity.	The poet had a strong distaste *for* publicity.
Will you try *and* finish it.	Will you try *to* finish it?
I was telling him *on* it.	I was telling him *of* it.
In point of style I should compare him *with* Dickens.	In point of style I should compare him *to* Dickens.
I get up very early *of* a morning.	I get up very early *in* the morning.

Similarly, prepositions must not be used to govern adverbs; the following are, therefore, incorrect:—

"*Where* are you going *to?*" (omit "to")

"*From whence* do you come?" (omit "from")

We must admit the phrase, "*Where* do you come *from?*" as sanctioned by general usage in place of the obsolete "Whence do you come?"

Again, prepositions cannot govern other prepositions. The following are, therefore, incorrect:—

"He sold it *at below* cost price" (omit "at")

"He sold it *at above* its value" (omit "at")

Between can only be used in reference to *two* things. When more than two things are in question *among* should be used; e.g. "The cake was divided *between* John and Mary," but "The cake was divided *among* all the children."

CORRELATIVES.

Certain words are used in pairs, and are then said to be correlative. The correlatives are chiefly conjunctions, but there are also a few adjectives and adverbs which have their appropriate correlatives.

LIST OF CORRELATIVES.	EXAMPLES.
Both—and	*Both* Scott *and* Dickens are great authors.
Either—or	*Either* the King *or* the Queen will come.
Neither—nor	*Neither* the King *nor* the Queen can come.
Whether—or	I wonder *whether* he *or* she will come.
Though—yet	*Though* he is just, *yet* he is generous.
Not only—but also	I act *not only* from choice *but also* from necessity.
Same (Adj.)—as (Pron.)	Your book is the *same as* mine.
Such (Adj.)—as (Pron.)	You have *such* opportunities *as* few enjoy.
Such (Adj.)—that (Conj.)	His determination is *such that* he is sure to succeed.
So (Adv.)—as (Conj.)	I am not *so* foolish *as* to credit that.
So (Adv.)—that (Conj.)	He was *so* credulous *that* he believed the most improbable tales.
More (Adv.)—than (Conj.)	The child is *more* frightened *than* hurt.

Caution.—Great care must be taken (*a*) to use the right correlative, (*b*) to put it in the right place.

Rule.—The correlative conjunctions should immediately precede the words they serve to connect. Hence "He *neither* fears death *or* captivity" is incorrect for two reasons:

(*a*) The wrong correlative is used. (*or* should be *nor*.)

(*b*) *Neither* is misplaced. (*neither* should immediately precede "death".)

The correct form is "He fears *neither* death *nor* captivity."

COMMON ERRORS.	CORRECTED FORMS.
Neither you *or* I have ever met her.	*Neither* you *nor* I have ever met her.
You are *as* tall or even taller *than* your brother.	You are *as* tall *as* your brother or even taller.
Your work is *as* good or even better *than* his.	Your work is *as* good *as* his or even better.
I do not know *if* he will come *or* not.	I do not know *whether* he will come *or* not.
He *neither* fears death *nor* exile.	He fears *neither* death *nor* exile.
She plays *more* accurately but not so impressively *as* her sister.	She plays *more* accurately *than* her sister but not so impressively.
The queen was *more* popular but not so gifted *as* her husband.	The queen was *more* popular *than* her husband, but not so gifted.
He *neither* loves his wife *or* children.	He loves *neither* his wife *nor* children.

Caution.—Certain correlative conjunctions, such as *either—or*, *neither—nor*, introduce alternative statements which are mutually exclusive; the verb must, therefore, agree with *one* or the *other* of the subjects, but not with both. Hence "Neither he nor I *are* welcome" is incorrect. Say "Neither is he welcome, nor am I," or "He is not welcome, nor am I."

THE APOSTROPHE.

Errors frequently occur in the use of the apostrophe. These errors, however, may easily be avoided by attention to the following simple rules:

Rule.—The possessive case of a noun is formed, (*a*) In the singular by the addition of 's to the nominative singular; in, "The poet's works"=The works of the poet. (*b*) In the plural by the addition of ', as, "The poets' works"= The works of the poets.

Exception to (*b*).—When the nominative plural does not end in s, the possessive plural is formed by adding 's, as in the singular; thus, The children's games; the men's wages.

Exception to (*a*).—When the Nominative Singular ends in an *s*, or an *s sound*, it is usual to omit s after the apostrophe, especially when the next word begins with s, as: "For *conscience*' sake." "For *righteousness*' sake." "*Moses*' rod that budded."

Note 1.—In the case of Proper Nouns the practice varies. For instance, the Possessive Case of James may be written *James*' or *James's*; e.g., "My house is in *James*' street," "This is *James's* book." Some common nouns also, such as *mistress*, *governess*, admit of either form; e.g. "She knocked at her *mistress's* door." "She did it for her *mistress*' sake."

Note 2.—For the sake of euphony, or for variety, *of*, followed by the Objective Case, is sometimes substituted for the Possessive Case. For example, we say, "The law

of Moses," not "Moses' Law"; "The wisdom of the Ancients," not "The Ancients' wisdom."

Rule.—When the nouns in the Possessive Case are in apposition, the apostrophe is added to the second only; e.g. "Coleridge the poet's works are full of genius." "Edward the King of England's Crown is in the Tower of London." This construction is to be avoided as inelegant. It is much better to say "The works of Coleridge the poet are full of genius."

Note 1.—The names of lifeless things are rarely put into the Possessive Case, the preposition *of* followed by the objective being used in preference. We say: "The top of the hill," not "the hill's top"; "The end of the story," not "The story's end." It is common, however, to say "the sun's heat," or "the moon's rays," as if sun and moon were regarded as living beings.

Note 2.—With regard to such an expression as "That friend of your *sister's* is clever," it is sometimes objected that the possessive is redundant, and that the correct expression is, "That friend of your sister is clever." But the former is quite correct when the friend spoken of is only one of a number, and is preferable to the latter when the speaker wishes to emphasize the fact.

Note 3.—The insertion of the apostrophe in the Possessive Case of personal pronouns is incorrect. Say, "I remain yours truly," not "your's truly"; "That dog loves its master," not "it's master."

2. ERRORS OF STYLE.

The subject of style is less definite in character than that of grammatical accuracy, being to a certain extent a question of taste, but even here certain rules may be laid down which are independent of individual preference. If the style of a writer or speaker is to be good there are certain characteristics he must acquire, and certain faults he must avoid. Three qualities may be mentioned as essential to a good style: (1) Clearness of expression, (2) purity of idiom, (3) simplicity of style.

With a view to *clearness of expression* we must avoid (*a*) misplacing words, as by so doing we alter or obscure the sense, (*b*) omitting words when their omission causes ambiguity.

With a view to *purity of idiom* we must avoid (*a*) redundant expressions, (*b*) faulty constructions, (*c*) inelegant constructions, (*d*) misuse of words, (*e*) slang words and phrases.

With a view to *simplicity of style* we must avoid every form of affectation or mannerism, including the use of pompous words and phrases. Foreign words and phrases should be introduced very sparingly into our conversation or writings.

INCORRECT ORDER OF WORDS.

A sentence is often rendered ludicrous, or, at least doubtful in meaning, by the misplacing of a word or phrase. For example:

1. A set of Scott's novels for sale by a gentleman about to go abroad elegantly bound in morocco. ("Elegantly bound in morocco" should be inserted after novels.")

2. Erected to the memory of John Phillips, who was accidentally shot as a mark of affection by his brother. ("As a mark of affection by his brother" should follow "Erected.")

3. The building has been sold where this noble patriot was assassinated for the benefit of the nation. ("Where this noble patriot was assassinated" should come after the word "building.")

The following instances of a similar character the reader will easily be able to recast in their correct form:—

1. No one ever learnt anything that was worth learning easily.

2. The speaker alluded to the statement that the treaty might be repudiated with scorn.

3. I have read the three first pages. **(N.B.—There can only be *one* first page.)**

4. We nearly saw a man run over to-day. **(What word does "nearly" modify?)**

5. The poor man spoke of his benefactor who had given him a guinea with gratitude.

6. She gave the doll to the baby whose head was off.

7. Wanted a boy to clean windows with good references.

8. Wanted a housekeeper in a small gentleman's family.

9. He shot himself after bidding his wife good-bye with a gun.

10. The speaker referred to the enemies who had always thwarted him in a spirit of generosity.

11. This is a proof of the boy's dishonesty whom we have just dismissed.

12. The traitor was ordered to be beheaded by the judge.

13. I saw a dead sheep walking across the moor.

N.B.—A study of the preceding examples will enable the reader to realize the great importance of keeping a relative word or phrase as close as possible to its antecedent. He will then avoid such ludicrous statements as the following:—

"That flower cost half-a-crown which he is wearing."

ELLIPSIS.

I.

Ellipsis, or the omission of a word or phrase, where the omission can easily be supplied mentally, is quite allowable, even in prose, while in poetry it is frequently employed with very good effect, e.g.

"There are in this loud stunning tide of human care and crime
(*those*) With whom the melodies abide of the everlasting chime,
Who carry music in their heart
Through dusky lane and wrangling mart,
Plying their daily task with busier feet,
Because their secret souls a holy strain repeat."

Keble.

A word, however, must never be omitted if its absence would either obscure the meaning or alter the sense of the passage. Ellipsis is frequently employed with a view to avoiding unnecessary repetition.

The principle is right, but it must be applied with care. For instance, when two subjects are followed by the same verb, the verb may often be omitted after one subject, *but only when the same part of the verb is understood.* It is correct to say, "The fires *were* lighted and the breakfast things laid," because *were* is expressed before "lighted" and understood before "laid." But we must not say, "The fire *was* lighted and the breakfast things laid," because in the latter example *was* is expressed before "lighted," whereas *were* is required before "laid."

Incorrect use of Ellipsis.

COMMON ERRORS.	CORRECTED FORMS.
I always have ^, and always shall *regret* my mistake.	I always have *regretted* my mistake and always shall *regret* it.
Do you think that such a thing is ^, has ^, or ever will *happen?*	Do you think that such a thing is *happening*, has *happened*, or ever will *happen?*
They ever have ^, and ever will *be* our enemies.	They ever have *been* and ever will *be* our enemies.
The master *trusted* us then and still does ^.	The master *trusted* us then and still does *trust* us.

II.

A verb and its subject should not both be omitted, as such an important omission would seriously affect both the sense and the construction.

Examples of construction spoilt by Ellipsis.

COMMON ERRORS.	CORRECTED FORMS.
He is not so passionate as ^ ^ formerly.	He is not so passionate as *he was* formerly.
Your work is better than ^ ^ last week.	Your work is better than *it was* last week.
I am much stronger than ^ ^ a year ago.	I am much stronger than *I was* a year ago.
The standpoint of the soldier and ^ of the diplomatist are radically different.	The standpoint of the soldier and *that* of the diplomatist are radically different.
I have found a pocket book with several letters and ^ a silver monogram on the back.	I have found a pocket-book with several letters and *with* a silver monogram on the back.
He is playing better than ^ last week.	He is playing better than *he did* last week.

Note.—The omission of the distinguishing adjective often alters the sense of a passage, e.g. "I saw the poet and the painter" (two distinct persons); "I saw the poet and painter" (i.e. the poet who was also a painter).

Caution.—The antecedent of a relative pronoun must not be omitted in prose. We must not say: "This is the best book and which is my favourite," but "This is the best book and *the one* that is my favourite."

REDUNDANCY.

Redundancy is the exact opposite of ellipsis. A word is said to be redundant, that is superfluous, when it is unnecessary both to the sense and to the construction. Redundant words are, as a rule, meaningless repetitions, and should be carefully eliminated.

Elliptical constructions are frequently justifiable, but redundant ones never, though certain redundant phrases have become sanctioned by usage. As an instance of this we may mention the insertion of a redundant *of* between two nouns in apposition; e.g. the City (of) London, the play (of) Hamlet, the story (of) The Vicar of Wakefield.

In poetry also redundant expressions are allowable, and frequently introduced for the sake of the sound or the metre; e.g.

"The pass was steep and rugged,
The wolves *they* howled and whined." —*Macaulay.*

With the above exceptions, however, redundant words should be avoided.

Sentences containing redundant words:—

1. I am fond of the name *of* Mary.
2. Marlowe is inferior to no poet except *to* Shakespeare.
3. These are their opinions *and* which I need not now describe more fully.
4. He sold it *at* above its market value.
5. He was a very different sort of *a* man in those days.
6. I bought it *off* of him.
7. The tiger is *equally* as strong as the lion.
8. Your plan appears to be *the more* preferable.
9. At length the discourse came to a *final* end.
10. *But* however I will come if you wish it.
11. He went *for* to do it in a hurry.
12. Lo! they were all *dead* corpses.

ERRORS IN CONSTRUCTION.

I.

One of the commonest errors in construction is the use of the *Unrelated Participle*, as it is called.

Rule.—A Participle should never be introduced into a sentence when there is no word expressed with which it can logically agree. Disregard of this rule frequently gives rise to incorrect and absurd statements; e.g.

1. *Walking* across the bridge my hat blew off.
2. *Riding* to market his horse cast a shoe.
3. The palace can be seen distinctly *walking* to the station.
4. *Having forgotten* to call at the cobbler's my shoes were not sent home.
5. *Going* to church a bee stung me.
6. *Sitting* on a stile a bull attacked him.
7. Did you see the beautiful sunset *coming* upstairs?

In the above sentences many absurd statements are unintentionally made. A hat is said to have walked across a bridge, a palace to have walked to the station, a bee to have gone to church, and so on.

These and similar sentences may easily be rectified, either by supplying words which are understood or by recasting. The above sentences will then read as follows:

1. *As I was walking* across the bridge my hat blew off.
2. *As he was riding* to market his horse cast a shoe.
3. The palace can be seen distinctly *as you are walking* to the station.
4. *As I forgot* to call at the cobbler's my shoes were not sent home.
5. *As I was going* to church a bee stung me.
6. *As he was sitting* on a stile a bull attacked him.
7. Did you see the beautiful sunset *as you were coming* upstairs?

II.

Rule.—The subject should not be changed in the middle of a sentence. The following sentences are faulty in this respect:—

1. Having finished his day's work, the rest of his time was spent in amusement.
2. Having written the letter, it was then posted.
3. Being his sole companion he naturally addressed himself to me.
4. On his putting the first question to the candidate he at once turned pale.
5. Alarmed at the ship's danger, the boat was launched.
6. Hoping you are well, believe me, etc.

The above examples may be rewritten as follows:—

1. Having finished his day's work, he spent the rest of his time in amusement.
2. The letter having been written was then posted, *or*, Having written the letter he then posted it.
3. Being his sole companion I was the one to whom he naturally addressed himself.
4. The first question put to the candidate caused him at once to turn pale.
5. Being alarmed at the ship's peril, they launched the boat.
6. Hoping you are well, I remain, etc.

III.

Illogical Statements should be carefully avoided; e.g.

(*a*) Alexander was greater than any monarch of his time. ("Any monarch" would include himself, and no man can be greater than himself. Say instead, "any *other* monarch.")

(*b*) My watch is too fast. (This implies that it is right for a watch to be a little fast. Omit the word *too*.)

(*c*) John and his brother won the two first prizes. (There cannot be two *first* prizes. Say the *first two* prizes.)

(*d*) Grace was the most talented of all her sisters. (This implies that Grace was one of her own sisters. Say "Grace was *more* talented *than* any of her sisters.")

(*e*) The statement may be perfectly true to some extent. (A statement cannot be perfectly true if it is only true to some extent. Omit *perfectly*.)

(*f*) The fairest of her daughters, Eve.

IV.

Anacoluthon, or a break-down in the sequence.

There is one form of error which occurs more frequently in the spoken than in the written language, namely, a sudden change of construction in the middle of a sentence. This is liable to happen when the speaker finds himself involved in a long sentence of which he has forgotten the beginning; e.g.

"Then the man, so great was his courage, and so undaunted his resolution, that even his enemies applauded him."

It will be observed that the word "man," which is intended to form the subject of the sentence, is left without a predicate.

V.

Other idiomatic mistakes are as follows:—

1. The use of the future for the present tense; e.g. I shall be pleased to accept your kind invitation. (Say, "I have much pleasure in accepting your kind invitation.")
2. The use of *when* to introduce a definition after the verb *to be*; e.g. An obstacle is *when* there is an impediment. (Say "an obstacle is an impediment.")
3. The use of an implied double negative; e.g. I shall not say more than I can avoid. (Say "I shall not say more than I am obliged.") I couldn't hardly credit it. (Say "I could hardly credit it.")
4. The choice of the wrong word as subject; e.g. Bills are requested not to be stuck here.
5. "I called but I found them out" is open to objection as an illogical statement. Say "I called but found that they were out."

PHRASEOLOGY.

Some forms of expression, without being absolutely ungrammatical, are very inelegant, and should be avoided for that reason, while others are both clumsy and ungrammatical. A few of the commonest instances are given below.

COMMON ERRORS.	CORRECTED FORMS.
I have *got to go* at eleven.	I *have to go* at eleven.
Will it come to-day? It *should do.*	Will it come to-day? It ought.
I thought you did not like tea. *No more I do.*	I thought you did not like tea. *No, I don't.*
I *didn't have* time to finish my work.	I *had not* time to finish my work.
You *didn't use* to talk *like that.*	You *used not* to talk *in that way.*
You *hadn't ought* to say that.	You *ought not* to say that.
I *never* said anything of the kind.	I said nothing of the kind.
I have read *pretty well* all those books.	I have read *nearly* all those books.
Whatever do you think?	*What* do you think?
A *whole lot* of them are lost.	*Several* of them are lost.
That is a fine one and *no mistake.*	That is *indeed* (or *certainly*) a fine one.
Mind you, I am not complaining.	You must not think I am complaining.
He has been away *a lot* this year.	He has been away a *great deal* this year.

MISAPPLICATION OF WORDS.

I.

Adjectives are especially liable to this abuse, and their force has in many instances been permanently weakened by a wanton perversion of their meaning. Such words as *awful, terrible, fearful,* are notable instances of this. We constantly hear of "an awful bore," and "a terrible nuisance." People are continually apologizing for being "fearfully early," "terribly late," "tremendously hungry." If people who use such expressions know they are talking slang, no more need be said. Again, great poverty of idea is shown in the attempt to make one adjective cover a wide range of meaning, and do duty for many different ideas. The word *nice* is, perhaps, the most striking instance of this. Compare the various meanings of nice in the following sentences:—

I had a *nice* walk to-day (pleasant).
This cake is very *nice* (delicious).
What a *nice* picture (beautiful).
We had a *nice* talk (enjoyable).
She wore a *nice* hat at the concert (pretty, becoming).
He has *nice* manners (pleasing, courteous).
What a *nice* view (lovely).
Your sister is very *nice* (charming, agreeable)
That is a very *nice* story (interesting).
That will be a *nice* help (great).

Beautiful and *lovely* are also often misapplied. These adjectives must never be applied to food, as they so often are. A picture may be beautiful, and scenery lovely, but a cake, however delicious, is neither lovely nor beautiful.

Good should not be used for *great.* Do not say "He took a *good* deal of trouble," but "He took a *great* deal of trouble."

II.

Verbs also are sometimes misapplied or used in excess. *To get* has been greatly abused, as will be seen from the following instances of the incorrect or clumsy use of this one word:—

I have *got* to go=I *am obliged to go.*
I have *got* several friends=I have several friends.
Now you must *get* to work=Now you must *set* to work.
I am *getting* to like it better=I am *beginning* to like it better.

To go is also greatly overused.

It has just *gone* nine=It has just *struck* nine.
Has the bell *gone* yet?=Has the bell *rung* yet?
That piano is *going* all day—That piano is *being played* all day.
He is very far *gone*=He is in a very serious condition.
Why do you *go on* like that?=Why do you *behave* like that?
It is your *go* next=It is your *turn* next.

To do is another verb that is overworked. "Have you *done* the clothes?" This at one time refers to "folding," at another time to "brushing," at another to "starching," and so on. This indefinite use of words is a common mark of an uneducated mind.

III.

The following words seem very liable to misuse:—*Without* is often used for *unless, like* for *as, as* for *that, as* for *who, what* for *who, and* for *to, only* for *but.*

COMMON ERRORS.	CORRECTED FORMS.
I will not go *without* you approve.	I will not go *unless* you approve.
You should speak *like* I do.	You should speak *as* I do.
Not *as* I am aware of.	Not *that* I am aware of.
Do you know the man *as* did it?	Do you know the man *who* did it?
Will you try *and* come early?	Will you try *to* come early.
I thought so, *only* I was not certain.	I thought so *but* I was not certain.
That is the man *what* did it.	That is the man *who* did it.

IV.

The following is a list of pairs of words which are often confused with each other.

affect (influence)	effect (bring about)
apparent (seeming)	manifest (evident)
but	than
compliment (complimentary speech)	complement (completion)
counsel (advice)	council (body of councillors)
can (is able)	may (is permitted)
continual (frequent)	continuous (without a break)
centre (middle point)	middle (middle line, midst)
couple (two)	pair (two that match)
dying (participle of die)	dyeing (participle of dye)

enjoy	suffer from, have
flown (participle of fly)	flowed (participle of flow)
formally (in a formal manner)	formerly (at a former time)
farther (comparative of far)	further (comparative of forth)
half	part
illusion (delusive appearance)	allusion (a reference)
less (not so much)	fewer (not so many)
plenty (denotes quantity)	many (denotes number)
principal (chief)	principle (rule of action)
stationary (at a standstill)	stationery (writing materials)
practice (the noun)	practise (the verb)
want (=desire)	need=(require) / lack

COMMON ERRORS.	CORRECTED FORMS.
I *enjoy* very bad health.	I *have* very bad health.
The weather *effects* my spirits.	The weather *affects* my spirits.
He parts his hair down the *centre*.	He parts his hair down the *middle*.
I was *formally* his housekeeper.	I was *formerly* his housekeeper.
He made an *illusion* to the fact.	He made an *allusion* to the fact.
I no sooner went out *but* it began to rain.	I no sooner went out *than* it began to rain.
You don't *want* to be too particular.	You *need* not be too particular.
Give me the smaller *half*.	Give me the smaller *part*.
That verb *wants* a *compliment*.	That verb *needs* a *complement*.
Can John come for a walk with me ?	*May* John come for a walk with me ?

SLANG WORDS AND PHRASES.

There are certain forms of expression which, though often used, are open to objection on account of their inelegance or vulgarity. For these reasons slang words, and words used in a slang sense, are generally speaking to be avoided. No hard and fast rule can be laid down, as it is largely a question of good taste, but a few examples may be given as specimens :—

Words used in a slang sense.

Rather. " Did you enjoy your holidays ? " Rather.
Rough. " That was rough on you."
Mighty. " You are mighty particular."
Screw. " My screw was raised last year."
Invite. " Did you get an invite to the Smiths' ball ? "

Slang phrases.

That will suit you *down to the ground.*
They were dressed *up to the nines.*
That *takes the cake.*
I was very angry *I promise you.*
It will *just serve you out.*
How will that *do* you ?
They *do* you very well at that hotel.
You *just* wait and see.
How *awfully* nice.

SIMPLICITY OF LANGUAGE.

In language, as well as in dress and behaviour, simplicity is a mark of good breeding. People who are half-educated often show a marked tendency to use grand words and pompous language. They also introduce foreign phrases into their conversation, often with disastrous results, owing to their imperfect knowledge of the language from which they quote.

Mistakes of language are excusable when they proceed from pure ignorance, but they are too often the result of an affected desire to impress others with a sense of the speaker's " superior " learning and social standing.

No doubt the subject of conversation sometimes requires the use of unfamiliar words, but as a rule the most homely words are the most vivid and graphic that we can employ. In illustration of this remark, let us compare Dr. Johnson's account of an incident in the Highlands written for the public eye and his account of the same incident in a private letter to a friend : (1) " Out of one of the beds on which we were to repose started up at our entrance a man black as a Cyclops from his forge." (2) " On our entering the room a man as black as a tinker bounced out of one of the beds on which we were to lie."

Caution.—Never use grand words where simple words will express your meaning equally well, since to do so is as great an offence against good taste as the wearing of a fine dress on an unsuitable occasion.

COMMON ERRORS.	CORRECTED FORMS.
I was just *commencing* to speak when you came in.	I was just *beginning* to speak when you came in.
Permit me to *assist* you to some tea.	Let me give you some tea.
At that moment the *missive* arrived which broke up our *festive assembly*.	At that moment the *note* arrived which broke up our *merry party*.
I *presume* you *allude to* me.	I *suppose* you *mean* me.
May I have the *felicity* of congratulating you ?	May I have the *pleasure* of congratulating you ?

PUNCTUATION.

If the meaning of a passage is to be clear, it must not only be correctly expressed, but the right words must be emphasized, and the *pauses* must occur in the proper places. In a written or printed passage these pauses are indicated by marks of punctuation or *stops*.

(*a*) **The Comma** (,) indicates a slight pause, and is used

(1) between short co-ordinate sentences, e.g.—
" Men may come, and men may go, but I go on for ever." *The Brook—Tennyson.*

(2) between the different clauses of a complex sentence, e.g.—
" I stood on the bridge at midnight,
As the clocks were striking the hour."
The Bridge—Longfellow.

(3) between words and phrases in apposition, e.g.—
Hereward, the last of the English, was a mighty man.

(4) between the different words constituting a list or enumeration, e.g.—
She was wise, witty, and generous.
Tea, sugar, and coffee are used in large quantities.

N.B.—A passage included between *two commas* is more or less parenthetical in character, and may often be removed without affecting the construction of the sentence. If its parenthetical character is to be emphasized, brackets should take the place of commas ; e.g.—
Elizabeth, Queen of England, was a great ruler.
Elizabeth (so the story goes) gave a ring to Essex.

(5) Occasionally a comma is used to indicate the omission of a word, e.g.—
" To err is human ; to forgive, divine."

(*b*) **The Semi-colon** (;) indicates a longer pause than the comma, and is used to separate long co-ordinate sentences ; e.g.—
" From sunrise unto sunset
All earth shall hear thy fame ;
A glorious city thou shalt build
And name it by thy name."
The Lay of Horatius—Macaulay.

(*c*) **The Colon** (:) indicates a still longer pause, and is used

(1) between the different parts of a paragraph where they are to be slightly connected, whereas a full stop would entirely disconnect them e.g.—

"O happy living things! no tongue
Their beauty might declare:
A spring of love gushed from my heart,
And I blessed them unaware."
The Ancient Mariner—Coleridge.

(2) It is also used before enumerations; e.g.—
The regiments in action were as follows: The Scots Greys, the Irish Fusiliers, etc.

(3) It is also used to introduce a quotation; e.g.—
And a verse of a Lapland song
Is haunting my memory still:
"A boy's will is the wind's will,
And the thoughts of youth are long long thoughts."
My Lost Youth—Longfellow.

(*d*) **The Period or Full Stop** (.) indicates that the sentence is complete; e.g.—
"When the pie was opened,
The birds began to sing."
It also marks abbreviated forms, as for instance,—
e.g. (exempli gratia=for the sake of example).
i.e. (id est=that is.)

(*e*) **The Mark of Interrogation** (?) is used instead of a full stop if the sentence takes the form of a *direct* question; e.g.—
"Was not that a dainty dish
To set before the king?"

(*f*) **The Mark of Exclamation** (!), as its name implies, is used after Interjections and exclamatory phrases or sentences, also after the Nominative of Address, e.g.—
"Hark!" she said, "I hear a rushing . . ."
"No, my child!" said old Nokomis,
"'Tis the night-wind in the pine-trees!"
Hiawatha—Longfellow.

(*g*) **Inverted Commas** (" ") are used to enclose a quotation, e.g.—
"Try not the pass," the old man said.

An amusing lesson on the importance of putting the stops in the right place is given in our first English Comedy, *Ralph Roister Doister*, written by Nicholas Udal, the Head Master of Eton, for his boys to act. In this play a love-letter is quite spoiled, and all its compliments turned into insults owing to the reader pausing at the wrong places. This is the letter:—

"Now by these presents I do you advertise
That I am minded to marry you in no wise.
For your goods and substance I could be content
To take you as ye are. If ye mind to be my wife
Ye shall be assured for the time of my life
I will keep ye right well from good raiment and fare
Ye shall not be kept but in sorrow and care.
Ye shall in no wise live at your own liberty;
Do and say what ye lust, ye shall never please me;
But when ye are merry, I will be all sad;
When ye are sorry I will be very glad;
When ye seek your heart's ease I will be unkind;
At no time in me shall ye much gentleness find."
Ralph Roister Doister. *Udal* (1534-1541).

3. COMMON ERRORS IN PRONUNCIATION.

Errors in pronunciation sometimes arise from lack of knowledge, but they are more often due to carelessness. With a view to avoiding such errors, from whichever cause they proceed, we may classify them as follows:—

(*a*) Incorrect accentuation; e.g., formid'able for for'midable, despic'able for des'picable.

(*b*) The sounding of letters which ought to be mute; e.g., the letter t in often, epistle, apostle.

(*c*) Incorrect pronunciation of words which are not pronounced as they are spelt; e.g., figure for figgur.

(*d*) The sounding of final e, or es, as a distinct syllable, when it should be mute, and vice-versa; for instance,

animal-cu-le for animal-cule
epi-tome for epit-o-me
anti-strophe for antis-tro-phe
anti-podes for antip-o-des
ration-ale for ration-a-le

(*e*) Mutilation of a word owing to ignorance of its form, as sparrowgrass for asparagus.

Errors due to want of care.

(*a*) Various forms of elision, such as—
The dropping of vowel sounds at the beginning, middle, or end of a word, for example—
The dropping of the initial vowel, as 'leven for eleven.
The dropping of a middle vowel, as histry for history, jography for geography, suprintend for superintend, sovrin for sovereign, vilet for violet, famly for family.
The dropping or clipping of the final consonant, as writin, readin, hopin, fearin, and the dropping of a consonant in the body of a word, as Febuary for February, artic for arctic.

(*b*) The insertion or addition of letters; e.g., substract for subtract, umberella for umbrella, sawr for saw, drawring for drawing.

(*c*) The substitution of one letter for another; e.g., nothink and somethink for nothing and something.

(*d*) The corruption of vowel sounds:
ai for a, as laidy, paiper, for lady, paper.
i or e for u, as jist or jest for just.
e for o, as perlice for police.

(*e*) A curious form of error has arisen in some cases from the n of the distinguishing adjective *an* being detached from it and added to the following noun; as a nour for an hour; a napple for an apple. In some instances this has led to a permanent change in the form of the word, e.g., "a newt" was originally an ewt; "for the nonce" was originally for then once.
Some words, on the contrary, have lost an initial n, owing to the n being detached from the noun and attached to the distinguishing adjective *a*, e.g., an orange for a narenge, an apron for a napron, an adder for a nadder.

(*f*) The incorrect insertion or dropping of the aspirate. This is a matter of vital importance, and is fully treated below.

Aids to Correct Pronunciation. Pronunciation is to a great extent a question of usage, and many words are even now in a state of transition. This accounts for the fact that certain words admit of two pronunciations, such as lab'oratory and labor'atory. It should also be noticed that some words are mispronounced owing to the speaker's clinging to an old pronunciation after it has become obsolete, such as contra'ry for con'trary. The following rules for pronouncing certain classes of words, may be found helpful:—

(*a*) A word ending in one of the following terminations is accented on the syllable immediately preceding it:—
—acal demoni'acal, mani'acal, Zodi'acal.
—cian politi'cian, physi'cian.
—cracy democ'racy, aristoc'racy, plutoc'racy.
—ferous aurif'erous, pestif'erous.
—gony cosmog'ony, theog'ony.
—grapher photog'rapher, geog'rapher, lithog'rapher.
—logy biol'ogy, geol'ogy, astrol'ogy, theol'ogy.
—meter perim'eter, gasom'eter, photom'eter, barom'eter.
—nomy astron'omy, econ'omy.
—pathy homœop'athy, allop'athy, telep'athy.
—tion vaca'tion, inflamma'tion, authorisa'tion, constitu'tion.

(*b*) We must carefully avoid the tendency to substitute *i* for *a* in the following terminations, -age, -ain, -ate.

We must say savage, captain, moderate, and not savige, captin, moderit.

e for *a* in the terminations -ar, -ary. We must say regular, singular, necessary, and not reguler, singuler, necessery.

i for *e* in the endings -ed, -en, -et, -est, -ject, -stead, -ness. We must say wicked, sudden, forest, pocket, subject, object, instead, governess, and not wickid, suddin, forist, pockit, subjict, objict, instid, governiss.

e for *o* in the termination -or. We must say actor, auditor, governor, author, and not acter, auditer, governer, auther.

u for *e* or *i* or *o* in the endings -el, -il, -ent, -lent, -on, -om. We must say model, fossil, violent, present, and not modul, fossul, violunt, presunt.

(c) We must be careful not to drop—

Vowels, e.g., p'raps, 'leven, Latn, jography, histry, for—perhaps, eleven, Latin, geography, history.

Consonants, e.g., hanful, writin, readin, fith, twelth, nex, jus, for han*d*ful, writin*g*, readin*g*, fi*f*th, twel*f*th, nex*t*, jus*t*.

THE ASPIRATE.

As some people find the letter *h* a source of difficulty, a few remarks on the subject may be of service, especially since the correct use of the aspirate is universally regarded as an essential mark of education and good breeding.

1. Remember that the *h* is mute, or silent, at the beginning of the following words: *h*our, *h*onesty, *h*onour, *h*eir. It follows that the initial *h* in words derived from the above will also be mute, as for instance: *h*eiress, *h*onourable, *h*ourly, and so on.

2. Be careful always to sound the aspirate in any word which begins with h, unless it is one of the words included in the preceding list. At one time it was considered correct to drop the h in "herb" and "humble," but it is not so now. Especial care is necessary to pronounce *he*, *him*, and *her* correctly, for the tendency is either to drop the aspirate or to emphasize the pronoun—a word that seldom requires emphasis. It is also necessary to guard against the omission of *h* when the accent does not fall on the syllable beginning with *h*; e.g. "hotel," "vehement."

3. Never aspirate a word which does not begin with *h*, since to put an *h* in the wrong place is an even greater solecism than to drop an *h* which ought to be sounded. For instance, the pronunciation of *ever* as *hever*, *ours* as *hours*, or *enterprise* as *henterprise*, would at once stamp a man as uneducated or ill-bred.

4. Be careful to sound the *h* when it occurs in the middle of a word. This warning is especially needed, as many people who would never drop an initial *h* are not so careful to sound it when it occurs in the middle of a word; for example, in per*h*aps, in*h*abit, in*h*eritance, pro*h*ibition. The aspirate should be slightly sounded in such words as *which*, *where*, *what*.

N.B.—Ludicrous mistakes are apt to be made through carelessness about the aspirate when, as sometimes happens, there are two words which are alike in sound, except for the aspirate, such as *eat* and *heat*, *air* and *hair*, *ear* and *hear*.

The following well-known and ingenious lines on the letter *h* may appropriately be quoted here:—

"'Twas whispered in *h*eaven, 'twas muttered in *h*ell,
And ec*h*o caught faintly the sound as it fell;
'Twas allotted to man with his earliest breat*h*,
Attends at his birt*h* and awaits him in deat*h*;
It presides o'er his *h*appiness, *h*abits, and *h*ealth,
Is the prop of his *h*ouse and the end of his weal*th*.
In the *h*eaps of the miser 'tis *h*oarded with care,
But is sure to be lost on his prodigal *h*eir.
Without it the soldier and seaman may roam,
But woe to the wretch who expels it from *h*ome.
'Twill not soften the *h*eart, and though deaf to the ear.
'Twill make it acutely and instantly *h*ear.
But in s*h*ade let it rest, like a delicate flower—
Oh, breathe on it softly—it dies in an *h*our."

COMMON ERRORS.	CORRECTED FORMS.
You must *eat* that iron at once.	You must *heat* that iron at once.
I prefer to *heat* cold salmon.	I prefer to *eat* cold salmon.
Those are my three favourite *hairs*.	Those are my three favourite *airs*.
Her *air* is curly.	Her *hair* is curly.
Her *earing* is not good.	Her *hearing* is not good.
Tell shot the apple with his *harrow*.	Tell shot the apple with his *arrow*.
He is a deceitful and *art-less* man.	He is a deceitful and *heartless* man.
The *arrow* is a useful farm implement.	The *harrow* is a useful farm implement.
He is *ale* and *earty* because he drinks no *hale*.	He is *hale* and *hearty* because he drinks no *ale*.
The boots which were stolen were *hall* marked.	The boots which were stolen were *all* marked.
The pilot stood by the *elm*.	The pilot stood by the *helm*.
It is better to bear the woes we have than fly to *hills* unknown.	It is better to bear the woes we have than fly to *ills* unknown.
She is a simple, *heartless* maid.	She is a simple, *artless* maid.

Wood, a forest; timber.
Would, past tense of "will."

Yoke, a bond.
Yolk, part of an egg.

You, the person addressed.
Yew, an evergreen tree.
Ewe, a female sheep.

SYNONYMS.

AN AID TO THE SELECTION OF THE RIGHT WORD.

A FEW words on the use of the following list of synonyms may be of service, as a certain amount of caution must be exercised in the choice of such equivalents. Synonyms are frequently used in order to avoid the repetition of the same word, and also for reasons connected with metre and euphony. It must, however, be remembered, that few words are identically alike in meaning, and these slight shades of difference often make one particular word more appropriate than any of its synonyms in a given passage.

Take for example *separate*, *sever*, *part*, *divide*, and note the effect of substituting in the place of the word used any one of its synonyms:—

(*a*) He used a sieve for *separating* the flour from the bran.
(*b*) "Their graves are *severed* far and wide."
(*c*) She *parts* her hair down the middle.
(*d*) *Divide* the cake into six parts.

One other caution is necessary, namely, words that are synonymous with the same word are not necessarily synonymous with one another:—

Ex.: wanting = lacking. "He is *wanting* in ability."
= desiring. "He is always *wanting* something."

Yet *lacking* and *desiring* have no connexion.

Abandon, relinquish, desert, forsake.
Abandoned, reprobate, depraved, corrupt.
Abashed, humiliated, disconcerted, confused.
Abate, decrease, subside; reduce.
Abbreviate, shorten, curtail, abridge.
Abhorrence, loathing, hatred, detestation, aversion.

Prayer, supplication, entreaty, petition.
Preamble, preface, prelude.
Precarious, hazardous, risky, uncertain.
Precise, exact, definite; prim, formal.
Preclude, hinder, debar.
Precursor, forerunner, herald.
Predict, foretell, forecast, prophesy.
Predilection, preference, fancy, inclination.
Predominant, ruling, prevailing.
Pre-eminent, distinguished, illustrious.
Preface, introduction, prelude, preamble.
Preferment, promotion, advancement.
Prejudice, bias, aversion, prepossession; detriment.
Prejudicial, injurious, disadvantageous, harmful.
Prepossessing, charming, attractive.
Preposterous, monstrous, unreasonable, absurd.
Prerogative, privilege.
Presage, portent, omen, augury, prognostic.
Prescience, foreknowledge, foresight.
Presentiment, foreboding, anticipation.
Preserve, save, safeguard, maintain, uphold.
Pressing, urgent, imperative.
Presumption, effrontery, assurance; assumption.
Pretence, feigning, simulation; plea, excuse.
Prevalent, rife, universal, wide-spread.
Prevarication, evasion, quibble, fib.
Prevent, hinder, debar.
Previous, preceding, former, prior.
Price, cost, value, worth.
Pride, haughtiness, arrogance.
Prim, stiff, precise, formal.
Primitive, ancient, early, original.
Principal, chief, leading, predominant.
Principle, rule, system, tenet.
Privation, want, hardship, destitution.
Probability, likelihood, prospect.
Probity, uprightness, integrity, rectitude.
Proclaim, publish, announce, declare.
Procure, secure, obtain, get.
Prodigious, marvellous, monstrous, vast.
Prodigy, wonder, marvel, phenomenon.
Product, result, outcome, fruits.
Profane, blasphemous, sacrilegious.
Profession, calling, vocation; avowal.
Proficiency, skill, dexterity.
Profit, gain, advantage.
Profound, deep, abstruse.
Profuse, copious, abundant; lavish, extravagant.
Progeny, offspring, descendants.
Prohibit, debar, hinder, prevent; forbid.
Project, plan, device, scheme.
Prolix, verbose, wordy, long-winded.
Prolong, extend, protract, lengthen.
Prominent, leading, important, striking.
Promise, vouch, undertake; pledge.
Promote, further, aid; raise, exalt.
Prompt, ready, speedy.
Pronounce, declare, assert.
Propagate, spread, disseminate, promulgate.
Proper, fit, suitable, becoming, correct.
Property, goods, possessions, belongings.
Proposal, suggestion, offer, proposition.
Propriety, seemliness, fitness.
Prosaic, dull, humdrum, matter-of-fact.
Proselyte, convert.
Prospect, view; outlook, likelihood.
Protect, guard, defend, safeguard.
Protest, object, remonstrate.
Proverb, saw, saying, maxim; by-word.
Provide, supply, furnish.
Province, sphere, area.
Provoke, vex, irritate, rouse.
Proximity, nearness, vicinity, neighbourhood.
Prudent, wise, discreet, circumspect.
Puerile, childish, silly, trivial.
Pure, undiluted, unmixed; undefiled, spotless.
Purport, tenour, drift, import, gist.
Purpose, intention, plan, design.
Pursue, chase, hunt; prosecute, carry on.
Push, thrust, drive, press.
Putrefy, decay, moulder, rot.
Puzzle, perplex, bewilder; riddle, enigma.

Quail, shrink, falter.
Quake, tremble, shake, shudder.
Qualified, adapted, fitted, calculated.
Quality, kind, degree, nature.
Quantity, amount, measure, number.
Quarrel, dispute, dissension; wrangle.
Queer, strange, odd, eccentric.
Query, question, doubt.
Question, enquiry, investigation, doubt; matter, subject.
Quibble, evasion, prevarication.
Quick, swift, speedy, rapid; living.
Quiescence, repose, inaction.
Quiet, silent, noiseless; calm, tranquil.
Quit, leave, abandon, forsake.
Quite, altogether, wholly, absolutely.
Quote, cite, repeat.

Rabid, raving, furious, raging.
Radiant, shining, beaming, brilliant.
Radical, thorough, complete, absolute.
Rage, fury, frenzy.
Raiment, apparel, clothing, dress, garb.
Rancour, ill-will, malice, spite.
Rapacious, greedy, grasping, ravenous.
Rapture, ecstasy, bliss, transport.
Rascal, scoundrel, rogue, knave.
Rash, reckless, heedless, imprudent.
Ratify, confirm.
Rationable, reasonable, sane, logical.
Ravage, devastate, plunder, waste.
Reach, stretch, extend; attain.
Ready, prepared; alert; prone.
Real, genuine, sincere; actual.
Reason, cause, motive, purpose.
Rebound, recoil.
Rebuke, reprove, chide.
Reciprocal, mutual.
Recognize, acknowledge, admit; identify.
Recollect, recall, remember.
Recommend, advise, counsel; commend.
Recompense, reward, payment, guerdon.
Recondite, abstruse, far-fetched, deep.
Redemption, salvation, deliverance, rescue.
Redundant, pleonastic, superfluous.
Reflection, meditation, thought; image.
Reform, amend, improve, reconstitute.
Refractory, recalcitrant, perverse, restive.
Refute, confute, disprove.
Regard, consider; view; esteem.
Region, district, quarter.
Regular, punctual, methodical, normal.
Regulation, rule, ordinance.
Rejoinder, answer, reply, retort.
Related, connected, akin, germane.
Relax, slacken, intermit, abate.
Relevant, pertinent.
Reliance, trust, confidence.
Religion, creed, belief; piety.
Relinquish, abandon, resign, forego.
Remarkable, striking, noticeable, extraordinary.
Remunerate, recompense, reward.
Renegade, apostate.
Renounce, abjure, forego, resign.
Renown, fame, glory.
Repartee, reply, retort.
Repeal, rescind, revoke, annul.
Repine, murmur, complain.
Report, rumour, hearsay.
Repose, rest, tranquility.
Repress, suppress, check, stifle.
Repugnant, abhorrent, distasteful, repulsive.
Resentment, indignation, umbrage, dudgeon.
Resignation, submission, acquiescence.
Resist, oppose, withstand.
Resolute, determined, firm.
Resound, re-echo, reverberate, ring.
Respect, detail, particular; esteem.
Result, issue, outcome, consequence.
Retard, hinder, delay, impede.
Reticent, reserved, uncommunicative.
Revulsion, recoil, shrinking, abhorrence.
Ridicule, mockery, jeering, banter.
Rigid, stiff, unbending.
Rite, form, ceremony.
Romantic, imaginative, sentimental, fanciful.
Rudiment, element, germ, embryo.
Rule, authority; ordinance; practice.
Ruminate, ponder, reflect.
Rupture, breach.
Rustic, rural, countrified.
Ruthless, relentless, pitiless.

Sanctify, hallow, purify.
Sanguine, hopeful, optimistic.
Sarcastic, satirical, caustic, ironical.
Satisfaction, reparation, atonement; contentment.
Savage, inhuman, brutal, fierce.
Saw, saying, proverb, adage.
Scheme, device, design, plan.
Scoff, mock, jeer, deride.
Scope, sphere, range.
Scorn, despise, contemn, disdain.
Scoundrel, rascal, villain, knave.
Security, safety; bond, guarantee.
Sediment, dregs, lees.
Sedition, revolt, mutiny, conspiracy.
Seemly, becoming, fitting, meet.
Self-willed, obstinate, wilful, headstrong.
Semblance, appearance, show.
Sentiment, feeling, romance; opinion.
Separate, part, divide, sever.
Sequel, continuation, issue, outcome.
Serene, tranquil, calm, unruffled.
Service, help, assistance; attendance.
Servile, obsequious, cringing, fawning.
Shabby, dingy, faded; mean.
Sham, counterfeit, pretence; spurious.
Shame, disgrace, humiliation, dishonour.
Shape, fashion, mould; form.
Sharp, acute, intelligent; cutting.
Shed, drop; diffuse, emit.
Shift, expedient; transfer, change.
Show, manifest, exhibit; ostentation.
Shrewd, acute, sharp, discerning.
Shun, avoid, evade.
Side, party, faction; hand.
Sign, symbol, token, indication.
Stipulation, bargain, condition, proviso.
Store, stock, fund, supply.
Strange, unknown; unusual, inexplicable.
Stratagem, artifice, snare, plot.
Stretch, extend, reach; expand.
Strict, stringent, severe.
Stricture, blame, condemnation, censure.
Strife, dissension, contention, warfare.
Strive, endeavour, struggle, labour.
Strong, vigorous, sturdy; powerful; robust; forcible; impregnable.
Structure, fabric, edifice, building.
Struggle, effort, strife, contest.
Stubborn, obstinate, headstrong, self-willed.
Style, fashion, mode, manner.
Subdue, conquer, repress, check.
Subject, liable, prone; theme, topic; question, matter.
Subsequent, following, after, later.
Substance, matter, material.
Substitute, deputy, proxy.
Subterfuge, evasion, quibble.
Subtle, cunning.
Succeed, prosper, thrive; follow.
Suffer, endure, bear, tolerate; permit.

Suitable, fit, appropriate, becoming.
Sullen, gloomy, lowering, overcast.
Sumptuous, costly, expensive, luxurious.
Superb, glorious, magnificent, splendid.
Supercilious, disdainful, haughty, contemptuous.
Superintend, manage, supervise, control.
Supine, slothful, inactive, inert.
Supplicate, entreat, pray, beseech.
Support, maintenance, aid, help.
Suppose, imagine, conjecture; assume.
Surety, bail, guarantee, security.
Significant, expressive, suggestive, indicative.
Similitude, likeness, comparison, figure.
Simple, plain, easy; artless.
Singular, strange, unique, peculiar.
Sinister, ill-omened, inauspicious, malign.
Skilful, practised, expert, adroit.
Snare, toil, trap, stratagem.
Sneering, scoffing, jeering, supercilious.
Solution, explanation, key.
Sorcerer, wizard, enchanter, magician.
Sovereign, supreme, absolute, regal.
Spectator, onlooker, observer, witness.
Speculation, theory, supposition.
Sphere, range, compass; rank.
Spiritual, sacred, divine; immaterial.
Spite, malice, ill-will, venom.
Splendid, glorious, magnificent, grand.
Spoil, plunder, rob.
Spot, place; stain, mark.
Sprightly, vivacious, nimble, active.
Spring, fountain, source, origin.
Sprite, elf, spirit, fairy.
Spruce, trim, neat, smart.
Spurious, counterfeit.
Squalid, grimy, sordid, dirty.
Squander, waste, lavish, dissipate.
Stable, firm, constant, unchanging.
Staid, sedate, demure, sober.
State, assert, declare; condition, situation; ceremony, pomp.
Station, rank, position, standing.
Staunch, steadfast, true, reliable.
Stay, stop, remain; standstill; support, prop.
Stiff, rigid, starched, unbending.
Stingy, mean, parsimonious, grudging.
Surmise, conjecture, guess, suspect.
Surplus, balance, excess, superabundance.
Surprise, astonishment, amazement.
Surreptitious, underhand, stealthy.
Susceptible, sensitive, impressionable.
Suspicion, mistrust, jealousy; surmise.
Swear, affirm, declare; curse.
Swindle, fleece, defraud, cheat.
Sympathy, fellow-feeling, accord; compassion.
Symptom, sign, indication, token.
Synonymous, identical, equivalent.
Synopsis, epitome, abstract, summary.
System, method, arrangement, scheme.

Taciturn, silent, reserved, uncommunicative.
Tally, correspond, agree, harmonize.
Tardy, dilatory, late, slow.
Talents, gifts, powers, ability.
Temerity, audacity, daring, assurance.
Temperate, moderate, sober.
Tempest, hurricane, gale, storm.
Tempt, allure, entice.
Tenacity, persistency, pertinacity, determination.
Tend, foster, nurture, serve.
Tendency, proneness, proclivity, bias.
Tender, proffer, offer.
Tenets, views, doctrines, opinions.
Test, proof, trial; touchstone, standard.
Testimony, evidence, witness.
Thought, reflection, idea.
Threat, menace.
Thrift, economy, frugality.
Thrive, prosper, succeed, flourish.
Tidings, news, word, report.
Tint, hue, shade, colour.
Tired, weary, fatigued, exhausted.
Title, appellation.
Tolerable, bearable, endurable.
Toll, tax, duty, impost.
Tomb, grave, sepulchre.
Torture, agony, anguish.
Total, entire, whole; sum.
Totter, reel, waver, stagger.
Trace, track, discern.
Tract, region, expanse, district.
Trade, commerce, business, traffic.
Train, suite, rear; following.
Trammel, hinder, impede, clog.
Transcend, surpass, excel.
Transformation, change, transmutation.
Transgress, trespass, overstep; sin, disregard.
Transport, rapture, ecstasy.
Trap, snare, stratagem.
Treachery, perfidy, treason, betrayal.
Treaty, compact, understanding.
Tremble, quiver, shudder, shake.
Tremendous, vast, overpowering, immense.
Trepidation, fear, trembling, misgiving.
Tribute, duty, tax; testimony.
Trick, wile, artifice; mannerism.
Triumph, victory, exultation, elation.
Trivial, trifling, insignificant, puerile.
Troop, band, company, flock.
Tumult, uproar, confusion.
Type, representative, pattern; symbol.
Tyrannical, despotic, overbearing, domineering.

Ulterior, behind, underlying.
Ultimate, final.
Umbrage, offence, dudgeon.
Umpire, arbitrator, referee.
Unanimity, accord, consent.
Undertaking, attempt, task.
Ungracious, unaccommodating, unbending.
Uniform, regular, even.
Unite, combine, connect; join.
Unity, harmony, concord, amity.
Unstable, inconstant, fickle, changeable.
Upbraid, chide, rebuke.
Uphold, maintain, support.
Uprightness, integrity, probity, rectitude.
Uproot, extirpate, eradicate.
Upshot, outcome, issue.
Urbane, polished, courtly, suave.
Urgent, pressing, imperative.
Usage, fashion, custom, practice.
Use, advantage, profit; exercise; accustom.
Usual, customary, ordinary, regular.

Vacant, empty, void, unoccupied.
Vagabond, vagrant, tramp.
Vagary, whim, caprice.
Vague, indefinite, undefined; dim.
Valid, weighty, strong, cogent.
Value, price, cost, worth.
Vanquish, overcome, conquer.
Vapid, insipid, flat, savourless.
Variety, diversity.
Vaunt, boast, brag.
Vehement, impetuous, eager.
Velocity, speed, rapidity; rate.
Vengeance, retaliation, revenge.
Venomous, poisonous, spiteful, virulent.
Venture, hazard, risk, dare.
Venturesome, daring, hardy.
Veracious, truthful.
Verbose, wordy, prolix.
Verdict, sentence, judgment, decision.
Verge, edge.
Versed, practised, skilled, experienced.
Vicious, spiteful, bad-tempered.
Vindicate, justify; exonerate, clear.
Virago, termagant, vixen.
Virile, manly, robust, strong.
Virulent, spiteful, malignant.
Vital, living; essential.
Vocation, calling, mission.
Voluntary, spontaneous, willing.
Volunteer, tender, proffer, offer.
Voluptuous, luxurious, pleasure-loving.
Voracious, ravenous, greedy, gluttonous.

Waive, forego, resign, yield.
Wan, pale, ghostly.
Wander, roam, rove; stray.
Wane, decrease, diminish, lessen.
Want, lack; poverty, need.
Wanton, heedless, licentious.
Warlike, martial, pugnacious.
Warrant, authority, justification; guarantee.
Wary, guarded, circumspect, discreet.
Waste, squander; devastate; pine.
Waver, falter, hesitate, vacillate.
Wayward, wilful, perverse, headstrong.
Wean, detach, alienate.
Wed, marry, espouse; unite.
Whimsical, capricious, fantastic, fanciful.
Winning, charming, lovable.
Witchcraft, sorcery, magic, enchantment.
Withstand, resist, oppose, gainsay.
Witness, testimony, evidence.
Wonder, astonishment, amazement, surprise.
Wont, custom, habit.
Workman, artisan.
World, earth, universe, humanity.
Wrangle, quarrel, dispute, contend.
Wrath, ire, rage, anger.
Wrench, twist; wrest, extort.
Wrong, mistaken, incorrect, unjustifiable.

Yearly, annual.
Yearn, crave, long.
Yield, succumb; submit, surrender; concede; produce.
Yoke, couple, unite, harness.
Youthful, juvenile.

Zeal, ardour, eagerness, enthusiasm.
Zealot, devotee, fanatic.
Zenith, summit, height.
Zero, cipher, nought.
Zest, ardour, zeal.

THE DERIVATION OF ENGLISH WORDS.

THE English language as spoken to-day differs in many respects from the language spoken by our forefathers when they first settled in Britain. One important difference is that Anglo-Saxon, as the language was then called, was a pure language, that is, it contained no foreign elements, whereas modern English has a vocabulary enriched from many sources. The history of a nation is embedded in its language, and those who have never realized this would be surprised and interested to discover what light the careful study of a language throws upon the history and upon the character of the race by which it is spoken.

After the "coming of the English" to what was then known as Britain, they came in contact successively with the Kelts (the original inhabitants), the Danes, and the Normans. Of this we find unmistakable traces in the vocabulary of our language. The Norman conquerors tried in vain to force their language upon the unwilling Saxons, whose attitude towards their hated foes is skilfully represented by Scott in "Ivanhoe" in the person of Wamba the jester, who bitterly points out to Gurth the Swineherd that *swine* and *oxen* and *calves* are known by their Saxon names while they are in the charge of Saxon slaves and bondmen, but are "converted into Normans," as *pork* and *beef* and *veal* "when they arrive before the worshipful jaws that are destined to consume them."

But, while rejecting the language as a whole, in the course of time they admitted certain words to supply deficiencies in the existing vocabulary, Norman French being much richer than English in terms connected with poetry and chivalry. Roughly speaking, we may say that the simplest and most homely words, the names of the commonest sights and sounds and feelings of every-day life, the names of the closest family ties, in fact all the most vital elements of the language have remained pure

Saxon. Witness such words as hope, love, fear, sorrow, father, mother, friend, sun and moon, hail and rain, sea and land, day and night, bread, milk, plough, harrow. But while English remained the language of the cottage, Norman French became the language of the castle, the court, the nobility and the educated classes generally. Consequently we find that words connected with *education, culture, refinement,* and *luxury,* as well as terms denoting *power, authority* and *dignity* are of French or Latin origin, as these very words themselves testify.

We owe to the Normans many words of Latin origin, but coming to us through the medium of another language those words have been considerably modified both in form and meaning. At the "Revival of Learning," however, there was a great influx of Latin words derived directly from the original source, owing to the interest then kindled in the Greek and Latin authors. This accounts for the curious fact that there exist in our language many pairs of words or "doublets" derived from the same Latin root, but differing from one another in form and meaning, one having come to us direct from the Latin, the other through the medium of French. The latter is usually less harsh in sound and often more poetical or metaphorical in meaning.

A few instances will effectively illustrate this.

LATIN WORD.	ENGLISH EQUIVALENTS.	
	DIRECT FROM LATIN.	THROUGH THE MEDIUM OF FRENCH.
amicus	amicable	amiable.
legalis	legal	loyal.
regalis	regal	royal.
fidelitas	fidelity	fealty.
adamantis	adamant	diamond.
populus	populace	people.
magister	magistrate	master.
captivus	captive	caitiff.
florem	floral	flower.
potionis	potion	poison.
pungentis	pungent	poignant.
separare	separate	sever.
monasterium	monastery	minster.

A large number of English words are composed of three elements: (1) the body of the word (often derived from a Latin or Greek root); (2) a syllable at the beginning of the word, called a prefix; and (3) a syllable at the end, called a suffix. Both prefix and suffix do not, of course, always occur in the same word, but one or other or both appear in a large proportion of English words, in the formation of which prefixes, especially, play an important part.

By means of prefixes many words may be formed containing the same root, as import, export, support, transport. It is important to know the meaning of each prefix in order to understand the effect it will have on the words of which it forms a part; for instance, the negative force of the Latin prefix *in* before adjectives, as independent, indefinite, indistinct.

A prefix often undergoes some little change of form to enable it to assimilate better with the word to which it is joined; and usually this change consists in the final consonant of the prefix changing into the initial consonant of the word with which it is combined. Thus, in the words immaterial, irresponsible, illimitable, the negative "in" is changed into *im, ir, il* respectively. In the list of examples given below will be found many instances of such "assimilation of consonants."

GREEK PREFIXES.

A, an, *not;* as atheist, one who does not believe in God; anæsthetic, causing absence of sensation; anæmia, lack of blood, poverty of blood.

Amphi, *both, round about;* as amphibious, living both on land and in water; amphitheatre, a circular building with seats all round.

Ana, *up;* as analyse, to break up.

Anti, *against, opposite to;* as antarctic, opposite to the arctic region; antagonist, one who contends against another.

Apo, *away, from;* as apostle, one sent away, or sent forth.

Arch, archi, *chief, first;* as archbishop, the chief bishop; archetype, the primitive type.

Auto, *self;* as automobile, self-moving; autonomy, self-government; automatic, self-acting.

Dia, *through, across;* as diameter, measurement across a circle; diagonal, line crossing a figure from opposite angles.

Dis or **di,** *twice;* as dissyllable, a word of two syllables; dilemma, a double difficulty.

Ec or **ex,** *out of;* as exodus, a going out; ecstasy, a standing outside oneself, rapture.

En, *in, on;* as encaustic, burnt in; enclitic, leaning on.

Epi, *on;* as epitaph, an inscription on a tomb.

Eu, *well;* as euphonious, well-sounding; euphemism, a pleasing name for an unpleasant idea.

Hemi, *half;* as hemisphere, a half-sphere.

Hyper, *beyond;* as hyperbole, a shooting beyond the mark, an exaggerated expression; hyperborean, beyond the North; hypercritical, over-critical.

Hypo, *under;* as hypocrite; hypothesis, something understood or assumed as true.

Kata, *down;* as catacomb, a subterranean burying-place.

Meta, *after;* as metaphysics, which in the writings of Aristotle came *after* Physics.

[Note.—In compounds *meta* generally denotes change, transference or transposition; e.g. metathesis—transposition of letters; metamorphosis, change of form.]

Pan, *all;* panacea, a cure for all ills; pantechnicon, a warehouse for all kinds of articles.

Para, par (1) *beside;* as parallel, side by side; (2) *against;* as paradox, a seeming contradiction.

Peri, *round;* as periphrasis, a roundabout expression; perimeter, the "measurement round," or the sum of the sides which bound a plane figure.

Pro, *before;* as prologue, a preface or introduction; prophesy, to foretell, predict.

Syn, *with;* as syntax, the putting together, or correct arrangement, of words in sentences; synagogue, a "gathering together," a Jewish church or congregation.

[Note.—*Syn* appears in a modified form in syllogism, sympathy, symphony, system.]

LATIN PREFIXES.

A or **ab,** *from or away;* as avert, to turn from; abject, cast away.

Ad, *to;* as advent, a coming to; address, to speak to.

[Note.—The *d* in *ad* often changes into the first letter of the next syllable, as in accede, affection, allow, apply, attract.]

Ante, *before;* as antediluvian, before the flood; antenatal, before birth.

Bis or **bi,** *two;* as biscuit, twice baked; bisect, cut in two.

Circum, *round;* as circumlocution, roundabout speech; circumspect, looking round, wary.

Cum, *with or together,* generally appears as *co-* or *con-;* as co-exist, to exist together, or at the same time; connect, to tie together, to join.

[Note.—Modified forms of *cum* appear in the following words: collect, compress, correlative.]

Contra, *against, opposite,* frequently appears as *counter;* as contradict, to say the opposite; controversy, a turning against, a dispute; counteract, to act against or in an opposite manner.

De, *from or down;* as detract, to draw from; depreciate, to take away the value from; descend, to go down.

Demi, *half;* as demi-semiquaver, half a semiquaver.

Dis, *in two;* [**Note.**—This prefix has a strongly separative force in most instances, as in distract, to draw apart; but in some cases it has a negative force and is equivalent to the negative prefix *un*=not, as in dissimilar, not similar.]
It is "separative" in disunite, disjoin, disassociate, disintegrate.
It is "negative" in dislike, disagree, displease, dissentient.
E or **ex,** *out, out of;* as educe, to lead or draw out; exclude, to shut out.
In, *in, into, on;* as inhabit, to dwell in; infuse, to pour into; invest, to put on.
[**Note.**—Modified forms of *in* appear in illuminate and impose.]
In, *not;* as intact, untouched, whole; infinite, not finite; independent, not dependent.
[**Note.**—Modified forms of *in* appear in illimitable, immoderate, irreproachable.]
Inter, *between;* as intervene, to come between; interpose, to place between.
Intro, *within;* as introduction, a leading within.
Male, *ill;* as malevolent, ill-wishing; malediction, an evil speech, a curse.
Ne, non, *not;* as nefarious, not lawful, wicked; nonsense, not sense; non-existent, not existent.
Pene, *almost;* as peninsula, almost an island.
Per, *through, by;* as permeate, to flow through; perambulate, to walk through; percentage, the proportion on each hundred.
Post, *after;* as postpone, to place after, to defer.
Prae, pre, *before;* as prejudice, a previous judgment; precede, to go before.
Pro, (1) *forth;* as produce, to lead forth; (2) *for, instead of;* as pronoun, for a noun.
Re, red, *back;* as recall, to call back; repay, to pay back; redeem, to buy back.
Retro, *back;* as retrograde, stepping back.
Se, *apart;* as secede, to go apart, withdraw; secure, free from care, hence, safe.
Semi, *half;* as semi-circle, a half-circle.
Sub, *under, from under;* as subdue, to bring under; subterranean, under the earth; subtract, to draw from under.
[**Note.**—Modified forms of *sub* appear in succeed, sufficient, suggest, summon, suppress, surrender, suspend.]
Super, *over, above;* as supervise, to oversee; supernatural, above what is natural.
Trans, *beyond, across;* as transfer, to carry across; transmit, to send across; transatlantic, across the Atlantic.

GREEK ROOTS.

Agon, *a contest.* Agony, antagonist.
Aisthesis, *perception.* Æsthetic, anæsthetic.
Akoloutheo, *I follow.* Acolyte, anacoluthon.
Akouo, *I hear.* Acoustics.
Akros, *the top.* Acropolis, acrostic, acrobat.
Allos, *other.* Allopathy, allotropic.
Angelos, *a messenger.* Angel, archangel, evangelist.
Anthos, *a flower.* Anther, anthology, polyanthus.
Anthropos, *a man.* Anthropology, misanthrope, philanthropy.
Archaios, *old, antique.* Archaic, archæology.
Archo, *I rule.* Monarch, oligarch, tetrarch, heptarchy.
Arithmos, *a number.* Arithmetic, logarithm.
Aster, Astron, *a star.* Asterisk, astrology, asteroid, astronomy.
Autos, *self.* Autocratic, automobile, automaton, automatic, autonomy, autopsy.
Ballo, *I throw.* Hyperbole, hyperbola, parabola.
Baros, *weight.* Barometer, baritone.
Biblion, *a book.* Bible, bibliography, bibliomaniac.
Bios, *life.* Biology, biography, amphibious.
Charis, *grace, thanks.* Eucharist.
Chloros, *green.* Chlorine, chloroform, chloral, chlorophyll, chlorosis.
Chole, *bile, anger.* Choler, cholera, melancholy.
Chrio, *I anoint.* Christ, chrism.
Chronos, *time.* Chronometer, chronology, chronic, chronicle, anachronism, synchronism.
Chrysos, *gold.* Chrysanthemum, chrysolite, chrysoprase, chrysalis.
Daktylos, *a finger.* Dactyl, pterodactyl.
Deka, *ten.* Decade, decalogue, decasyllabic, decahedron.
Demos, *people.* Demagogue, democracy.
Dendron, *a tree.* Rhododendron, dendrology, dendrite, lithodendron.
Derma, *skin.* dermatology, epidermis, hypodermic, pachydermatous, taxidermy.
Dipsa, *thirst.* Dipsomaniac.
Dokeo, *think, seem.* Dogma, orthodox, heterodox.
Drao, *I do.* Drastic, drama.
Dromos, *a race, running.* Dromedary, hippodrome.
Dynamis, *strength, force.* Dynamo, dynamics, dynamite.
Eikon, *image.* Iconoclast.
Elektron, *amber.* Electricity, electro, electrometer, electrolysis, electrophone, electroscope, electrotype.
Enteron, *intestine.* Enteric, enteritis, dysentery.
Ergon, *work.* Energy, metallurgy.
Gamos, *marriage.* Bigamy, polygamy, misogamy.
Ge, *the earth.* Geography, geology, geometry.
Gennao, *I beget.* Genesis, generation, genealogy, oxygen, hydrogen, nitrogen.
Gignosko, *I know.* Agnostic, diagnosis, prognosticate.
Glossa, *a tongue, word.* Gloss, glossary, polyglot.
Glykys, *sweet.* Glucose, glycerine, liquorice.
Gramma, *a letter, something written.* Grammar, anagram, diagram, epigram, telegram, phonogram.
Grapho, *I write.* Graph, graphic, graphite, autograph, biography, geography, hectograph, lithograph, monograph, paragraph, phonograph, photograph, telegraph.
Gyne, *woman.* Misogynist, gynæcology.
Gyros, *a circle.* Gyre, gyrate, gyroscope, gyroidal.
Haima, *blood.* Hæmorrhage, anæmic, hæmatite.
Haireo, *I take, choose.* Heresy, aphæresis, diæresis.
Hedone, *pleasure.* Hedonist, hedonism.
Helios, *the sun.* Heliotrope, heliograph, heliogravure, helioscope, heliotype.
Hemera, *a day.* Ephemeral.
Heurisko, *I find.* Heuristic, eureka.
Hieros, *sacred.* Hieroglyph, hierarchy, hieratic, hierophant.
Hippos, *a horse.* Hippopotamus, hippodrome, hippophagy, hippophagist.
Hodos, *a way, journey.* Exodus, period, cathode, method.
Holos, *whole.* Holocaust, holograph, catholic.
Homos, *like.* Homogeneous, homologous, homœopathic, homonym.
Hydor, *water.* Hydrogen, hydrostatics, hydrometer, hydrophobia, hydrant, hydrate, hydraulic.
Idios, *belonging to oneself, characteristic.* Idiom, idiosyncrasy, idiot.
Isos, *equal.* Isobar, isochronous, isometric, isosceles, isothermal.
Kaio, *I burn.* Caustic, cauterize, encaustic, holocaust.
Kardia, *the heart.* Cardiac, cardiograph, cardialgia, pericarditis.
Klimax, *a ladder.* Climax, anticlimax, acclimatize.
Klino, *I bend, lean.* Decline, enclitic, incline, recline.
Koma, *sleep.* Coma, comatose, cemetery.
Kosmos, *order, universe, adornment.* Cosmos, cosmopolitan, cosmic, cosmetic.
Krino, *I judge.* Critic, criterion, critical, crisis, hypocritical.
Krypto, *I hide.* Crypt, cryptogram, cryptogamous, apocrypha.
Kyanos, *dark blue.* Cyanide, cyanite, cyanogen, cyanosis, cyanotype, cyanometer.
Kyklos, *circle.* Cycle, encyclical, encyclopædia, bicycle, cyclometer, cyclone.
Kyon, Kynos, *a dog.* Cynic, cynophilist, cynosure (lit. dog's tail).
Lambano, *I take.* Catalepsy, dilemma, epilepsy, syllable.
Lego, *I choose, say.* Eclectic, eulogium, lexicon.

Lithos, *a stone.* Lithograph, lithocarp, lithoglyph, monolith, aerolite, meteorolite.
Logos, *word, reason.* Logic, dialogue, logarithm, syllogism, apology, biology, geology, pathology, zoology.
Lyo, *I loosen.* Analyse, paralyse, palsy.
Metron, *measure.* Barometer, cyclometer, diameter, hygrometer, metre, perimeter, thermometer, radiometer, symmetry.
Mikros, *small.* Microbe, microcosm, micrograph, micrometer, microphone, microscope.
Misos, *hate.* Misanthropy, misogamy, misogynist.
Monos, *alone, single.* Monocotyledon, monolith, monologue, monomania, monopoly, monosyllable, monotheism, monastery, monad.
Morphe, *shape, form.* Amorphous, metamorphosis, morphology, morphosis.
Nekros, *a dead body.* Necromancy, necropolis, necrosis.
Nesos, *an island.* Melanesia, Polynesia, Peloponnesus.
Nomos, *law.* Astronomy, autonomy, economy, gastronomy.
Ode, *a song.* Ode, epode, melody, monody, parody, psalmody, rhapsody, comedy, tragedy.
Okto, *eight.* Octopus, octagon, octahedron.
Onoma, *a name.* Onomatopœia, anonymous, antonym, homonym, metonymy, synonym.
Ops, *the eye.* Optical, optician, synoptic.
Ornis, *a bird.* Ornithology, ornithorhynchus.
Osteon, *a bone.* Osteology.
Pais, paidos, *a boy.* Pedagogue, pedagogics.
Pan, *all.* Pantheism, pandemonium, panorama, panoply, pantomime.
Palin, *back again.* Palindrome, palingenesis, palimpsest.
Pathos, *suffering.* Pathetic, pathology, allopathy, homœopathy, sympathy.
Pente, *five.* Pentagon, pentameter, Pentateuch, Pentecost.
Pharmakon, *a remedy.* Pharmacopœia, pharmacy.
Philos, *a friend, loving.* Philanthropy, philosophy, philology, Philadelphia, philtre.
Phone, *the voice.* Phonetic, phonograph, euphony, gramophone, telephone, symphony.
Phos, *light.* Phosphorus, photograph, photogravure.
Phren, *the mind.* Phrenology, frantic, frenzy.
Physis, *nature.* Physical, physics, physiology, physiography, physiognomy, metaphysical.
Phyton, *a plant.* Zoophyte, phytology, phytophagy, phytography.
Pneo, *I breathe.* Pneumatic, pneumonia.
Poieo, *I make.* Poet, pharmacopœia, posy.
Polis, *a city.* Politics, policy, polite, police, polity, metropolis, necropolis.
Polys, *many.* Polyanthus, polygamy, polygon, polytechnic, polyhedron, polyglot, Polynesia, polypus, polysyllable, polytheism.
Pous, *a foot.* Antipodes, tripod, octopus, polypus.
Protos, *first.* Protocol, protoplasm, prototype, protozoa.
Pseudes, *false.* Pseudo, pseudoaisthesis, pseudograph, pseudonym.
Psyche, *the soul.* Psychical, psychology, metempsychosis.
Pyr, *fire.* Pyre, pyrites, pyrotechnics.
Rheo, *I flow.* Rheumatic, catarrh, diarrhœa.
Sarx sarkos, *flesh.* Sarcophagus, sarcasm, sarcology, sarcosis.
Schizo, *I cleave.* Schism, schist, schedule.
Skopeo, *I see.* Scope, telescope, microscope, stethoscope, stereoscope, spectroscope, kaleidoscope, laryngoscope.
Sophos, *wise.* Sophism, philosophy, theosophy.
Stasis, *standing.* Apostasy, statics, hydrostatics.
Stello, *I send.* Apostle, epistle.
Stratos, *an army.* Strategy, stratagem.
Strepho, *I turn.* Apostrophe, catastrophe, strophe, antistrophe.
Taxis, *an arrangement.* Tactics, syntax, taxidermy.
Techne, *art.* Technical, technique, polytechnic, pyrotechnics.
Tele, *distant.* Telegraph, telepathy, telephone, telescope.
Temno, *I cut.* Anatomy, epitome, tracheotomy, phlebotomy.
Theaomai, *I behold.* Theatre, theory, theorem.
Theos, *God.* Theistic, theology, theosophy, theocracy, monotheism, polytheism.
Therme, *heat.* Thermometer, thermopile, isothermal.
Thesis, *a placing, setting.* Thesis, antithesis, epithesis, epenthesis, hypothesis, metathesis, parenthesis, synthesis.
Topos, *place.* Topography, topic, topical.
Treis, *three.* Trigonometry, tripod, trilogy.
Trepo, *I turn.* Trope, tropics, allotropic, trophy.
Typto, *I strike.* Type, antitype, archetype, prototype, platinotype, stereotype, daguerreotype.
Zoon, *an animal.* Zoology, zoophyte, zoological, zodiac.

LATIN ROOTS.

It will be observed that in most cases *two forms* of the Latin original are given below. The reason for this in the case of verbs and nouns is as follows:—

(1) **The Verb.** Just as an English verb has three distinct forms, Present Tense, Past Tense, Perfect Participle, e.g. *write, wrote, written*, so a Latin verb has varying forms, e.g. *scribo, scripsi, scriptum.*

From **Scribo,** *I write*, we get scribe, scribble, inscribe; from **Scriptum** we get scripture, manuscript, rescript. Hence the importance of giving both parts is self-evident.

(2) **The Noun.** The Genitive case of a Latin noun corresponds to the Possessive case of an English noun, and both differ in form from the Nominative. As in English we have *king, king's*, so in Latin we have ***rex, regis.***

Words derived from a Latin noun contain the stem of that noun, and this is always clearly seen in the Genitive case, whereas in the Nominative it often appears in a very modified form. A few instances will illustrate this fact.

Nominative.	Genitive.	Stem.	Derivatives.
Rex	Reg-is	Reg-	Regal, regalia.
Virgo	Virgin-is	Virgin-	Virgin.
Lapis	Lapid-is	Lapid-	Lapidary, dilapidated.
Ordo	Ordin-is	Ordin-	Ordinal, ordinary.
Lex	Leg-is	Leg-	Legal, legislation.

English derivatives from Latin have often come through the French. Compare—*poverty*, L. pauper (poor), F. pauvre (poor); *cherish*, L. carus (dear), F. cher (dear).

Ædes, *a house.* Edifice, edify.
Æquus, *equal, fair.* Equality, equation, equanimity, equilibrium, equinox, equity, equivalent.
Ago, actum, *I do, drive.* Agent, reagent, agile, agitate, cogent, exigent, act, action, reaction.
Alius, *other.* Alias, alibi, aliquot, alien.
Alter, *one of two.* Alternate, alternative, altercation, subaltern.
Altus, *high.* Altitude, altar, alto, contralto, exalt, haughty.
Amo, amatum, *I love.* Amiable, amicable, amity, amative, amorous.
Angulus, *a corner.* Angle, angular, quadrangle, rectangle, triangle.
Annus, *a year.* Annual, biennial, triennial, perennial, annals, anniversary, superannuate.
Aqua, *water.* Aquarium, aquatic, aqueous, aqueduct.
Arbitror, arbitratus, *I judge.* Arbiter, arbitration.
Ardeo, arsum, *I burn.* Ardent, arson.
Audio, auditum, *I hear.* Audible, audience, inaudible, audit, auditor, auditorium.
Bene, *well.* Benefit, benefice, benefactor, benevolent, beneficent, benediction, benison.
Bis, *twice.* Biscuit, biennial, bisect, bicentenary, bilingual, bimetallism, bilateral.
Brachium, *an arm.* Brace, bracelet, embrace.
Brevis, *short.* Brevity, abridge, brief.
Cado, casum, *I fall.* Cadence, decadence, accident, incident, incidence, case, casual, casualty.

Cædo, cæsum, *I kill, cut.* Fratricide, homicidal, matricide, parricide, incisive, decisive, precise, concise, excision, circumcision, cæsura.

Cano, cantum, *I sing.* Canticle, canto, cantata, incantation, chant, enchant.

Capio, captum, *I take.* Captive, captivate, capture, accept, conception, conceit, receipt, deception, reception, exception, perception.

Caput, capitis, *a head.* Cape, capital, capitation, decapitate, captain.

Caro, carnis, *flesh.* Carnal, carnival, carnivorous, carnage, carrion, charnal, carnation, incarnation.

Cedo, cessum, *I go, yield.* Cede, recede, concede, precede, accede, proceed, intercede, accession, procession.

Centum, *A hundred.* Century, centenary, centenarian, cent, centime, centipede.

Cerebrum, *the brain.* Cerebral, cerebration, cerebellum.

Cerno, cretum, *I perceive.* Discern, concern, decree, decretal, discretion.

Cito, *I rouse.* Cite, excite, incite, resuscitate.

Civis, *a citizen.* Civic, civil, civilian, civilization.

Clamo, clamatum, *I shout.* Clamour, exclaim, declaim, disclaim, proclaim, reclaim, acclamation.

Claudo, clausum, *I shut.* Clause, include, exclude, preclude, seclusion, close, closure, disclosure.

Colo, cultum, *I cultivate.* Colony, culture, agriculture, floriculture, cultivate, horticulture.

Cor, cordis *the heart.* Cordial, accord, concord, courageous, discord.

Corona, *a crown, garland.* Crown, coronet, coronal, corolla.

Corpus, *a body.* Corpse, corporal, corporeal, corporate, corporation, corpulent, corpuscle.

Credo, creditum, *I believe.* Creed, credulous, credit, creditable, credible.

Cresco, cretum, *I grow.* Crescent, decrease, increase, increment.

Crux, crucis, *a cross.* Crucify, cruciform, crucial, crusader, excruciating.

Cumbo, cubitum, *I lie down.* Cubicle, incumbent, incubator, recumbent, succumb.

Culpo, culpatum, *I blame.* Culpable, exculpate, inculpate.

Curo, curatum, *I take care.* Cure, curate, curator, curative, secure, sinecure.

Curro, cursum, *I run.* Current, occurrence, recurrent, course, cursory, discursive, excursion, incursion.

Debeo, debitum, *I owe, ought.* Debt, debtor, debit, debenture.

Decem, *ten.* Decimal, decimate, December.

Dens, dentis, *a tooth.* Dental, dentist, dent.

Dico, dictum *I say.* Diction, dictate, dictum, dictionary, dictatorial, indict, interdict, indicate, edict, prediction, predicate, verdict.

Dies, *a day.* Diet, diurnal, diary, dial, quotidian, meridian.

Dignus, *worthy.* Dignity, dignified, deign, disdain, indignant.

Do, datum, *I give.* Date, data, dative.

Dono, donatum, *I give.* Donation, donative, donor, condone.

Doceo, doctum, *I teach.* Docile, doctor, doctrine, indoctrinate.

Dominus, *a lord.* Domineer, dominate, dominion, domain, predominate.

Dormio, dormitum, *I sleep.* Dormant, dormouse, dormitory.

Duco, ductum, *I lead.* Duke, educate, duct, ductile, conduct, conducive, induction, deduction, reduction, production.

Duo, *two.* Dual, duet, duodecimo, duplex, duplicate, duplicity, double.

Emo, emptum, *I buy.* Redeem, pre-emption, exemption.

Facio, factum, *I make, do.* Fact, factor, feat, feasible, efficient, effective, defective, confectionery, sufficient, affection.

Fero, tuli, latum, *I bear, carry.* Confer, differ, defer, infer, prefer, transfer, relate, relation, translation.

Ferveo, *I boil.* Fervent, fervour, fervid, ferment, effervesce.

Fido, *I trust.* Fidelity, affidavit, confidence, diffident, infidel, perfidious, fealty, defy.

Fingo, fictum, *fashion, invent.* Feign, fiction, fictitious.

Finis, *an end.* Final, finality, confine, define, infinite, infinity, infinitive.

Firmus, *firm.* Firmament, affirm, confirmation, infirm, infirmary.

Fiscus, *treasury.* Fiscal, confiscation.

Flecto, flexum, *I bend.* Flexible, circumflex, deflect, inflexion, inflexible, reflection.

Fligo, flictum, *I dash.* Afflict, conflict, inflict, profligate.

Flo, flatum, *I blow.* Flatulency, inflated.

Flos, floris, *a flower.* Florist, floral, florid, flourish, inflorescent.

Fluo, fluxum, *I flow.* Fluid, fluent, fluctuate, affluence, confluence, effluence, influence, refluence, superfluous, influx.

Fortis, *strong.* Fort, fortitude, fortify, reinforce, comfort.

Frango, fractum, *I break.* Fragile, fracture, infraction, fraction, frail, irrefragable.

Frater, fratris, *brother.* Fraternize, fraternal, fraternity, fratricide.

Frons, frontis, *forehead.* Front, frontier, frontal, frontispiece, affront, effrontery.

Fugio, fugitum, *I flee.* Fugitive, refugee, centrifugal, subterfuge.

Fundo, fusum, *I pour.* Confound, fuse, effusive, diffusion, confusion, infusion, refuse.

Fundus, *the bottom.* Fundamental, foundation, founder, profound.

Gens, gentis, *race, people.* Gentile, degenerate, generation, progeny, progenitor.

Gero, gestum, *I carry on.* Belligerent, vicegerent.

Gradus, *a step.* Grade, gradual, graduate, gradient, retrograde, degradation, aggression, egress, ingress, congress, transgression, progression.

Gratia, *favour.* Grace, gratitude, gratis, gratuity, gratify, congratulate, ingratiate.

Grex, gregis, *flock.* Gregarious, aggregate, congregate, egregious, segregation.

Habeo, habitum, *I have.* Habit, ability, exhibit, inhibit, prohibit, rehabilitate.

Hæreo, hæsum, *I stick.* Hesitate, adhere, cohere, adhesive.

Homo, *a man.* Homicide, human, humane, humanity, humanize.

Horreo, *I bristle.* Horrid, horrible, horror, horrify.

Hospes, hospitis, *a guest.* Hospitality, hospital, hotel, host, ostler.

Idem, *the same.* Identical, identity, identify.

Impero, imperatum, *I command.* Imperial, imperious, imperative, empire, emperor.

Index, indicis, *the forefinger.* Index, indicative, indication.

Insula, *an island.* Isle, insular, insulate, peninsula, isolate.

Integer, *whole.* Integer, integrity, integral, entire, disintegrate.

Intelligo, intellectum, *I understand.* Intelligent, intellect, intelligible.

Invenio, inventum, *I find.* Invention, inventory.

Jacio, jactum, *I throw.* Adjective, abject, conjecture, interjection, dejection, eject, inject, object, subject, subjection, reject, project, jet, jetty, jetsam, ejaculation.

Jungo, junctum, *I join.* Junction, juncture, joint, conjunction, subjunctive, injunction, conjugal, subjugate.

Juro, juratum, *I swear.* Jury, perjury, adjure, conjure.

Jus, juris, *law, right.* Jurisdiction, jurisprudence, jurist, just, justice, justify, injury.

Labor, lapsus, *I glide.* Lapse, elapse, collapse, relapse.

Lædo, læsum, *I injure, strike.* Lesion, collision, elision.

Lapis, lapidis, *a stone.* Lapidary, dilapidation.

Latus, lateris, *a side.* Lateral, equilateral, quadrilateral, collateral.

Laus, laudis, *praise.* Laud, laudable, laudatory, allow.

Lavo lavatum, *I wash.* Lave, laver, lavatory, laundry, lava, lavender, lotion.

Lego, lectum (1) *I gather, choose.* Collect, elect, neglect, eligible, coil, cull, elegant, legion, predilection, selection; (2) *I read.* Legend, legible, lection, lesson, lecture, lectern.

Levis, *light.* Levity, leaven, alleviate.
Levo, levatum, *I raise.* Levy, levee, levant, lever, relevant, relieve.
Lex, legis, *law.* Legal, loyal, leal, legislator, legitimate, privilege (originally, an exceptional law).
Liber, *free.* Liberal, liberate, libertine.
Liber, *a book.* Libel, library, libretto.
Ligo, ligatum, *I bind.* Ligature, ligament, league, liable, lien, liege, allegiance, ally, obligation, religion.
Linquo, lictum, *I leave.* Delinquent, relinquish, derelict, relict, relic, reliquary.
Locus, *a place.* Local, locality, localize, locative, locomotive, locomotion, collocation, dislocation, lieu, lieutenant.
Loquor, locutus, *I speak.* Loquacious, circumlocution, colloquy, elocution, obloquy, soliloquy, ventriloquist.
Luceo, *I shine.* Lucid, lustrous, lustre, elucidate, illustrious, pellucid, translucent.
Ludo, lusum, *I play.* Ludicrous, allusion, collusion, delusion, elude, illusion, prelude, interlude.
Luo, lutum, *I wash.* Ablution, alluvial, antediluvian, deluge, dilute.
Magister, *a master.* Magistrate, magisterial, master, mister.
Magnus, *great.* Magnanimity, magnate, magnificent, magnitude, majesty.
Major, *greater.* Major, majority, mayor.
Malus, *bad.* Malady, malaria, malice, mal-à-propos, malign, malignant, malevolent, maltreat.
Mando, mandatum, *I entrust, enjoin.* Mandate, command, demand, recommend, remand, countermand.
Maneo, mansum, *I remain.* Mansion, manor, manse, permanent, remnant.
Manus, *a hand.* Manual, manacle, manage, maintain, manifesto, manufacture, manuscript, mortmain, legerdemain, manipulate, manœuvre, amanuensis.
Mare, *the sea.* Mariner, maritime, marine, submarine, mermaid.
Mater, matris, *a mother.* Maternal, matron, matriculate, matricide, matrimony, matrix.
Maturus, *ripe.* Maturity, immature, premature.
Medeor, *I heal.* Medicine, medical, medicate, remedy.
Medius, *middle.* Mediator, medium, mediocre, meridian, immediate, intermediate, mediæval, Mediterranean.
Memini, *I remember.* Memento, reminiscence.
Memor, *mindful.* Memoir, memory, memorandum, commemorate, remember.
Mens, mentis, *the mind.* Mental, demented, vehement.
Mergo, mersum, *I dip.* Merge, emergency, emerge, immerse, submerge.
Merx, mercis, *merchandise.* Mercenary, mercer, merchant, mercantile, mart, market, commerce.
Metior, mensus, *I measure.* Mensuration, commensurate, dimension, immense.
Migro, migratum, *I migrate.* Migratory, emigrant, immigrant.
Miles, militis, *a soldier.* Militant, militate, military, militia.
Mille, *a thousand.* Mile, million, millennium, millenary.
Minae, *threats.* Minatory, menace, commination.
Minuo, minutum, *I lessen.* Minute, minuet, diminution.
Minimus, *least.* Minim, minimum, minimize.
Miror, miratus, *I wonder.* Miracle, marvel, mirage, admire.
Misceo, mixtum, *I mix.* Miscellany, mixture, medley, promiscuous.
Miser, *wretched.* Miser, miserable, commiserate.
Mitto, missum, *I send.* Missive, missile, mission, dismiss, admission, commit, emit, remit, intermit, permit, submit, promise, premise.
Modus, *measure.* Mood, mode, modify, modulate, moderate, model, commodious, accommodate.
Moneo, monitum, *I advise.* Monitor, admonition, premonition, summon.
Mons, montis, *a mountain.* Mount, mountaineer, promontory, dismount, surmount, remount, amount, paramount.
Monstro, monstratum, *I show.* Monster, monstrous, demonstrate, remonstrate.
Mordeo, morsum, *I bite.* Morsel, remorse, mordant.
Mors, mortis, *death.* Mortal, mortuary, mortmain, mortgage, murrain, moribund, postmortem.
Moveo, motum, *I move.* Movable, mobile, motor, motive, mob, momentum, motion, commotion, emotion, promotion.
Multus, *much, many.* Multifarious, multitude, multiple, multiply, multiform.
Munio, munitum, *I fortify.* Munition, ammunition, muniment.
Munus, muneris, *gift, office.* Munificent, municipal, remunerate.
Murus, *a wall.* Mural, immure, intramural.
Muto, mutatum, *I change.* Mutable, commute, permutation, transmute.
Nascor, natus, *I am born.* Nascent, renaissance, natal, native, nation, nativity, cognate, innate.
Navis, *a ship.* Navy, naval, navigation, nave.
Necto, nexum, *I bind.* Annex, connexion, disconnect.
Nego, negatum, *I deny.* Negation, negative.
Nihil, *nothing.* Nihilist, nihilism, annihilate.
Noceo, nocitum, *I injure.* Noxious, obnoxious, innocuous, innocent, annoyance.
Nomen, nominis, *a name.* Nominate, nominative, noun, nominal, cognomen, denominator, ignominy, pronominal.
Non, *not.* Nonentity, nondescript, nonplus, nonpareil, nonsense.
Norma, *a rule, standard.* Normal, abnormal, enormous.
Nosco, notum, *I know.* Note, notable, notion, notice, notify, denote, cognizance, recognize.
Novem, *nine.* November, nonagenarian.
Novus, *new.* Novel, novelty, novice, noviciate, innovation, renovation.
Nox, noctis, *night.* Nocturn, nocturnal, equinox.
Nullus, *no, none.* Nullify, nullity, annul.
Numerus, *a number.* Numerous, numerator, enumerate, innumerable, supernumerary.
Nuntio, nuntiatum, *I proclaim.* Nuntio, announce, annunciation, denounce, enunciation, pronounce.
Nutrio, nutritum, *I nourish.* Nutriment, nutrition, nurture, nurse, nourishment.
Octo, *eight.* Octave, octavo, octopus, octogenarian, October, octagon, octangular, octahedron, octosyllabic.
Oculus, *eye.* Ocular, oculist, binocular, inoculate.
Odor, odoris, *smell.* Odour, odoriferous, deodorize.
Officium, *duty, function.* Office, official, officious, officiate.
Olere, *to smell.* Olfactory, redolent.
Omnis, *all, every.* Omnibus, omnipotent, omniscient, omnivorous.
Onus, oneris, *burden.* Onus, onerous, exonerate.
Opto, optatum, *I wish.* Option, optative, adoption, co-opt.
Opus, operis, *a work.* Opera, operation, operative, co-operate.
Orbis, *a circle.* Orb, orbit, exorbitant.
Ordo, ordinis, *order.* Ordinal, ordinary, ordain, ordinance, ordination, extraordinary.
Orior, ortus, *I rise.* Orient, orientation, origin, original, aborigines, abortive.
Oro, oratum, *I pray.* Orison, oratory, oration, orator, oratorio, oracle, adoration, inexorable, peroration.
Os, oris, *a mouth.* Oral, orifice.
Os, ossis, *a bone.* Ossification, osseous, osprey.
Ostendo, ostensum, *I show.* Ostensible, ostentation.
Pando, pansum, *I spread.* Expand, expanse.
Pango, pactum, *I fasten.* Compact, impact, impinge.
Par, paris, *equal.* Pair, peer, disparity, nonpareil.
Parco, parsum, *I spare.* Parsimony.
Pario, partum, *I bring forth.* Parent, parturition.
Paro, *I get ready.* Pare, repair, prepare.
Pars, partis, *a part.* Partition, party, particle, parse, participate, partisan, partner, partake, participle, parboil.
Pasco, pastum, *I feed.* Pastor, pasture, repast, pastern, pastille.
Pater, patris, *father.* Paternal, paternity, patron, patrician, patrimony, expatriate, padre, padrone.

Patior, passus, *I suffer.* Patient, passive, passion, compassion, impassioned, impassive.
Pauper, *poor.* Pauper, poor, poverty, impoverish.
Pax, pacis, *peace.* Pacify, pacific.
Pecunia, *money.* Pecuniary, impecunious.
Pello, pulsum, *I drive.* Compel, expel, impel, pulse, impulse, repulse, pulsation, expulsion, repellent, repulsive.
Pendeo, pensum, *I hang.* Pendant, pending, pendulum, pensile, impending, appendix, depend, suspense.
Pendo, pensum, *I weigh, pay, hang.* Append, compendium, perpendicular, stipend, compensate, expense, pension, recompense.
Pene, *almost.* Peninsula, penultimate, penumbra.
Penna, *a wing, feather.* Pen, pennon, pinion.
Pes, pedis, *a foot.* Pedal, pedestal, pedestrian, biped, expedition, expedient, impediment, quadruped.
Peto, petitum, *I beg, seek.* Petition, petulant, appetite, competition, impetuous, impetus, repetition.
Petra, *a stone.* Petrify, petroleum, saltpetre.
Pingo, pictum, *I paint.* Pigment, picture, paint, depict.
Pietas, *piety.* Pity, pious, expiation.
Placeo, *I please.* Placid, pleasant, complacent, complaisant.
Placo, *I appease.* Implacable.
Plango, planctum, *I bewail.* Plaint, plaintive, plaintiff, complaint.
Planus, *level.* Plane, plain, explain.
Plaudo, plausum, *I applaud.* Plaudit, plausible, applause.
Plecto, plexum, *I weave.* Complexion, complex, duplex, perplex, duplicity, complicity, accomplice.
Pleo, pletum, *I fill.* Plenary, plenty, accomplish, complement, complete, comply, depletion, expletive, replenish, supplement.
Plico, plicatum, *I fold.* Plait, pleat, plight, plot, display, complicated, duplicate, explicit, exploit, implicate, imply, multiple, supple, supplicate, simplicity.
Plumbum, *lead.* Plumb, plummet, plumber, plumbago.
Pœna, *punishment.* Penal, penalty, pain, penance, penitence, repentance.
Pondus, ponderis, *weight.* Ponderous, preponderate, ponder, poise, avoirdupois, pound.
Pono, positum, *I place.* Position, post, apposition, compound, component, deposit, deponent, exposition, impostor, opposite, opponent, position, positive.
Populus, *people.* Populace, popular, population, depopulate.
Porta, *a gate.* Portal, porch, portico, porter, portcullis.
Porto, portatum, *I carry.* Portable, import, export, deportment, porter, portfolio, portmanteau.
Possum, *I am able.* Possible, puissant, potent, potentate, potential.
Post, *after.* Post-mortem, postpone, post-obit, posterior, posterity, preposterous, posthumous, postern.
Precor, precatus, *I pray.* Precarious, imprecation, deprecate.
Prehendo, prehensum, *I seize.* Prehensile, apprehend, comprehend, reprehensible.
Premo, pressum, *I press.* Pressure, compress, depression, express, impression, oppress, repress.
Pretium, *price.* Precious, appreciate, appraise, depreciate.
Primus, *first.* Prime, primary, primeval, primate, premier, primitive, primogeniture.
Princeps, principis, *chief.* Prince, principal, principle.
Privo, privatum, *I deprive, separate.* Privation, private, privity, privacy, privilege.
Probo, probatum, *I prove, test.* Probe, probable, probate, probity, proof, approbation, reprobate.
Prope, *near.* Propinquity.
Proximus, *nearest.* Proximity, approximate, approach.
Proprius, *own.* Proper, propriety, property, appropriate.
Pugno, pugnatum, *I fight.* Pugnacious, impugn, repugnant.
Pungo, punctum, *I prick.* Puncture, pungent, punctuation, punctual, punctilio.
Puto, putatum, *I think.* Putative, deputation, dispute, computation, impute, reputation.
Quæro, quaesitum, *I seek.* Quest, question, enquire, exquisite, inquest, inquisition, inquisitive, perquisite.
Quattuor, *four*, **Quartus,** *fourth.* Quart, quarter, quadrilateral, quartet, quarto, quatrain, quadrant, quadrangle, quadrille.
Quies, quietis, *rest.* Quiet, quietus, quiescent, acquiesce.
Radius, *a rod.* Ray, radius, radiate, radiant.
Radix, radicis, *a root.* Radical, eradicate, radish.
Rapio, raptum, *I seize.* Rape, rapture, rapacious, rapine, ravage, ravish.
Rego, rectum, *I rule.* Regent, regular, regulate, regimen, regiment, rector, rectitude, rectify, director, correct, incorrigible.
Regnum, *a kingdom.* Reign, realm, interregnum.
Res, *a thing.* Reality, republic, rebus.
Rex, regis, *a king.* Regal, regalia, regicide, royal.

Utopian, from *Utopia.* (See *Dict. of Gen. Inf.*)
Valentine, from *St. Valentine.* (See *Dict. of Gen. Inf.*)
Volcano and **Vulcanite,** from *Vulcan,* the god of fire. (See *Dict. of Gen. Inf.*)
Volt, Voltaic, from *Volta.* an Italian physicist. (See *Dict. of Gen. Inf.*)
Worsted, from *Worsted,* near Norwich.

PHRASES, CLASSICAL AND FOREIGN,

(Current in English Literature and Legal Documents).

N.B.—Many single words and short phrases from foreign sources will be found in the "English Dictionary" (p. 1031).

[The letters F, Ger, Gr, It, Sp, denote that the quotations come from the French, German, Greek, Italian, and Spanish languages respectively. All the other phrases come from the Latin. In pronouncing the Latin words put the accent on the *penult* when it is marked with a stroke (—), or when the vowel of that syllable comes before two or more consonants. In every other case put the accent on the *antepenult.* Every vowel in Latin is to be sounded; thus *celare* is a word of three syllables.]

Ab extra. From outside.
Ab initio. From the beginning.
Ab intra. From inside.
A bon droit. (F.) Justly.
A bon marché. (F.) Cheap.
Ab origine. From the beginning.
